The latest moves in Congress suggest that our national legislature is still hunting around for a safe and popular way of hamstringing the war effort. The latest victims of the Congressional search for its lost sense of importance are the Office of Price Administration and the Office of War Information. As E. Palmer Hoyt arrived in Washington to take over his duties as director of the Office of War Information's domestic branch, Elmer Davis faced Congressional elimination of this unit. Incidentally, the domestic bureau of War Information was set up and operated by rockribbed Republicans. The Office of War Information appropriation was cut so drastically by the House of Representatives last Saturday that the agency's future is in doubt, according to its director, Mr. Elmer Davis. Mr. Davis pointed out that the responsibilities of his organization are 10 times as big as those of the committee on public information in the last war. Short wave radio is one new complication, as is the fact that this war is being fought all over the world where the last one was confined to France so far as America was concerned. Mr. Davis has offered to resign if his agency is forced to abandon its attempt to inform the country of what its taxes are paying for in the way of the war effort. The charges against the Office of War Information are, of course, 1944 politics. It is said that political propaganda crept into some of the agency's news releases. It has been charged further that the Office of War Information is busy promoting a fourth term for President Roosevelt. Elmer Davis has denied these charges. Last week Mr. Davis gave a speech before the American Newspaper Guild in Boston in which he stated that he believed the newspaper coverage of war news was better than the newspaper coverage of Washington news. For this, too, he has been wrongly condemned.

(Richard Eaton, June 21, 1943)

The home front is particularly violent today, in fact during the past week end, which must, indeed, discourage our fighting men on the seven seas. First of all, we had last week the inexcusable attack upon Elmer Davis with no more justification than that upon Leon Henderson.

In the case of Elmer Davis it is just another effort not to reach Elmer Davis but to reach the President, our Commander in Chief, through one of his favorite aides. The Office of War Information, of course, may not be perfect. The number of resignations taking place in the last few weeks is perhaps the best proof, although many of them perhaps have taken place because the men were discharged after criticism. But I can tell you this much, the Office of War Information renders precious service to the home front through its domestic service without any effort whatsoever to influence newspapermen or commentators. But let me give you a few examples * * * the uncontrolled and poorly organized releases of each Government department (are centralized by the Office of War Information) and sees to it that every newspaperman or radio commentator receives them speedily and synchronized. In the same manner all the foreign broadcasts collected by the Federal Communications Commission listening posts are digested for our convenience.

No effort is made, and that's a very important point, in any way to influence our opinion but on the contrary we have at our disposal information * * * with far more thorough a background. If the Office of War Information didn't exist we would have to have a vast personal staff, even the agencies, the Associated Press would hardly do as efficient a job as the Office of War Information is doing. I haven't the time to go into all the details now of the work done by the Office of War Information, but I can say that this attack on Elmer Davis is a bad example of the sort of lack of unity in the effort to gain individual political success which characterizes the news from the home front.

(NOTE.—Due to the very poor recording of this program it was practically impossible to transcribe Mr. Eaton's comments of Office of War Information.—J. G.)

(Claude Mahoney, Blue Network, June 19, 1943)

The Domestic Branch of the Office of War Information is asking its seconds what hit it following the refusal of the House to vote any appropriations yesterday.

I suspect the Office of War Information this morning is wondering why the engineer didn't blow his whistle before he came around the curve. The action of the House in cutting off the appropriation for all domestic operations was as complete as anything I've ever heard. When I forecast yesterday morning that Mr. Davis would have his head in his hands before the day was over I didn't have any idea that he was going to get it chopped off. I want to get out into the open on this matter. Up until he made that Boston speech I was pretty much of an Elmer Davis man. Well, I still am for that matter, and I think that speech was ill-advised, just as something I might say would be called ill-advised. It's evident that there are a great many people in Congress who have little sympathy with Mr. Davis or perhaps more particularly with the work his organization is doing. You can't laugh off a 218 to 114 vote. Republicans in the past have charged that the Office of War Information was issuing fourth-term propaganda for President Roosevelt, but yesterday Representative STARNES said the organization had a distinct socialistic tinge. He said that Davis was a member of the American Labor Party, and Mr Davis has admitted that. He admitted that he was at one time, at least. Now, of course, there are many folks who would say that was no more sin than being a Democrat or a Republican. The Foreign Branch of the Office of War Information is left, but the 1,500 people in the Domestic Branch will go out at the end of the fiscal year if the Senate upholds the House. I suspect that Mr. STARNES laid himself open on one count, however, in his speech against the Office of War Information. He said it was an insult to the American people to say they don't know what they're fighting for until what and why by the Office of War Information. Well, it's a sad fact that both the Army and the Navy find it necessary to have heavy classes on just that subject. And I know whereof I speak on that, because I've got two personal friends who are teaching classes in what are we fighting for. Of course, those are Army and Marine classes. The Office of War Information has nothing to do with them. But the fact remains that a great many people are pretty fuzzy about the war aims.

(Claude Mahoney, Blue Network, June 21, 1943)

The Office of War Information seems to have as many lives as a cat, and I didn't let the House bill put it out of existence at all. The Office of War Information came through with a story of 9 statistics today probably gotten up by somebody who didn't know he was being legislated out of a job. The Office of War Information has this paragraph of explanation of the importance of coal in our lives. There are more than 60,000,000 consumers of bituminous coal. It supplies industry with more than one-half the power and energy required to produce the weapons of war [continues quoting Office of War Information's statement]. That's a nice little summary for which I'm indebted to them, and I'm indebted to that very branch that was voted out of existence by the House. How, I ask you, am I going to get my statistics if they kick that thing out of existence?

(Eric Severeid, Columbia Broadcasting System, June 21, 1943)

These are dog days in Washington. Political life in the capital seems to have reached a new low in wisdom, tolerance, and dignity. We are in a period of savage tempers, of violent statements, and sheer irresponsibility to a degree which this correspondent has not witnessed in the last 2 years. In the same frenzied afternoon the House slashed away all funds for the domestic information program of the Office of War Information. Some Representatives in the process compared Mr. Elmer Davis' position with that of Joseph Goebbels in Berlin. Well, that was just confusion compounded.

(Upton Close, Mutual Broadcasting System, June 20, 1943)

Now there is not a newspaperman that will feel that Elmer Davis in no way deserves the comparison made by a Congressman with the propaganda ministers of Germany and Italy or that he deserves anything save sympathy for having tackled what in the nature of America is an impossible job.

(John B. Hughes, Mutual Broadcasting System, June 19, 1943)

The home front has reached a state of disintegration which threatens to undermine the military advantages. The situation is underlined by the fight over the Office of War Information, the fight over the subsidy program and the soft coal situation, by any of a dozen symptoms of self-interest and national myopia.

(Carey Longnire, National Broadcasting Co., June 21, 1943)

A man from Mars could hardly be blamed if he dropped in here today if he decided that we Americans certainly do things the hard way. The man from Mars would find us faced with the toughest war in our history, a war in which everyone of us would presumably drop factionalism and petty jealousies and be pitching in with just one thought unanimously—victory. Last Friday Congress saw a sight which might have made the man from Mars think he was really visiting some sort of dream world. Everybody ought to know by this time that stability and confidence here on the home front is vital to winning the war. Two of the biggest needs on the home front are, first, a stable cost of living, and, second, honest information about the progress of the war. Not only did the House seek to chain up the Nation's price-control agency, it also voted to wipe out the issuing of war news on the home front by Elmer Davis' Office of War Information. One Representative inferred Mr. Davis tried to act

like Dr. Goebbels. Now, that presumably means Office of War Information threatens to tell newspapermen and radio commentators what to say. I can testify right here and now that neither Mr. Davis nor anyone else in Office of War Information ever tried to tell me what to say in any way.

(Calmer and How, Columbia Broadcasting Co., June 18, 1943)

The vote of the House of Representatives to give no money to the Office of War Information to continue its domestic operations appears to be a purely political move. It may be doubted that the mass of the American people regard the Office of War Information as primarily a fourth-term propaganda organ. It may further be doubted that the Office of War Information has any such purpose in mind.

(Samuel Grafton, Mutual Broadcasting System, June 20, 1943)

My second topic is the legislative riot which broke out in the House of Representatives on Friday and Saturday. The Members of the lower House are taking appropriations away from executive agencies of the Government with something of the spirit in which soldiers and sailors in Los Angeles recently snatched clothes from the zoot-suiters. They're showing just about as much discrimination and just about the same degree of calmness. In less than 24 hours the lower House wiped out the entire domestic appropriation of the Office of War Information. This is a true legislative crisis. It is so serious that it is up to the cooler, wiser, more statesmanlike heads in Congress—and there are many in both Houses—to take instant control. We cannot do the public business of this Nation in wartime to the tune of this kind of legislative snake dance.

[In discussing outbreak of race riots recently:]

In one of these riots—one at Mobile, Ala., the true facts were finally laid before the public only by the Office of War Information. That may account in part for some of the bitter hostility shown toward that Office in some sections of the political arena last week. It is an amazing thing that this Government, which is so often attacked for not telling people enough of the truth, should now vote to have its chief agency for disseminating the truth cut off. As one studies this wonderful and obscure pattern one sees to what a height political irresponsibility has lately risen. We can only hope for a reaction against all this—trusting in the good sense of the American majority which wants, first, to win the war, and, second, to reform without wrecking.

(Arthur Hald, National Broadcasting Co. June 22, 1943)

A Washington listening post advises that the newsmen in the Capital are going to bat for Elmer Davis and the Office of War Information. The House of Representatives, you know, voted to put the Office of War Information's Domestic Branch out of business following protest from Alabama's Congressman STARNES. The fate of the Office of War Information now rests with the Senate. The listening post reports that even the representatives of newspapers who have been critical of the Office of War Information are letting the Senate know that the Domestic Branch of the Office of War Information plays a vital role in America's wartime information set-up. Many writers and commentators have criticized the Office of War Information for some of the things that it's done, and Office of War Information Chief Elmer Davis would be the first to admit that his organization is not perfect. Nevertheless, without the Office of War Information the difficulties of news coverage in wartime Washington would be multiplied many times. Much of the work done by the Office of War Information escapes attention, but Elmer Davis has done a swell job in loosening up Army and Navy policies on giving out news, in preventing conflicting releases from various agencies, in coordinating Government messages broadcast by the radio industry, and in a number of other ways. The public, not Davis, will be the loser if Congress forces the Office of War Information head out. He can always go back to the $100,000-per-year radio job he gave up for reasons of patriotism when the President asked him to become head of the Office of War Information at $12,000 a year.

(Johannes Steel, June 22, 1943)

Congress last week in a mood of abandon, apparently, cut down the entire domestic branch of the Office of War Information on a moment's notice. Now it should be observed here that it was the Office of War Information that stopped race rioting in Mobile, Ala., by daring to tell the public the truth and there can be no doubt that if the people of Detroit knew the full economic and social and political factors behind the race rioting that took place there, they themselves would stop it. There would be nothing like it. These facts, however, they can only get from an unbiased Federal agency like the Office of War Information. Yes; Congress continues to complain about the inability of the executive (department) to cope with problems of this kind. Last week's routine record, however, certainly doesn't set an example. The slashing of the Office of Price Administration practically made inflation a certainty. And that at a moment when the coal miners are on strike because they say that Congress is doing nothing to prevent the rise of prices.

(Roy Porter, Blue Network, June 22, 1943)

There may be some hope, after all, that the current confusion inside othe Office of War Information in Washington may be corrected. A new ray of light has been shed on the future activities of the Office of War Information and while the majority of the active newspapermen and radio reporters will agree on the general terms of the proposal, it's one thing to say what you are going to do and another to actually do it. All this arises from the new assignment accepted by Palmer Hoyt as director of the Office of War Information's Domestic Branch. Hoyt took over his new job yesterday and in the course of getting down to the job he said a few things which gives us the impression that perhaps the Office of War Information can really begin to function as a straight news-dispensing organization

---

(Report to the Nation, Columbia Broadcasting System, June 22, 1943)

Edwards: This week the home front became a first-class battleground. A rebellious House of Representatives voted to cut the Office of Price Administration budget by $35,000,000, as well as hamstring it with unprecedented limitations. The House also decided that the public knew enough about the war and denied funds to the domestic branch of the Office of War Information. All over Washington it became clear that too many minds were centered on the election campaign of 1944 instead of the military campaign of 1943. In fact, there seemed to be Nation-wide confusion as to the identity and whereabouts of this Nation's enemy.

[Telegram]

JUNE 24, 1943.

Mr. ELMER DAVIS,
Director, Office of War Information, Washington, D. C.:

National war committee for visual education earnestly believes Bureau of Motion Pictures has rendered great service in nontheatrical field showing war plants as well as thousands of communities without theaters, clubs, lodges, etc. Have indicated this belief to Senators concerned offering our personal testimony supporting this view if helpful.

O. H. COELLN, Jr.,
Chairman, National War Committee for Visual Education and Publisher for Business Screen Magazine.

RESOLUTION ADOPTED BY THE NEW JERSEY PRESS ASSOCIATION, MARCH 8, 1943

"Whereas the weekly newspapers of New Jersey have been requested to save newsprint and printing papers wherever possible, and

"Whereas these newspapers are now receiving a tremendous amount of publicity materials from Government agencies: Now, therefore, be it

"*Resolved*, That the weekly newspaper division of the New Jersey Press Association requests the heads of Federal agencies to do all in their power to lessen the amount of publicity stories, leaflets, booklets, etc., sent to weekly newspapers by Federal agencies both from Washington and other cities; and be it further

"*Resolved*, That these Federal agencies be requested to clear their material through the Office of War Information in the interest of greater economy and to save time and labor in the small newspaper office."

A copy of this resolution shall be sent to the head of each Federal agency and to Elmer Davis, Director of the Office of War Information.

Adopted March 8, 1943.

———, ———,
Vice President for the Weekly Newspaper Division of the New Jersey Press Association.

RESOLUTION ADOPTED BY THE LOUISIANA PRESS ASSOCIATION AT ITS ANNUAL CONVENTION AT OPELOUSAS, MAY 7–8, 1943

Whereas the United States Government, through the War Production Board, has asked the newspapers of the United States to cut consumption of newsprint at least 10 percent; and

Whereas the multitude of Federal agencies, bureaus, etc., have clamored for publicity in the said newspapers, and used tons of mimeographed sheets for this purpose, and

Whereas many duplications of efforts resulted prior to the establishment of the Rural Press Section of the Office of War Information; and

Whereas the establishment of said Rural Press Section has resulted in the elimination of the said duplication of effort, brought order out of chaos, saved many thousands of tons of paper and given the "rural" or so-called "country weeklies" and small dailies a concise statement of essentials for publication each week: Now, therefore, be it

Resolved by the Louisiana Press Association in convention assembled; This 8th day of May, 1943, in the city of Opelousas, Louisiana, that the Rural Press Section of the Office of War Information be commended for its achievements and that the thanks of the publishers of the State be, and are hereby, extended to the said Rural Press Section of the Office of War Information for the many

hours of work saved the country editors, the elimination of the duplication of effort and the saving mony tone of paper and; be it further

Resolved, That the Louisiana Press Association does hereby further extend its thanks for the short and concise bulletin of essential news forwarded them each week by the Rural Press Section of the Office of War Information.

RESOLUTION ADOPTED BY THE MICHIGAN PRESS ASSOCIATION AT THE SEVENTY-FIFTH ANNIVERSARY CONVENTION, JANUARY 23, 1943

Resolved, That the Michigan Press Association register its appreciation of the presence on its program of Mr. Charles L. Allen, Chief of the Rural Press Section of the Office of War Information, and for the splendid and revealing information he gave relating to the Office of War Information's current plan to cooperate more fully with the Nation's thousands of weekly and small daily newspapers. The Michigan Press Association expresses its confidence in Mr. Allen's abilities, and pledges its aid to the success of the Office of War Information program. We instruct the executive secretary to send copies of this resolution to both Mr. Allen and to his superior, Mr. Elmer Davis, head of the Office of War Information.

Hon. KENNETH MCKELLAR,
Chairman, Senate Appropriations Committee, Senate Office Building, Washington, D. C.:

The Domestic News Bureau of the Office of War Information is performing an invaluable service for the ,000 industrial publications of the country. It has supplied them with a condensation of factual Government information suitable to their publications.

The industrial publications—and that includes the plant publications, the house organs, and the other papers and magazines that go to the men and women in the plants, shops, and stores of the Nation—are dedicated to the winning of the war. They are publishing the facts that are inspiring the men and women in our plants, mills, and shipyards to turn out more weapons with which to smite the Axis. They are publishing the facts that are encouraging their readers, the 40,000,000 men and women in the plants and their families, to do more with less, to make the sacrifices necessary to win the war.

These publications need those facts from responsible Government sources and the Office of War Information has been supplying them. The industrial editors have not been swamped with hundreds of releases from scores of Government offices. Instead they have been receiving a single release once every 2 weeks. This release has contained only information of value to their publications.

We do not know what will happen if the Office of War Information Domestic News Bureau is rendered inoperative. Whatever happens, certainly the industrial publications of the country will continue to do everything they possibly can to win the war. But they foresee grave difficulties.

None of these publications have sufficient funds to maintain bureaus in Washington. Few have funds with which to hire editors to read, evaluate, and rewrite press releases from multiple Government agencies.

Therefore, it is with the plea to keep these publications in the fight that we petition your committee to make certain that the Office of War Information gets sufficient funds to keep war information coming to the industrial press of America.

MERRICK JACKSON,
President, National Council of Industrial Editors Associations.

RESOLUTION UNANIMOUSLY ADOPTED BY GEORGIA PRESS ASSOCIATION

The following resolution was unanimously adopted by Georgia Press Association at closing session to be forwarded to Elmer Davis:

"The newspapers of Georgia are increasingly aware of the need of conveying to the public information from governmental agencies which is necessary to the war effort. Our space is limited and our time and personnel inadequate, but we wish to do everything humanly possible in this emergency. To most effectively attain this end the board of managers of the Georgia Press Association has authorized me to make the following requests:

"1. That all material from governmental agencies be cleared through one central source, the Office of War Information.

"2. That news stories be clearly designated, or listed, in the order of importance as seen by the Office of War Information.

"3. That the contents of this letter be transmitted to every bureau of Government dispensing information.

"4. That every newspaper in Georgia be placed on the mailing list of the Office of War Information for regular releases, based upon a reasonable determination of the space requirements.

"With the granting of these requests, we pledge to the Government the fullest possible cooperation of Georgia newspapers in carrying to the people as complete information on the war and home fronts as is possible."

OTIS A. BRUMBY,
President, Georgia Press Association.

Hon. KENNETH MCKELLAR,
Chairman, Senate Appropriations Committee, the Capitol, Washington, D. C.:

The American Newspaper Guild, with a membership of 20,000 working newspaper men and women, believes that the Office of War Information is an essential war agency doing a vital war job.

We believe that the American people are entitled to get as much information as it is possible for them to get. We believe that now more than ever—in this critical summer of 1943—a strong Office of War Information is imperative to help the reporters get out the facts to the American people—to help get the news of developments at home and abroad to all Americans. We believe that the Office of War Information has been of great service to the Nation in helping to obtain information about the war, in helping to eliminate confusion, and in helping reporters get the facts.

On behalf of the members of the American Newspaper Guild, I request that full appropriations be voted for adequate operation of the Domestic Branch of Office of War Information, at least to the extent proposed by the Budget Bureau.

MILTON MURRAY,
President, American Newspaper Guild.

Hon. KENNETH MCKELLAR,
Chairman, Senate Appropriations Committee, Senate Office Building, Washington, D. C.:

Executive committee Washington Newspaper Guild asks Senate Appropriations Committee restore funds which Budget Bureau found necessary for operation domestic branch Office of War Information.

Office of War Information operations have aided reporters and other newspapermen in complex task of covering greatly expanded governmental war agency activities. Washington news bureaus and correspondents would find it extremely difficult to get all war news without such a central source. Channelizing of war agency news through Office of War Information is necessary to avoid interagency confusion. Recent Newspaper Guild national convention unanimously adopted resolution stating Elmer Davis as Office of War Information Director is best guaranty Nation could have freedom of the press.

By order of the executive committee.
WASHINGTON NEWSPAPER GUILD,
By MARY KOVNER, *Administrative Officer.*

WAR AGENCIES CORRESPONDENTS' ASSOCIATION,
Wshington, D. C., June 22, 1943.

Mr. ELMER DAVIS,
Director, Office of War Information, Washington, D. C., June 22, 1943.

DEAR MR. DAVIS: The War Agencies Correspondents' Association yesterday unanimously passed the following resolution, which might be of some interest to you:

"An Office of War Information should be in business on the home front.

"It has been the experience of members of the War Agencies Correspondents' Association who have daily contact with the Office of War Information that the agency has consistently tried to get the facts about the home front war operations and to present them in a fair and competent manner.

"True, the Office of War Information's efforts have not been wholly effective. We have criticized it in the past and may in the future, but our criticism would revolve around a demand that it do a more effective job along its present lines of effort.

"A more vigorous, not a dead Office of War Information is needed."

Yours sincerely,
DOROTHY ROCKWELL,
Philadelphia Inquirer, Secretary-Treasurer.

We Should More Fully Appreciate the Importance of Food Production

---

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. MURRAY of Wisconsin. Mr. Speaker, the inflationary spirit—hold-the-line program—is only heard when the people in low-income brackets are concerned or when the American farmer is in the picture.

First. There is nothing phenomenal in the fact that the C. C. C. can show a profit as claimed. Why should they not? They have ample Federal funds to buy at the low-price periods of the season and sell at the higher price season of the year. They pay no taxes, income taxes, or general business expenses. They acquire the stocks off the farmer at below cost of production or parity prices and hold them for a higher market. The C. C. C. has made its profits off the American farmers at subnormal prices.

The C. C. C. may have made money on cotton they could get off the cotton farmer at half the cost of production, but after they obtained the cotton the Agriculture Department used section 32 funds to dispose of it, as is shown by

the following paragraph from an official letter from the United States Department of Agriculture. It is as follows:

The Department of Agriculture paid an export subsidy on raw cotton ranging from 1½ to one-fifth of a cent per pound during the 1939–40 cotton season. Payments were made on a total of 5,787,559 bales of cotton, amounting to $37,868,918. There was no export subsidy on raw cotton during the 1940–41 season, and an export subsidy of 2½ cents per pound was paid on raw cotton shipped to Canada during the 1941–42 cotton season. This subsidy was paid on 232,542 bales of cotton, and amounted to $3,044,943.

All of the 1941–42 subsidy was paid from section 32 funds, and most (possibly 90 percent) of the 1939–40 subsidy was paid from section 32 funds. The remainder of the 1939–40 subsidy was paid from funds appropriated for the conservation and use of agricultural land resources and allotted in accordance with section 12A of the Agricultural Adjustment Act of 1938.

The C. C. C. might not have shown any loss itself, but evidently the Federal Treasury was out over $37,000,000 in 1 year as an export subsidy. The cotton might have been taken off the C. C. C. without loss to the C. C. C., but evidently the United States Treasury is not so fortunate. The cotton farmers also received during 1939–40 over $200,000,000 out of the Federal Treasury for growing or not growing cotton, and received over one hundred and ninety million in additional payments because it did not bring enough in the market place. With these huge cotton subsidies, the cotton farmers may be able to continue to let the C. C. C. speculate on their cotton and show either a profit or loss on its activities, as the case may be. Second. The facts on the cheese situation. The gentleman from Oklahoma [Mr. MONRONEY] appears not to have all the facts about Cheddar cheese. Here is a short sketch of the prices of this product. In April 1941, cheese was 16+ cents per pound; Secretary of Agriculture appealed for increased production for lease-lend; production and price increased to January 1942, when it had risen to 24–25 cents per pound; Agriculture Department had made promises as to prices, but in 1942 refused to pay but 21 cents per pound for Federal purchases; prices rose to 23¼ plus by the fall of 1942; December 1942 saw the price of 27 cents per pound provided by order; 23¼ cents per pound was the price and 3¾ cents per pound subsidy. Cheese production has been from 20–25 below the corresponding weeks of a year ago. This proposed roll-back on butter will possibly divert milk to cheese production, but I do not want any of my colleagues to show how this subsidy on cheese increased the production of Cheddar cheese.

How about other than Cheddar cheese? Swiss cheese was about 30 cents per pound (September 1942), but the O. P. A. let the ceiling price be advanced 2 cents more. Result, the Swiss cheese is bringing its price in the market place without asking future generations to pay for it.

Third. The gentleman from New York [Mr. CELLER] said today that the average income in New York was $40 per week, or $1 per hour. Of course, it is much more for many groups. Here today you want to roll back the price of butter where the producer does not get 40 cents per hour to produce it. This is just a scheme to get someone else to slave to produce food for you at less than 40 cents per hour—the guaranteed minimum rate provided for all nonagricultural groups. Is it any wonder that only 40 percent of the farmers have electric lights, and only 1 out of 10 have a bath tub?

The people in Washington in 1942 received 28 percent more per capita income than in 1941. You recently voted the people on the Federal pay roll obtaining from $2,900 to $12,000 a year an increase of $328 in salary. Do you want to now pay their grocery bill?

The principal cause of high food prices is the O. P. A. approach whereby food is not to be funneled through the normal trade channels.

Master of National Grange Presents Plan to President

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 29, 1943

Mr. AUGUST H. ANDRESEN. Mr. Speaker, when someone objects to an administration program, the general New Deal retort is that no one has proposed a better plan. A large majority of farmers and consumers object to the roll-back and subsidy program. All of the large farm organizations are fighting to prevent the payment of subsidies. They want no part of them.

Mr. Albert S Goss, master of the National Grange, has submitted a definite plan to the President for the prevention of inflation and for the handling of the food problem. Since I feel that the ideas proposed by Mr. Goss are sound, I want you to take the time to read his letter to the President on the subject of inflation, roll-backs, and subsidies.

Letter to Hon. Franklin D. Roosevelt:

JUNE 22, 1943.

Hon. FRANKLIN D. ROOSEVELT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Since the winning of the war and the establishment of a sound and enduring peace depends so largely upon an adequate food supply, any policy that restricts or stifles production should not be tolerated. The situation with which we are confronted calls for the maximum production of foodstuffs.

It is also our duty to do all in our power to halt the drift toward inflation. If we are to prevent inflation we must remove the cause instead of treating the symptoms. There are two chief causes of inflation. The first is the pressure of excess income on an insufficient supply of consumer goods, and the second is the loss of confidence in the Government's ability to pay its obligations in dollars having the same purchasing power as the dollar it borrowed.

Price ceilings as a remedy for inflation have been tried hundreds of times during the past 2,000 years. Not once, so far as we can learn, have they succeeded over an extended period. On the contrary, they have resulted in creating food shortages, black markets, and finally, the very inflation they were supposed to prevent.

On the basis of today's prices, we have an annual income of approximately $40,000,000,000 in excess of the consumer goods available. Assuming that half this sum will go into savings, we still have the serious problem of an excess income of some $20,000,000,000, all seeking something to buy. It is impossible to dam this rapidly increasing surplus income by price ceilings. It is increasing at the rate of a billion and a half to two billion dollars per month, and history proves that it cannot be dammed.

Whenever rising production costs bump into price ceilings, production is strangled. These production costs vary greatly in different sections of the country, and local markets have normally adjusted themselves to these different costs. With inflexible ceilings, the high-production-cost areas are put out of business.

To overcome this difficulty we began the use of subsidies. Nevertheless, no system of subsidies has ever been devised which is effective enough to reach only these high-cost areas. Any subsidy system which is effective in maintaining production must be flexible enough to keep the high-cost producer in the field. Under such a plan the low-cost producer would receive an unwarranted profit.

As a matter of fact, subsidies, as now employed, do not reach many of the small producers at all, so they are the direct victims of the roll-back. Neither are they sufficient to aid many of the high-cost producers. It follows, therefore, that the ceilings are cutting off production just as they have always done whenever tried.

Thus it will be seen that the ceiling method increases the inflationary gap by reducing production. On the other hand, when used in connection with subsidies, it increases the gap at the other end because the Government has to borrow the money paid in subsidies, and most of this is borrowed from banks. This increases our national spendable income. The subsidy, therefore, defeats itself. The present plan attempts the impossible by putting economic law into reverse. Higher prices encourage production and discourage consumption. The subsidy program encourages consumption, and to the extent that the subsidies fail to reach the producers they discourage production.

After everything reasonable has been done to increase production, including a compensatory price, if the supply will not meet the demand, the next step is to reduce the demand to fit the supply. This can be done in two ways. First, by increased taxes and increased savings, or both. Second, by rationing. Where goods are scarce, rationing should be applied so that the supply will be divided equitably. Commodities can be rationed to produce a surplus which can be used to hold prices at reasonable levels without the use of ceilings; although ceilings to prevent profiteering may be necessary in some instances. Ceilings should be used for no other purpose.

If we do not take practical steps to close our fast-increasing inflationary gap, plain economics will do it for us, as has always occurred in the past. More and more goods will flow through black markets at higher prices, reducing the purchasing power of the dollar until it comes into balance with the supply. That is inflation.

If this Nation is unwilling to pay the cost of its food bill during these years of record income largely based on Government outgo,

how can we ever expect our price structure to become balanced? In launching upon a subsidy program in our efforts to hold down the cost of living, it cannot be too strongly emphasized that there is only one basis upon which any government can endure, and that is that the people must support the government. Any attempt to reverse this principle, asking the Government to support the people cannot fail to have disastrous results.

Why should we cut the price of coffee 3 cents per pound, butter 5 cents per pound, and meat 2 cents per pound to everybody, including the wealthy and those whose incomes have increased more than the cost of living in order to aid the few with fixed or low incomes? If subsidies are necessary for the relief of, say, 10 percent of our population, it is an enormous waste to subsidize the other 90 percent who do not need it. A far better scheme would be to use the stamp plan which was employed during the late thirties. Thus the subsidy would go to only those who need it, and it would not be necessary to place ceilings which fast curtail our already diminishing food supply

England has been cited as an example for us to follow in the matter of price ceilings and subsidies. However, the English economy is almost the reverse of our own. England is an industrial nation, with only 7 percent of her population engaged in agriculture. Her interest lies in maintaining a low level of food prices, and the 93 percent of her people can well afford to subsidize the other 7 percent to keep food at the desired level.

In England the consumer pays 60 percent of his income for food, as contrasted with 22 percent in America, believed to be the lowest on earth.

In England they have practically closed the inflationary gap, largely by taxation. Three years ago there were 7,000 people with a net income in excess of $25,000 after paying taxes. Last year this group was reduced to 80. At the other end of the line, England has sales taxes ranging from 12 to 72 percent of the retail price.

England pays a subsidy, but in effect the United States pays it for her. During the 2 years ending March 1, we exported to England under lend-lease $1,449,064,000 in foodstuffs. She sold this food to her people and out of the proceeds paid subsidies estimated at approximately $730,000,000, with a tidy balance left over. Thus England did not increase her inflationary gap by borrowing the subsidy money from banks.

The English figures do not tell the whole story. In her food index she uses only 14 items, largely those received from America, which are under complete control. She does not include such home-grown products as fresh fruit, fresh vegetables, or any canned goods. The prices on these items have risen sharply. They have had to go up in order to maintain production, but this increase does not show in the food index which England exhibits as proof that food prices have not been allowed to advance.

It should also be noted that England is having a serious time with black markets. She has had to increase the penalty for the sale of food above ceiling prices to 14 years in prison, plus $20,000 fine, yet with these severe penalties, prosecutions have increased 320 percent in the last 2 years and the Ministry of Food has recently reported that black markets are endangering the successful prosecution of the war.

We therefore feel that it is not wise to try to follow in England's footsteps, but rather that our course should be based upon the sound economics necessary to maintain a maximum food supply, for we have no one but ourselves to look to for aid.

Sincerely yours,

THE NATIONAL GRANGE,
By ALBERT S. GOSS, *Master.*

Mr. Woll States His Position

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 29 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Mr. Matthew Woll, vice president of the American Federation of Labor, to the editor of the New York Times and published in the New York Times for June 25, 1943.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MR. WOLL STATES POSITION—CHARGES IN COMMUNIST ORGAN DENIED ON BASIS OF HIS RECORD

To the EDITOR OF THE NEW YORK TIMES: In your issue of June 18 you carry a dispatch from Moscow quoting a Soviet publication, purporting to speak for the Russian workers, in which I am characterized as a "reactionary" labor leader who is "misleading" workers into "unpatriotic, antiwar strikes." I am charged in the dispatch by the alleged organ of the Russian workers (head of the Russian Communist Party) with "inciting strikes" and "generally favoring isolationism." The charge is also made by the Soviet publication that I belong to those American labor leaders who "apparently place personal motives and the desire to retain their posts and serve the needs of certain political groups above the labor movement."

Together with the false allegations that I have incited unpatriotic antiwar strikes, the statement is made in the dispatch that "we should not be at all surprised if the real initiators of this suspicious strike campaign were found in Berlin," etc.

The Communist International has been ostensibly abolished, but the Russian Communist Party and the dictatorship it represents continue, with the aid of their agents in America, to pursue their old policy of character assassination against the leaders of trade-unions in the democratic countries. This policy is reflected constantly in the pages of the Daily Worker, official organ of the "American" Communist Party, and other Communist publications in the United States.

STANDS ON RECORD

I need not contradict the libelous charges. My record is known to 6,000,000 members of the American Federation of Labor and to the American people in general. I am writing this solely with the purpose of helping to make clear the fact that the Communist leopard has not changed its spots or its objectives.

The fact is well known to all informed Americans that at the time when Foreign Commissar Molotoff was telling the Russian people and the organized workers of the world that "fascism was only a matter of taste," and Joseph Stalin was sending birthday greetings to Adolf Hitler, I was in the forefront of those who demanded active intervention by the United States against the aggressions of the Axis Powers.

I have never altered my attitude. There is no dividing line marked "June 22, 1941," in what I have advocated with respect to our Nation's foreign policy, and the utmost possible cooperation of organized labor with our Government in the implementation of that policy, a policy which the American Federation of Labor has steadfastly espoused and to the formulation of which I have made my contribution.

Why, then, do the ruling Russian Communist Party and its agents in this country continue to wage their poisonous campaign against me and other leaders of American labor, against all representatives of American democratic society actively opposed to all forms of totalitarianism? Why, as another example, do they assail men like David Dubinsky, president of the International Ladies Garment Workers Union, and others like him, in language similar to that applied to me in the afore-mentioned Moscow dispatch in the New York Times?

CAMPAIGN AGAINST LABOR

Where would America be today, where would Russia be today, if the representatives of American labor, whom the Communists still seek to destroy, had followed their policy?

But why do the Russian Communist Party and its agents here continue to wage their campaign against us? They do it because the zigzags of the Communist line, such as the dissolution of the Comintern, have never for a single moment diverted them from their main and sole objective: Capture and destruction of the democratic labor movements wherever they continue to exist, and by any and all means available. To this end they persist in their campaign of character assassination against the duly accredited representatives of the trade unions in this country, or sowing distrust and dissension among the organized workers everywhere. They cling to the belief that establishment of Communist dictatorship requires, first and foremost, the destruction of the free labor movement, a lesson Hitler learned from them.

I am sure that the overwhelming majority of the rank and file of American labor will know how to evaluate this pogrom agitation. Filled with admiration for the magnificent conduct of the Russia people and their heroic armies in the war, and eager to help them in the greatest possible measure, American trade-unionists will nevertheless remain uncompromisingly opposed to communism and to its agents in the United States.

MATTHEW WOLL,
Vice President, American Federation of Labor; President, Labor League for Human Rights-United Nations Relief.

NEW YORK, *June 23, 1943.*

Pre-War and Post-War Positions of Hon. Robert R. Reynolds, of North Carolina

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 29 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, there is published in Rutherfordton, N. C., the Rutherfordton News, a weekly newspaper. Mr. R. E. Price is the editor and publisher. In the issue of June 3, 1943, there was an editorial criticizing my pre-war position and making comment upon what naturally my position would be as to post-war matters. Having read that

editorial, I took exception to what he had said, and addressed a communication to him. He was kind enough, and exhibited sufficient fair play to publish my letter. I therefore ask that the article, entitled "Senator Reynolds Replies to Editorial in the News," published in the Rutherfordton, (N. C.) News of Thursday, June 24, 1943, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR REYNOLDS REPLIES TO EDITORIAL IN THE NEWS

Senator REYNOLDS last week replied to our editorial and requested that we publish his statement. We believe in fair play, and hence publish his reply, as follows:

He quotes the first paragraph of our article:

" 'Senator REYNOLDS opposed American aid to the Allies before this country entered this war. There is nothing in the record of Senator REYNOLDS since Pearl Harbor which would make one believe that he favors America's post-war cooperation with other nations for the establishment of a stable and peaceful world society, or that he would be disposed to do anything to further such cooperation. Rather we would be inclined to think that he would try to obstruct it, just as he tried to obstruct our proper self-defensive cooperation with the Allies before our country was involved in this war.' "

"In answer to the above, I shall state very frankly that I did oppose America's aid to Great Britain and France before our country entered this war. By that I mean that:

"1. I voted against the lifting of the arms embargo. In other words, I opposed our manufacturing arms for Great Britain and France because I felt that such would make us an ally of Great Britain and France and thus would unquestionably be a step toward war.

"2. I voted against the repeal of the neutrality laws. These laws had been enacted by the Congress of the United States on the recommendation of President Roosevelt at a time when they stated that we needed the enactment of the neutrality laws to keep us out of the war. Then later the administration recommended the repeal of the very laws it had insisted that we enact in order to keep us out of the war. I voted against the repeal because I wanted this country to stay out of this war or any other war.

"3. I voted against the passage of the Lend-Lease Act which would supply France and Great Britain with everything they desired at the expense of the American taxpayers. I felt that the passage of the lend-lease bill was such a long step toward war that I declared at the time that its passage would be nothing more or less than a declaration of war.

"Those who voted for the lifting of the arms embargo, the repeal of the neutrality laws, and the passage of the Lend-Lease Act declared that all of these measures were steps away from war, whereas, on the other hand, I declared that they were steps toward war

"As an isolationist and an American Firster who wanted to keep America out of this war or any other war, I voted against all these measures, believing that the passage of each and every one of them were steps toward war, whereas the interventionists were declaring that they were steps away from war. Well, the interventionists won.

"Answering your particular statement quoted above, to the effect that 'he tried to obstruct our proper self-defensive cooperation with the Allies before our country was involved in this war,' I wish to advise that those of you who insisted upon our lifting the arms embargo, repealing the neutrality laws, and passing the Lend-Lease Act stated that unless we did so Germany would attack us on our own shores. Well, of course, that, in my opinion, was a lot of propaganda aimed at frightening the American people. The British Isles are separated from Hitler and his hordes by only a little strip of water, the English Channel, and after almost 4 years of war they have not succeeded in invading the British Isles. I argue that if they could not cross a little strip of water like the English Channel, what chance would they have had of crossing the Atlantic Ocean, 3,000 miles of turbulent waters, and attacking us here.

"I dislike bringing these matters to your attention, but you have occasioned me to do so by the statements set out in your editorial.

"In reference to your statement to the effect that I would not be disposed to do anything to further world peace, but on the contrary that I would be inclined to obstruct it, I wish to say that there you are in error.

"I believe in peace with all nations on earth. I was opposed to getting into this war, while you and those who shared your views evidently approved of our participation long before Pearl Harbor and long before Germany declared war against us—and may I add right at this point that it is my opinion that those of you who were yelling the loudest in demanding our participation in the war before Pearl Harbor and before Germany's declaration of war against us, are the very ones who are today demanding peace for all time.

"I think we should cooperate with any nation or nations for a lasting peace, but I do not want this cooperation to be of a nature that would place all of the responsibility upon the shoulders of the taxpayers of America or destroy the sovereignty of the United States of America. We all want peace. In World War No. 1 we were told that we were fighting that war to stop all wars for all time. Well, we did not succeed. In World War No 2 we were told that this was a war that would stop all wars for all time—and I hope and pray that this particular objective will be accomplished.

"In your editorial you stated that: 'America can no longer remain in isolation after this war.' I shall not go into this subject, but I wish to say that if our becoming internationalized is going to destroy the American way of life, lower the standards of the American working men, and place our workers in direct competition with the coolie labor of Asia and the peon labor of South America, all to the disadvantage of the American working men, then I am opposed to it; just as I am opposed to a bill which has but recently been introduced in Congress to admit Chinese under the immigration laws to this country in competition with the American laboring man; and just as I am opposed to, and now condemn, our administration for having permitted more than 480,000 aliens and refugees from Europe to enter this country since the war began in Europe on September 3, 1939. These more than 480,000 people have been permitted by the administration to enter this country as students, tourists, travelers, and businessmen. For these very people our own American boys are dying on foreign battlefields. I take the position that they should have joined up with the fighting forces in their respective lands against the murderous aggressors against whom we fight today, instead of their coming here to bask in the sunshine of a safety zone, while our own native sons are sent to their portions of the world to fight for their freedom. As I recently stated on the floor of the Senate I not only was an isolationist prior to Pearl Harbor, but I am now more of an isolationist than ever before, and in defining isolationism I mean by that that I believe firstly in looking after the interests of American people. I believe firstly in looking after the interests of our United States of America. I believe firstly in doing that which is best for the people of our Nation. I believe in maintaining friendly relations with all the people of the earth, if at all possible, and I believe in trading and encouraging trade with all the nations of the earth."

Address by Hon. Jesse Jones to the Made in America Rubber Luncheon, Houston, Tex.

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 30 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Hon. Jesse Jones, Secretary of Commerce, and telephoned to the Made in America Rubber luncheon in Houston, Tex., on June 28, 1943, and broadcast over a Texas State network.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Texas Rubber Day—I salute you, and wish with all my heart that I could be at home for this occasion.

Texas has long been first in cattle, first in cotton, first in petroleum, and first in natural gas. These commodities constitute a large part of the everyday life of America. Now comes rubber, which is of equal importance in our present-day economy. Because we in Texas have more of the necessary raw materials, which can be produced at the lowest cost, Texas will be first in rubber.

The war forced us to move with top speed in the manufacture of rubber, going from the laboratory stage to building an entire industry.

By the end of this year we will have our own rubber industry, capable of meeting all essential needs, both for war and for civilian requirements.

What you see today at Baytown and Houston is only part of a $700,000,000 rubber industry, with 40 plants throughout the country, built in a period of 2 years, starting from scratch in early 1941. Originally, plans called for only 100,000 tons annually—sort of a learn-how procedure.

The goal after Pearl Harbor was to build facilities for the manufacture of synthetic rubber which would keep our transportation economy in motion, and provide for the war, and to do it as rapidly as possible. It became necessary not only to manufacture rubber for our own use, but for that of our allies, who, before the fall of Singapore and the loss of the Dutch East Indies, has produced and controlled 90 percent of the world's supply of natural rubber. By December this year we will have a manufacturing capacity in excess of 800,000 tons a year, which is more than we have ever used, and sufficient for all our essential purposes.

With the exception of a few small refinery conversions, our program for the production of rubber—from raw materials to the finished product—is being completed under the direction of Rubber Director William Jeffers, in

accordance with plans and contracts developed by the Reconstruction Finance Corporation and its subsidiaries.

The task has not been an easy one. Those in charge of the program have had to overcome not only such problems as shortages of material and manpower but also the confusion created by critics, who sought, and not always unselfishly, to question means, methods, and procedure without knowledge of all the facts.

Now that the storm of words has subsided, and government, together with industry, has been allowed time to do the necessary work, we have what we set out to get when we were forced into the war; that is, a completely integrated synthetic-rubber industry.

It had to be on paper before it could be built, but it is on paper no longer. It stands at Baytown, Borger, Corpus Christi, Houston, Ingleside, Port Neches, Texas City, Velasco, Lake Charles, Baton Rouge, in West Virginia, Pennsylvania, Kentucky, California, Ohio, Arkansas, and Connecticut.

It is the industry which the men at Reconstruction Finance Corporation with the approval of the President, brought into being, and they take pride in its approaching completion. They share that feeling of pride with many others, particularly the rubber industry, the petroleum industry, the distilling industry, the chemical industry, the machinery industry, engineers, and workingmen. Without their help, government could not have done the job. All have labored long and hard to overcome the loss of our natural-rubber supply.

Too much credit cannot be given to the Rubber Director and his staff. His insistence and determination that construction materials be made available, that all phases of the program be thoroughly checked, and that speed be the watchword have been responsible for the early completion of the plants. He drove the program through.

Although we are today celebrating another step, toward security in rubber from the exigencies of war, by the creation of the synthetic industry, it is but one phase—although a most important one—of the rubber situation that threatened us after Pearl Harbor.

About this time in 1940, 18 months before we were drawn into the war, your Government began protecting our rubber supply. In July 1940, President Roosevelt asked the Reconstruction Finance Corporation to build up a stock pile of rubber. Between that time and the capture of the Dutch East Indies by the Japanese, we bought every pound of rubber we could possibly get.

As a result, when we entered the war, we had accumulated the largest rubber stock pile the world has even known. We have been drawing upon that stock pile for all our own essential needs, as well as for those of the United Nations, and we still have several hundred thousand tons. We have been stimulating the production of natural rubber in South and Central America, and in Africa, by every possible means, and we are getting some natural rubber from these sources.

Because of all these activities, we have been able to keep that part of American transportation going, which is dependent on rubber.

True, we have had to conserve rubber, and it is still necessary to conserve rubber, but it is only one of many products and commodities which the demands of war have drawn upon so heavily, as to force rationing and extreme care in their use.

Our problem in all these scarce commodities is, first, to make certain that we have enough for our fighting men. Then, we must also have enough at home to produce the things our Army and Navy need and to meet essential requirements of the civilian population. That we are doing, and will continue to do.

In clothing, let me repeat what President Roosevelt said in a letter to me only a few days ago, at the dedication of another synthetic rubber plant:

"JUNE 11, 1943.

"DEAR MR. SECRETARY: As you know, I have never had any doubt but that we could successfully manufacture synthetic rubber in any reasonable quantities if it became necessary, and I am glad to see the production getting under way.

"The establishment of an industry of this magnitude, in so short a period, is in full keeping with the tradition of our people in meeting any emergency.

"All who have part in the manufacture of synthetic rubber have just cause to feel they are making a real contribution to the war effort."

The Bermuda Conference and After

REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday June 30, 1943

Mr. DICKSTEIN. Mr. Speaker, sufficient time has now elapsed to make possible a fair appraisal of the Bermuda Conference. Every unprejudiced observer will admit that the Bermuda Conference accomplished nothing. It has not indicated what it proposes to do nor how it intends to solve the refugee problem.

The newspapers carry stories of the continued destruction of Jewish people—and in lesser measure, other racial and religious groups—in all of Hitler-controlled Europe. In one way or another, thousands are being slaughtered every day and in spite of Hitler's preoccupation with the war, or perhaps in furtherance of his far-reaching plans to conquer the world, the policy of extermination is very real and will continue until there will be no victims left for further slaughter and all of Europe is overrun by modern barbarians who will seize everything and entrench themselves in power. There is no question that the wholesale destruction is part of a well-organized plan of conquest.

We of the twentieth century, particularly those of us bred in the philosophy which believes in the right of the individual to life, liberty, and the pursuit of happiness, find it difficult to comprehend the doctrine of destruction which Hitler unleashed with full fury upon the European continent. The word, "Liebenstraum," which we are apt to interpret as a mere desire to obtain territory for the development of a nation, has a sinister meaning when employed by Hitler and his gang. It means the acquisition of territories occupied by others, not for development by the Germans but for enjoyment by the Nazi hordes, reaping where they have not sowed. Such has been the policy of Hitler, Goering, and Goebbels. Let the others build, we will eat their substance and enjoy the fruits of their labor, and we will not toil or spin for a living.

It was in that spirit that the new German Government began to function under Hitler. One of our trade representatives in the American Embassy in Berlin, Douglas Miller, then coined the famous phrase "You can't do business with Hitler" and wrote a book in which he showed how Hitler has "cashed in" on the entire economic life of Europe. Of course, Hitler, who is not historically minded, but an opportunistic third-rate politician, does not know that this is not a new philosophy of government but was tried in ancient Rome almost 2,000 years ago, and it was this policy which ultimately brought about the downfall of the Roman Empire. No, Hitler never studied history and does not know that he is headed for a fall.

But until he collapses and crumbles into dust, Hitler is dragging to destruction countless human beings and he will continue to do so unless he is stopped before it is too late.

Are we, the people of the United States, going to become the unwitting accomplices of this blood-thirsty guttersnipe, as Winston Churchill so aptly called this modern Hun? Must we fold our arms and profess our inability to check this unbridled killing and destruction? I cannot accept such an attitude. It may be well and good for well-meaning gentlemen to say "We are sorry, but all we can suggest is, Let us win the war." Of course, we want to win the war. It is because we are fighting a war and sacrificing our lives that we cannot view with indifference the killing of human beings whose saving would mean help to us in our war effort. The aid which the people of this country and of Britain give to the victims of Hitler's persecution mania, is a step toward the winning of the war and as much a part of our war effort as the fight on the battlefields of the world.

Hitler-dominated Europe is a battlefield. Innocent and helpless victims are being rounded up and killed in cold blood. Hitler's example is catching. At first his satellites, Rumania, Hungary, and Bulgaria, were satisfied with labor camps and concentration camps. Now they also follow the footsteps of the master. Even Bulgaria, a country which could not exist for one day but for the generosity of our people in the last war, when mainly through the efforts of Henry Morgenthau, Sr., we organized a relief program to feed and clothe this nation. I say even Bulgaria has now become infected with the Hitler poison. A few days ago, the statement was made that all the Jews in Sofia, its capital, have to leave the city "or else." It is always "or else." Where they could go is, of course, nobody's business. Get out, and we will not tell you where. Even Hitler deports people to some destination. But the present rulers of Bulgaria go him one better and simply order them to leave the country. The Jews are expelled from Hungary, what was Czechoslovakia, Rumania, what was Yugoslavia, and all the countries surrounding Germany are gradually liquidating

their Jewish inhabitants. When they cannot find another place to go, and they cannot, they are liquidated.

There are only two countries in the world that can offer any solution at all to the immediate problem of saving these victims, the United States and Great Britain. Neither of these countries did anything to solve the problem or to help in its solution.

At the very outset of the Bermuda conference, it was decided that neither the question of American immigration quotas nor the question of a settlement of refugees in Palestine could be taken up by the conference. Without either solution, the problem cannot possibly be attacked. There is no other place for them to go. If they cannot go to Palestine and they cannot come into this country, there remains nothing but death. Hitler and his satellites were busy while the Bermuda conference went on in aimless discussions. Why should the enemies of our Nation wait until we decide what we will do?

Hitler and the dominated countries know well that their Jewish citizens are in the front lines of those fighting for freedom and democracy. They know that the Jews will never compromise for the enslavement of the human race.

Hitler sees a solution of the Jewish question only through the extermination of the Jews because he knows that the love of freedom and hatred of tyrants exhibited by the Jews throughout the years of their history will be the weapon by which he is destroyed and democracy and liberty re-established in Europe.

We derive our love of freedom from the deepest roots of the human race, and the dictators of Europe can succeed only while mankind is not looking and the world is asleep. When public opinion is thoroughly aroused, the doom of the dictator is sealed.

The rulers of the Axis countries can even now sense impending doom. But supreme gamblers that they are, they will not yield until they are thoroughly beaten. They fear the spirit of freedom and so seek to enslave those who, on the soils of Europe, represent the best element of American tradition. Unless we act and act quickly, innocent lives will be snuffed out forever.

While we work and fight toward the day when Hitler will be beaten, he is not marking time. He is busy with his work of slaughter. He goes on with his destructive activities while we of the democracies sit idly by and allow him to exterminate a whole people.

I say it is our duty as representatives of the American people to urge our Government to do everything possible to prevent the completion of Hitler's program. I say it is our duty as representatives of the American people to give such help to men and women who believe in our ideals and who are always in the forefront in the fight for the preservation of democratic principles. If this is a war to make the world safe for democracy, it is likewise a war to preserve those people who will be the fighters for democracy in the years to come.

I can only repeat the words of General MacArthur when he emphasized the fighting quality of the Jews, so many of whom have already given their lives in our cause. He said:

> The Jewish heritage has been one of suffering and sorrow. Jews have always fought against oppression, seeking freedom for themselves and for all peoples. Today the whole civilized world fights against history's greatest tyrants and oppressors. We are proud to have Jews in our ranks. Their deeds furnish unshakable proof of their courage and loyalty to our common cause—the world-wide preservation of freedom.

Is it not worth while to save such people? Will not our democracies be enriched by the people whose heritage makes them forever supporters of freedom and liberty?

For a long time now, the Jews of Palestine have been pleading for the opportunity to raise and organize a Jewish army. Such an army could be the spearhead of an effective military effort to liberate victims of Nazi cruelty. To aid and assist in such a task, we should bend all our efforts and lack of equipment is a poor excuse for inaction. When Britain claimed that she could not provide adequate military equipment for a Jewish army, she stressed nonessentials in view of the enormous task confronting us. Allow the organization of a Jewish army and you will see how courage and bravery will overcome many technical obstacles. The example of the brave Greeks and Yugoslavs shows how love of freedom can spur mediocre armies to win victories.

When the enemy sees our faint-heartedness and muddling, when we display a reckless lack of interest, no wonder the forces of evil go on in their unbridled ways. We cannot remain indifferent and expect success. Lip service is inexpensive and ineffective. Deeds and actions are necessary. We cannot leave the victims of persecution and tyranny to their own fate if we want to preserve peace and justice in the world.

Why Blame Congress?

REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. McLEAN. Mr. Speaker, every Member should resent the effort being made to make Congress responsible for the failure of the price-stabilization program. The program is wobbling. It gives promise of failure. Someone must be found to blame it on, and there is a studied effort to put the responsibility on the Congress. The latest blast comes from the President himself.

On Monday Mr. Chester C. Davis resigned as Food Administrator. He said he could not stand it any longer because the duties he was supposed to discharge were being exercised elsewhere, and because he did not believe in the program of broad general subsidies announced by the President on June 15. In his letter accepting the resignation of Mr. Davis the President indicted Congress. This is what he said:

> I agree with you that we cannot fully or effectively enforce our price or rationing programs or fully or effectively stabilize the cost of living without an adequate tax and savings program to drain off excess purchasing power. I have emphasized that fact in my Budget message, in my statement on the hold-the-line order and on other occasions. But because the Congress has not yet provided the tax legislation I have requested, I cannot sit back and fail to advocate other measures, such as limited consumers' subsidies, which I am convinced can help to prevent the cost of living from getting completely out of hand. Of course, you know that I also favor and have advocated such support programs and incentive payments to producers as will enable us to obtain the necessary war production.

So the foundation is laid to make Congress responsible for the failure of the Price Stabilization Program. The fact is that the fault lies with the President and the Secretary of the Treasury, Mr. Henry Morgenthau, Jr. They have failed to recommend a tax program beyond that already adopted by Congress, and have been unwilling to recommend compulsory savings, and have resisted the enactment of a retail sales tax.

Last October the House of Representatives passed the Revenue Act of 1942. Most of the year had been given to the preparation of the measure. Mr. Morgenthau was dissatisfied with it and criticized it because he thought its yield should be larger, and he said that a bill to raise $6,000,000,000 in addition would be necessary. He said further that he "had the way to do it and was prepared to present the program to them"—meaning Congress—"as soon as they are ready to receive us."

This statement was made on October 5. On October 6 I directed attention to the statement of the Secretary, and suggested that any ideas he had concerning additional taxes should have been presented before we embarked upon the stabilization program because, as a result of taxes that were not then in contemplation, the whole job of stabilization might have to be done all over again. I also said that, if the Secretary of the Treasury had knowledge that additional taxes were needed and the means by which they could be provided and did not come to Congress and make the facts known, he was guilty of conduct akin to misfeasance.

I did not advocate delay in the preparation of the pending bill in order that the Secretary's new program might be included in it, but I did offer the suggestion that it should be taken up immediately so that it could be done with reasonable continuity, and the pending bill and any necessary supplements could be as one and the same.

No word was received from the Secretary of the Treasury as to additional taxes for revenue purposes, to prevent inflation or as an aid to the stabilization

program, in spite of the fact that on the 5th of October he had said he had the way to do it and was prepared to present the program to Congress. Neither by their own volition or by request to the chairman of the Committee on Ways and Means was anything done toward initiating a supplemental tax program.

In the latter part of January 1943, when there appeared to be no activity looking toward a new tax bill, the Republican members of the Ways and Means Committee issued a joint statement demanding that some progress be made. This brought about the consideration by the Ways and Means Committee and the enactment of the pay-as-you-go program and the withholding method of collection. This was a bill to modernize the method of collection of income taxes and did not have any purpose of increasing revenue or stabilizing purchasing power.

Since this act was passed there has been much talk of a tax bill to raise additional revenue to drain off purchasing power, but nothing seems to be done about it.

Congress has not heard from the Secretary of the Treasury on the subject of additional taxation as a price stabilizer. Through the public prints it would appear that his time has been taken up with other matters. He has visited England where reports indicate he lunched with the merchant princes, discussing a financial program for after the war. He spent a considerable time in Bermuda, and reports of the recent drive indicate that he made an extended tour throughout the West to aid in the selling of the bonds.

Sometime in April it was announced that the Secretary of the Treasury would meet with the Finance Committee of the Senate and the members of the Ways and Means Committee in joint session. I anticipated some reference to the tax situation, but it turned out to be nothing more than a publicity stunt incident to the bond-selling campaign, and the publicity given out was entirely at variance with what actually occurred, but nothing was said about taxes. The professional high-pressure bond salesmen and publicity experts had the floor.

The Secretary of the Treasury said on October 5 that $6,000,000,000 in additional revenue was needed. In his Budget message the President said we would have to raise $16,000,000,000. The Secretary of the Treasury in his latest statement has reduced the amount to twelve billion. This statement was made for last Sunday morning newspapers, but has not been communicated to Congress.

Maybe there is confusion as to the purposes of taxation. Some may look upon it as the means for raising revenue for governmental needs. Others may take the view that it is to be invoked for social purposes and regulating people's habits of life. Whatever the purpose may be, the Secretary of the Treasury on October 5 last told the newspaper reporters he had the answers. But Capitol Hill seems further from the Treasury Department than London, Bermuda, or the Pacific coast. So why blame Congress?

Congressional Recess

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday June 30, 1943

Mr. RANKIN. Mr. Speaker, from the press we learn there is a movement on foot to have the Congress recess for 2½ months. I want to serve notice now that I shall oppose any such movement. Of all times when the Congress ought to remain on the job, it is now, when we are not only in the midst of the greatest war of all times, but involved in so much confusion at home. If you want to take individual leave, or even a recess, for 30 days, that is different; but for Congress to leave here now and go home for 2½ months with the unfinished tax business, and other unfinished business we have pending, is unthinkable to me. We might as well give the boys on the battle-front a 70-day furlough. I, for one, shall oppose any such extended recess.

Mr. HOFFMAN. Will the gentleman yield?

Mr. RANKIN. I yield.

Mr. HOFFMAN. Why should we not stay in session until some of these administrative agencies finish their quarrels? How can the President expect unity among the people while the members of his official family are quarreling publicly?

Mr. RANKIN. I am in favor of remaining in session until we finish our quarrel with Germany, Italy, and Japan.

The SPEAKER. The time of the gentleman has expired.

In the Interests of Honesty and Accuracy

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. MUNDT. Mr. Speaker, the attached news clipping from the public press is self-explanatory. It is a bluntly worded condemnation of the propaganda techniques employed in trying to sell Mission to Moscow to the American public as a factual film, and it comes from a group of critics and writers who could not even remotely be considered as unfairly antagonistic to Russia.

It is important, however, that deliberate propaganda be labeled as such and that the intelligence of Americans be not insulted by attempting to feed them fiction under the label of facts. The strained and labored effort of Mission to Moscow to convince gullible movie-goers that red is white is not only poor entertainment but it is in extremely poor taste and indicates a failure on the part of its sponsors to appreciate the native sales resistance which American citizens have to the force feeding of propaganda and piffle. The writers' war board does well to call the attention of the country to the fact that this picture deserves "an unfavorable rating of three duds."

Mr. Speaker, the country and the Congress will be interested in the following news item from the daily press:

MISSION TO MOSCOW MOVIE FALSIFIES, WAR WRITERS SAY

Warner Bros. controversial film, Mission to Moscow, falsifies facts about Russia, the Writers' War Board has informed its 2,000 members who comprise most of the country's professional writers, it was learned today.

In its current report the board, semi-official agency through which the writers contribute their talents to the Government, gave the movies an unfavorable rating of three duds. The board is headed by Rex Stout, Franklin P. Adams, Pearl S. Buck, Russel Crouse, Clifton Fadiman, and Paul Gallico.

The report declared:

"Giving Mission to Moscow three duds was a difficult decision. We are aware that the picture does a valuable service for a trusted ally, but we feel that the deepest principle of human liberty is involved—the necessity of telling the public the truth.

"The true case for Russia is excellent. It is not necessary for Hollywood to falsify facts to make it slightly better

"Every movement for appeasement is based on the idea that an untruth or a distortion is excusable if it serves a greater good. We cannot subscribe to such a doctrine, however desirable the immediate effect."

The board operates through the Office of War Information and serves such agencies as the Army, Navy, Office of Civilian Defense, Treasury Department, and War Production Board.

Women's Equal Rights Amendment

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday June 30, 1943

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me over station WHN, Tuesday, June 29, 1943:

Congressional Record on the Air! From Washington, D. C., ladies and gentlemen, WHN brings you the thirty-second weekly program in a public service series featuring outstanding leaders of the United States Congress. Tonight, we're privileged to have as our guest the Honorable EMANUEL CELLER, of New York. Congressman CELLER, a top-ranking member of the House Judiciary Committee, will discuss with you tonight the question of women's equal rights amendment.

Congressman CELLER. For 20 years now, the controversy concerned with equal rights for women has been raging on Capitol Hill. As inevitable as the seasons of the year, each congressional session sees introduced an equal-rights amendment for women. The present session is, of course, no exception. As it stands today, the proposed equal-rights amendment to the United States Constitu-

tion reads as follows: "Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation."

So there it stands, with innocent countenance and forthright, to all apearances on the side of the angels. The well-intentioned have rallied under its banner with an emotionalism and ostrichlike refusal to face facts and consequences that bid fair to circumvent rational legislation based on rational thinking.

Let it not be assumed for a single minute that those of us who are opposed to the equal-rights amendment necessarily countenance or sanction discrimination against women, economically, politically, or socially. For example, I was the successful sponsor of the bill to commission women doctors in our armed forces. If otherwise qualified, sex should be no bar. With the most fervent and fevered adherents of the proposed amendment, we would away with the barriers raised against women's advancement solely on the ground of sex. We agree that we can never achieve the full measure of the democratic way of life without eradicating the idea of the subservience and inferiority of women. Why then this opposition to a seemingly open sesame to equality?

If the overheated proponents of the so-called equal-rights amendment would put some of their ardor into mature reflection of what the tendered bill really means, and not willy-nilly wrap themselves in the folds of a vague, mischievous, abstract proposition, they might better serve the progressive march of womankind.

What all-embracing magic formula is this that will erase prejudices, change standards, conform the ideology of the North with that of the West and that of the East with the South? This is a proposed amendment to the United States Constitution, be it remembered. Does it mean that all of the 48 States and Territories shall have uniform laws, that if, for example, one State—and there is such a State—makes the legal age of consent to marriage that of 12 for women, that all States and Territories shall do likewise, or shall it be throughout the Union that of 16 as in other States or 18 as some States have it? Who is to say? Will Congress have to legislate further so that the respective States conform to what the Federal notion of equal rights may be? Will interpretation of the statute rest in the State courts or in the Federal courts? What are equal rights? How will rights be distinguished from duties, and duties from obligations? Who will write the definitions?

Very well, then, suppose the other interpretation is accepted and the amendment means simply that within each State women shall have rights equal to men and that Rhode Island need not concern itself with what Texas believes equal rights are. There still remains confusion worse confounded. You'll have 48 pretty kettles of fish.

In that same State where the age of consent to marriage is 12 for girls and 14 for boys, would the equal-rights amendment increase the age for both boys and girls to 14 or lower it to 12? A host of such similar questions must follow, and I for one, will be extremely grateful if some sage soul can show me how aught but chaos can grow out of a blanket law that seeks to cover every phase of human relations. It reminds me of the doctor who cheerfully chirped, "The operation was successful, but the patient died."

Who will tell me what effect equal rights will have in those States where the husband's failure to support his wife is grounds for divorce? Would the shoe be on the other foot, giving the husband the divorce if the wife did not support him? A husband is obligated to support his wife. The wife in turn is obligated in one State at least to turn her pay envelope (if she has one) over to her husband, and it is customary for her to render services in the home without pay. Certainly these rights and responsibilities of husband and wife are very different. But are they therefore unequal? What is equality? Does it mean that the husband should be freed from his obligation to support his wife? Or that the wife should be forced to support her husband? Or should support be a joint affair, and if so; on what terms? Then, again, how about the wife's wages and services? Should she be allowed to keep the pay envelope or perhaps even to receive wages when she cooks her husband's dinner? On the other hand, what about his pay envelope? What about his cooking the dinner? Lastly, doesn't it make any difference if it is she and not he who bears and principally rears the children? These questions are not asked in a spirit of levity; rather, in honest concern for the social structure.

In some States the woman reaches the age of majority at 18. The man must wait until he is 21. Under the so-called equal rights, does the majority for a man become 18 or the majority for a woman become 21? This is so in recognition of the accepted fact that women mature earlier than men. You can't change that fact by law. How would the question of contract rights be affected? What, then, would be the legal age for voiding contracts entered into while a minor? Again, in most States, the estate of the deceased husband is liable until administration is completed for the support of the wife, regardless of will or anything else. The estate of a deceased wife is not liable for the support of the husband. What would happen in such cases under equal rights?

Some States prohibit night work for women. Would that mean that women will be permitted to work nights or that men will not be permitted to work nights? What of the draft act? Could a man refuse combat service unless women joined them in battle? Many State constitutions provide that all able-bodied men are part of the State militia. Is this a right that women shall assert or is it an obligation with which men alone are burdened? Would the men get the "rights" of women, or women those of men, or neither, or both? The equal-rights amendment would be like giving a shotgun to a blind man. Certainly he could shoot, but whom would he hit?

Because of the physical nature of the differences between man and woman, because of the manifold roles she perforce plays in life—wife, mother, worker, and citizen—we must keep in mind that legislation not consonant with the laws of nature can but lead to chaos and, yes, inequality. Certainly, much injustice can result to women in the enactment of such ill-considered legislation. The mind reels with the number of questions that must necessarily arise with an honest and fearless examination of the equal-rights amendment. Those concerned with social and human welfare can ill afford to ignore the implications and interpretations implicit in the blanket equal-rights amendment. The framers of the proposed amendment have apparently forgotten that the majority of women are homemakers, rearing children, and adhering to the marriage bargain of men providing the livelihood and women serving the home. Because of this inability to be economically independent, protective legislation has been enacted to bring women to a more certain economic security. How will the equal-rights amendment affect these just legal guards I have mentioned in addition to many more, such as mothers' aid, homestead rights, widows' pensions? In the event of divorce, shall we do away with any preference that is now given to the mother as to the custody of children? Again, what about maternity protective laws? Naturally, they cannot as well apply to men, so off the statute books they must go. Consider the statutory rape laws. Would the equal-rights amendment mean that at the age of 12 or 14 a female can give consent to illegal cohabitation? Such legislation is not discriminatory but a just recognition of the biological and social differences between men and women. The questions multiply. They pop up one after another and disclose the chaos, the confusion, the injustices that must follow in the wake of so ill-advised a slab of legislation. Where the burden of support of illegitimate children is placed on the father, shall it now rest on the mother? What of alimony laws? What happens to whom and who pays?

Who is moved up or who is pushed down? It hardly seems possible that the smooth-sounding, high-scunding, just-appearing "equality of rights under the law shall not be denied or abridged by the United States or any State on account of sex" can harbor such seeds of mischief or be a breeding ground for actual discrimination against women.

We come to the role of woman as a wage earner. In addition to the all-important fact that the welfare of the Nation and its future generations depend upon the health of women that prompted protective labor legislation we must remember that women are not so unionized that they have the power of organized bargaining as have the men. It was years of investigation and the insistence of social-minded citizens that resulted after a long, hard struggle in the minimum-wage and maximum-hour laws for women, that resulted in the passage of laws prohibiting night work and working in dangerous employment such as quarries and mines. It was this legislation that aimed for and succeeded more nearly in "equalizing" women. Yet this so-called equal-rights amendment would destroy, would deprive women of this protective legislation and introduce again the sweat-shop conditions for women, substandard pay, and unlimited hours of work. All the hard-gained victories dismissed on the ground of "equality." I could almost believe that the proponents of the equal-rights amendment are mocking our credulity, were I not convinced of their unredeemed naïveté.

The proposed amendment, remember, authorizes Congress to enforce "equality" by appropriate legislation. Does this mean that Congress must act in fields now reserved exclusively to the States in matters having to do with marriage, divorce, support laws, property laws, etc. That would constiture one of the most extreme and one of the most extensive changes in the relation of States to the Federal Government and in the relation of Federal Government to the States. Whether or not contemplated, to institute such a change by indirection is highly absurd.

Thus it can be seen what court actions must follow in the interpretation of the statute. I fear me the courts will be so busy deciding what's right for women that all other matters will have to be set aside until the rights of boy and girl, wife and husband, maid and bachelor are clarified.

We cannot deny that discrimination against women is present. No ideal by any means has been reached. Laws do exist preventing women from serving on juries, from holding certain offices, preventing married women from holding property without the consent of the husband, laws that prevent the wife from setting up a separate domicile, and so forth. It is not in defense of these laws that makes for opposition to the proposed amendment. It is the method that is decried. Let the energies be turned in curing a specific ill by specific legislation within the States where such discriminatory laws exist, rather than to throwing the whole Nation into a turmoil of definition-seeking men and women. Using the Constitution for a

broom with which to sweep away discriminately the good with the bad is neither sound law nor sane behavior. It is as absurd as destroying a forest to uproot some unwanted trees.

Finally, the earnest proponents point with conclusive argument to the suffrage amendment. The analogy they seek to establish is, unfortunately for them, the revealing weakness in their logic. The nineteenth amendment met a specific ill with a specific remedy. It merely states that the right of citizens to vote shall not be denied or abridged on account of sex. It did not attempt to legislate on the whole sphere of human endeavor.

Should the equal-rights amendment through some mischance pass, then it needs must collapse as did the eighteenth amendment. We have some very bright fellows in the Halls of Congress, but even they, it has been discovered cannot amend the laws of nature.

ANNOUNCER. Thank you, Congressman CELLER. From Washington, D. C., ladies and gentlemen, you have been listening to the thirty-second broadcast of Congressional Record on the Air, a public-service program, presenting each week an outstanding leader of the United States Congress. Our speaker tonight was Congressman CELLER, of New York, who spoke to you on the question of women's equal-rights amendment. Congressional Record on the Air is arranged by Leo J. Paulin.

Can We Do Less for Hitler's Victims Than for Hitler-Hun Prisoners

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CELLER. Mr. Speaker, nations have declared war on Germany, and their high-ranking officials have issued pious protestations against the Nazi massacre of Jewish victims, but not one of those countries thus far has said they would be willing to accept these refugees either permanently as as visitors, or any of the minority peoples trying to escape the Hitler prison and slaughterhouse.

Goebbels says: "The United Nations won't take any Jews. We don't want them. Let's kill them." And so he and Hitler are making Europe Judentun.

Without any change in our immigration statutes we could receive a reasonable number of those who are fortunate enough to escape the Nazi hellhole, receive them as visitors, the immigration quotas notwithstanding. They could be placed in camps or cantonments and held there in such havens until after the war. Private charitable agencies would be willing to pay the entire cost thereof. There would be no expense to the Government whatsoever. These agencies would even pay for transportation by ships to and from this country.

We house and maintain Nazi prisoners, many of them undoubtedly responsible for Nazi atrocities. We should do no less for the victims of the rage of the Huns.

In this connection, a very splendid editorial appeared in the New York Post, June 21 last, Can We Do Less, as follows:

CAN WE DO LESS?

There's soda pop and beer and a minimum of 10 cents a day for the 40,000 Fascists whom we hold prisoners of war in 17 States. No one fusses about this except a few stiff-necked Nazi prisoners who bellyache that they don't have enough room in their barracks or that the valet service is poor.

These men were taken in battle and they're going to stay here until the end of the war—in well-built barracks, with good food and adequate clothing. But how about some of the men, women, and children whom these Fascists have been killing?

Are we willing to give them shelter, feed their hungry bellies, and clothe their naked limbs? Are we ready to soothe their wounds and maintain them decently until the war is over and Europe returns to peace?

We mean are we willing to take a thousand or even 40,000 Jews from Hitler's Europe and keep them here at least in the fashion in which we keep Hitler's prisoners of war?

WE'VE MUMBLED AND TALKED

Both Rumania and Bulgaria, to cite two cases, have offered to surrender a number of their Jews to us if we would taken them. At this point our State Department has always gotten very technical about visas and passports and documents. We've mumbled and talked and even held a conference on an inaccessible island to discuss as quietly as possible this business of saving people from slaughter.

And with all the seeming good will in the world we have so far been unable to come to any other conclusion than that it's just too bad, but the Jews' papers aren't in order, and so they'll have to get along the best they can. Getting along the best they can has come to mean a gas chamber in a Polish forest, or maybe a bite from a typhus-infected louse in the Warsaw ghetto.

In the face of pleas to do something, Anthony Eden has told Parliament that the only answer to Hitler's slaughter of Jews is a United Nations victory. That sounds real nice, but at the rate they are being killed there will be no Jews left to rescue by the time we march into Berlin.

We want to save some lives. We would settle for a little less than perfection. If Bulgaria and Rumania are willing to surrender just a few thousand of the 4,000,000 Jews still alive in Europe, let's take them.

If there is no other way of bringing them in, let them be brought in as prisoners of war. Let them be shut up in a prison camp just as we shut up Nazi prisoners of war and let them be kept there until the close of the war.

OUR ALLIES

It is barbaric that we should thus treat a people who are allied with us against the common enemy, but we feel that some Americans who have feared to allow Jews to emigrate into the United States even to save their lives, might be willing to see them come in as prisoners of war, kept under lock and key.

No one shouts that he is afraid that the 40,000 Fascist prisoners are going to stay here permanently. Everyone knows they're going back after the war.

Let us look at Jews admitted as prisoners of war in the same manner. They will also go back after the war is over and the Nazi-sponsored anti-Semitism has died down. We would simply be giving them temporary haven.

The perfectionists who will tell us that this isn't the right way are forgetting that, while they plan and debate, men and women die. The search for a perfect solution has been an easy formula for doing nothing at all.

The Post asks the congressional delegation from New York City to propose this plan in Congress. The Post asks the Emergency Conference to Save the Jews of Europe which convenes in New York on July 10 to take this plan up.

Can our conscience allow us to do any less for the unfortunate victims of fascism than we do for the Fascists themselves?

The Forgotten Peace Aim

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William Henry Chamberlin from the Progressive, of Madison, Wis., for June 7, 1943:

THE FORGOTTEN PEACE AIM

(By William Henry Chamberlin)

Amid the fanfare of schemes for giving a quart of milk to every Hottentot, providing Patagonians with electric light, and making sure that no country, not even remote Ethiopia, misses the benefits of lend-lease, one simple and fundamental peace aim has been pretty well lost from view. This is the restoration and improvement of the American standard of living.

There has been little audible thinking along this line by our leaders of public opinion. And what thinking there has been is of the cart-before-the-horse variety. There has been some theoretical discussion of the desirability of social security, along the lines of the British Beveridge plan. But there has been uncommonly little recognition of the fact that true security is to be measured not in the paying out of dollars to the individual in this or that emergency, but in the stability of those dollars in terms of goods and foodstuffs.

Before getting down to positive proposals for insuring a reasonably good life for our people, it is necessary to cut through a jungle of misconceptions that have obscured our thinking and led to some false conclusions and assumptions that are only gradually being dispelled by the increasingly hard realities of a total war economy.

THE DEVELOPING FOOD CRISIS

One of the gravest of these misconceptions is that America is a land of unlimited abundance, where the only problem to be solved was distribution, not production. The swift, unmistakable deterioration in the food situation during the last few months, a deterioration that, in the opinion of some experts on the subject, is likely to become catastrophic within another year, is the best comment on this fallacy.

Here we must be on guard against the soothing sirup that is being ladled out in large quantities from the Office of War Information and from individual self-appointed boosters of national morale. It is worth remembering that 15 employees of the Office of War Information recently resigned, with the suggestive remarks:

"We are leaving because of our conviction that it is impossible for us, under those who now control our output, to tell the full truth. * * * The promoters who are now running the domestic information policy of the Office of War Information * * * are

turning this Office of War Information into an office of war ballyhoo."

It was undoubtedly naive of these 15 disillusioned spirits to believe that a war propaganda agency could or would permit them "to tell the full truth." But a sharp point was added to their criticism by the coincidence that on the day of their resignation Office of War Information published a statement of the food situation which carried its own refutation in the everyday experience of millions of American families. This statement coyly conceded that there might be as much as a 6-percent reduction in food supply in 1943 as against 1942.

Six percent indeed. Sixty percent would be much closer to the actual reduction in supply and availability, during the last few months, of such staple items in the normal American standard of living as meat, butter, canned goods, and fresh vegetables. A detailed report from California for 1942, a year when weather conditions were extremely favorable, gives the following figures of crop losses: apricots, 15 percent; tomatoes, 25 percent; peas, 25 percent; asparagus, 20 percent; vegetables, 30 percent, both in planting and in harvesting; slaughter of dairy cows, 46 percent above normal.

SPIKING A THEORY

One must also set down as unreal ballyhoo the constant Pollyanna prattle about how good rationing has been for the British and how their health has improved on their meager diet. Now it would be easy to take what the Briton can get on his food and clothing ration and show that an unemployed person in the United States or in Great Britain could have duplicated it on his dole during the depression.

Should we, then, look to the standard of living of the unemployed as the ideal for the future? An individual, if he chooses, may live on orange juice, raw carrots, tree bark, or any queer substance that he regards as helpful to his health or disposition. But the restoration of a decent American standard of living presupposes that all consumption goods will be as accessible to the consumer, without rationing restrictions, as they were before the war.

Another illusion is the "quart of milk a day for everyone" theory. Anyone who can seriously believe that an unprecedentedly destructive war will be or could be the prelude to a world flowing with milk and honey, is indeed gifted with an optimism so extravagant as to be slightly touched with irrationality.

It has already been proved, and it will be proved with increasing finality as the war goes on, that we cannot even feed ourselves adequately under war and lend-lease conditions. The idea that we possess so much abundance that we could easily spread our surplus food production over the entire globe deserves to be spiked for the fantastic nonsense, the "globaloney" that it is.

A NEW TYPE OF CRISIS

Another illusion that will be disposed of long before the war is over is the belief that jobs are everything, irrespective of the value of the real wages that go with the jobs. The naive belief that all that matters is to put everyone to work has led to some very cockeyed uncritical overestimates of the success of the collectivist economy in Russia and in Germany.

Having lived for more than 15 years under various forms of collectivist economics, in the Soviet Union, in Germany, and in Japan, I am often impressed by how exclusively American economic thought is concerned with the defects of an individualist economic system. This is natural. We have never known any other system; and it is the defects and weaknesses of the individualist system that must bear the responsibility for the tragic economic crisis that began in 1929.

Yet at the very lowest point of the American economic crisis, in the winter of 1932–33, I received a vivid illustration of the fact that collectivist dictatorship does not know all the answers to the eternal problem of giving everyone a decent standard of living. I had been in the city of Milwaukee and a friend who was in charge of relief administration gave me a list of the foodstuffs which the unemployed received at home. I took the list back to Russia and showed it to a Russian friend. He gasped in amazement.

"There isn't an employed Russian worker who gets such a variety of fruits and vegetables," he exclaimed. "Why, a high party official would be glad to be sure of this kind of a ration. And our newspapers tell us that your unemployed are all dying of starvation."

Of course the scandal of mass unemployment, of poverty in the midst of plenty in the United States was in no sense excused by the fact that at the same time in Russia, where almost everyone was employed (quite a number in prison camps, under the control of the political police) there was a terrific shortage of foodstuffs and manufactured goods.

But this incident shows that there can be more than one kind of economic crisis. Most of our critical thinkers can only conceive one type of crisis, a crisis of widespread unemployment. We will know a good deal more about another type of crisis, a crisis of full employment, even of labor shortage, but accompanied by serious shortage of food and manufactured goods, by a drastically lowered value of money, before this war is over.

The Russians, who are among the wittiest people in the world, summed up the essential features of this type of crisis in two conundrums that were popular in the years 1929–33, when the amount of money in circulation exceeded very markedly the amount of goods to be purchased: "Who are the richest people in the world?"

"The Russians, because they don't know what to do with their money."

"What people in the world eat the most?"

"The Russians, because they can easily eat up a week's rations in a day."

ESSENTIALS OF UNITED STATES POLICY

To realize the forgotten peace aim, to achieve the best possible American standard of living we must, in the post-war world, avoid both types of crisis. We must avoid both unemployment and empty shelves in our stores. As conditions for an American standard of living that will reach and surpass the pre-war level I would suggest the following as essential conditions:

1. Avoidance of policies that will lead us into wars, whether in pursuance of a hard-boiled American Century imperialism or in line with a fuzzy-minded internationalism that would cause us to fight the quarrels of other nations in remote parts of the world.

2. Emphatic repudiation of the idea of placing other parts of the world on a Work Projects Administration, of depleting our own resources and lowering our standard of living in order to finance grandiose reconstruction projects for the benefit of other peoples. This does not exclude necessary humanitarian relief activity. But it does rule out any reckless squandering of our resources in line with the "quart of milk for everyone" theory. Specifically the Lend-Lease Act should be repealed the moment the war is over.

3. The swiftest possible elimination of all rationing restrictions, and of the vast parasitic network of bureaucratic agencies required to administer and police an all-out rationing system. It will be a happy day for the American standard of living when the last ration booklet goes into a huge bonfire along with the last questionnaire from the aforesaid agencies.

4. Placing our economic relations with foreign powers on a reasonable give-and-take basis. Recognition of the obvious economic axiom, so dismally forgotten during the twenties, that international trade must be a two-way street, that we cannot sell goods and lend money all over the world unless we are prepared to accept goods and services of a roughly equivalent amount in return.

A BRAKE ON BIGNESS

5. Our principal reliance for an indefinite future period should be on internal development, with a secondary interest in hemisphere trade. We should not place too great hopes on the extensive development of trade with parts of the world which will be so terribly shattered as Europe and east Asia will be before the end of the war.

6. Forethoughted effort to level off both speculative booms and disastrous slumps by intelligent application of such weapons as taxation policy and public-works programs. We should have a pretty good start in bridging over the difficulties of transition from war to peace economy in the starvation of the market for automobiles, refrigerators, radios, many other objects of civilian consumption, in the demand for new housing, rehabilitation of rolling stock, machinery and equipment, etc. Taxes should be heavier in periods of high profits, tapered off in times when business is slow. Public works should be carefully studied so as to ban leaf-raking projects and to create genuine assets to public health, well-being, and economic prosperity: Power development, soil conservation, slum clearance—here is certainly a big and necessary job—recreation and health facilities, etc.

7. In economics as in politics recognize to the limit the implications of the American tradition of freedom and voluntariness. Be suspicious of too much bigness, whether in private corporations and banks or in State agencies. No excessive concentration of power, either in public or private hands. Let democratically organized trade-unions and cooperatives serve as checks and balances on the excesses of private initiative.

8. Maintenance and improvement of the existing Social Security System to be financed primarily by employers and workers, with the Government in a secondary role.

The Republican Party's Dedication

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 30 (legislative day of Monday, May 24), 1943

Mr. McNARY. Mr. President, on the afternoon of June 27 the able junior Senator from Wisconsin [Mr. WILEY] delivered a speech before the Republican convention held at Appleton, Wis., which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

The Republican Party of Wisconsin, the Republican Party of the entire United States, is dedicated to a great and imperative task in this time of crisis.

As the name affirms, the Republican Party is dedicated to the task of preserving the republican form of Government in this country. It is dedicated to the imperative task of perpetuating that balanced system of Government under constitutional law which assures the individual the socially possible maximum of freedom.

It is dedicated to the great task of preserving the American Republic as a republic, as a republic in fact as well as in form.

Republicans are now joined with all Americans in fighting a great war to make secure from foreign aggression the United States of America. In this war there are no party lines. There is instead a united people dedicated to a single purpose.

We will win this war. We will win it decisively, totally.

International outlaws who would destroy the institutions of free men and free women must be dealt with as outlaws.

But we are not fighting merely to preserve our country during the war. We are not fighting merely for immediate and total victory. We are fighting to preserve it after the war, to preserve it for all time.

Nor are we fighting to preserve our country only. As American citizens who are conscious of our birthright, Republicans of Wisconsin, Republicans of all America are fighting to preserve the American Republic and those freedoms and institutions of freedom it champions.

As Republicans who know our birthright, we realize clearly that the battle to preserve the Republic will continue after this war has been fought and won.

As Republicans, dedicated to the task of preserving the Republic in fact as well as in form, we realize that the real battle of the post-war period will be to win an orderly return to duly constituted authority. We realize that the real battle will be to compel an orderly elimination of the semidictatorship imposed on us by the necessities of war and loyally accepted by all of us for the duration of the war.

Let me make one point clear—

Here in America we have two major political parties. We have the Republican Party and we have the Democratic Party.

In neither major party is there any deliberate purpose to destroy the Republic. On the contrary, there is in both parties only the sincerest determination to maintain it. This is true not only of the rank and file; it is true of perhaps a majority of the leaders.

But we all know that a small but powerful group of men and women who have worked themselves into places of high authority in the present Federal Government are openly scornful of both the form and the substance of our historical political system.

We know they insist openly and noisily that our historical system is a horse-and-buggy system—that it has outlived its usefulness.

We know they insist that it must be replaced by some highly centralized and streamlined new system—some all-embracing and all-demanding master plan—to be imposed on us by the master planners.

And we know that their continued presence in places of power is a threat and a challenge to the American Republic.

Let me offer an illustration: There are now, exclusive of the armed forces, nearly 3,000,000 persons on the Federal pay rolls. The significance of this vast new civilian army is not alone in its added cost. Its deeper significance is in its thirst for power—in the insistent struggle of each of the host of Federal agencies to expand its own functions, its own privileges, its own authority, at the expense of the other, and at the final expense of the States and the people.

The result of this interagency strife, of these feuds and rivalries, and of this brazen lust for power is a paralyzing confusion, which is obstructing beyond all need or reason the splendid and forthright war effort of the American people.

It is upon this foundation of confusion and thirst for power that the master planners hope to build their own version of a new America. It is within its framework that they expect to solve the profound and pressing problems of the post-war era.

It is all part and parcel of what they call the administrative process. It is an attempt to gather into the administrative function of government all the power previously held by the executive, the legislative, and the judicial branches.

It is to further this continuously expanding process that the planners have so vigorously resisted all congressional attempts to limit their authority. It is to feed their thirst for power that they resist not only congressional attempts carefully to limit and define necessary administrative functions, it is for this same reason they resist so vehemently all congressional attempts to compel judicial review.

The administrative process, as they understand and attempt to use it, is government by the whims of men. It is most obviously and beyond any question an attempt to substitute something new for the historical American Government by law.

In January 1936 in his message to Congress, President Roosevelt said: "In 34 months we have built up new instruments of public power. In the hands of a people's government, this power is wholesome and proper. But in the hands of political puppets of an economic autocracy, such power would provide shackles for the liberties of the people * * *."

The people have learned, in the intervening years, that such power is neither wholesome nor proper in any hands. They have learned that a political autocracy can provide shackles for the liberties of the people even much more effectively than any political puppets of economic autocracy.

They have learned and they now realize that their great problem, after this war has been fought and won, will be to rid themselves of the political autocracy which has already fastened itself upon them under a combination of necessary war restraint and sheer love of power for its own sake.

And while it is scarcely necessary to point out that the rank and file of the Democratic Party no more welcomes shackles than do the rank and file of the Republican Party, the Democratic Party as now constituted has been so completely taken over at the top by the master planners that it is in no position to strike off any shackles, not even its own.

The inescapable fact is that of the two major political parties in this country, only the Republican Party has the necessary freedom and the necessary determination to strike off the shackles and keep them off.

And the Republican Party is fully conscious of its profound responsibility.

Let me make another point clear:

There are Americans who still stubbornly insist that after this war we are going back to the "good old days." Not a few of these are Republicans. Not a few of them are Democrats.

But we are not going back to the "good old days." We are going forward to a splendid future. "They conquer who believe they can." Those Republicans who believe otherwise are out of step with the times; out of step with the real spirit and purpose of their party.

The Republican Party, the real party of the rank and file and the overwhelming majority of the leaders, looks forward with lively appreciation of the grave problems which will confront us in the post-war world. But while we realize the gravity of these problems, we have enough faith in the abiding good sense of the American people and in their final devotion to traditional American principles to look forward with confidence. Minds set on great objectives become great.

The Republican Party recognizes that there will be a huge public debt at the close of this war. But aside from the wholly unnecessary extravagances which have helped swell the debt all through the last 10 years, the Republican Party insists that the debt was incurred for value received. It bought the preservation of our liberties for us. Because it did, we propose to see to it that it will be repaid.

The Republican Party insists that America can move forward to new material and spiritual triumphs in the years after this war. It proposes to insist on the proper coordination of management and labor, of industry and agriculture, of public and private enterprise, so that we may know fully the abundant America of our hopes and dreams. With vision and cooperation this people will go forward.

This party proposes to do all this, not through some master plan, but through the established processes of that Bill of Rights democracy which some New Dealers insist we prize too highly.

Moreover, in the field of world affairs, the Republican Party proposes that never again will the American people be caught napping and compelled to face with so few weapons such deadly danger as struck out at us on December 7, 1941, at Pearl Harbor.

The Republican Party proposes that never again shall the United States undertake any international commitment without the necessary Army and Navy and Air Force to make the commitment good.

Let me make this point clear: The Republican Party will continue to lend its influence to any real program of world disarmament. This is in the American tradition. The American people have never and do not now love armament for its own sake. But we do love this land of ours. We do love our freedom. We do love our children. That is why we must never again invite such deadly risk as we invited a year ago last December. That is why we must never again send out our sons as gallant "expendables" to buy time for us on some future Bataan, Corregidor, Wake Island, or Guadalcanal. Yes, eternal vigilance is the price of freedom and the maintenance thereof.

And, finally, the Republican Party recognizes that as one of the major nations of the earth the United States must accept a major share in helping to restore and preserve international law and order in the post-war period. This is the way to world peace.

The Republican Party proposes that the people of this country stand ready to join all like-minded peoples in seeing to it that never again shall any gang of national savages and international outlaws be permitted to destroy the peace of the world in a lethal challenge to every standard of human decency which the nations of the earth have raised up through 3,000 years of slow and painful and persistent effort.

The Republican Party proposes that a strong America shall be a strong champion of international justice; that a purposeful America shall help weave the pattern of durable international peace and order; that an America, aware and confident of her own great future, shall help relight the lamps of freedom for all the groping nations of men.

The Republican Party insists that all this can be done without the sacrifice of any vital American interest or the undue expenditure of any American wealth or the yielding of any sovereign American right.

Only men of good will and nations of good will can build a world of good will. Our fighting sons have proven to us that with proper will and purpose a way can be found, no matter how beset with hazards. We must prove to them in turn that we are worthy to be their fathers and their mothers. God helping, we will not fail them or the Nation.

Commander Gaines, of Charleston, W. Va.

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 30 (legislative day of Monday, May 24), 1943

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the West Virginia Review, a well-known magazine published in West Virginia, commenting upon the activities of Commander Richard K. Gaines, of the United States Navy, who has won distinction for his courage as a leader in this war. Commander Gaines is a son of the Honorable Joseph Holt Gaines, of Charleston, W. Va., who for years was a distinguished Member of the House of Representatives of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A short time ago a Chicago newspaperman, Elgar Brown, of the Journal American, interviewed a Charleston boy in the Ambassador Hotel. This boy was Commander Richard K. Gaines, son of former Congressman Joseph Holt Gaines, of Charleston. Mr. Brown described him: "He looks like a naval hero of the movies. But if that's all he was, thousands of dead Japs would be live Japs today. He is 39 years of age, 6 feet 3 inches tall, and wears four campaign ribbons and three stars for as many major sea battles.'

Commander Gaines is wing commander of a flying team and operates from an unidentified aircraft carrier somewhere in the Pacific. In less than 1 year of active duty, here is his record which he does not talk about: One battleship sunk, cruisers sunk (number unspecified), destroyer sunk, transport sunk with 12,000 Japs on board, 100 airplanes shot down. That much is official record, but there are other accomplishments which Commander Gaines does not discuss. Time after time he led a squadron into the air, directed each plane's activity by radio, and took a lively part in a remarkable series of victories. He modestly disclaims credit by saying: "I was surrounded by wonderful fliers. The Jap Zero is a good plane; but I want to tell you that the spunk and morale of American pilots just burns 'em up."

One Hundred and Fourteenth Anniversary Day Parade of the Brooklyn Sunday School Union

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. HEFFERNAN. Mr. Speaker, under unanimous consent I extend my own remarks in the RECORD on the subject of the one hundred and fourteenth anniversary day parade of the Brooklyn Sunday School Union. During this month of June 1943 some 85,000 members and friends paraded in 28 different sections of the Borough of Brooklyn in the one hundred and fourteenth anniversary day parade of the Brooklyn Sunday School Union.

The parade commemorates the founding of Sunday schools in Brooklyn in 1816. The first parade was held in 1829 with 4 schools and 400 marchers. It has grown through the years until now 300 schools participate annually in this unique demonstration, which is not to be found anywhere but in Brooklyn.

Last year over 100,000, including all races and colors, took part; but because of the many members now serving in the armed forces, this year's turn-out was smaller by 15,000. Many of the service people were represented in line by proxy marchers who wore service badges bearing the name of the service person for whom he or she was marching.

At the suggestion of Borough President John Cashmore, each service person received a letter advising that the anniversary day parade was held as usual, and was sent his proxy-marcher badge.

The public schools in Brooklyn are closed on anniversary day to enable the members of the Sunday schools—teachers and scholars—to participate in the exercises held in the churches, as well as to march in the annual parade.

This year, as for many years past, former United States Senator and Mrs. William M. Calder were luncheon hosts in the Montauk Club, Brooklyn, to the distinguished reviewing party of about 100. Former Senator Calder was a Member of the House of Representatives for the same district which I now represent, before he became a Member of the United States Senate.

In addition to Senator Calder, many Supreme Court Justices and representatives of religion, education, and business were in the reviewing party.

Every year through 1932 the Federal Government has been represented by either the President, Vice President, or a Cabinet member. In recent years President Taft, President Coolidge, and Mrs. Herbert Hoover—representing President Hoover—were the chief reviewing officers. The Governors of neighboring States frequently are to be found in the reviewing party.

Each year the marchers rally around an appropriate theme. This year's theme was "Victory With Christ."

Maritime Commission Shipbuilding Program

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a transcribed broadcast delivered by me June 27, 1943, over radio stations WMAM, Marinette, Wis., and WSOO, Sault Ste. Marie, Mich.:

During the past week out here on the west coast in San Francisco, our committee has heard some very interesting testimony from those various individuals, from industry and labor and the Government, who are charged with the emergency construction of about 56 percent of our Maritime Commission shipbuilding program. There have been many headaches and growing pains experienced in putting this over-all program into action.

I will tell you about some of them in later broadcasts based on direct testimony given to our committee.

Today, however, I want to give you a typical example of the miracle that has been accomplished by men from other fields of industry in America and who, prior to Pearl Harbor, were entirely foreign to the shipbuilding industry.

As an example of typical American ingenuity, when the chips are down in this all-important and world-wide struggle for existance, let me quote from the direct testimony given our committee by Mr. K. K. Bechtel, president of the Marinship Corporation, just across 'Frisco Bay in what had become almost a ghost town, Sausalito:

"On March 2, 1942, Admiral Land wired W. A. Bechtel Co. (which was one of the famous 'Six Companies' that pooled their resources to build the famous Boulder Dam) asking that it make a proposal to build and operate a new Liberty shipyard in a west coast port where our organization could operate to best advantage. He stated that he was relying on us to contribute our organization for the purpose of securing completed ships in 1942, and that the emergency demanded all within our power to give our country ships.

"Admiral Land's request was unsolicited. We have always seriously considered our new undertakings realizing the organization and responsibilities entailed. We knew that this project, if undertaken, meant drawing on our already busy organization. We decided on patriotic grounds that we would do as requested if we were really needed. We wired Admiral Land that we were studying alternate plans and he could depend upon us to do our part. We immediately set about a study of available sites, tentatively decided upon the Sausalito location because of its favorable community conditions; it was uncongested, was assured of additional housing if needed, and the favorable physical conditions.

"On March 8, 6 days after Admiral Land's wire, we were in Washington with a proposal. We told Admiral Vickery that although we were already very busy with other defense undertakings, we were ready to go forward with the new yard if they really needed us. Our proposal stated that we would build and operate a new yard under the then standard EC-2 conditions. We recommended the Sausalito site, stated that we would draw key personnel from our other activities, and presented a cost estimate of $10,250,000 for a 6-way yard. We estimated that 3 Liberty ships could be delivered by the end of 1942 and 31 additional ships in 1943.

"On March 8 Admiral Vickery gave us the verbal go ahead, and we immediately started preliminary organization and yard design work. On March 12 the Commission awarded us a contract to 'in the shortest time possible subject to the terms and conditions of this contract, design and construct the facilities.' (That was on a cost basis plus a fee of $2.) On that same day the Commission awarded us a contract to build 34 Liberty ships by the end of 1943. Admiral

Vickery expressed a strong desire for speed, so instead of waiting until the contract was signed we went ahead with our preliminary preparations immediately. We started to build the yard on March 28, 1942. We subcontracted as much of the work as possible in order to spread the work, get the benefit of other firms' management, equipment, and material sources. Subcontracting the work this way speeded it up and increased the efficiency.

"We invited Raymond Concrete Pile Co., J. H. Pomeroy Co., MacDonald & Kahn, and Morrison-Knudsen Co. to participate with us in this project in order to get the benefit of their organization, equipment, and judgment help. (These were others of the 'Six Companies.')

"We started to build the office building on May 12 and moved in on June 17. In order to build the yard we had to level a hill and fill in tidelands. On May 20 we started to build the first way and laid the first keel on June 27.

"The Maritime Commission wanted ships as fast as they could get them. In July we told Admiral Vickery that if they wished to increase the size of the facilities we felt the yard was capable of building between 60 and 70 Liberties by the end of 1943 instead of the original 34 contracted for. On July 9, 1942, the Maritime Commission authorized an increase in the investment on facilities to $16,400,000 and we agreed to a 50 percent reduction in the shipbuilding fee because the additional Government investment would permit a greater output, therefore, fee reduction was fair.

"The first few ships were fabricated at Calship (at Los Angeles) because Calship Yard, under the same sponsorship as Marinship, had an existing plate shop which could fabricate this steel faster and cheaper and thereby speed up our early shipbuilding operations. We started subassembly at Marinship on June 1 with temporary shipbuilding facilities. We laid our first keel on June 27, 107 days after the facilities contract was awarded. We started shipbuilding on partially finished ways as soon as possible, using construction equipment to erect steel sections pending the arrival of the permanent yard equipment such as whirleys. We knew this was the way to get speed, but we recognized it was more expensive.

"Admiral Vickery visited our yard on July 27. He was pleased with our progress and the ingenious use of construction equipment to build ships. He then first announced his decision to build tankers in this yard, so we started preliminary planning for tanker construction

"We launched our first ship on September 26, 1942, 92 days after the keel was laid, 199 days from the date of the facilities contract. This was the fastest record of any yard now building Liberty ships. We then had 11,800 men on our pay roll. We delivered the first ship on October 31, 1942, 51 days ahead of contract, 234 days after the facilities contract. We then had 16,400 men on our pay roll. By the end of 1942 we had delivered 5 ships compared to our contract calling for 3. These 5 ships were 127 ship-days ahead of contract. By March 17, 1 year after ground breaking, we had delivered 12 ships, 463 ship-days ahead of contract. These ships were delivered so much faster than the record established by the former record-holding shipyard that the Government got the use of 1,139 ship-days compared to the next fastest shipyard.

"To date we have laid 15 keels, launched 14, and delivered 13. In the first year from ground breaking this yard delivered 2 ships per way and did a great deal of work on other ships, including tankers. The fastest other yard record in the first year from ground breaking was eight-elevenths of a ship per way. Our first ship took 126 days to build from keel laying to delivery. Our fifteenth ship will take about 50 days, so between the first and fifteenth ship we have reduced the time of construction by 60 percent and the man-hour cost by 50 percent. At about the time Marinship started there were 5 other six-way Liberty shipyards getting started. Two of these other yards had delivered ships by the end of February 1943. One of these yards took 266 days to build its first ship compared to our 126 days on the first ship. The man-hour cost of our first ship and this other yard's first ship was about the same.

"Among other things that have contributed to our speed and ship cost were—

"1. Fabrication of first ship steel at Calship saved time and cost.

"2. The fast start and construction of our yard helped our speed greatly but increased the cost. Knowing that speed was paramount we used improvised methods pending the arrival of the permanent equipment.

"3. All costs increased between 1941 and 1942, estimated at least 15 percent increase.

"4. Ninety percent of the people who went to work in our yard were inexperienced in ship work or the craft work. This meant that these people had to be trained before they went to work or on the job. We anticipated this and worked additional people in order to offset the inexperience. As time went on the experience of these people increased their man-hour efficiency. On October 31 we had 16,400 people on the pay roll. This went up to 19,500 by early December. It is now back to 16,500 and we estimate that our man-hour efficiency is up at least one-third.

"5. Last autumn there was a shortage of tanker material and machinery. We were just starting, going fast, and these shortages hurt our progress. Other yards that were started before ours, started slower with a better supply of materials.

"6. Conversion of our yard from Liberties to tankers meant that during a considerable period of time we were building both Liberties and tankers. We had to do the engineering and production planning work to get ready for the tankers. Had we stayed on Liberties we would by now have delivered at least 36, and would be delivering 6 or more per month with the same or a lower total pay roll. Had we stayed on Liberties our Liberty ship cost would have been 40 percent lower. Tankers were sorely needed; this yard was selected to build them and we are building them, but the cost effect of conversion must be recognized.

"On October 9 the Commission awarded us a contract to build 22 T-2 tankers. We laid our first keel on December 7, have launched 5, and have 5 now on the ways under construction. Our average time for construction on the ways for the first 5 ships is considerably lower than the way time for the first 5 ships built in any other yards now building the same tankers. The quality of our workmanship and especially of welding sequence, have been very carefully laid out and approved by the Maritime Commission and the American Bureau of Shipping. Our basic problem now is to secure adequate tanker machinery. This has delayed delivery and increased the cost of our ships substantially. We are now working 15,650 people on 3 shifts a day; 50 percent work on the day shift, 30 percent on the swing, and 20 percent on the graveyard. Our force is almost constant, although our total pay roll may increase slightly as the supply of tanker machinery improves. We have had no serious problem in supplying our manpower needs. People in this area have been attracted to our yard because of its favorable transportation, housing, and pleasant working environment. We have had no strikes or official threats of strikes.

"Some time ago, realizing that continuous operation with a constant rotation within crews of the men's day off had a harmful effect on their daily work, we put into effect, with the Maritime Commission's approval and knowledge of the labor union, the 7-day balanced work program under which most of the men have the same day off on Sunday. This keeps the crews intact, avoids changes of leadership within the crews and increases teamwork. It gives us a better chance to do balancing work on Sundays, such as maintenance, material planning and any other critical work. This plan has worked out successfully and we understand is under consideration in other defense industries.

"The labor turn-over is now 8½ percent, down considerably in the last 6 months. Our absentees run at the rate of 6¼ percent. About 70 percent of our absentees are caused by illness or nonindustrial accidents.

"We have an ideal transportation set-up at our yard. Special busses serve the yard both from San Francisco and areas north of Marinship. Special ferryboats run from San Francisco right to the yard. Several thousand of our men walk to work from a housing project near the yard site. Many of our men drive to work across the Golden Gate Bridge in private automobiles using the pool-car set-up.

"Originally there was a slight housing shortage, but we had been assured by the housing authority that if needed they would furnish additional houses, and they did. The National Housing Authority built Marin City which houses 1,200 single men in dormitories and 1,500 men with their families in family units.

"Marinship was conceived, designed, built, and has been operated primarily by men formerly in the construction industry, although some of our best supervisors were available at Calship and some have come from other yards. When Admiral Vickery first visited the yard he was pleased with our progress but said maybe we were just good starters. We asked him to come back in 6 months to judge our results. He did come back 6 months later and on January 27 awarded us our first M-flag for making the fastest record of any of the six-way shipyards. Our second M-flag was awarded to us on March 29.

"We have found the Maritime Commission fair and able; they are splendid to work for. Admiral Land and Admiral Vickery are great leaders and are an inspiration to all of us. They recognize that we are building ships at Marinship primarily to help the war effort. They are hard drivers and expect results, and we give them results."

So testified Mr. K. K. Bechtel, president of Marinship Corporation. I congratulate Mr. Bechtel, his staff, and all of his personnel on their remarkable contribution to our war effort.

The Antistrike Bill Veto

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star:

BLOW DEALT PRESTIGE OF ROOSEVELT—VETO IS BLAMED ON STUPIDITY OF LEFT-WING ADVISERS

(By David Lawrence)

There is only one real basis for indignation today as a consequence of the overriding of President Roosevelt's veto by Congress. It

is an indignation that should drive from Washington the smart-aleck group of left-wingers who have misled and misinformed the President about the state of public opinion on the strike issue.

There was no sound reason why in the midst of war both Houses of Congress, by a two-thirds vote, should have found themselves compelled to register a vote of lack of confidence in the judgment of the President. Such a vote with all its implications to the outside world—for in parliamentary government it would mean the ousting of the executive or else a general election—need not have occurred.

The so-called group of advisers who keep the President from knowing the facts about what is happening in the country have done him a disservice and perhaps a disservice to the prestige of the Commander in Chief of the Army and Navy.

Whoever wrote that veto message for the President—for it seems incredible that he would write such an illogical and contradictory document himself—did more to break down the position of the President before Congress and the country than any political opponent ever has done or could do.

PRESS GAVE WARNING

Mr. Roosevelt was forewarned by the press, but he has developed a cynicism toward the press which warps his judgment. Still there must have been other advisers in his entourage who could read and analyze what has been happening since John L. Lewis began playing fast and loose with the prestige of governmental agencies.

There was only one way out—a law that would require Mr. Lewis to come before the War Labor Board and testify, a law that would prevent the encouragement or calling of strikes when the Government seized a property or plant. The country wanted such a law. The troops in our camps and our men overseas wanted such a law—they wanted authority exercised promptly and without fear of political consequences.

Men in Congress read newspapers. And, above all, they read letters from constituents—the mothers and fathers, brothers and sisters of the boys in our armed services. War is a serious business and politics has no place in it, or the wrath of the country will take its toll of Congressmen and Senators.

WEIGHTY DISAPPROVAL

Mr. Roosevelt, confident that he can do as he pleases without law, still nurturing the illusion that an Executive order is a command—something Mr. Lewis challenged and proved to be fallacious—and still believing that Congress wouldn't override a veto on such a delicate subject as labor legislation, now has a bitter defeat on his record. It is the most vehement expression of disapproval ever registered against the President since he came into office. It may even shake badly the confidence of his group of worshippers who up to now have taken for granted that a fourth term was inevitable and a walk-away.

Where the President made his mistake was, first, in listening to the labor lobby who asked him to veto the bill. Then he made his next mistake in the language of the message. After first reciting that labor had kept its no-strike pledge so that 99 95/100 percent of the work went forward without strikes, he declared that "laws are often necessary to make a very small minority of people live up to the standards that the great majority of the people follow."

But later on in his message, without any explanation whatsoever, the President turns about and says that some other innocently worded provision "would stimulate labor unrest and give Government sanction to strike agitations."

VICTIM OF ADVISERS

Just why the patriotic labor leaders of America who have given their solemn pledge not to strike should suddenly feel compelled to strike just because a law says they must give notice if they want to strike was beyond the comprehension of anybody in Congress, and so they tossed the argument out the window as specious and as merely the raising of a far-fetched interpretation just as an excuse for a veto.

It is admitted by the President that there is more good than bad in the law. He has signed many a law under those circumstances. He should have signed this one with a request for the repeal of what he considered unwise provisions. But he evidently was told he could not afford politically to antagonize labor and that Congress would surely sustain a veto His advisers guessed wrong, and Mr. Roosevelt is the victim of the stupidity of his own left-wing group of advisers. He should get rid of them all and get in tune with Congress and the country. He should forget politics and expediency—men are dying and homes are being saddened. This is no time for left-wing or right-wing.

Congress saw the point. And the morale of our troops overseas and in the camps will be stimulated as never before. On the subject of prohibiting strikes in wartime, the Nation is virtually unanimous.

Address of Hon. Clare Boothe Luce, of Connecticut, Before Wisconsin Republican State Convention

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. CLARE BOOTHE LUCE before the Republican State Convention at Appleton, Wis., on June 27 1943:

Mr. Chairman, ladies, and gentlemen, every Republican is fully aware of the great part the State of Wisconsin has played in the history of Republicanism. We know that our party was born at Ripon in your State, almost 90 years ago. Here, then, as the clouds of the Civil War gathered; it was born with the word "freedom" twice on its lips: Free Soil and Free Men. And from the beginning, Wisconsin had the deathless love of freedom in its heart. To achieve that freedom, Wisconsin gave the Union over 8,000 of its young lives, sustaining then—one sparsely populated State—more casualties than all the United States today have had in taking North Africa. And the long political legends of your fighting farmers and fighting legislators who have made Wisconsin one of our most liberal States within the framework always—always within the framework—of constitutionality, is also known to every student of political history. And the harmony which exists today among your dairymen and farmers, businessmen, and laborers, in their war effort, is a matter of national attention and pride.

Therefore, simply as an American, as well as a Republican, I am proud and honored to be here.

But I am doubly honored as the first Republican woman to keynote a Wisconsin convention, though I take this compliment as I know you meant it: to all the Republican women of your State and of my State, who have fought in recent years quite as hard as the men to bring back good government to our land.

But now I must make a confession to you. Happy as I was to accept the honor of keynoting the convention of a State as great as Wisconsin, glad as I am to do here my pleasant Republican duty, proud as I am as a Connecticut woman to meet the women of Wisconsin—none of these was the true reason I came here today. I came to discharge a personal debt of gratitude to the State of Wisconsin itself. It is a debt incurred long ago, when I was a small girl. I lived on a lake called Turtle Lake in Barron County, in a town that was not really a town, I suspect, but a shopping appendage to a lumbering camp. How this happened to be so can be of no particular interest to you. But that it was so is today, and always will be, to me a matter of importance. For may I tell you that, with the great exception of my own tight little State of Connecticut, no other part of this Union is to me so much America as Wisconsin. Memories of childhood remain always the deepest and the most activating ones. It seems to me now, as it has time and time again in the past 20 years, that some of that quality of self-reliance, which we Americans are prone to think of as peculiarly American, I was lucky enough to learn here as a child.

I was instinctively aware then, in a childish way, of what I know as an adult to be a certainty now: That the air of Wisconsin, 30 years ago, was indeed the very air of freedom, breathed by free men, living and laughing, planning and building, saving and spending in a free and expanding land, a land in which there was still great opportunity for them and their wives, and even greater opportunity for their children.

In 1775, a year before the War of Independence, Edmund Burke rose to his feet in the House of Commons to make his great speech on Conciliation. He based his plea for peace with the American Colonies largely on his evaluation of the true nature of this new man in history, the American. Our pioneer pursuits, he said had largely influenced our characters: "Abeunt studia in mores." To the men of the Old World, he described the men of the New World as "men acute, inquisitive, dexterous, prompt in attack, ready in defense, full of resources." "In other countries," he said, "the people, more simple, and of a less mercuria cast, judge of an ill principle in government only by an actual grievance. In America, they anticipate the evil, and judge of the pressure of the grievance by the badness of the principle. They augur misgovernment at a distance, and snuff the approach of tyranny in every tainted breeze."

Burke might well have been describing the Wisconsinites I knew 30 years ago. Are the men of Wisconsin, and America, too, still like that? The account American soldiers are giving of themselves on the battle fronts of the world heroically attests to their ability to cope with foreign tyrants, to augur foreign misgovernment at a distance. For Americans today are fully aware of the badness of the beastly principles of Nazism and Japism, They are determined that these evil principles shall not triumph.

But what of the ability of Americans to judge of the pressure of a grievance by the badness of the principle, to augur misgovernment here at home? Are our farmers and workers, today, as quick as Burke said they were to "snuff the approach of domestic tyranny in every tainted breeze"? Is the air of

America today as free as the Wisconsin air of my childhood? Fundamentally, yes.

But let us face it. In past years, many Americans have not been like their pioneer forefathers, so quick to anticipate domestic evils in their Federal Government, or so shrewd to judge the pressures of their domestic grievances by the badness of the principle practiced in Washington. For their failure to do so, in our time, our Nation has paid dearly.

Now what is the principle by which we demanded as American revolutionists we should be governed? And by what principle have Americans always demanded to be governed? By the democratic principle of justice, to every individual, and to all groups in our land. It was in large part the failure of the Old Deal to give equal justice to every individual and group, above all the farmer and the laborer, which finally overthrew the Old Deal and brought the New Deal to power. The people had judged the badness of the Old Deal's failure to abide by the principle of justice.

But, my fellow Republicans, did the New Deal restore the democratic principle of justice in government, for the conspicuous and acknowledged injustices of the Old Deal? It did not. It substituted instead another principle, a hitherto unknown principle in American political philosophy, completely strange to the self-reliant American pioneers and farmers whose spirit had long informed it. The principle by which the New Deal sought to govern and stay in power was the aristocratic principle of charity. And what is the difference between justice and charity in government? Well, I think it is this: Justice is what you get when you receive exactly what you have a right to get as an honest citizen of a great democracy: a good steady job, with the chance of advancement; a farm on which you can produce and plant, and sell your produce in a fair market; a career or business in which you can make headway as fast as your talents and industry warrant; above all the opportunity freely, according to your abilities, to open or enter more fruitful fields of enterprise. This was the essential economic justice which Thomas Jefferson proposed when he said "equal opportunities for all, and special privileges for none." This is the justice which encourages spirit in every material undertaking.

Charity is what you are given when you don't get justice. Then you get doles, handouts, WPAism, special subsidies and special privileges and special benefits to favored and special groups within the economy. It is my belief that the American people are now sick unto revolt of the New Deal principle of charity as government, and government as charity. For they have seen at long last that this principle, however much in the beginning it may have served to bind the wounds inflicted by the old economic injustices, when applied wholesale for a long time to a nation, discourages self-reliance, frustrates ambition, curtails production, and stultifies all the processes of democracy. Today the badness of this principle of government has, after 10 years of application, resulted in a terrible pressure of national grievances: Of prodigious taxes and a public debt of a size that staggers a mathematician's imagination. These taxes, this debt, must be borne by us, and our children. We know that now. We see quite clearly at last what the aristocratic charitymongers in Washington had begun to do to our economy. Before the war our economy was rapidly contracting instead of expanding. For charity, instead of justice, in government had spawned confusion in business policies, confusion in agricultural policies, confusion in fiscal policies, and confusion, confusion, and confusion.

Today we have in the aristocratic New Deal an extraordinary paradox: It is beyond any doubt the most charitable Government in the world. It has gone in, on a prodigious scale, for "do gooding" and "Lady Bountifulism." Its countless administrators tirelessly emulated Robin Hoods. And every other clause in every other law the New Dealers sought to pass was a "Santa Clause." And yet insensibly this Government has become one of the most unpopular and tyrannical this Nation has ever had. Why? Because we see at last that charity as government in the end makes men poor, but it never can make poor men rich. Only justice as government can do that.

Today the war itself, with its insatiable demands on American resources, has exposed to every eye and mind the long folly and shame and the incredible danger to our national security, our national economy, and our very way of life—of the old New Dealers' attempt to substitute charity for justice. Our Nation of fiercely self-reliant, dexterous, acute people, who are naturally great producers on farm and in factory—as who should know better than you of Wisconsin—had almost been turned into a Nation of frustrated, doubting, helpless people, who sat mournfully and idly in factory and on farm, with no other hope for the future except the long holding out of millions of tin cups for Government doles, Government benefits, and Government subsidies. Today, what all Americans want from the cradle to the grave is real opportunity, not the New Deal's false security. Today, what all Americans will demand of victory is a post-war America which, governed by just men and just laws, will guarantee us the free and ever-expanding economy of which this greatest of nations is surely capable. This is the challenge offered to the Republican Party, and, I believe, in 1944 the Republican Party will meet it. It will become the majority party in the Nation, as you are in this State already.

Fellow Republicans, after I had accepted your invitation to keynote your convention, I sought the opinions of my very able Republican colleagues who come from your State. Naturally, I wanted to say here things that would interest you and perhaps even be profitable to you. My colleagues were almost unanimous in advising me to bring you the unhappy tale of what this false New Deal principle of charity has made of your Government in Washington. They urged me to bring you, as a reporter rather than as a legislator, the grim picture of the New Deal bureaucracy, which has grown to such prodigious proportions in our time.

They suggested that I excite your justifiable anger, arouse your honest indignation with—to quote one of them—descriptions of the many New Deal coordinators, and coordinators of coordinators, who again and again in the very nick of time have brought organized chaos out of regimented confusion; of the New Deal professors appointed to tell farmers and their wives how to solve the problems of life which they themselves cleverly avoided by becoming professors; of the New Deal statisticians who draw mathematically precise lines from unwarranted assumptions to foregone conclusions; of the New Deal "efficiency experts" who know less about your business than you do, but who are getting paid more today for telling you how to run it than you could make out of it after taxes, even if you ran it right, instead of the way they tell you to run it; of the countless New Deal executive agencies, staffed with hundreds of men who individually can do nothing, but who gather in impressive headline groups in order to decide that nothing can be done; of the fog of orders that command but do not produce; of the hundreds of directions that have no direction. I was urged to remind you of the New Deal czars piled on czars, of bureau heads on bureau heads, in mounds that look on Capitol Hill like nothing so much as the pyramids of skulls Tamerlane left on his march of conquest. I was counseled to trace for you the vicious New Deal circle of rising wages, rising prices, overtopped by wages that rise still more, and prices that mount again above them in the inexorable spiral of inflation; to mourn and lament with you over the New Deal's muddled rationing plans, its Alice in Wonderland efforts to roll-back prices which are all too likely to result in such a sharp curtailment of food production that hunger, that word so strange to America, may yet become a familiar one; to review the history of the New Deal's vacillating relations with organized labor, which have let loose the New Deal Frankenstein, John L. Lewis.

Above all, I was cautioned to tell you that this powerful New Deal bureaucracy is very much like a giant octopus. Its tireless tentacles have wormed and slid into the smallest crevices of our economy. And while it is a very wise thing—indeed, a vitally necessary thing, for patriotic legislators to hack off a tentacle here, when it gets around our war-production diaphragm, and a tentacle there, when it gets around our financial windpipe, and perhaps another tentacle which has fastened itself on our civil liberties, that does not dispose of the many-tentacled octopus itself. For there is no way, no way at all, to get rid of the old New Deal until Mr. Roosevelt is voted out of office. That is the truth and the whole truth and there isn't a person in the United States who doesn't know it. He is the author of the philosophy of charity as government, and right there lies the well-spring of all our domestic confusion. Now we have augured the misgovernment at Washington, defined the badness of the principle, and flatly stated that there is no way of correcting these evils and grievances but to turn the New Deal out of office.

How then shall we Republicans seek to accomplish this? Or, to put it another way, how will the new dealers, who are powerful and vocal, try to prevent us from accomplishing it? In what terms will the new dealers launch their attack, and in what terms couch their defense? Let me tell you then, although I think you already know it: The new dealers will not make their fight on domestic issues. For that fight is already lost. There is not a new dealer in Washington who will not admit freely that Mr. Roosevelt cannot be re-elected for a fourth term if the issues can be confined to a discussion of Mr. Roosevelt's 12-year-old domestic policies. Now what ought we to deduce from that? Nothing could be more simple: The new dealers will not make their fight on domestic issues. They will make the fight on foreign issues.

And because I wish to be utterly frank with you, I must tell you now that they will succeed; yes, they will succeed, in making this the paramount issue of the next election. For there is no question, absolutely no question, after the actual achievement of military victory, more important to the whole American people than the question of what America's foreign policy was, what America's foreign policy is, and what America's foreign policy ought to be. Americans know that in this ever shrinking world America stands no chance, no chance at all, of working out a prosperous domestic economy and of preserving her way of life, unless peace can be preserved over wide areas of Europe and Asia. They feel that our inevitable military victory will be utterly meaningless and all the brave young lives dedicated to it wantonly wasted, if, afterwards, this Nation does not vigorously seek the mechanism and procedure by which we may hope to prevent a third world war in our children's lifetime. If this is the New Deal argument for fighting the election of '44 on foreign issues—and I think it is—then the New Deal argument is right. And the people know it. So our party will stand unprepared

to battle the New Deal on the question of foreign policy at its own peril.

As I told you, many of my colleagues suggested what I might talk to you about out here in Wisconsin. But one cautioned me what not to talk about.

"Don't," he said, "talk about foreign policy in Wisconsin." And when I said, "Why not?", he said, "Well, because Wisconsin has been considered something of an isolationist State—intervention isn't popular out there." Now, I don't know exactly what most people mean any more by these words "isolationist" and "interventionist." If an isolationist is, or was, a man who wanted to stay out of war, then I was and am an isolationist. And so, I believe, was everybody in the United States before Pearl Harbor. For a wan who wants to get into a war he can stay out of is either a fool or a knave. Certainly, the people of the State of Wisconsin did not want to get into this war any more than did the people of Connecticut. So if the word means just having wanted to stay out of war, then as a smear word it is, even to new dealers, useless. Well, then, is an isolationist a man who believes that his country shall have no trade relations and no cultural relations with any other nation when the war is over? If isolationist means that, surely there are no isolationists in Wisconsin nor in the rest of the country. Then, what, precisely, does "isolationist" mean as the New Deal uses it and will use it with increasing frequency as the election approaches? May I tell you? An isolationist will sooner or later be defined by the new dealers as a man who refuses to accept, from here out, what will be called from here out "Mr. Roosevelt's foreign policy." Now, if we Republicans are going to be smeared because we refuse to accept Mr. Roosevelt's foreign policy, we had better discover quickly what it is we are being smeared for not accepting. In short, we had better examine Mr. Roosevelt's foreign policy closely and at once, because, as I say, if the New Deal is reelected this is the issue it will be reelected on.

First, with your kind permission, I shall have to give you certain definitions of my own of what I believe isolation really is. Isolation, as we have come to know it in our country since the turn of the century, is, I think, the widely held belief that America can live in peace and prosperity in an ever shrinking world, without developing a positive, forceful American foreign policy, a policy based, as every nation's should be, on our own self-interest, and self-defense. Now every American knows that we do have such a policy toward Canada, Mexico, the Central American countries and South America. And he knows that for many years we have, with a considerable degree of success, pursued it. Because of this up-and-down, North-to-South foreign policy of ours, there has been long peace and increasing prosperity in and among the countries of the Western Hemisphere.

But today the average American must also be aware that for almost 40 years, we have had no such vigorous and positive procedure, based on our own self interest, our own conceptions of the defense of our shores, the expansion of our trade, the communications of cultural ideas, toward Europe and Asia. We have had in short, no side-to-side, East-to-West policy. The belief that we did not need one in the past, that we will not need one in the future, is what I call "isolation," and will continue to call it, so long as the belief prevails. In short, an isolationist is a man with few or no ideas in his head about what he thinks America should do to safeguard our national interests in relation to Europe and Asia.

Now what is an interventionist? For this is also used as a smear word by some Republicans. If an interventionist is a man who wants to give every blessed thing America has away to the rest of the world, and who wants to mess into the internal affairs of other nations, then I am not an interventionist, and I don't believe there are many, outside the ranks of the New Deal, in America. So let me define the word interventionist, too. For, by my definition an interventionist is a man who has been an isolationist—that is to say a man without an American foreign policy at all—who, when he finally sees that his country is unavoidably threatened by war, adopts, at the last moment, the foreign policy of another nation, or even of several other nations.

Now that description fits the administration perfectly. History is history. Shortly after Mr. Roosevelt came to office in 1933 he scuttled the World Economic Conference. Just such a conference, I may add, as he will one day be suggesting as a post-war necessity. At the time, this act was recognized by every chancellery in Europe, and by every thoughtful American, as the most violent act of economic isolation ever committed by an American President. From then on, until the year 1938, Mr. Roosevelt grew in stature as the world's outstanding isolationist. That is to say, although he was the leader of the greatest country in the world, he propounded and practiced no positive American foreign policy for Europe and Asia. To be sure, he had inherited a policy of European isolation from the Republican Party of the middle twenties, but by scuttling the World Economic Conference, which had been set up by President Hoover, he brought isolation to a peak of perfection never before matched in America.

But if Mr. Roosevelt had inherited no American foreign policy for Europe from the Republicans, he had inherited one for Asia. Under years of Republican leadership, this country had developed a policy toward the Orient which was based on the territorial integrity of China, the right of all nations to trade there on equal terms and the preservation of our defenses in the Philippines.

It was under Woodrow Wilson, who had also been a great isolationist, later converted to intervention, just like Mr. Roosevelt, our foreign policy in the Pacific began to go to pot. Flying in the face of every dictate of our national self-interest at the Versailles Conference, the Democratic administration gave the Japanese the mandated islands in the Pacific whose possession have since cost us, and will yet cost us, so much American blood. In later years, when the Japs marched into Manchuria, Henry Stimson, a Republican under Hoover, protested violently. But his protests were buried in the New Deal landslide. He was the last American in high office to protest Japanese conquests in the Orient for many years. The fact is that all through these years Mr. Roosevelt's isolationist no-policy toward Asia allowed our defenses in the Pacific to deteriorate, our prestige in the Orient to wane, and the Japs slowly but surely to set out on their conquest of our only potential allies, the Chinese. Meanwhile, this administration sold them the scrap and iron for the war machine which they were doing it with.

Thus, under Roosevelt, we had the unchecked growth of Hirohito in the East, and in Europe the unchecked growth of Hitler and Mussolini. Even as late as 1938 Mr. Roosevelt was an avowed isolationist. He warmly congratulated Chamberlain—a matter of public record—at Munich. Even after the war broke he offered no serious opposition to the passage of the Neutrality Act, which was even a more insane piece of isolationism than the scuttling of the Economic Conference. Imagine the leader of a great nation favoring the passage of a piece of legislation which could only help his country's enemies and hurt its friends, and not staking everything, even his high office, on pointing this fact out to the people. And "but me no buts" about the Republicans being behind the Neutrality Act. For years Mr. Roosevelt had Congress in the hollow of his hand. He had the great respect, even adoration, of the American people. If he had taken the lead at this crucial point to shape an American foreign policy designed to discourage the rising dictatorships in Europe and Asia which ultimately meant danger for us, the people surely would have followed.

He did not do so because he had no American foreign policy; in short, he was an isolationist. But what happened, you ask, what happened to change him over? Well, I shall tell you. Slowly but surely the bad news out of Europe and Asia began to pile up in the State Department. News, I may say, that the administration and the State Department never shared fully with the American people. It had an unhappy way, you see, of pouring in around election time. If you do not believe that the mountains of bad news were not shared with the people, read Mr. Hull's White Paper on Japan. But in the end the news was so very evil in what it augured for the ultimate economic and physical safety of the United States, should the Axis Powers ultimately overwhelm the British Isles, that no man fit to be President could any longer ignore it. Carefully and cautiously Mr. Roosevelt became a European interventionist. That is to say, having no foreign policy of his own, slowly he began to adopt the foreign policy of the British Empire. I do not hesitate to say, thank heavens, he adopted something and that that something was the foreign policy of our greatest and friendliest neighbor, the British. But history also forces me to note that Mr. Roosevelt, the budding interventionist, never even adopted British policy wholeheartedly and forthrightly. It was rather thrust on him by the German declaration of war upon us and his awakening to the complete deterioration of our Far East policy was thrust upon him, as on all of us, by the horror of Pearl Harbor.

Today, I say, this administration still has no American foreign policy. There is not one human being in Washington, who knows what the administration's foreign policy is towards any of the United Nations. Would it, for instance, approve of a permanent nonaggression pact with the British Commonwealth? Do you know? Le me tell you right now that I would. I have eyes, and I can look at the map. I can see on the map, my fellow Republicans, that the British Empire and its components are the natural buffer state for the United States of America. Go look at your globes when you get home and check this. In order to get at our enemies, where are we fighting? Everywhere on British soil. What would our enemies, today or tomorrow, have to do to get at us? Name the country or countries and look at the map. To get at us they would first have to go through, pass over or subdue all or parts of the British Empire. Does not this immutable geographical fact suggest to you, as it should to the administration, that perhaps a cardinal principle of a wise American foreign policy would be to extend the Monroe Doctrine to include our natural buffer state? Another example: What does the administration think our policy should be towards France? I'll tell you again what I think: that the restoration of a strong, democratic France in Europe and in Africa would be a splendid thing for the peace of Europe—and the defense of the United States. A vigorous American foreign policy ought to be utterly and forthrightly dedicated to restoring France, which was and will be again one of the greatest forces for peace and democracy on earth. Or let us take still another example: What is the administration's policy toward Russia? Do you know? Does anyone? Again I do not hesitate to say: American policy

should vigorously seek to keep Russia our friend after this war is over. It should not thrust her, by the threat of recurrent isolation, into preying on her neighbors for the territory she will then demand, in order to protect herself from a third German aggression.

Believe me, the administration has no coherent policy, or, if it has, it is keeping it as secretly to itself as any dictator ever kept his. And let us get this clear: The four freedoms are not a policy; they are simply the expression of principles and sentiments, principles and sentiments which are totally incapable of application to the whole world. Indeed, they are only capable of application to parts of the world on the condition that our Nation embrace a foreign policy vigorous enough to implement them, if need be, by force. Windy, high-flown talk of world councils, regional federations, world federations, world government, world police forces, or even another league of nations—indeed, talk of any machinery for so-called collective security—is meaningless unless our statesmen first collect their wits and decide how America can best secure herself. These are all dazzle-dust terms, thrown into the people's eyes in order to be able to complain that the people do not see, so we may come to think that nobody but the New Dealers know how to manage our foreign affairs for us. I tell you quite simply that no form of collective security is possible until we Americans, with open minds and open eyes, are willing to enter into clear and wise, binding and honorable, non-aggression pacts, first with the British and thereafter as soon as they will, and we can, with other of the United Nations. Only on such common-sense foundation stones can you erect, in this epoch of history, the sound edifice of collective security, and add what further machinery may be necessary to integrate international cooperation. When we have faced up to this very simple fact, that binding agreements with our neighbors whom we trust, is the first step in any foreign policy which will safeguard this Nation, we can then debate the issue of foreign policy with the administration—and win on it.

Now you have heard a great deal about a mission to Moscow, undertaken by a New Deal diplomat. Like so many of the New Deal's missions, that one was also done with mirrors. For while Mr. Davies' memory of that mission has made excellent celluloid fiction, the fact remains that historically the mission failed. For when Mr. Davies left Moscow, he left a Moscow which shortly afterwards fell into Hitler's arms, diplomatically. And if that wasn't bad news for us, I don't know what was. If things have turned out rather better than Mr. Davies left them, it is not because this administration's agents were to be trusted with making a sound foreign policy for the United States of America in Russia, but because Adolf Hitler himself betrayed Stalin's trust.

Now, I would like to talk about another mission; a mission which did not fail. And I like to talk about it, because I am in the State of Wisconsin. This mission was undertaken by a man who certainly never considered himself a diplomat, or a statesman, but whom history has proved to be both. For history has shown that when he undertook his mission he had clearly in mind an American foreign policy, or a great part of such a policy, at any rate. And it was more than 10 years ago that this man foresaw the shape of things to come for America. He foresaw that America would have to go to war, and that America would be attacked. He identified the enemies. He said what had to be done about them, and he undertook to do as much of that as he could, all by himself. I have myself talked long and earnestly with this man in days gone by, and I can attest to the agonizing, heartbreaking clarity with which he looked into America's unhappy future.

His mission was a Mission to Manila. I am speaking, of course, of the son of one of Wisconsin's great sons—Gen. Douglas MacArthur.

Let us review the history of a Wisconsinite who was neither an isolationist nor an interventionist—but a patriot. And believe me, I only mention this because surely it must be a matter of pride to you here, in Wisconsin, that one of your own sons saw perhaps more clearly than any American living the menace growing in Asia and Europe.

General MacArthur spent 5 years, from 1930 to 1935, in official Washington as Chief of Staff. Winston Churchill's compilation of his own unheeded warnings to the Empire, "While England Slept," could be matched in military value by a compilation of MacArthur's own warnings during those years to the Senate, the Congress, and the public, while America was sleeping. For MacArthur saw not only the inevitability of war, he also foresaw the kind of highly mechanized war it would be, and he projected in exact specification after specification, the sort of equipment and training, the sort of mobile instruments and air force we would need to win such a war. But neither the administration nor Congress nor the Nation would heed him. They felt that only statesmen, not soldiers, could know anything about the shape that international affairs would take. When the time came to retire as Chief of Staff, MacArthur refused to give up his long fight to protect America from the enemy that he knew so well would one day strike. At his own request he undertook his mission to Manila to build there, as field marshal of the Philippines, the army of defense that he knew must one day protect the United States in the Pacific. This son of your State was thus the first important American, not only to recognize an international peril of enormous magnitude, but one of the few Americans to try to do something concrete about it. When he arrived in the Philippines, he embarked on a frantic race against time. Until as late as 1940, isolationist Washington denied him again and again the material and men he again and again begged for to build his bastion against the Jap. But he did what he could, in spite of that. And what Americans and Filipinos lacked in equipment, MacArthur made up for in part by inspiring a deathless love of freedom in their hearts. On Bataan, Americans for the first time took the measure of the enemy. And the Filipinos' loyalty to America—their belief in America's honor and strength that MacArthur had so carefully nurtured, so carefully and tirelessly that at times he was accused of being a better statesman and politician than a soldier—was worth more to us as a nation than we will ever be able to count or repay. Though Corregidor fell after 6 bloody months of heroic defense, none can say that MacArthur's was a mission that failed.

MacArthur's vision of what must happen to America in the Pacific, if our foreign policy out there continued to deteriorate; his single-handed determination to build up America's defense on those far-flung islands, and his heroic defense of them when the inevitable hour of attack had come, gave time to America and the United Nations to recover from the deadly wounds of Singapore and Pearl Harbor, and it saved another great democracy—Australia.

As I say, I mention all this only to remind you that your State has produced the prototype of the Americans we need so badly today—"men acute, inquisitive, dexterous, prompt in attack, ready in defense, full of resources." Men who anticipate the evil, and can judge of grievances to come by the badness of the principle. Men who hold their Nation's safety and honor, and power so dear, they are not afraid to sacrifice life or fame even to go into long exile, if need be, to safeguard them. Men who can formulate a clear American foreign policy, and act upon it, without waiting for the enemy to give it hideous shape when it is almost too late. Men who realize that eternal vigilance is the price of liberty, and that free men will always think clearest and fight hardest for victory and for peace. And may I say, I believe there are many such men in positions of leadership in the Republican Party.

And now, fellow Republicans, let me very briefly review my argument. The New Deal is dead, so far as its reputation on the home front goes. It can only survive if it can convince the people that its foreign policy was and is sound. This it cannot do because the New Deal had no positive foreign policy before Pearl Harbor, and has none now, except as it has borrowed one, temporarily, from our British cousins, and while that is better than nothing, it is still, for the United States, second best.

For the rest, let us for once and all face this fact: The same philosophy of charity as government which has inspired the New Deal at home will inspire the New Deal abroad. W. P. A. at home will become W. P. A. abroad, Washington bureaucracy will become world bureaucracy, and all will be run overseas with the same juggernaut inefficiency with which it has been run at home.

Above all, I have said that the time has come for the Republican Party to stop defending itself against the name "isolationist" by developing a strong, realistic, common-sense American foreign policy, which will then become the foundation of a world peace policy that all the nations can embrace, because they can understand it. In no other way can our party keep faith with the boys who are dying, dying every day on the fronts. In no other way can we justify in the eyes of history all that they have suffered and are yet to suffer, all the heroic sacrifices that they are making for us. This, my fellow Republicans, is our Mission to America.

The Battle of Midway

EXTENSION OF REMARKS

OF

HON. EUGENE WORLEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. WORLEY. Mr. Speaker, I believe that every Member here today would join with me in a feeling of regret if we were to allow the month of June to go by without commemorating a date which might well become one of the most important in our history. On this last day of June, I feel you will all join with me in preventing this oversight.

When the final score of the war in the Pacific is posted it might well be found that the turning point in this conflict occurred on the dates between June 3 and June 6, 1942, just a little over a year ago. The action on those dates has come to be known as the Battle of Midway.

Although there has not yet been time to view this battle in its proper perspective, of one thing we can be sure. The crushing defeat suffered by the Japanese at Midway marked the last serious invasion attempt—the last major offensive—by our enemy in the Pacific. Since that crushing defeat the Japanese have been for the most part on the defensive.

The Battle of Midway did more than that.

It provided history with the first major naval engagement in which one great fleet was defeated by a far smaller fleet, and without the ships of either coming within range of surface gunfire.

It definitely established as a pattern for this war the fact that air power is an integral part of sea power, just as air power is an integral part of our striking forces on land.

It dealt the Japanese Empire a jarring loss of face which is without parallel in Japanese history, and it taught the Japanese a costly lesson from which I hope they may never fully recover.

Finally, our glorious victory at Midway gave our own Nation new confidence—new proof that America's fighting equipment and America's fighting men are without superiors in all the world.

The story of the various maneuvers in the battle of Midway have been told too many times to need retelling here. But, for those who have shouted that the Pacific was being treated as a minor theater, here is an interesting fact:

Far more forces, on both sides, were engaged in this great battle than took part in the Battle of Jutland. And the Japanese lost more tonnage in combatant shipping than the Germans lost in the battle which, up until this war, was considered one of the greatest naval encounters in all history.

Our enemy in the Pacific sent one of the world's mightiest and strongest invasion fleets at us. Exactly what their objectives were we will probably not know until the war is over. Most naval strategists believe, however, that the Japanese were trying to rectify a mistake they made on December 7 when they did not invade Pearl Harbor and the Hawaiian Islands. Others believe they were headed for the mainland. In any event, had their plans been successful we would have been deprived of the Hawaiian Islands and would today be fighting this war from west-coast naval bases in the United States.

All told, the Japanese lost four mighty aircraft carriers—the *Kaga*, the *Akagi*, the *Soryu*, and the *Hiryu*.

Three Japanese battleships were either sunk or so heavily damaged that they were knocked out of the fight for months thereafter.

Two heavy cruisers were blasted to the bottom of the Pacific. Three other heavy cruisers were severely damaged, two so badly that they may never have reached Japan.

One light cruiser was damaged.

Three destroyers were sunk and several were damaged.

At least one heavily loaded transport was sunk, and two others were so badly damaged that they may not have remained afloat.

Almost 300 first-line Japanese aircraft were destroyed, and approximately 5,000 Japanese were killed or drowned.

Against this heavy toll, own our losses were 1 carrier, 1 destroyer, and less than 500 officers and men.

Although Midway was under naval command, the Japanese were met and defeated by fighting men of our Navy, our Army, and of our Marine Corps. The cooperation between the three services, I am happy to say, was nothing short of superb.

Our great Army lost one of its best air tacticians in the heroic death of Maj. Gen. Clarence L. Tinker, whose bomber was forced down at sea.

The Navy lost many brave men, among them all but one member of the immortal Torpedo Squadron Eight. The sole survivor, one of the bravest of the brave, was a young lad from Texas, Ensign George Gay.

But both Army and Navy united in praise of the heroism of the United States marines.

Maj. Lofton Henderson was the Marine Corps aviator—mentioned in an address by the President of the United States—who deliberately flew his dive bomber onto the deck of a Japanese carrier after his plane had been so badly damaged that there was no chance of escape. In the true spirit of the marines, Major Henderson determined to make the enemy pay the utmost.

The United States Navy at Midway was heavily outnumbered in ships, planes, and men. But in two things we were superior. One was our ability to plan ahead, anticipating the enemy's move even before he made it. Another was that fine character of loyalty to service, of courage in the face of seemingly crushing odds, and of determination to uphold this Nation's honor no matter what the personal risk or personal cost. These qualities typify our Navy, our Marine Corps, our Coast Guard, and our Army. With these qualities, we shall go on to final victory.

The Antistrike Bill

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, a few days ago, Congress passed an antistrike bill over the Presidential veto with a speed unequaled in the history of our Federal Government, a speed indicative of the strong feeling in Congress that previous methods used to deal with strikes which cripple the war effort were insufficient, and that firmer measures and greater governmental authority were required in view both of present conditions and future probabilities with regard to labor in our war factories taken over by the Government.

It is regrettable both that Congress was forced to pass the bill in the first place and that it had to override the President's objections, but it would have been more regrettable had Congress refused to do so. The American people have but one all-important job: To win this war as quickly as our total productive resources and fighting powers can win it. That is also the all-important job of every group of Americans, whther they represent labor, management, capital, or government, and it far transcends the interests or objectives of one of those groups.

There is nothing in the act to which any patriotic American can conscientiously object. It prohibits nothing which a patriotic worker wants to do; it requires nothing which a patriotic union member will not willingly do; it violates no one's wartime rights. The act is necessary as a protection against the willful mischief of ignorant or unprincipled labor leaders and strike instigators. It is no more directed against the vast majority, who are patriotic workers and union members, than is a law against embezzlement directed against every honest banker or cashier.

The act prohibits anyone, whether affiliated with a labor union or not, from instigating a strike in a Government-operated war plant on the principle that no one has a right to entice the Nation's defenders from their posts of duty. Anyone attempting it with members of the armed forces would be shot for treason. War workers are no less defenders of the Nation than are soldiers and sailors, because without their production, victory would be impossible. Yet, unlike the fighting man who cannot quit his wartime job, the war worker is not required to fill a certain place in the war effort. Nothing in the new act prohibits him from quitting—but it will not let him so forget his duty to his country as to entice others workers to leave with him.

Neither does the act prohibit the right to strike except in those comparatively few plants which the Government operates. It safeguards that right, however, from being misused by irresponsible union heads who call their men out on strike without the latter's expressed consent, and it protects the right of patriotic men and women to continue their war jobs even though an unpatriotic minority (who may be in control of the union) would force them to strike. The act does this by requiring a 30-day "cooling-off period" after which, under Government supervision, the workers shall secretly ballot whether or not to strike. A majority will determine. By that time, it is hoped, the machinery for conciliation and arbitration of industrial disputes will operate to remove the threat to uninterrupted war production.

A distinction has been made in the act between the Government-operated plant and the privately owned plant. Workers in the former are denied the right to strike at all. Those in private industry may strike only after a majority votes to do so 30 days after notification of the dispute has been given to the Government. In neither case, however, is a worker denied the right to protest against working conditions or to demand a higher wage. In fact, making such demands and protests is still the proper function of the union acting as the authorized representative of the workers.

Neither does the act in any way enforce a status quo with regard to any intolerable working conditions or inequitable wage rate. Such matters will continue to be adjusted by the proper governmental agencies concerned with management-labor relations, hours of work,

and wages. If those agencies cannot do their jobs satisfactorily, there is still no justification for a strike which will cripple our war production and which will be paid for in the lives of our young men on the battlefields. If the Government agencies fail in their functions, the administration is responsible, not our soldiers and sailors, and such administration should be changed for one which can assure equity and peace on the home front so long as we require shells and guns for the fighting fronts.

Congress has been accused of "taking a slap" at labor by passing the Anti-Strike Act. Nothing could be further from the truth. Congress realizes that the overwhelming majority of American working men and women are as patriotic and as anxious to do their best for victory as any soldier or sailor. Unfortunately, however, we have seen a comparatively few workers induced to leave their jobs three times in recent months by a particularly power-hungry self-seeking man, and we have seen the results: Thousands of workers in other war industries forced to quit producing because of lack of materials. It is against such irresponsible leaders and their misguided followers that this act is directed; it is because of their lack of either intelligence or patriotism that it had to be enacted. Such leaders and workers are a small percentage of the total American working force, but they are often in positions where, as in the coal industry, they can effectively slow up the whole war-production machine.

Clipped Wings

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. McKENZIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Washington Post:

CLIPPED WINGS

The young men of our Navy have learned to fly. They have learned that the striking range of a ship can be tremendously extended by planes. They have added a new dimension to naval warfare. But the older men of the Navy, their feet planted firmly on the decks of battleships, have clipped the flyers' wings.

Naval strategy is wholly in the hands of the battleship men. They are men who, in many cases, wear wings—earned by virtue of a brief carrier cruise or an indoctrination course at a naval air station. But the surface vessel remains their first love. They are prone to see naval warfare in terms of fleet engagements, the big guns booming as opposing battle lines move against one another in stately procession. They are good men and true. But they do not love planes or believe in them.

Yet they are the men who sit in high council with our allies. General Arnold, of the Army Air Forces, is at the side of General Marshall in meetings of the Combined Chiefs of Staff, while the Navy is represented by Admiral King alone. Few flyers are on the staffs which help Admiral King and Admiral Nimitz formulate plans for the defeat of the enemy. Even the few admitted to such high conclaves are subordinate in rank and discreetly silent. The men who actually fly the Navy's planes, who have faith in naval aviation, who believe fervently that it can be employed to revolutionize the winning of the war at sea, have no voice in shaping battle plans.

This dominance of the battleship men goes down the line. It applies to tactics as well as to strategy. A naval task force, even when its principal components are carriers, and its mission mainly aerial, is generally under the command of some stout blue-water sailor. The flying men simply carry out orders—the orders of men whose knowledge of aviation at best is theoretical and who are somewhat disposed to write off the plane as just another new-fangled gadget.

Under such conditions it is unlikely that the full potentialities of aviation will be realized in naval warfare. No lay critic, to be sure, is competent to declare that the Navy's air arm has been mishandled or that great opportunities have been missed through a failure to utilize it effectively. But to the ordinary layman this subordination of flying men is inescapably disturbing. We have seen the Army push its flyers forward to posts of great influence. We have seen the Army Air Forces given virtual autonomy. And the results in the air over Europe and north Africa and New Guinea and Guadalcanal—on every front—have abundantly vindicated the men who had faith in the air weapon.

The Army learned that aviation could not be used with full effectiveness if it were kept as a mere subsidiary to the ground forces. Dispersion of planes among a number of tactical ground units prevented the concentration of power to be achieved by unified air strength. In north Africa, accordingly, a stragetic air force composed of British and American elements was created under Maj. Gen. James Doolittle. Its share in our Tunisian triumph was of utmost importance. The Army learned from experience.

But the Navy has learned little and forgotten less. It has developed nothing comparable to the Army's strategic air force. Its planes are parceled out among units of the surface fleet without either the coordination or concentration essential to real power. They have been treated as nothing more than a subordinate element in an organization designed and dedicated to fighting on the surface of the sea. It is time for the Navy to take note of the fact that its airmen have grown up, time to give them a voice as adult members of the naval family.

Memory Monday

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I beg permission to include a resolution of the O. B. Nelson Post, No. 3 of the American Legion, Department of Iowa. May I say that this post is one of the largest in the State of Iowa, owns its own building, has many thousand dollars of resources, and in addition to its splendid record of the past, this post is taking a leading part in war activities. Many members of the post who served heroically in the last war are back in uniform in this war. Others are leading citizens of the community. The resolution is on the subject of Memory Monday, and is as follows:

Resolution proposing the designation of each Monday as "Memory Monday" in honor of those who gave their lives in military and naval service of the United States

In times of peace, the American people have set aside one day each year to be known as Memorial Day, to decorate the graves and pay respect to the honored dead who have given their lives in the service of their country. This, of course, is entirely fitting and proper, but during a war when so many lives are sacrificed in the fields of honor from day to day, we, the members of O. B. Nelson Post of the American Legion, feel that it is the patriotic duty of every good citizen to pay frequent and timely tribute to the memory of those of our armed forces who have laid down their lives for their country during this terrific struggle for freedom and democracy. A grateful thought toward Heaven is of itself a prayer. We feel that such an homage should be paid to every fallen hero within a week after he has made the supreme sacrifice, and that an appropriate method should be adopted to express the gratitude and appreciation of the American people for these gold star heroes. Every gallant American who lays down his or her life in this great cause, whether on the battlefield, on the high seas, or while in training for military or naval service merits an immediate and grateful recognition by the American people. In wartime, the names of all deceased members of the military and naval service who have passed into eternity during the preceding week should be enshrined in memory's light on every Monday, by proper expression, with the undying gratitude of the living for whom they have laid down their lives: Therefore be it

Resolved by O. B. Nelson Post, No. 3 of the American Legion of Ottumwa, Iowa, That commencing June 28, 1943, every Monday during the period of the present world conflict be dedicated and set aside as Memory Monday, and that the flag of our country be flown at half staff on all public buildings, and elsewhere, until noon each Monday, out of respect and in memory of those who have given up their lives in the military and naval service of their country during the preceding week: Be it further

Resolved, That we lend our support to the Memory Monday bills introduced in Congress by Senator GUY M. GILLETTE and Congressman CHARLES B. HOEVEN, said bills being Senate No. 1110 and H. R. No. 2732, and urge their passage to the end that our war dead will be honored by our National Government, with all Federal buildings, parks, and posts observing the day each week: Be it further

Resolved, That we urge that a similar resolution be adopted by every American Legion post; that the Governors of all the States, and the mayors of all the cities and towns, be requested to issue proclamations designating every Monday as Memory Monday for this purpose; be it further

Resolved, That a copy of this resolution be sent to Senators Guy M. Gillette and George A. Wilson, Congressman Charles B. Hoeven, Congressman Karl M. LeCompte, of our district, Gov. Bourke B. Hickenlooper, Mayor David A. Nevin, Iowa Department Headquarters, Iowa Legionnaire, American Legion Monthly, and the press of this county.

Food Subsidies

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday June 30, 1943

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas our wages were frozen in March 1942; and

Whereas cost of food has continued to rise steadily even under Office of Price Administration regulations and is the largest single item in the family budget; and

Whereas Canada, faced with a similar problem, began a system of government subsidy payments to producers of foodstuffs in order to compensate them for increased costs instead of allowing them to pass these costs along to the ultimate consumer; and

Whereas this plan in Canada has actually resulted in keeping food cost increases down to less than 1 percent per year; and

Whereas the Office of Price Administration is now planning a similar subsidy program for this country using funds of the Reconstruction Finance Corporation for the purpose, and also plans to roll back prices of most foodstuffs to help make the balance between the cost of living and wages more equitable; and

Whereas it appears that a strong block is now forming in Congress to fight this subsidy plan: Therefore be it hereby

Resolved, That we strongly urge Members of Congress to allow this subsidy plan to be carried by the Office of Price Administration.

LOCAL 2213, UNITED STEELWORKERS OF AMERICA, CONGRESS OF INDUSTRIAL ORGANIZATIONS.

Chester Davis Is Victim of Divided Authority

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include an editorial in the Toledo Times by that fearless editor, Harold Hartley, who has stood as a Watchman on the Tower for civic righteousness in the Buckeye State for years:

CHESTER DAVIS IS VICTIM OF DIVIDED AUTHORITY

Chester C. Davis has resigned as wartime Food Administrator.

In his letter of resignation, which President Roosevelt accepted yesterday, there was one paragraph that every American who is perturbed by Washington confusion should read:

"I find that I have assumed a public responsibility while the authority, not only over broad food policy but day-to-day actions, is being exercised elsewhere."

There is meat for many hours of thought in that sentence. Last March 26, when Davis was appointed, he was considered a perfect choice. His background is that of an agriculture expert and his knowledge of economics and business principles is attested by service as president of the Federal Reserve Bank of St Louis.

It is apparent, then, that a man whose knowledge and ability are unquestioned started a big job with little chance for success because of overlapping spheres of authority.

To this Mr. Roosevelt had an answer:

"I set up the Office of Economic Stabilization and authorized the Director, among other things, to resolve disagreements which might arise between the Food Administrator and the Price Administrator and to issue to them policy directives. * * * The country realizes that stabilization applies not only to food but to many other things, such as rent, clothing, and wage decisions."

That use of language can be regarded as Mr. Roosevelt's defense of the Office of Price Administration. It is clever in supporting the implication that Mr. Davis had to go because he could not cooperate. That may be unfair implication. It might have been more sporting for the President, who speaks of the essentiality of teamwork, to admit that effective cooperation is becoming impossible in the confusion engendered by overlapping bureaus and agencies.

Mr. Davis admitted that he found it difficult to cooperate with the administration in its proposed program of food subsidies. His opposition apparently was based on good economic logic. Almost the same views are held in Congress, for expansion of the subsidy program has been forbidden.

In selecting Marvin Jones, former Representative from Texas, former chairman of the House Agriculture Committee, and former agricultural adviser to James F. Byrnes, the President may have found a more cooperative person. Mr. Jones should know something about the food problem. He also should know how to mesh in the administration's peculiar interpretation of government for, of, and by the people. Mr. Jones was chairman of the recent international food conference from which the American press was barred.

In candor, however, it is sincerely hoped Mr. Jones succeeds where Mr. Davis failed. The food situation in this Nation is grave. Shortages are becoming alarming and the country knows that bickering, mismanagement, and bitter jealousies are keeping good men from doing their best work.

How Wisconsin Congressmen Voted on Connally-Harness-Smith Bill

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I submit herewith an editorial appearing in the Milwaukee Journal of June 29, 1943:

WISCONSIN CONGRESSMEN ON VETO

Three Wisconsin Republican Congressmen, SMITH, KEEFE, and O'KONSKI; and one Democrat, WASIELEWSKI, voted to override President's veto of the Smith-Connally antistrike bill.

One Republican, STEVENSON; two Democrats, MCMURRAY and DILWEG; both Progressives, SAUTHOFF and HULL, voted to sustain the veto. One Republican, MURRAY, was not recorded.

The pressure for the veto came from labor organizations on the ground that the bill dealt too harshly with labor. This contrasted with the reason given by Mr. Roosevelt for his veto—that one section providing for a 30-day cooling off period was not strong enough or was inappropriate.

Until there is explanation by the Congressman, no one can assert that those who voted to sustain the veto accepted labor's view or the President's view. It is reasonable to suppose that, since Senator LA FOLLETTE also voted to sustain the veto, there was agreement among the Wisconsin Progressives. The votes of STEVENSON, Republican, and DILWEG and MCMURRAY, Democrat, must be explained by themselves.

Here in the Milwaukee districts, our two Congressmen were on opposite sides in the voting Congressman WASIELEWSKI voted, with a majority of Democrats in the Senate and the House, to override. This throws the spotlight on a conviction Congress had reached. The conviction was that proper support of the war and the men whose lives are daily risked in the war called for stronger action to end the sapping on the home front.

Congressman WASIELEWSKI has a record, not only of supporting the war but of supporting the President on all important policies. He is known as a liberal, as friendly to labor. But he has shown independence. In the present instance, he clearly believed that the veto of the President was not the voice of the Nation. He voted to send word to all our forces that Congress opposes undermining on the home front.

Congressman MCMURRAY, serving his first term, has a record of voting "Yes" to everything the President says. The present emergency, which the country faced by recurring strikes and notified each time by John L. Lewis how long it has to meet his terms, did not call forth independence from Mr. McMURRAY. Though he won election because of the failure of his opponent to support the war effort, he was supporting the President when it seemed that the opposite action was necessary to give the war effort its chance.

With Congress voting by more than two-thirds that it was time to end a situation in which John L. Lewis could "stand up" the Republic, Mr. MCMURRAY'S judgment was otherwise.

Subsidies, the Great Illusion

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith some excerpts from the radio report I give to the people of my congressional district each Sunday over KGBX, Springfield, Mo., at 12:15 p. m. and again the same day at 5:30 p. m. on KWTO, Springfield, Mo. These remarks pertain to the proposed subsidy program which has been rejected by Congress and by all citizens who are informed on the inflationary dangers inherent in such a proposal:

SUBSIDIES

Price Administrator Prentiss Brown made an interesting radio speech the other day. Here are some of the exact words he used. I quote: "The roll-back subsidy program on meat and butter will save consumers between

two and three dollars for every dollar paid, and the Govenment at least will save $2. This program will pay off in hard dollars and cents at the rate of 4 or 5 to 1." That is what Mr. Brown said. It is the most interesting arithmetic I ever heard. It is not the kind I learned in school. Now, this food-subsidy program is quite a problem.

I asked the Legislative Reference Service of the Library of Congress to gather for me some authentic figures on the question. The Library, of course, has no ax to grind. It is impartial, even though its employees are appointed by the President. The Library estimates that the $450,000,000 subsidy program on coffee, meat, and butter will cost another $50,000,000 to administer. The Government must sell War bonds to raise the money. It is estimated that at least $750,000,000 in interest will accrue in addition to the cost of the subsidy. This breaks down to a cost of $9.15 per year for each individual who saves $3.92 in 1943 on his grocery bill as a result of Uncle Sam paying part of it through subsidies from the Treasury.

Of course, most of this will have to be paid by future generations. But Mr. Brown, no doubt, got his figures from the same man or men who figured out that a national debt doesn't make any difference anyway, since we owe it to ourselves. Of course, the ultimate plan calls for an annual $5,000,000,000 subsidy. The sum I have been talking about is only to start it off.

The reliable figures on the Bureau of Agricultural Economics indicate that American consumers are on the average now paying 21 percent of their incomes for food. In England consumers pay 60 percent of their income for food. England is using the food subsidy plan.

Since March of this year the average income in the United States has increased $129. The per capita cost of food has gone up during that same time only $30.

When this is boiled down we see that the cost of food is only one item in the cost of living. If we want really to roll back the cost of living we will have to roll back taxes and the other items which make up most of that cost. We probably would have also to roll back wages for unless we did we would be increasing the inflationary gap which brings inflation nearer and nearer. Nobody would relish that prospect.

There seems to be a great hue and cry that the Government should do something to help citizens whose cost of living is going up. "Do something," they cry, "to prevent or cushion the sacrifice required on the home front." I don't want to be gloomy but I'm afraid we cannot avoid sacrifices on the home front. We can't have our cake and eat it, too. We can't fight a war and maintain a high standard of living. We can't pass a law which will alter this fact. Don't look for Congress to saddle the soldier boys with part of your grocery bill to pay in taxes on an increased national debt when they get home from the battle fronts where real sacrifices are being made. Don't look for Congress to give Government more control over private business through subsidies which could make or break it at the will of some Washington bureaucrat.

WE NEED A JOSEPH

It is arithmetic that bothers me in this situation. Did you know that during the last 25 years the population of the United States has increased about a third but during the same time our total production of food and feed crops increased only one-seventh? Did you know that the United States has in every year since 1923 imported more food into this country than we exported to others? We have had a few favorable growing seasons which gave us temporary surpluses, but we did not have a Joseph to lead us in saving these crops for lean days. Now, due to a combination of factors—floods, war, farm-labor shortages, restrictions on plantings—we are face to face with famine at a time we are called upon not only to feed ourselves but most of the rest of the world.

AN ALTERNATIVE

Subsidies are an illusion. They are a deferred tax which must be paid. The farther we get away from our competitive-price system of our good old-fashioned American free economy the deeper we sink in the mire of restricted personal liberty, debt, black markets, inflation, and other troubles. There is an alternative to subsidies. It does not fit in very well with the plans of those who are seeking under cloak of war necessity to remodel our way of life. What is the alternative? We have only to look back as far as the last war to find it. In that war we had no black markets, no local famines. We were shipping more food to our Allies than we are now. Prices rose less, and even after the armistice we were able to ship 30,000,000,000 pounds of food to Europe. Maybe we would do well to call in some of the people who ran that food program for us. We are in war and must call upon our best men for public service regardless of their politics.

COLD AND HUNGER

Congress has before it a bill to strip the Office of Price Administration of its powers over the food supply of the Nation and to give this power to the War Food Administrator. The wisdom of such a measure is apparent. The Office of Price Administration, by its bungling, its confusing regulations, its incompetent leadership, and preoccupation with the 1944 campaign, has brought our Nation to the point where the people are now faced with hunger and next winter will likely be cold as well as hungry. But, this proposal will not solve the situation. War Food Administrators come and go. The best one we have had left his job because he was being made scapegoat for a calamity he was not responsible for. The administration has an interesting habit of meeting new problems by appointing a new front man, printing new letterheads, but leaving in control underneath the same crew which merrily continues to scuttle the ship of state.

It is difficult if not impossible to improve bad administration of a good law by passing another law. It is impossible to improve bad administration of a bad law by reshuffling letters of the alphabet. What this country needs is a new shuffle in the office of Chief Executive. The White House is infested with too many gremlins. We may not win the war on the home front but we can very well lose it on the home front. The situation in Washington has simply progressed from planned confusion to organized chaos.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. FLANNAGAN. Mr. Speaker, the Senate, in my opinion, acted wisely in saving the National Youth Administration. While, perhaps, many of the criticisms of the N. Y. A. in the past were justifiable, the work carried on by the agency at this time should appeal to all who are deeply interested in the welfare of our country because it is bringing education to a class that our educational set-up heretofore failed to reach. Let us face the facts: Our poorer boys and girls, prior to the advent of the N. Y. A., had a slim chance of bettering their condition. Being without financial support there was very little chance for them to equip themselves for life's work.

I have always thought, and as I grow older the conviction grows stronger, that the life blood of democracy is an educated citizenry. Yes, my colleagues, the hope of continued liberty and freedom depends upon educating the masses. Ignorance, the food upon which tyranny feeds, is the poison from which democracies die.

We are met with the challenge that during these days of stress we cannot afford the outlay of money necessary to continue N. Y. A. I answer, that even in war there are some things so fundamental that we cannot afford to neglect. While I believe in thrift, especially when our exchequer is being drained by the demands of the present conflict, in war or peace, I am against any mistaken form of thrift that would weaken the foundation stones of our Republic and thereby threaten us with a greater ruin than a little profligate spending.

Having indulged in these observations, let me tell you what N. Y. A. is doing today. I am afraid that very few of our people realize the important part it is playing, not only in bringing education to the masses, but in our war effort.

As our attention is more or less fixed today on the war, let me first tell you the important part N. Y. A. is playing in our war effort. I do not think I can bring the matter home to you in a better way than to take the N. Y. A. record in my home State. And before I present the record, let me state to you that none of these boys are of military age, unless they have been turned down due to some physical disability or unless some special arrangement has been made with the Army or Navy for their training, and that before a boy or girl is accepted for N. Y A. training a certificate has to be first obtained from the county agent that he or she is not needed agriculturally in the county. After training the boys and girls are directed into positions in war industries by the United States Employment Service.

Here is the record:

Since July 1, 1941, there have been 7,904 youth trained on N. Y. A. projects in the State of Virginia, and of this number 6,586 have obtained jobs.

These boys and girls have been trained in the following trades: Electric, radio, woodworking, welding, sheet metal, machine, auto mechanics, foundry, power sewing, clerical, aircraft mechanics, aircraft sheet metal, and aircraft woodworking.

The average wage earned by these youth is $5.36 per day.

I have a statement showing the placement of Virginia youth from July 1, 1942, to April 30, 1943, which, I am sure, will be revealing to many. It shows that during this period 3,627 boys and girls were placed, and of this total, the break-down shows that there were 2,793 boys and 834 girls. The statement further shows that these 3,627 boys and girls went into 138 industries directly or indirectly connected with our war effort. Let me mention a

few of these placements so you will see where these boys and girls are going:

	Boys	Girls	Total
Newport News Shipbuilding & Dry Dock Co	710	7	717
Naval air station, Norfolk, Va	111	124	235
Norfolk Navy Yard, Portsmouth	1,158	226	1,384
Langley Field	27	24	51
Military services	84	0	84
Port of embarkation	0	30	30
Patterson Field	40	0	40
Marine Corps air station	0	95	95
Naval torpedo station, Alexandria, Va	6	18	24
Hercules powder plant, Radford, Va	4	10	14
Crawford Manufacturing Co	0	20	20
Glen Martin, Baltimore, Md	60	6	66
Engineering Research Corporation	36	17	53

These figures clearly show that the N. Y. A. trainees are really playing an important part in our war effort. No one familiar with the facts can challenge the statement that these N. Y. A. boys and girls are playing an important part in our war effort not only in turning out war materials but in releasing men for combat service. Moreover, at the same time, their training will equip them after the war to make a better living. Hence, the N. Y. A. program serves a twofold purpose: it aids the war effort, and, at the same time, gives young men and women a better chance to fight life's battles.

The N. Y. A. program has been endorsed by the Navy Department and also by the War Department. Moreover, it has the endorsement of practically every industry holding war contracts.

Now, let me read two or three letters showing the appreciation of the boys and girls of the service:

APPALACHIA, VA., *March 8, 1943.*

Hon. J. W. FLANNAGAN,
House of Representatives,
Washington, D. C.

DEAR SIR: I think the National Youth Administration project is one of the grandest projects I know It gives the poorly educated people an opportunity to make something out of themselves which therefore they might have been knocked out of, on the account of a high school education. It also gives the poorer class of people an opportunity to get the training and pay them for the training in which the take, therefore they would have paid to take their sufficient training.

The National Youth Administration project also gives us an opportunity to help the war effort.

Transportation is also given us free, although we walk from one-half a mile to 3 miles before they catch the bus.

I hereby gladly appreciate the National Youth Administration project's efforts for helping the poor and uneducated people in America.

Yours truly,

OPAL HILL.

WISE, VA., *March 9, 1943.*

Hon. JOHN W. FLANNAGAN,
Washington, D. C.

DEAR SIR: I haven't been on the National Youth Administration but a short time but I like it just fine. I have learned a lot and hope I can get to finish what I have taken. There are a lot of us girls needed now to take the places of the ones who are fighting for us, and I hope to be of some help to those who need us. I think this training is a very good thing to help us get started.

Yours truly,

BESSIE L. SALYERS,
National Youth Administration Student.

APPALACHIA, VA., *March 10, 1943.*

Hon. JOHN W. FLANAGAN,
House of Representatives,
Washington, D. C.

DEAR SIR: I am now employed at the National Youth Administration training school at Wise, Va. I have been employed there for 6 weeks. I will soon have my machinist course finished and I hope to go to some defense plant to work.

The National Youth Administration training school is a nice project because it prepares young boys and girls to take the places of men and boys in our armed forces.

It also gives boys and girls an opportunity to get jobs which they wouldn't have been able to get if it hadn't been for the National Youth Administration. I really think it is nice project and it will be a help to boys and girls who will take it in the future. I hope you will do all you can to keep this organization running and I know it will be appreciated by all on the National Youth Administration.

Sincerely,

LOTTIE COLLIER.

Just a few words as to the other phase of the program. The program is enabling thousands of boys and girls to continue their education in our liberal arts colleges. Without the N. Y. A. assistance these boys and girls would be denied a college education. The investment the Government is making in these boys and girls through the N. Y. A. is, in my opinion, one of the finest and most worth-while investments the Government ever made. I do not know of a single Government investment that will pay greater dividends.

Permit me to read two letters received from the heads of two of our great educational institutions, and a letter received from one of our great division superintendents of schools. These educators tell the true story.

STATE TEACHERS COLLEGE,
Farmville, Va., May 12, 1943.

Congressman JOHN W. FLANNAGAN,
House of Representatives,
Washington, D. C.

DEAR MR. FLANNAGAN: The enrollment at the college has decreased at least 200 in the last year or so and the decrease will be even more than that for the next session. A great many high-school students are going into defense work.

The National Youth Administration program has been working well with us for the past 4 or 5 years. We have more applications for work scholarships under the National Youth Administration than we can give. As a rule students who enter college with the idea of becoming teachers do not have very much money During the session of 1941–42 we assisted approximately 100 students. This year on account of the decrease in appropriation we are assisting 45.

I understand that there are two programs being considered. Personally, I like the present National Youth Administration program as it has worked well and is a good going organization.

I sincerely hope that you will support some program for assisting the teachers colleges. At this time there is a great shortage of teachers, something like 2,500 in Virginia, and it is important to have as many students as possible enter our teachers colleges.

With best wishes, I am,

Yours truly,

J. L. JARMAN,
President.

VIRGINIA INTERMONT COLLEGE,
Bristol, Va., June 11, 1943.

Hon. JOHN W. FLANNAGAN, Jr.,
House of Representatives,
Washington, D. C.

DEAR SIR: I want to urge you to remember the students in our liberal arts colleges and junior colleges. It is my judgment that the National Youth Administration aid to students is money wisely spent. But for this aid many could not be in college, and it is, in my opinion, more necessary today than ever.

The comparatively small amount necessary to aid these students is most necessary to the building of strong men and women so vital in civilian life after the war is over.

There are forces at work to do away with this aid which I consider very essential to the future of our country.

Cordially yours,

H. G. NOFTSINGER,
President.

LEE COUNTY PUBLIC SCHOOLS,
Pennington Gap, Va., June 15, 1943.

Hon. JOHN W. FLANNAGAN, Jr.,
Congressman, United States of America,
Washington, D. C.

MY DEAR FRIEND JOHN: I do not know how you feel about the national-youth program in Virginia, but for Lee County where our youth know nothing concerning employment other than the teaching profession, and now since the requirement has been set to 4 years of college work as a minimum for any teacher, the poorer class of people are at a loss to know where to turn to find anything, and they have been enrolling in National Youth Administration and the greater percent have found training and the chance of work in our industrial plants a real lifesaver. I could name family after family who have sons and daughters who are carrying on in a big way with the help of the National Youth Administration. Many of our high-school graduates are now training and will be found, I think, better equipped for military training or work in our industrial plants than if they had remained at home and found nothing.

If you can will you please support the allocation which will soon be asked for in this work, and assuring you that the good people of Lee County will stand behind you.

Best wishes, I am,

Respectfully,

S. J. SHELBURNE,
Superintendent.

Mr. Speaker, I hope it will be the pleasure of the House to concur in the Senate amendment restoring the N. Y. A. appropriation. If we do not, our failure is going to blast the hopes of thousands of our young boys and girls. Let us do the right thing, the noble thing, and give these boys and girls a chance. In doing so we will not only be extending to these boys and girls a helping hand, we will be building a greater America.

What Did You Do Today for Freedom?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a poem recently written by a war worker in a Tennessee ordnance plant after seeing the widely circulated

war poster showing an American soldier's helmet, with a bullet hole through it, hanging on a rude cross over a hastily made grave on a distant battlefield:

WHAT DID YOU DO FOR FREEDOM TODAY?

(By R. L. Nicholson, war worker in an ordnance plant in Tennessee)

"What did you do for freedom today?
A Marine on Guadalcanal,
Through a hail of lead and jungle hell,
Crept out to a wounded pal;
And he dragged him back through the slime and muck,
Then, with never a thought of rest,
Back over that deadly route he went
And smashed a machine-gun nest.
It wasn't much fun—the bullets—the mud—
He may have been scared, but he hid it;
He only knew of a job to do
And he didn't quibble, he did it.

"What did you do for freedom today?
'All that you could.' Think well—
One-millionth as much as that leatherneck did?
They buried the boy where he fell.

"What did you do for freedom today?
A gob on a rubber raft
Drained the last wet drop from his water-flask
Then threw it away and laughed.
For 18 days on an endless sea
In a torment of pain he lay;
Drenched and chilled to the bone at night,
And burned to a crisp by day.
He wanted to live, but he knew in his heart
That the odds were a thousand to one;
But he drifted and hoped, consoled by a prayer,
And the thought of a job well done.

"What did you do for freedom today?
'All that you could,' you declare.
But when you say it, remember the gob
Who died on the raft out there.

"What did you do for freedom today?
Nine lads in a B-17
Ran into a flock of Messerschmitts
And died in their wrecked machine.
Oh, they didn't do bad with what they had,
But they flew through hell to do it;
They had smashed Berlin and a dozen 'one-ten's,'
But their number was up and they knew it.
They were full of holes, with no controls,
And their ship was a comet of flame;
But they stuck to their guns and the useless stick
And battled on just the same.

"What did you do for freedom today?
'All that you could.' O. K.
But if those nine boys in the B-17
Were to ask you, what would you say?

"What did you do for freedom today?
I think they've a right to ask.
You're in this fight just as much as they,
And with just as important a task.
Were you at your desk, or bench, or press,
And at work at the starting bell?
Did every minute of this day count?
And the job—did you do it well?
Did you buy a bond or a stamp today?
Or collect any scrap for the pile?
Did you save your grease or throw it away?
Did you drive just an extra mile?
Have you been down to the Red Cross Bank
And given a pint of your blood?
Did you send that V-mail letter today?
Did you hoard any rationed food?
Before you begin to complain and gripe
That life is all work and no fun—
Would you trade your dinner for ration K?
Or your overtime pay for a gun?

"Just stop every once in a while today
When your lot seems hard and lean,
And think of a gob, and a leatherneck,
And nine boys in a B-17."

Draft of Fathers for Military Service

EXTENSION OF REMARKS

OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the Hon. Philip Keyne-Gordon over the Mutual Network, Tuesday, June 15, 1943:

The War Manpower Commission today extended a reprieve to draftable American fathers.

In a formal statement the Commission spokesman said that there probably would be no fathers drafted until October 1, and that even then probably fewer than one-sixth of the draftable men with children would be inducted.

This has been made possible, the Commission's spokesman said, by a combination of things. The Navy has lowered its physical requirements, and that has admitted to service many men who otherwise would have been barred. A re-examination of industrial deferments is expected to stave off induction of fathers yet further.

There is quite obviously a commendable desire on the part of the Manpower Commission to delay the draft of men with children as long as it is convenient for the Commission.

This 60-day reprieve for the fathers is good news for America's family men. But it doesn't provide the final answer. The War Manpower Commission still assumes the power to call these men to service despite the clear intent of the draft law to work neither social nor financial hardship on any of the children of America.

A few days ago a young man came to see me. He had traveled a long way—clear from Florida. He was en route to Washington. He was headed there for the purpose of discussing his draft status with his Congressman and with other Representatives of his State. He presented what was, to me, an unbelievable set of facts. A man of much personal initiative, he has built himself a pretty fair little business by dint of hard work and individual effort. He has gathered a few dollars, a home, and three youngsters. His job is that of an advertising salesman for an agency which he owns and operates. He is a canny sort of young man, an Alabama country boy grown up and on his own. He was ordered to service. He found that he had no basis for deferment whatever, but that if he had been a printer for a newspaper, an engineer in a radio station, or even a grouper fisherman off the shores of his home town he could have been granted an industrial deferment. He found that such a position as either of these outranked in importance as his position as the father of three fine kids and their breadwinner.

He said to me—I quote him:

"I'd be honored to serve this country as a soldier, and I might be a good soldier. But I've another responsibility—the responsibility to those 3 children. If the time comes when the draft of fathers is a conceded necessity—when 19 other fellows and I must march off to war and leave 60 children behind—I'll go willingly and proudly. I do not want to leave my family to scramble for themselves or encounter the risk that my children must grow up as wards of the State while other men are deferred for industrial reasons, on jobs which I help to make for them."

He's in a kind of difficult position. If he talks too loudly, some of the professional patriots will call him names. If he doesn't talk up, he goes to war and helps to socialize America by contributing to a situation which is going to make us as a nation provide for the regimentation of war orphans.

I have been wondering about him and the thousands like him ever since that day when he called. I know he isn't a draft dodger, a slacker, or anything of the sort. And I don't think he ought to have to go to war. I think he'll do more for the America we're trying to keep if he stays here and provides us with three good future citizens who will protect the ideals of the American home, the American social structure, and the great Republic we love.

Nor do I think that his future status should depend upon the willy-nilly whims of the War Manpower Commission. For 18 months of war, those fellows have been giving us a daily demonstration of the evils to be found in authoritarianism. The "directive" for him and men like him ought to come from the Congress of the United States in the form of a clear-cut draft law which goes back to the people for its source of power. The Government of the United States has undergone some strange changes with the development of administrative power. The Manpower Commission is a pretty good example of them. It started out with a peacetime draft law which said, quite simply, that men of good physique and of certain age could be taken into the armed service of the United States. Then it said that if taking them caused hardship, they should not be taken. From that rather simple law there has grown the mountain of administrative orders which today baffles every draft board in the country.

The Kilday bill which would have sought to place fathers last on the list of drafted men was an effort to clarify this situation. It probably isn't a perfect law. At any rate the Senate Military Affairs Committee didn't think so and tabled it after it had passed the House. But whether it was good or bad, it did give these men with children some measure of economic and social certainty which permitted them to lay plans for the big job of raising and training the next generation. The Senate committee thought the bill was a bad one, because—they said—it tended to restrict the military. Maybe it did; I don't know. But if it was a bad bill, there was a way to write a good one that would still achieve the good purposes it would have encompassed—a way to put the administration of the selective service under the basic direction of the people rather than in the hands of appointed officials who bear no direct responsibility to the voters.

The young fathers of the Nation have been on the tenterhooks of the War Manpower Commission's indecision for months. The Congress—which is as yet no tool for the State Socialists and the Washington warriors—could do well for the Nation if it took this draft law in hand.

Office of War Information

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. ELLSWORTH. Mr. Speaker, before the Office of War Information was set up, Government information was in a state of tremendous confusion. Publicity services were multiplying at an increasing rate, the cost of these services

was mounting and our daily newspapers and radio were filed with the conflicting statements of the Government agency.

The press, the public and many Members of Congress clamored for the establishment of a central agency like the O. W. I. and we finally got it.

It is difficult to understand why any Member of this House should want to vote to cripple a valuable war agency like the O. W. I. Where does the demand to curtail arise? I have looked into the statements of those who are affected by O. W. I. and I find the record to be an extraordinarily good one. The motion-picture industry finds it valuable and wants it continued. The radio industry has stated that O. W. I. is essential if the radio is to be of assistance in the war effort. The working newspapermen have stated that what they need is a vigorous O. W. I., not a dead one. The book-publishing industry has come out for it, the magazine publishers want it continued, and the advertising industry's representatives say that it has done one of the best jobs of any war agency. Nearly 100 leadings newspapers have supported it editorially within the past week.

Where will you find another Government agency which is supported by all who do business with it? How many Government agencies have the support of both industry and labor, as does the O. W. I.?

In my own State and in the Pacific Northwest as a whole it has been of great service and warmly supported. I quote from an editorial which appeared in the June 19 issue of the Tacoma Times:

NORTHWEST OFFICE OF WAR INFORMATION DOING A GOOD JOB

We decry the growth of the Federal bureaucracy, as these columns often have made plain, but in fairness and appreciation we must say a good word for at least the Pacific Northwest section of a Federal bureau. The urge to do this arises from Friday's action of the House of Representatives, which voted to deprive Office of War Information of funds for its work within the Nation. We do not know just what motivated the House, but we do know this: Office of War Information is the first Federal Government press bureau which, from the standpoint of the press and the public, has been worth its keep. It has consistently distributed information properly prepared concerning activities of Office of Price Administration, War Manpower Commission, Office of Production Management, War Labor Board, and a host of other new Government agencies, all fitted into a complex pattern, but all vital to the war effort and affecting the daily lives of all citizens.

If Office of War Information had not done this job well the public confusion by now would have been monumental. If Congress really wants to lop off Government press agent expense we invite it to turn its attention to the scores of special bureaus and the several thousand such employees attached to the regular Government department. Most of them the press and public would never miss, but let Office of War Information continue its good work. As never before the people need information, and Office of War Information supplies it concisely, accurately, and objectively.

Mr. Speaker, we need an Office of War Information. That has been abundantly demonstrated. We need it to protect the rights of all of us to know what is going on in the war. We need it to make sure that the many war agencies and the military services do not withhold news and information that the country ought to have.

If we curtail the funds for the O. W. I., these functions will quickly find their way back to the various departments and agencies where they will once again be beyond control, where they will cost more and where they will serve the public less.

This is no time to hamstring O. W. I. Its appropriation is insignificant compared to the vast sums the Congress is constantly called upon to appropriate. There are few agencies that can show as big a return for a small expenditure. It is an investment which the country cannot afford to give up. I strongly urge that we give the O. W. I. as much of its requested appropriation of $8,800,000 as possible.

The Late Mrs. William Brown Meloney

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mrs. Eleanor Roosevelt from the Washington Daily News of June 29, 1943:

MY DAY—THE FIRST LADY PAYS TRIBUTE TO MEMORY OF MRS. MELONEY

(By Eleanor Roosevelt)

NEW YORK, Monday, June 28.—I have waited to add my small tribute to the tributes of many other people who knew and loved Mrs. William Brown Meloney, because I felt that many others had known her longer than I have and had a right to speak first. I have known her well only since she had begun her extraordinary fight against pain and illness, so always to me she will be the flame of a spirit which nothing, not even death, can extinguish.

Many a time when I went in to see her, the words of a poem written by my aunt, Mrs. Douglas Robinson, about her sister, Mrs. William Sheffield Cowles, kept running thru my mind, for Mrs. Meloney was a soldier of pain.

"Facing each day, head high with gallant laughter, anguish supreme;
What accolade in what divine hereafter shall this redeem?
"Thru the long night of racked, recurrent waking, till the long day,
Fraught with distress, brings but the same heartbreaking front for the fray.
"In a far land our Nation's patriots, willing fought, and now lie,
But you—as brave—a harder fate fulfilling, dare not to die!"

One never came away depressed from seeing "Missy" Meloney. One always felt that the world was so full of interesting things that there was something important for everyone to do and she was urging you on to do your share. I know that even in the future, if I am sometimes wearying and think that perhaps there is no use in fighting for things in which I believe against overwhelming opposition, the thought of what she would say, will keep me from being a slacker. She believed that women had an important part to play in the future. She not only helped such women as Mme. Curie, who was a great woman, but she helped many little people like myself to feel that we had a contribution and an obligation to try to grow.

I do not want to think of Mrs. Meloney as dead. I want to think of her vivid spirit living on in those who loved her, giving them strength to conquer bodily ills and courage to achieve more than they believed themselves capable of achieving. Most of her messages and letters finished with the same sentence. She used it to me and I am sure she did to all her other friends, and so I say "God love you," Missy dear.

Mayor LaGuardia Urges Roll-Backs and Subsidies

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks, I include herewith an important address by the mayor of the city of New York, Fiorello H. LaGuardia, together with my remarks introducing him at a conference to protect consumers attended by more than 50 Members of this House and several hundred representatives of organized labor, consumer, and farm groups in the old caucus room of the Old House Office Building on June 25, 1943:

INTRODUCTION BY CONGRESSMAN VITO MARCANTONIO

Ladies and gentlemen, this is a significant and historic meeting. It is, I believe, the first time in history when Members of Congress on their own initiative have called in representatives of labor, farm, and consumer organizations to hear from them their opinion as to what should be done on the vital problem of rising living costs, threatened inflation, and the serious problem of ineffective production and distribution of our steadily dwindling food supply.

This is a problem which requires the best thinking of all of us, if we are to avoid the extreme misery and hardship which is inevitable unless there is a real rallying of all the American people to support all aspects of President Roosevelt's economic stabilization program, especially his demand for roll-back of prices and for subsidies absolutely essential to accomplish that roll-back.

As one of the members of the steering committee which convened this conference, I have the pleasant task this morning of introducing my predecessor from the Twentieth New York Congressional District. I know that in the seven terms he served in the House no man did more to bring about harmony between the farmer, who produces our food supply, and the city worker, who is the food consumer. He constantly sought to make plain that there was an identiy of interest between these two great groups of American people and that attempts to play off the farmer against the industrial city worker were intended to becloud the issue—the real issue of assuring to the farmer his cost of production and to the city worker a

standard of living sufficient to guarantee his family a healthy existence.

Since he has left the House he has continued his efforts to bring about collaboration between the consumer and the farmer. As mayor of the city of New York, he is spokesman for the largest consumer unit in America. I give you, His Honor, Fiorello H. LaGuardia, mayor of the city of New York.

ADDRESS OF HON. FIORELLO LA GUARDIA

I fear I misunderstood the character of this meeting. I was under the impression that we were going to confer as to the parliamentary situation in connection with the subsidy and roll-backs rather than to address a mass meeting. I wanted to give some of my younger colleagues my experience of the past in legislation of this kind, for I think I came to Congress before any of these handsome young men here.

What I fear more than anything else is the sinister motive back of what may become a split between consumers in the cities and the producers on the farms.

As my successor stated, I spent 14 years here in Congress seeking to bring about an understanding between the producers and the consumers because we really have so much in common. Now I can understand Mr. Philip Murray's righteous indignation, but if he is mad now, I can tell him unless there is a drastic change in the administration and control of food immediately I would hate to hear him or see him 6 weeks from now. Gentlemen, you can tell your colleagues in the House that unless Congress gives immediate and effective action to this problem of food, its production and distribution, the whole administration of food control is going to bog down and there will be no enforcement and hell will break loose in this country.

In my town we are enforcing price regulations and when I say "we," I mean the city government. Office of Price Administration has not the personnel to do it. And there is no use having ceiling prices, laws, rules, and regulations if you do not provide the machinery to enforce them. Here's the situation. I have been with it from the very beginning because I have the responsibility of looking after the welfare of seven and a half million people. For when it comes to food, it is the metropolitan area that's involved, and that takes in a total of 10,000,000 people.

You find that the retailer, the grocer, the butcher, the wholesaler, the processor, as a rule want to do the right thing. They are not asking for exorbitant profits. They do not want to profiteer. All that they ask is the possibility of remaining in business without a per-pound money loss. Under existing conditions, they cannot do it. The retailer cannot sell at ceiling prices if he cannot buy at ceiling prices. The wholesaler cannot sell to the retailer at ceiling prices if he cannot buy at ceiling prices. We have issued and served in the last 6 weeks about 5,000 summons. Over 96 or 97 percent were pleaded guilty or were found guilty and were fined, and some were jailed. Now what? How can we continue to bring a retailer into court and fine him or jail him if he can demonstrate that he has paid more for food than he is permitted to sell. And yet we must have food. It's gotten so far, gentlemen, that we have been criticized for enforcing the law. And yet I cannot permit conditions to become in New York as they are right here in the Capital City of Washington. I wouldn't permit it.

Therefore, it boils itself down to this. Let us assume that the retail ceiling prices are just in effect and we can adjust ourselves to the ceiling prices as written in the regulations. There is sufficient margin in the difference between the producer or slaughterhouse price and the retailer that could be absorbed provided we can get the supplies. The margin allowed to the retailer is sufficient and perhaps a little more but it does him no good because he cannot get the supplies and has to go in the black market to buy. Therefore, if the retailers could get all of their supplies through legitimate channels, there is some margin and that can be applied to the original cost of the animal on the hoof or to the manufacture process that would reduce the estimates now made on the amount needed for subsidies.

If it is the policy of Congress, and I am not discussing that at all, to put no price level on the livestock, then fix the price as it is now from the packer or slaughterhouse to the retailer and pay that differential, which is what some call a subsidy; if you do that and license your slaughterhouses, we won't have a black market in 48 hours. Then the packers and the slaughterhouses can sell to the wholesalers at the ceiling price, they can then sell to the retailer at the ceiling price, and the consumer is protected.

Now what's going on? There are two methods employed that puts the retailer at a disadvantage and thereby increases the price to the consumer. One is, the packers, the large packers, have a slight advantage in that they use all of the byproducts and can make up some of the losses. There is a distinct loss on every animal between the price paid to the livestock man and the price that the packer must sell to the wholesaler on his dressed meat. The independent slaughterer cannot continue very long because he hasn't the resources and therefore the honest independent slaughterhouse is going out of business and the bootleg slaughterhouse is coming in.

Two ways to get away from it—the slaughterhouse says to the wholesaler, we will give you so much meat but you must buy other things along with it. The wholesaler in turn requires a tie-in sale. That is considered legitimate although it defeats the purpose of all of your price-ceiling regulations.

The other way is, the wholesaler will bill the retailer on an upgraded price. He may bill him for double-A grade and give him A grade. Or he bills him for more than he delivers. Or he will bill him right and weigh him right and take the payment in a check through regular channels and get the rest in cash. Then, of course, there is the black market which is nothing else than a bootlegger, and he sells for cash above the ceiling prices.

Don't permit anyone to tell you, gentlemen, that this subsidy is new. That's just a lot of junk. It was invented by the very people who now oppose it. I have lived through it—cotton, wheat, corn, tobacco. All during those terrible days of the Coolidge and Hoover administrations the farmers were down and we had to pour in and pour in money. The consumers didn't get the benefit of that. It wasn't un-American then to provide subsidies. And after 1932, when Roosevelt came in, gentlemen, you know what you voted for all these years. Why, before the war broke in Europe, we had every warehouse in the country full of wheat, cotton, and tobacco belonging to the Government. So you can meet the argument when it is presented that this is something that is going to disturb the economy of the country. No such thing.

And you can also tell your colleagues that with proper management in controlling the market, because the Government is the biggest single buyer with its requirements for the armed forces and lend lease; if prices slump it can buy up, and if they get too high, it can release food because it has over 9 months' supply on hand.

It will not cost the Government 50 percent of what is now estimated if there is proper management. You just leave it to old "6 percent" Jesse Jones and he will save money—he will make money out of it.

I don't think you will have any trouble at all in getting the votes in August. The trouble is, I fear, that we can't hold out until August. But wait until your colleagues commence getting letters from home as people get the first taste of the withholding tax. With a withholding tax you must have a releasing subsidy. When you take 20 percent of the taxable salary of the average wage earner and that housewife has that reduced from her pay envelope and goes out to try to buy food in the black market, she just can't do it. This thing is too serious. Mr. Murray understated the gravity of the situation. We're holding out in New York City; I don't know for how long. Food is attractive to all; there's no limit; and in some of your towns, you will see prices brazenly displayed in store windows far above the ceiling prices, and nothing is done about it.

Now, provide the differential so that there will be no loss, out-of-pocket loss, provide a system of licensing the slaughterhouses and the processors, and we will have no black market. And of course we have got to get a little more sense in the Office of Price Administration. In the first place, gentlemen, put prices of meat on one sheet of paper. Now you have to look through 27 sheets to find out the price of bacon. We can't get posters on ceiling prices to pu in each store although the regulations call for this. The city of New York had to pay for its own posters.

Let's get some sense into the coupon business. I had this trouble 24 years ago. Most of you men have families. You can't feed your children on a pamphlet. There is the most elaborate pamphlet out on substitutes for meat. Most mothers and most housewives and homekeepers know the substitutes for meat. I submit what good is it to have all this elaborate literature on substitutes for meat if we can't buy the substitutes? If meat is scarce, as it is right now, lift the coupons on beans, peas, and other protein-containing foodstuffs, and the market will naturally go to those commodities. It's so simple.

Take butter. No matter what you do there is going to be a scarcity in butter. For the last 35 or 40 years we have been driving against the use of oleomargarine. Every State in the country has a law against oleo. We have Federal laws against oleo. Oleo, fortified with vitamin A, is just as good as butter. True Office of Price Administration has lowered the coupon value of oleo, but it should be lowered even more or perhaps lifted entirely and that would in a great measure solve our butter problem. If any of you boys have a mixed district don't take my advice on this. There is a prejudice and a great fear the farmers and dairymen naturally feel that same day this war will be over and they dread to think that perhaps people will get to use oleo. But we are in a crisis.

At this time we have plenty of pork. But there is a prejudice about using pork in summer which is not justified any longer, and I recommended to Mr. Brown yesterday to lower the coupon value of pork so that we can encourage the consumption of pork particularly in the next four to five weeks because beef is going to be very scarce. There is a shortage of beef on the market but not of livestock. When the roll-back on meat was announced there was no announcement of how the roll-back would be met. So the raisers of livestock waited to bring their animals in. Here we are in the cities informing the people of the roll back and yet nothing has happened. When you will assure the livestock man that he will get the cost of his animal, and guarantee the original buyer at the slaughterhouse against any out-of-pocket loss, you will see how the beef starts to roll.

If the Government takes 45 percent of all slaughtered meat for the armed forces and lend-lease, that's all right. Any amount they want, that's all right. We will adjust

ourselves to the remaining quantity. But there must be allocation according to population. Take our situation on the eastern seaboard. Forty-five percent includes all of Government requirements but it does not include the requirements for the Maritime Commission. And therefore that comes out of our civilian quota and sometimes it digs in very deep.

My specific recommendation is this. First, you simply have to get together with the boys on the Agriculture Committee and talk sense to them. I know it's hard. I have been through it. Someday, sometime, this war will be over. And they are going to be the first ones to be stopped. No one seeks to take from the farmer anything he is entitled to. And yet the consumar is required to eat less than he needs because the money isn't there to buy the amount or kind of food the family needs, particularly after the withholding tax. The farmer should be guaranteed his price to cover his cost. And then the Government should guarantee to the slaughterhouse and to the original processor the differential. Then give the Government the lend-lease powers to the American people. Nothing original in that idea, is it? If the Government can buy to sell at a loss in a foreign country, to give, to take anything in exchange, surely it is not asking too much to give that same Government the power to buy and sell in order to support the market and in order to guarantee a continuous, uninterrupted, systematized flow of food to the American people.

Congress has given the Commander in Chief full and complete support in all matters military. And what's the result? The result is that we have got the best fighting force the world has even seen, and we are licking them everywhere. Now, let Congress give that same Commander in Chief, as President of the United States, the same support in protecting the morale and the health of the American people, and we will have no black market.

I hope the next invitation I get will be from the Committee on Agriculture. If they see the proposition, I don't think we will have any trouble. But it is the worse kind of politics in seeking to drive a wedge between the farmers and consumers. Who profits by it? The speculator in food. If we get farmers and consumers together, you will see how quickly all this trouble will disappear.

Just one last word. We must have action. The retailers are getting wise to the coupon bogeyman. During the first few weeks up to now, he conscientiously took his coupons, put them in an envelope, marked it, and handed it in to his bank. Now, he knows that nobody counts those coupons. You can see what's going to happen. That is just going to make the black market that much more effective, and with no control over prices. In my town we'll jail them, but New York City is not the entire United States. The retailer ought to make his purchases by the delivery of his coupons to the wholesaler and the wholesaler to the processor, and they can be weighed and counted in that manner.

When the farmer sells, let the additional cost come from the consumer. What will that mean? That will mean that only a small percentage of people who can afford to buy food will have food. And that is not to the interest of the farmer. Point that out to them. Why have we the rationing system? So as to make it equally possible for all Americans to get food. The coupon business has to be reinforced. And that assures to every American, regardless of whom he may be, just how many pounds of any rationed commodity he can get. I want to assure you that I think the interest you have displayed is very helpful. We must have a proper distribution of food and the only way to hold the line, as Mr. Murray said, is to hold the line.

One of the greatest authorities in this country on the question of inflation—every man around this table knows him—told me that he fears the situation is out of control, and when we go to inflation, who is it that gets it in the neck? The wage earner, the small businessman. I have provided in my government for meeting the present ceiling prices, and that took $12,000,000, and only provided for those having a salary to $2,500. Take the other people getting fixed salaries, small businessmen. There is just a limit. And when you take $3,000, you are above the average salary of the average person in the United States. Take from that $3,000 the withholding tax plus rent, housing, clothing, and you will see that that family can barely make both ends meet. Unless that wife is a good housekeeper, they are going to get into serious trouble. This involves success of the war just as much as providing planes and ammunition to the soldiers and should not be neglected. Gentlemen, you have got to fight if it is necessary. You have got to invoke every rule of that House to get action. You have got the American people back of you. Go to it.

Pittman-Robertson Funds

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CASE. Mr. Speaker, under permission granted by the House, I offer for the RECORD a letter from the Fish and Wildlife Service which sets forth the legislative history and an interpretation of the so-called Pittman-Robertson Act relative to the character of funds available for appropriation under its terms, by the Comptroller General of the United States. In view of the pending conference report on the Interior Department appropriation bill, and the questions that arose in the House over the funds available for appropriations, this matter has considerable importance, and should be a part of our legislative records. The matter follows:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
FISH AND WILDLIFE SERVICE,
Chicago, Ill., May 31, 1943.

Hon. FRANCIS CASE,
House of Representatives.

DEAR CONGRESSMAN CASE: I have just returned to the office to read the testimony in the CONGRESSIONAL RECORD covering the passage of the Interior Department appropriation bill in the House, on May 20. I was interested in your statement on page 4717, relative to the availability of Pittman-Robertson funds for other activities of the Government.

The Pittman-Robertson Act fully intended that these funds be set aside in a special fund and used for no other purpose but the Treasury did not accept this philosophy and held that the balance in the fund was largely to be construed as a general credit, against which the Congress might appropriate from time to time.

Not being satisfied with this interpretation, we finally secured an opinion from Comptroller General Lindsay Warren, on July 3, 1942, a copy of which I am attaching for your information. While this is rather long, the pertinent points of this opinion hold that "there is commanding evidence that the intent of the Congress was (1) to set apart and 'earmark' sums equal to the firearms-tax receipts subsequent to 1938, (2) to appropriate annually certain portions of that fund for the restoration of wildlife, and (3) to limit expenditures from the amounts thus appropriated to the aggregate of the amounts set apart from the tax collections.

"Therefore, upon establishing the special fund, and crediting thereto the amount of these tax collections for 1939 and subsequent fiscal years, the corresponding appropriation should be charged to the same fund.

"It is to be understood, of course, that the special fund authorized to be established is not to be an appropriation account and no expenditures are to be made therefrom. It is to be in the nature of a holding fund from which the appropriations authorized under the act of September 2, 1937, are to be made by the Congress from time to time in such amounts as it may deem necessary or proper and all amounts heretofore appropriated pursuant to the authorization contained in section 3 of said act are to be regarded as having been made from such fund."

Under this interpretation, there appears to be no question but that the funds must be held for the purposes of the act alone and that they are not available for any other use.

I appreciate your continuing interest in the Federal aid program as well as the other activities of the service. Incidentally, we have completed our study of the eligibility of the State of South Dakota following the passage of the State tithing law. We are now studying the data carefully and will be able to advise you very shortly of the decision as to whether your State may continue to participate in these Federal aid funds. From the wording of the law as well as the excessive amounts being directed from the game department under the tithing law, the situation does not look too good.

With kind regards, I am,

Sincerely yours,

ALBERT M. DAY,
Acting Director.

JULY 3, 1942.

The Honorable the SECRETARY OF THE TREASURY.

MY DEAR MR. SECRETARY: There has been considered your letter of April 17, 1942, in which inquiry is made whether there is any objection to compliance with the request contained in letter of February 25, 1942, from the Assistant Secretary of the Interior to the Secretary of the Treasury, reading as follows:

"The act approved September 2, 1937, entitled 'An act to provide that the United States shall aid the States in wildlife-restoration projects, and for other purposes' (50 Stat. 917), provides in part as follows:

" 'SEC. 3. An amount equal to the revenue accruing during the fiscal year ending June 30, 1939, and each fiscal year thereafter, from the tax imposed by section 610, title IV, of the Revenue Act of 1932 (47 Stat. 169), as heretofore or hereafter extended and amended, on firearms, shells, and cartridges, is hereby authorized to be set apart in the Treasury as a special fund to be known as "the Federal aid to wildlife-restoration fund" and is hereby authorized to be appropriated and made available until expended for the purposes of this act. * * *'

" 'SEC. 11. The Secretary of Agriculture (now Interior) shall make an annual report to the Congress of the sum set apart in "the Federal aid to wildlife-restoration fund," giving detailed information as to the projects and expenditures therefor.'

"On August 25, 1941, a letter was addressed to you requesting advice regarding the aggregate receipts covered into the Federal aid to wildlife-restoration fund and the unappropriated balance as of June 30, 1941. Reply dated September 10, 1941, by Mr. L. L.

Collie, Chief, Division of Bookkeeping and Warrants furnished the total receipts covered into the account '200117 tax on firearms, shells, and cartridges, section 3407, Internal Revenue Code' and the total appropriated by the Congress under the account '14X1954 Federal aid, wildlife restoration, Fish and Wildlife Service (receipt limitation).' The letter did not furnish the information specifically requested, namely, the total receipts covered into and the unappropriated balance of the Federal aid to wildlife-restoration fund as authorized by the Congress to be established.

"It is understood that your Department has taken the position that the act only authorized the setting apart of a special fund, and that therefore no action toward establishing a special fund was taken. It appears that this position may be technically correct when section 3 of the act is considered alone. However, it appears that other sections of this act and other enactments of the Congress definitely contemplated that a special fund would be established, and the fact that this has not been done complicates compliance by this Department with its provisions as a whole.

"Section 11 of the act which is quoted above requires the Secretary of the Interior to make an annual report to the Congress of the sum set apart in the Federal aid to wildlife-restoration fund. This is not possible since such a fund has not been established.

"Section 4 of the act authorizes not to exceed 8 per cent of the revenue covered into said fund (the Federal aid to wildlife-restoration fund) in each fiscal year for administration and execution of this act and the Migratory Bird Conservation Act. Here again administration is complicated by reason of the fact that a special fund has not been established.

"The Interior Department Appropriation Act of 1942 appropriated $2,750,000 for carrying out the provisions of the Federal Aid to Wildlife Restoration Act with the proviso that expenditures should not exceed the aggregate receipts covering into the Treasury under the provisions of said act. The setting apart of the receipts under section 610, title IV, of the Revenue Act of 1932, as amended, is necessary for the proper accounting for funds under this proviso.

"In view of the foregoing and in the absence of other objection, the Department desires that a special fund be established as authorized by the act. Your early consideration and a prompt reply will be appreciated."

Your letter furnishes the following table of the receipts (since 1938) from the tax on firearms and of the appropriations annually made for Federal aid to wildlife restoration.

Fiscal year	Receipts—"200117. Tax on Firearms, Shells, and Cartridges, sec. 3407, Internal Revenue Code"	Appropriation—"14X1954 Federal Aid, Wildlife Restoration, Fish and Wildlife Service (receipt limitation)"
1939	$2,976,019.80	$1,000,000
1940	3,707,843.68	1,500,000
1941	5,535,773.25	2,500,000
1942 (as of Feb. 28)	3,201,065.20	2,750,000
Total	15,420,701.13	7,750,000

The establishment of the special fund as authorized by the above statutes seems to have been under consideration at various times, and a letter of your acting administrative assistant, dated March 27, 1939 (as printed in the hearings on the Department of Agricultural appropriation bill for 1940 before the Senate Appropriations Committee at p. 460), explains why it was formerly determined not to establish the fund. The letter reads, in part, as follows:

"This section (sec. 2 of the act of Sept. 2, 1937, supra) was given careful consideration upon approval of the act of September 2, 1937, and inasmuch as the legislation did not specifically direct the Secretary of the Treasury to establish a special fund to be known as the Federal aid to wildlife restoration fund, but only authorized the setting apart of such fund, and authorized the appropriation for expenditure for the purposes of the act, no action toward establishing a special fund was taken by this Department. It was believed that under the authority contained in the foregoing section Congress would doubtless proceed to give further directions or specifically appropriate funds to carry out the purposes of the act."

The significance of the request to segregate amounts equal to tax receipts into a "special fund" derives from the usual characterization of a special fund as one "to be expended for objects or purposes specified at the time of establishment" (Gen. Regs. 67, sec. 4, 7 Comp. Gen. 870, and of 19 Comp. Gen. 791), which might be thought to suggest that the entire fund would be available for expenditure, without further appropriation by the Congress. On the other hand, the repeated use in the statute of the term "authorized" suggests otherwise, since, under a rule of interpretation enjoined by law (31 U. S. C. 627), the customary authorization of an appropriation is enabling legislation only, and an actual appropriation act is required before the funds may be paid out. (16 Comp. Gen. 1007; 19 id. 961.) That anomaly apparent, the legislative reports and debates are admissible as evidence of the congressional intent. (20 Comp. Gen. 81; 21 id 805.)

Section 3 of the original bill (S. 2670, 75th Cong.) required the fund to be set aside and appropriated the deposits for expenditure. But the final enactment came from the version reported out by the House Committee on Agriculture, in the following form:

"SEC. 3. An amount equal to the revenue accruing during the fiscal year ending June 30, 1939, and each fiscal year thereafter, from the tax imposed by section 610, title IV, of the Revenue Act of 1932 (47 Stat. 169), as heretofore or hereafter extended and amended, on firearms, shells, and cartridges is hereby authorized to be set apart in the Treasury as a special fund to be known as the Federal aid to wildlife-restoration fund, and is hereby authorized to be appropriated and made available until expended for the purposes of this act. So much of such appropriation apportioned to any State for any fiscal year as remains unexpended at the close thereof is authorized to be made available for expenditure in that State until the close of the succeeding fiscal year. Any amount apportioned to any State under the provisions of this act which is unexpended or unobligated at the end of the period during which it is available for expenditure on any project is authorized to be made available for expenditure by the Secretary of Agriculture in carrying out the provisions of the Migratory Bird Conservation Act."

The language added by amendment, the committee report thereon (No. 1572), and the remarks appearing at Eighty-first CONGRESSIONAL RECORD, page 9351, leave no doubt but that the change from an actual appropriation to an authorization to appropriate was intended, but they leave in considerable doubt the effect of the first insertion, authorizing amounts equal to the tax revenue "to be set apart," etc. As the District of Columbia Court of Appeals said in *Red Canyon Sheep Co.* v. *Ickes* ((1938) 98 F. (2d) 308, 313), "Whether authorized is to be construed as mandatory or permissive is a question which must be determined in the light of the context and purpose of the particular statute in which it is used." In view of that doubt, and, in any event, as the section was not to come into operation until the following July 1 (1938), the Treasury's determination not to set up the fund at once appears to have been correct as of that time.

Several months later an appropriation item for this purpose was included in the 1939 appropriation bill (H. R. 10238, 75th Cong.) for the Department of Agriculture, where the act of 1937 was then administered under the former Bureau of Biological Survey. As disclosed by the published hearings (p. 675), the understanding was clear and unchallenged that the tax collections for 1939 and subsequently were intended to be "earmarked or authorized" for the purposes of the act of 1937, supra, but the committee members indicated the view that the actual appropriation of the amounts thus set aside should be postponed a year, until the amount of the collections should be known. For that reason, according to the chairman of the subcommittee (83 CONGRESSIONAL RECORD, 5423), the item was eliminated by the committee (House Rept. No. 2130, 75th Cong.). Upon consideration of the bill by the Committee of the Whole, an amendment was offered to be inserted as follows (including a slight subsequent correction):

"FEDERAL AID IN WILDLIFE RESTORATION

"For carrying out the provisions of the act entitled 'An act to provide that the United States shall aid the States in wildlife restoration projects, and for other purposes,' approved September 2, 1937 (50 Stat., 917), $1,000,000: *Provided*, That expenditures hereunder shall not exceed the aggregate receipts covered into the Treasury under the provisions of said act."

This amendment was supported upon the ground that the previous act of 1937 had "earmarked" or set aside the taxes on firearms beginning July 1, 1938, had declared that the sums so collected from the sportsmen of the country at large were expressly reserved for the wildlife-restoration program, and were to be held separate and unavailable for any other purpose. The amendment was opposed upon the ground that the act had merely authorized, not required, the setting aside. (See 83 CONGRESSIONAL RECORD, 5423–5426 and 5430–5432.) In other words, the very question left in doubt by the same Congress in a previous session became the point then at issue. The amendment was adopted (83 CONGRESSIONAL RECORD, 5432), was carried verbatim into the appropriation act (52 Stat. 736), and the identical language—changing only the amount appropriated and the statutory citation (16 U. S. C. 669–669j) has appeared in the act for each subsequent year (1940, 53 Stat. 965; 1941, 54 Stat. 454; 1942, 55 Stat. 356; 1943, H. R. 6845, which went to conference on June 4, 1942). It is noteworthy that the proviso to the amendment so adopted and repeated each year refers to the receipts covered in under the provisions of said act, i. e., the act of 1937, which language can have no other literal referent than the special fund considered to have been set up under the authority of that statute.

Accordingly, whether or not the basic act of 1937 itself required the fund to be set aside, the language of the appropriation and the history of its enactment make manifest that the two statutes, taken together, do direct that action; and it follows that the account should be established, crediting thereto the equivalent of the collections under the excise tax in question accruing subsequent to June 30, 1938.

But the question does not end there. The special fund being inexistent, necessarily the annual appropriations have been charged to the general fund of the Treasury. With the establishment of the fund, as of 1939, the correctness of that action becomes open to question. Referring again to the first appropriation—the amendment added by the House to the Department of Agriculture appropriation bill for 1939—the language is, "For carrying out the provisions of the act

[of September 2, 1937, supra]." The 1937 statute authorized such an appropriation, but only from the special fund. Thus, it is not possible to carry out the provisions of the act of 1937 without charging the expenditures, then authorized and thereafter appropriated, to the special fund thereby reserved for the special purpose named.

It is true that each appropriation act was prefaced with the customary wording, "the following sums are appropriated, out of any money in the Treasury not otherwise appropriated * * *," which ordinarily, of course, anticipates a charge to the general fund. But, by the very negative nature of the words employed, special cases were left open for special treatment. In this particular connection, the legislative background again is significant. Under Rule XXI (2) of the House of Representatives, the amendment in question would not have been in order unless the expenditure had been previously authorized by law. The only previous authorization was a charge to the special fund, and if the amendment had in fact contemplated a charge to the general fund, it could not have been enacted over a point of order by a single Member. However, as noted, the amendment was debated on its merits and adopted. In the legislative references cited above, and in those arising out of the subsequent appropriation acts, there is commanding evidence that the intent of the Congress was (1) to set apart and earmark sums equal to the firearms-tax receipts subsequent to 1938, (2) to appropriate annually certain portions of that fund for the restoration of wildlife, and (3) to limit expenditures from the amounts thus appropriated to the aggregate of the amounts set apart from the tax collections.

Therefore, upon establishing the special fund, and crediting thereto the amount of these tax collections for 1939 and subsequent fiscal years, the corresponding appropriation should be charged to the same fund.

It is to be understood, of course, that the special fund authorized to be established is not to be an appropriation account and no expenditures are to be made therefrom. It is to be in the nature of a holding fund from which the appropriations authorized under the act of September 2, 1937, are to be made by the Congress from time to time in such amounts as it may deem necessary or proper, and all amounts heretofore appropriated pursuant to the authorization contained in section 3 of said act are to be regarded as having been made from such fund.

Respectfully,

LINDSAY C. WARREN,
Comptroller General of the United States.

O. W. I. Motion-Picture Bureau

EXTENSION OF REMARKS

OF

HON. WILL ROGERS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30 1943

Mr. ROGERS of California. Mr. Speaker, the genuine alarm with which the motion picture industry views the threatened elimination of the O. W. I. motion-picture bureau is spread through every phase of that industry. It is not simply that the newsreel people are sorry to lose the invaluable aid they have had from O. W. I., or that producers are worried about the help they have had. Theater owners themselves—the portion of the industry in the best position to know what the public wants and needs in film entertainment—are also worried.

Below is a portion of a Washington column written by Will Sheridan for The Independent, issue of June 26, 1943, a trade paper which speaks for the independent theater owners of the country—owners of theaters not controlled by the large circuits attached to Hollywood studios:

Exhibitor leaders as well as producers have come to value the work of Lowell Mellett and his crew, even though it is by no means perfect. They're worrying plenty right now about how they're going to deal with Government hereafter. Without Office of War Information there's no control agency which can function as liaison between the industry and the myriad Government departments. Some makeshift organization may be arranged, either by the Government or the industry, but it is difficult to see how it can function with anything like the authority Office of War Information was finally obtaining insofar as Government is concerned. The CONGRESSIONAL RECORD for last Friday contains the following wire from Will Hays, head of the Motion Picture Producers and Distributors of America, addresed to Chairman CANNON, of the House Appropriations Committee:

"I note in the report on the hearings of your committee on the War Agencies Appropriations bill the inclusion of certain criticisms of the Office of War Information as they relate to the motion-picture industry. The effect of this is to suggest that Office of War Information has attempted to unduly influence the content of American motion pictures.

"I speak from the best of information when I say that this view is not that of the industry. We have been greatly pleased by the understanding shown by the Bureau of Motion Pictures of the Office of War Information and by the complete lack of any effort on its part to dominate our operation. The industry on its own initiative offered to cooperate completely with the Government in the war effort, and the Bureau of Motion Pictures of the Office of War Information has aided our efforts to make our cooperation 100-percent effective.

"I know the motion-picture industry's feeling is one of genuine appreciation for the service being rendered to the industry."

What it all boils down to is that Lowell Mellett's office has been unique in that it served as an aid to the industry—a vitally important aid, while aside from an occasional misunderstanding it was not attempting to "take over" the industry. We won't dip into past quarrels—the fact is that whether or not Mellett had other ideas when he began his job he now knows that the industry will do the best possible job for the war effort only if it retains its complete independence. Both he and the industry have learned that there is a definite place for a Government office such as his, providing service of real value. Industry-wise, we think a major casualty was registered last week.

In addition to the wire of support from Will Hays, other wires were sent the Senate Appropriations Committee, including these from the War Activities Committee of the Motion Picture Industry and the major newsreels of the country:

NEW YORK, N. Y., *June 24, 1943.*

Hon. LOWELL MELLETT,
Chief, Bureau of Motion Pictures,
Office of War Information,
Washington, D. C.:

In behalf of the War Activities Committee of the Motion Picture Industry representing all branches of the industry including over 16,500 theaters I wish to register my hope that the work of the Bureau of Motion Pictures of the Office of War Information will not be curtailed to an extent that will reduce the excellent service it is performing in coordinating the activities of all Government departments and in making available valuable information to millions of theater patrons.

GEORGE J. SCHAEFER,
Chairman, War Activities Committee.

JUNE 23, 1943.

Senator JIM MEAD,
Senate Appropriations Committee,
Washington, D. C.:

The Bureau of Motion Pictures of Office of War Information has been of great help in assisting the newsreels in disseminating to over 100,000,000 people weekly motion picture news of the war and of Government activities pertaining to the war. In our opinion abolition of this motion picture bureau would be a serious loss at this time.

WALTON C. AMENT,
Pathe News.
M. CLOFINE,
News of the Day.
THOMAS MEAD,
Universal Newsreel.
EDMUND REEK,
Fox Movietone News.
A. J. RICHARD,
Paramount News.

Here is another editorial from a motion picture trade magazine—the Motion Picture Herald, issue of June 26, 1943:

OFFICE OF WAR INFORMATION AND THE SCREEN

Despite the much that has been said, and much of it in these columns, about the Bureau of Motion Pictures of the Office of War Information, it is an institution of earnest wartime service with which the motion picture industry has reached a generally competent working relation. Also, Mr. Lowell Mellett, Chief of that Bureau, has impressed this industry with his sincerity of purpose.

The movement in Congress, pending at midweek between House and Senate, to wipe out the Office and along with it, incidentally, the Picture Bureau, is to be viewed as a process of abandoning the horse in midstream.

The functions at which the Office of War Information Picture Bureau has been addressed are essential to the war cause of the Nation and to the conduct of the motion picture in wartime. Relations must be maintained by some agency. The existing relation enjoys the benefit of a deal of experience, and the cause is not to be served by waiting for a new arrangement and organization to acquire working experience.

A very important aspect of the work of the O. W. I. Motion Picture Bureau—one that is frequently overlooked—is the distribution of important war information pictures for showing in schools, rural churches, clubs, and so forth. Millions of Americans have been able to see these nontheatrical showings who would otherwise not have seen many of our best short pictures on the war and how the

people of America—on the farms and in the factories—can do their part for victory.

The following communications give some idea of the support for this phase of the O. W. I. program:

WASHINGTON, D. C., *June 24, 1943.*

LOWELL MELLETT,

Bureau of Motion Pictures, Office of War Information, Washington, D. C.:

The National Congress of Parents and Teachers representing 2,600,000 members respectfully urges the continuance and strengthening of the motion-pictures program of the Office of War Information and especially that part which provides war information films for schools. There is continuing need for authentic, effective film material dealing with war aims, the United Nations, Victory gardens, conservation of home equipment, child care, work of schools and colleges in wartimes, inflation, and other topics. Films already available have been widely used in classrooms and in parent-teacher meetings.

Mrs. WILLIAM A. HASTINGS,
President,
Mrs. MALCOLM MCCLELLAN,
Chairman of Legislation,
National Congress of Parents and Teachers.

COPY OF WIRE SENT SENATE APPROPRIATIONS COMMITTEE

The National Association of Visual Education Dealers, representing the major resources of the visual-education industry, with membership in 39 States and Hawaii, urges adequate appropriation for the Bureau of Motion Pictures of the Office of War Information so that 25,000 16-millimeter sound projectors will continue to be used for war information purposes by clubs, schools, churches, industrial plants, and others.

Two hundred and thirty film distributors, including educational film libraries as well as our members, are now distributing Office of War Information films without profit. This activity makes it possible for over 7,000,000 Americans monthly to see films and be better informed about the war effort.

This association considers this motion-picture project an essential part of the civilian war effort and should be extended rather than curtailed.

This association pledges its continued active cooperation to aid the Government in this motion-picture program. If a hearing is to be held, we request the privilege of being heard.

NATIONAL ASSOCIATION OF VISUAL EDUCATION DEALERS.
D. T. DAVIS.

National Youth Administration

EXTENSION OF REMARKS

OF

HON. JAMES M. CURLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CURLEY. Mr. Speaker, one out of every three persons employed in Massachusetts is engaged in war production. Nevertheless, today, manpower is still our greatest problem. Today, 73,000 more war workers are needed in Massachusetts war industries. There are 73,000 production battle stations idle, battle stations that should be producing daily for our fighting men. Given these skilled workers, Massachusetts can increase its war production by 12 percent.

I dwell on this background material to give emphasis to my astonishment at opposition to the continuance of any agency which has been devoting its every effort to increasing the country's supply of skilled manpower for war industries. At a time when industries in Massachusetts, and throughout the country, are unable to produce to their fullest capacity through a shortage of skilled manpower, what is the basis for criticism of an agency which in 1 year added over one-half million new skilled workers, which is today adding 1,700 new skilled workers every day.

I refer, of course, to the National Youth Administration, which is at present a part of the War Manpower Commission. Permit me to review the record of this agency in my own State, where I am acquainted both with the struggle of industry to produce enough, soon enough, and the contributions of the N. Y. A. to their efforts. What is the record of the N. Y. A. and what are the criticisms of it?

Presently the N. Y. A. operates 22 training units in Massachusetts in 10 different industrial cities. In addition, two resident centers—one for boys and one for girls—are maintained in the Springfield area. These N. Y. A. programs can train 750 youth at any one time. During the past 10 months an average of 1,500 Massachusetts youth have been in training for a period of 8 weeks each. Over one-third of this number have been women.

It is estimated that the N. Y. A. in Massachusetts has, since the inception of its war-production training program in 1939, trained some 75,000 Massachusetts youth. It is known that an average of 75 percent of all N. Y. A. trainees obtain war employment upon leaving the N. Y. A. There are now 600,000 war workers in Massachusetts. This means that at least 10 percent of all war workers in the Commonwealth are N. Y. A. trainees. The present daily manpower contribution of N. Y. A. former trainees is 450,000 hours—enough to build 25 attack bombers every day. I believe the question as to the quantity is answered satisfactorily.

What has the N. Y. A. contributed to Massachusetts' manpower problem qualitatively? Let the Massachusetts industrialists speak for themselves:

We have found them to be satisfactory employees. * * * We shall certainly continue to be receptive to any others who may come to us. (Raytheon Production Corporation, Newton, Mass.)

We have been well satisfied by the work done by these young women. * * * We have found these girls to be much more valuable to us than the few who have come to us without any previous machine-shop training. (Pneumatic Scale Corporation, Quincy, Mass.)

We have taken contracts based upon receiving N. Y. A. trainees. (Research & Engineering Co., Agawam, Mass.)

We have found them to be very well trained considering the length of time spent at the school; some, who had a little more time in training, are, in our estimation, exceptional. (Manning, Maxwell & Moore, Boston, Mass.)

We have been pleased in the past with the training received by the National Youth Administration students and they have proven to be very satisfactory workers. (American Bosch Corporation, Springfield, Mass.)

Additional evidence of the quality of N. Y. A. trainees is available in the list of thousands of firms who have continually hired these youths. Allow me to cite a small portion of the list, firms which are making solid contributions to our production battle, firms which have a reputation far beyond the borders of Massachusetts:

American Bosch Co., Atlantic Parachute Co., Bethlehem Shipbuilding Corporation, Boston Gear Works, Boston (U. S.) Navy Yard, Crompton-Knowles Co., Florence Stove Co., General Electric Co., Gilbert & Barker Manufacturing Co., Hood Rubber Co., Hygrade-Sylvania Lamp Co., Independent Lock Co., Indian Motorcycle Co., Lawley Shipyards, Manning, Maxwell & Moore, Massachusetts Institute of Technology, Northeast Airlines, Norton Abrasives Co., Pneumatic Drop Hammer Co., Precision Tool Manufacturing Co., Raytheon Manufacturing Co., Remington Arms Corporation, Savage Arms Corporation, Simplex Wire Corporation, Simpson Drydocks, Springfield (U. S. A.) Armory, Stone & Webster Corporation, Tubular Rivet & Stud Co., Union Twist Drill Co., United Shoe Machinery Corporation, United States Rubber Co., Walsh Boiler Works, Watertown (U. S. A.) Arsenal, Westinghouse Electric Co., Westover (U. S. A.) Air Field Base, Worthington Pump Co.

I believe no more effective reply could be made to any questions as to the quality of the N. Y. A. product than this list, a blue book of war production plants in Massachusetts.

Any fair appraisal of the N. Y. A. requires mention of one of its most important byproducts, production of essential items in its shops. The N. Y. A. training program is based on the proposition that one learns by doing. Thus, each trainee works on actual production, scaled to his or her level of progress. Thousands of minor jobs which would throw the production schedule of a large plant out of alinement have been performed by N. Y. A. trainees at their benches for the Army, Navy, civilian-defense agencies, and city and State departments. In each case the sponsor of the work provides the raw materials, and the N. Y. A. trainee, as part of his training, fabricates the required item. Massachusetts shops alone have fabricated items for the United States navy yards at Portsmouth, N. H., and Brooklyn, N. Y., valued at almost 100,000 man-hours.

What then are the criticisms of this program, for, surely, no man or woman knowingly seeks to undermine a program which is adding to our war strength, to our production power.

The most common criticism is why continue a relief agency in time of a manpower shortage. This is a sorry criticism resulting from failure on the part of the critics to ascertain the facts. Eight years ago, when there was a surplus of manpower, the N. Y. A. was initiated as a relief agency. Over 3 years ago, and incidentally long before the majority of the agencies and public had aroused themselves to the urgency of

war, the N. Y. A. was transformed into a war industry training program. For years it has not functioned as a relief agency. For years it has been providing war industries with skilled workers. Critics on this score should visit one of the 1,500 work training units throughout the Nation and inform themselves whereof they speak.

Another frequent criticism is that the Nation must economize. Let us economize by eliminating nonessential activities, but not by eliminating an agency turning out 1,000 workers skilled for war production every day while machines stand idle waiting for workers. The total yearly cost of the N. Y. A. is less than that of a battleship. Yet without the product of the N. Y. A.—skilled workers—no amount of money would permit us to build any ships.

In Massachusetts, for the first 6 months of the fiscal year, the cost of training the average N. Y. A. youth over a period of 8 weeks was $91, of which $28 was paid to the youth. Is $63 a high price to pay for a pair of trained hands that will produce fighting equipment? This figure includes all costs of supervision, training, equipment, transportation, and rentals. Would that Massachusetts today could, by the simple expedient of paying $63 each for 73,000 men and women, acquire trained workers. Not an industrialist would hesitate.

Another charge is that the N. Y. A. is a Federal program imposed upon the cities. This charge, common among professional lobbyists, fares badly in the face of the facts. Such facts as the cooperation of municipal authorities in Massachusetts authorizing expenditures for rentals, heat, power, light, and services for the N. Y. A. that the program may be strengthened; such facts as letters of wholehearted commendation from heads of Massachusetts' outstanding industrial cities such as Boston, Springfield, New Bedford, Quincy, Worcester, and so forth, and other overt expressions of support clearly give the answer to this charge.

Failing to challenge the solid basis of the N. Y. A. work, critics resort to another method of attack. Some other agency could do the work better. It has not been an American custom to reward meritorious service with dismissal, but let us examine the assertions.

Industry can train its own workers. This is only partially true. Small plants have neither the staff nor room to organize training programs. They are wholly dependent upon the public training facilities. Large plants can and do train their own workers. With what results? The cost, which is borne by the tax-paying public, is four times that of the average N. Y. A. cost. In addition, valuable equipment and skilled men who would be otherwise at work on production are thus diverted to training. Is it not sounder to allow the N. Y. A. to train new workers when it can do it more cheaply and without disturbing the production schedule of private industry?

Let our regular educational programs train the workers. In the first place, in Massachusetts at least, industry will need more than the total trained worker output of both the N. Y. A. and the regular vocational school programs. Secondly, the N. Y. A. has been able to exhibit a flexibility that the vocational school program, operated by local school authorities, cannot duplicate. Vocational schools are permanently established in certain cities. The N. Y. A. can and does move from city to city. Labor shortages hit now one city, now another. The N. Y. A. has effectively filtered workers from labor surplus areas in other States in Massachusetts' Springfield Valley area. The N. Y. A. has established resident training centers caring for youth through all of New England. The city of Gardner, Mass., experienced a rising demand for war workers. Within 2 months a complete war training unit has been established there. I say, gentlemen, we need both training programs. Each fulfills a separate and distinct function.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. WILLIAM P. ELMER

OF MISSOURI

IN THE HOUSF OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. ELMER. Mr. Speaker, I speak on the Fulbright resolution, as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein.

I am a nationalist. I am not an internationalist or interventionist. I believe in the principles of the American Government. You may call me an isolationist if you please if that term means adhering to and practicing the principles enunciated by our founding fathers and under which we have operated a successful Government for 150 years.

As derisively defined by those who seek advantage, I declare there are no isolationists in this country, and no political party of consequence has ever declared for isolationism. Nor has any such party declared for internationalism. The declarations of party platforms have been nearer to the isolation idea than to the international one, and will be in 1944. No party dares to declare for internationalism. The membership of this House dare not so declare. Some will play around in the shallows with milk-water resolutions like this one to test out the sentiment of voters, with the illuminating thought if it fails it doesn't mean anything anyway. If this resolution is right in the minds of its proponents; if it means military force to police the world; if it means internationalism; the change in our form of government in any way; the surrender of some of our sovereignty; the abolition of our national life or any part of it, why not come out in boldness and say so? Why not set out the plan in detail and advocate its immediate adoption? If it is so good and beneficial, why delay till the war is over? Maybe its beneficient effects will convert our enemies, for they say, like us, they are waging the war for eternal peace.

Surely we do not want to creep up on the American people with an olive branch in one hand and a stiletto in the other to slit their throats. Let us declare for political nationalism or political internationalism so the people will know whither we are trying to lead them. Let the issues be clear cut and not be clouded. I have talked to and read letters from hundreds of soldiers, some here, some from abroad, and they have never seen anything yet worth fighting for in any foreign country. One wrote: "I am in the land where Christ was born; I wish to Christ I was in the land where I was born." When these boys return home—if they do—they will be full to overflowing with national patriotic spirit and they will start a crusade of America for Americans that will sweep aside all the other isms and schisms from our way of life. It will be the death knell of that internationalism whose main objective is world trade at the sacrifice of national sovereignty. The same thing will be true of all nations. Even China will have a national spirit after this war ends.

Yet this has never meant and does not now mean we or any of these nations are living in a state of isolation, or that we are housing ourselves within a shell. That illustration is often used by those who have run out of reasons. It is just an excuse to silence the fearful and ridicule the patriot. The rule has ever been to assume our place in the galaxy of nations in every way except to tie our destiny with theirs. Between isolationism and internationalism we have plowed our course of national Americanism; it has kept us free from wars and preserved our peace. It was the deviation from our true course that involved us in two world wars.

This resolution violates our national rule. Walter Lippmann in his new book on this subject, United States Foreign Policy, says isolationism is misnamed. That it really means insolvency. That we never have had and do not now have a national or international policy. That our Monroe Doctrine is incapable of performance and defense, by us. That it would bankrupt us to fulfill its obligations. All of this because of the international urge. May I ask if we had no policy, national or international, by what chance have we grown to stature? How did we become the richest and best Nation of the earth? If the form of Government we adopted is wrong why so long in discovering it?

Why did it come with two world wars, the origin of which is so far hidden in the remote background of history, we can only speculate as to their cause?

Would it bankrupt us to enforce the implications of the Monroe Doctrine? We have done so since 1824, by virtue of national prestige until it is now an accepted international fact. It has cost us little and saved us much. If we could not enforce the Monroe Doctrine without insolvency, how can we then enforce all the implications of this resolution to cover all the world and still remain solvent? Can we by uniting with the insolvent nations of the world—and all of them broke—better our political and financial condition over the more limited sphere of our present commitments?

The questions, without argument, give the answer. We are the only nation now solvent but we are fast approaching that dismal abyss. We constantly solace ourselves by talking about our great natural resources, our national income, and cite them as to our ability to finance, police, and govern the whole world. Yet we cannot enforce the Monroe Doctrine and could not defend ourselves without an alliance with Britain. This war is depleting our natural resources; discouraging our people in the production of wealth. We are taxing and borrowing, mounting our national debt, spend it and call it income. The extravagances it produces we call prosperity. We are at our lowest ebb, but will go lower, in real national wealth.

Have we spent this money to defend the Monroe Doctrine or to save the British Empire from destruction? How much will we spend to uphold and maintain that Empire if we adopt the international policy of forever weaving our destiny with that of Britain and all other nations? That is just the international policy Lippmann writes about and this resolution contemplates. It means insolvency and destruction for us. How different is this idea from that of Churchill. He said the greatest day's work of his life was getting America on their side of this war. And it was. That was said when his country was gasping for breath. Later, when India was gasping for her independence, he said he was not appointed Prime Minister to liquidate the British Empire. I admire him for both statements. Both are patriotic, national; they exalt the welfare of his country, above all others. That is why I am an American nationalist.

Where did this resolution come from? It is not native-born. It doesn't have the birthmarks of Americanism. It is not inspired by our system of national life. It is born across the sea, but not in a manger. It is a foreigner, steeped in a mixture of marxism, fascism, nazism, and world-wide commerce. Its application would render us a subservient and subaltern nation. The action of the committee in bringing the resolution to this floor has been described as "vastly important and historic." I say it is vastly destructive of American ideals. If you want to see it in detail read Eli Culbertson's book where he plans and maps the super government down to the office of justice of the peace and constable.

If you want to read a synopsis of the Culbertson plan, without commitments, read "Roosevelt's World Blue Print," in the Saturday Evening Post, April 10, 1943. The basic idea of the League of Nations and of this resolution and all other similar schemes is power and force that was the heart of the covenant of the League. It meant then, and means now, the establishment of an international army powerful enough to enforce peace by coercing or subduing any other combination of nations. No other nation shall maintain an army for defensive or offensive purposes. The direction of this force will have to be vested in the whole League, else it is a mere balance of power. This means the surrender of sovereignty by the individual nations. No reservation can save it. The government of Washington and Jefferson will be merged in a super government of the world. It is the United States of America or One World.

We often hear: "We won World War No. 1, but lost the peace." That is just a saying without foundation. We won nothing in World War No. 1 except debt, destruction, and death. After the war we intermeddled unofficially in the affairs of Europe; directed their commerce; loaned money to and financed the politicians on both sides; tried social experiments; loaned to foreign governments; supplied foreign corporations with money and machinery to rehabilitate themselves; and rebuilt her cities. This was not isolationism; it was interventionist meddling where we had no business. We were helping them keep out that dreaded monster, Russian communism. Then they traded with everybody else but us. American-loaned money was used to pay German indemnities and the Allied Nations used this money to pay us on the war loans. They really paid nothing. They have paid nothing yet.

In South America we loaned money, bought worthless government bonds, so they could trade with Europe. We did everything but join the League of Nations and back it with our military power. The failure to do this is the basis of that cry, "We lost the peace." That is a false cry, too. The League of Nations was composed of the victorious Allies who were the preferred powers. They had complete control and the military power to coerce Germany. They had the peace. Our signing the covenant would only have added our unneeded wealth and power to the League. When it was completed there existed the same old balance of power that had troubled Europe for centuries. Our joining the League would not have changed it. Just made the balance of it a little more unbalanced without changing the peace terms.

The same old jealousies, hates, rivalries, selfishness, and double-crossings took place as of old. England double-crossed France and finally permitted Germany to rearm. All of them watched Italy ravish their sister member, Ethiopia. England, France, and Russia secretly took sides in the civil war in Spain, and England never protested the use of military aid by Germany and Italy to Franco. Litvinoff told the League the invasion of Ethiopia meant another world war, and demanded it stop. But England wanted to see Italy and Japan become world powers; Germany, a buffer state between her and Russia; Spain a menace to France. What peace did we lose in this set-up? We merely lost a chance of getting into this maelstrom of hell 2 years earlier than we did. If the powers had so decreed, these tares of war could have been uprooted, and they did not need our help to do it. Each one distrusted and sought advantage of the other.

Today we are allied with England in World War No. 2. England is hated with venomous hate by more people on this earth than any other power. She lost her East India possessions to Japan, and has to hold India down by the sword because of this hatred. Even the Chinese rejoiced when the English were jailed by the Japs. I believe the present strife in north Africa between the French generals is partly due to England's covetous eyes on north Africa as a colonial possession. She knows France cannot resist, and the others will not. She has double-crossed all nations—even us. Do we want to cast our lot into this inferno? With all of this as known history what can we hope to gain by joining in a world-wide league, assuming more obligations and expense, with a surrender of sovereignty?

What is our formula for peace? We have the best one ever devised. And that is to stay at home and mind our own business. It worked for 130 years, and would work today if we observed it. Our Constitution says in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare and secure the blessings and liberty to ourselves and our posterity, we established our Government. It has done these things. We never have needed an international alliance to carry out these beneficent ideas. We have done it by a national policy. I know some now regard our founding fathers as fossils; their principles worn out; that the world is in a new era and needs new governments. But a compass is still used on the modern ship and its needle points to the North Star; an anchor is still used to hold the ship steady; a loyal crew is necessary to insure a safe voyage; the well-known and tried routes are the safest. We know who laid the keel of our ship and we know the material of which it is built. I am not in favor of sabotaging it to embark in a new boat built by unknown workmen without plan or design, with no compass or anchor, with a mixed crew of jabbering internationalists on a strange sea and on untried routes with a lot of co-owner nations who have heretofore, if not now, been international pirates, schemers, oppressors, and exploiters of weak people. The Bible says, "Remove not the ancient landmarks which thy fathers have set." That is good advice to us as a nation.

I know it is argued times have changed; modern inventions have made the world small; distances have been annihilated; we cannot rely on old doctrines and principles. Our own power is not enough to save us. We need alliances—even world-wide—not with all nations—just with those whom we want to share this power with us to boss the

world. This argument is fallacious. The oceans are just as wide as ever.

When our Colonies rebelled the people were shocked one morning to see English battleships in American harbors. In 1814 English soldiers marched to Washington and burned this very building. Our Government, in terror, fled. No one knew or thought the enemy was at our gates. They came as a thief in the night. We had no defenses; nothing to fight with. No means of knowing they were here. Today our coasts are defended. We have the guns, ships, planes, submarines, and millions of men. We can detect enemy ships, submarines, and planes on the distant high seas. Not a one of them could come within 500 miles of our coast without detection and destruction. All the ships in the world cannot land an army and equipment on our shores and invade us if we are not asleep. There would have been no Pearl Harbor if we had been awake. If we can fight an aggressive war where the first battle line of defense is 3,000 miles from our shores, I know we can defend our homes. If we cannot, we are unworthy of the name we bear and our country will fall. I verily believe the airplane is the greatest security of the ages against cross-sea invasion. With planes, submarines, and coast defenses, no enemy can land ships. We can still thank God the "land was divided" and the oceans bound us on either side.

I know there is an insistent demand for world-wide coalition. We want peace. It is so desired we are apt to close our eyes and grab for it. But the words of Patrick Henry should ring in our ears. We established and saved our country by war at home. The only real menace we ever had was in 1861–65, when we divided ourselves.

This was the only real war ever fought. Hand to hand, man to man, with a bravery and ferociousness in battle never equalled in world history. Many of us in this House are descended from those men who fought that war of division. Now we stand united under one flag and for one purpose—to defend our common country. No one could object to world agreements for peace. Our country has had them from the beginning. The objection is in tying ourselves through political alliances with other nations and putting our reliance for national safety in an armed force, controlled by them. That is a loss of sovereignty and would soon lose our independence and safety. World commerce and even world peace are not worth it. We have already heard the utter abjectness preached here, that we must join with England to "save ourselves." That was a cowardly and false doctrine. It was preached as an excuse to enter the war to save England, not ourselves. That abjectness was not shared by all, but if our national safety depends on superpower world force then abjectness becomes a national policy and spirit. Nationalism would be dead. It is a disturbing thought that world peace is always linked by internationalists and interventionists with world commerce, the cause of most wars.

Our national policy in dealing with foreign nations was firmly established by our first five Presidents. We have followed their advice in its true sense. Washington spent 4 years in writing his farewell address and submitted it to all the leading statesmen of his time. It is a chart for our foreign policy. He said:

> Observe good faith and justice toward all nations; cultivate peace and harmony with all; * * * the greatest rule of conduct for us in regard to foreign nations is, in extending our commercial relations to have with them as little political connections as possible; * * * it is our true policy to steer clear of permanent alliances with any portion of the foreign world.

That is a definite foreign policy.

Thomas Jefferson said:

> Peace, commerce, and honest friendship with all; entangling alliances with none.

That is a definite foreign policy.

Monroe promulgated another foreign policy which in effect said: We will not meddle in European affairs and they shall not meddle in ours, or America for Americans. We have woven this foreign policy inextricably with and as a part of our national policy. It is not isolation, intervention, or international. It is American, a distinct policy, separate from all world politics, and intended so to be.

The Republican national platform of 1940 said:

> The Republican Party is firmly opposed to involving this Nation in foreign war. * * * The Republican Party stands for Americanism, preparedness, and peace * * * and also to efficiently uphold in war the Monroe Doctrine.

The Democratic national platform of 1940 said:

> We will not participate in foreign wars, and we will not send our Army, Navy, or Air Forces to fight in foreign lands outside of the Americas, except in case of attack. We favor and shall rigorously enforce and defend the Monroe Doctrine.

These are declarations of foreign policy. There is no internationalism in them. Objectors to this policy mean they want national alliances in peace and war instead of American policies. Regardless of all ingenious theories, plans, and schemes, and arguments made to undermine or overcome, it is the fixed policy and sentiment of the American people. Unscrambling entangling alliances, as once proposed, or alliances made with one or more countries for physical security, as now proposed, are not American. They are byproducts of war diseases.

I am an American. I am proud of it. It means something. When the old Apostle Paul was tied to the post and the soldier was ready to lash him he said; "Is it lawful for thee to scourge a Roman citizen uncondemned?" The whip fell from that soldier's hand and he ran to the captain and said: "Take heed what thou doest, this man is a Roman citizen." The captain of the hosts ran, he did not walk, and said to Paul: "Art thou a Roman?" The little, old, baldheaded, weak-eyed, epileptic, hunchback straightened himself up to the full stature of his chains and proudly said: "I am." The centurion said: "With a great price bought I that freedom." Paul said: "I was free born." In that day it was greater to be a Roman than to be a king. Today it is greater to be a free-born American than to be a king. Shall we lose that birthright of kingship? Shall we trade it for a miserable mess of international peace pottage steeped in the viciousness of world politics? Or shall we preserve it for ourselves and transmit it to our posterity to live by and, if need be, to die for? We are Americans. We are nationalists. We are not internationalists. We do not want the flag to come trailing back some time after we have tried this fallacy. We don't want the flag to leave here.

Labor Relations

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 30 (legislative day of Monday, May 24), 1943

Mr. HOLMAN. Mr. President, recently there was held in Eugene, Oreg., a meeting or convention of labor leaders which issued a public statement purporting to represent my views on the subject of labor relations. The meeting also adopted resolutions which were in harmony with its purpose to discredit me before uninformed citizens of my State. In order to make of record a truthful and accurate statement of my views on the subject of labor relations, I addressed a letter on the subject to an old friend who has devoted the best years of his life to the protection and welfare of the workingmen of Oregon. I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 30, 1943.

Hon. —— ——,

Salem, Oreg.

MY DEAR MR. ——: On account of your lifelong interest in the welfare of the American workingman, as well as on account of the long friendship which has existed between us, I would like to receive your reactions relative to my convictions about labor relations which I shall try to express accurately in this letter.

Contrary to the statement of the convention of the racketeers of labor, recently held in Eugene, Oreg., I have no desire or intention to "misstate facts or to influence the public against labor"; nor have I done so. On the contrary, the American workingman, who works and maintains the peace, has no better friend or ardent supporter than I am and always have been, in both my private life and in my public career, as the historic facts demonstrate. I have been a laborer, myself; as my pioneer father and grandfather were before me.

In the interests of the American workingman and as a protection to him and his family in his rights as an independent citizen to

go and to come, to work and to speak freely, I am opposed to all forms of force and violence, exercised without legal authority, which control and intimidate him in his freedom, liberty, and independence. The use of force, violence, and intimidation in an effort to enforce the will of some men upon other men is the method of dictators and the destruction of democracy. I recognize as a fact that my liberty ceases where yours begins and I expect all others to observe the same rule of conduct.

I am opposed to the collection of any funds whatever from the workman's earned wages, by deduction or otherwise, which are made against his will, by any person or persons, not lawfully and officially connected with the Federal, State, or municipal government and unauthorized by constitutional law; as I am opposed to all other forms of piracy and highway robbery.

I am opposed to any person, or persons, other than those acting with the warrant and badge of governmental authority, interfering with the traffic of citizens or of their vehicles on the public highways, or any part of them, as I am opposed to all other criminal practices and acts which curtail the freedom of innocent and peaceable citizens minding their own business.

I am opposed in time of war to the planned and deliberate interruption of production and delivery of anything which our Nation needs in the conduct of the war; as I am opposed to all other traitorous acts against our Government and its efforts to win the war and to supply our soldiers, sailors, and marines with all those things which they require now to defend themselves from the vicious attacks of our treacherous enemies in the global conflicts where our combat troops are fighting valiantly for the protection of all of us at home.

It is my conviction that the American workingman, as well as his employer, is entitled to enjoy, and his Government under the Federal Constitution is obligated to guarantee to him, domestic tranquillity, the blessings of liberty, the right to be secure in his person, house, papers, and effects; the freedom of religion, speech, and press; and the right to assemble peaceably to petition his Government for a redress of grievances, and other lawful purposes.

As a United States Senator I have taken a solemn oath to give him this protection; consequently, I am morally bound to do so. I am, and shall continue to be, faithful to my oath. Therefore, I am opposed to what I consider the subversive policies and acts of John L. Lewis, Bill Murray, William Green, and such gentry and all their satellites, who for their own personal advantage and profit cause American workmen to be intimidated by beating up those who resist their racketeering practices, who have destroyed the property of owners and have threatened operators of industries with the destruction of their businesses. Moreover, the racketeers of labor have seriously retarded the war efforts of our Nation in time of war.

I am for the American workman who works, and I am against the racketeers of labor who exploit him and by force and violence intimidate him as cruelly as the most heartless employer ever has imposed upon him and his family. For many years I was a pay-roll worker before I became a pay-roll maker, and I know how cruel and vicious some selfish employers can be; just as from personal experience I know how kind, just and encouragingly helpful some other employers are. There is a need for labor unions and a legitimate function for them to perform in the protection of the interests and welfare of the workingman, but that need and function is neither met nor served by exploiting the workman; nor in retarding the war effort; nor in betrayal of our soldiers, sailors, and marines in combat service all over the world who now depend upon the maximum possible production of all kinds of supplies and equipment.

Are those in our combat forces going to be betrayed by those at home who foment and engage in strikes, slowdowns, and other subversive practices in war industries and other essential services, as our troops which surrendered to the Japs at Bataan were betrayed? I am willing and prepared to face this issue. Our country must be preserved regardless of my own political fortunes. Unless we win this war now there will be only defeat and slavery under a foreign master, or by a dictator at home, for all of us. Only united, patriotic action now by employer and employee alike can win this war and aid and protect those whom we have sent to foreign lands to fight for us.

The paramount issue in the next election is not how its result may affect my own political fortunes or anything relating to me personally. The vital issue before the voters of Oregon and all other American citizens is now and will be then, Are they going to support our soldiers, sailors, and marines in combat services and our Government in the prosecution of the war, protect the patriotic, loyal, and diligent workmen of our country in their employments and constitutional freedoms, and are the citizens of Oregon going to insist that the "government of the people, by the people, and for the people shall not perish from the earth"?

Very truly yours,

RUFUS C. HOLMAN.

Daily Prayer for Victory

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CASE. Mr. Speaker, on previous occasions I have called attention to the very fine loyalty of the Indian people in the war which now engages the energies of the Nation. They have the highest percentage of volunteers of any racial group in America. Their per capita subscription to War bonds bears the highest proportion to their per capita wealth of any of our people. I now wish to call the attention to a very beautiful, a very inspiring contribution that comes from the Indian people. It is the custom of a daily prayer for victory.

The custom was introduced in the St. Francis community of the Sioux Indians, on the Rosebud Reservation by a member of the tribe, Alice S. Compton. She does not claim originality for it, but gives credit to an ancient Mayan custom which observed united prayer in times of great importance.

Believing that the prayer will inspire and help many Americans in these days, and be, of itself, a great aid to victory, remembering as Tennyson said, that—

More things are wrought by prayer than this world dreams of—

I wish to place the St. Francis proposal for daily prayer in the RECORD at this time.

SAINT FRANCIS, S. DAK.

A MOVEMENT FOR 1 MINUTE OF CIVIC UNITED PRAYER DAILY

To all members of Saint Francis community:

I propose that everyone, no matter what he or she is doing, stops doing it for 1 minute at the stroke of 7 p. m. Central Standard War Time and offer up a prayer for the protection of our dear ones, all the men and women in the service of their country, wherever they may be. A prayer for that, and for a Christian victory. A tremendous good is bound to flow forth upon such an effort, blessing our dear ones facing unknown peri , blessing such a community, and our country.

Yours for victory,

ALICE S. COMPTON,
Chairman St. Francis Community.

Paper Conservation

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. BOREN. Mr. Speaker, it is a happy privilege to rise to express a word of commendation for faithful public service well performed.

The War Production Board has done an excellent job in instituting policies that have already effectuated a vast saving in the use of critically short paper and resulted in considerable savings to the Public Treasury.

Under the direction of House Resolution 98, your committee made a study of newsprint and print paper and as a result of that study made recommendations for curtailment in Government use of paper. The War Production Board vitalized that recommendation. The Board's relationship with the Congressional committee has been an example of cooperation that could well be adopted as a pattern by all departments. Their expeditious actions merit the highest commendation.

In this brief moment, I will make no effort to report in detail what has been accomplished, but it has been a real task handled with wisdom and results, and I invite the attention of the Congress to what the W. P. B. and the Inter-Agency Committees have done. It merits your full approbation and appreciation.

Waste and Abuse

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. BOREN. Mr. Speaker, under leave granted to extend my remarks in the

RECORD, I include the following article from American Aviation of July 1, 1943:

(From American Aviation of July 1, 1943)

WASTE AND ABUSE

The strain on the Nation's various transportation systems is reaching unprecedented proportions this summer. Especially in the South, the Midwest, and the far West, transportation conditions verge on the unbelievable.

One transportation executive remarked the other day, with a combined note of sarcasm and facetiousness, that the high command must have its signals mixed. While we are blasting Germany's transportation and industrial resources in order to stop her war effort and destroy her civilian morale, we have let our own transportation systems creak and groan under burdens they were never meant to carry. We are reaching a dangerously low point on transport efficiency.

To the credit of the railroads, they are lumbering along under strains and handicaps that one would have believed impossible a few years ago. Conflicting statements issued by a multitude of diverse Washington agencies as to whether the American citizen should or should not take a vacation that requires travel, and the vast uncontrolled and largely needless travel by servicemen and their sweethearts and families not justified by foreign duty or rigorous training, has tended to throw United States transportation into bedlam.

Under Secretary of War Robert Patterson has just complained that the war output is lagging. One way to hold back war production is to permit transportation to bog down. No recital of example is needed to bolster the obvious fact that shipments of precious war cargoes and vital air-mail communications are being seriously delayed. Those who are actively engaged in war work are finding it increasingly difficult to accomplish their missions or to obtain shipments when needed.

One very important bottleneck should be relieved right now. More transport airplanes should be allocated without delay to commercial air lines. These air lines willingly gave up half of their equipment when lack of foresight in the War Department caught the Army without sufficient transport and cargo planes at the beginning of the war. But transport-plane production has now risen to impressive proportions and there is now no rhyme or reason for any further delay in returning to the air lines the planes given up earlier in the war.

As a matter of fact, an investigation would reveal some healthy abuses in the utilization of Army transport airplanes. If high Government officials and certain other brass hats had a string of individual Pullman cars sitting at Union Station in Washington for the exclusive use of each person when and if he wanted to go some place, there would be a terrific outcry. Such waste of equipment in wartime would not be tolerated.

But, if anything, a 21-passenger transport plane is more useful as a unit of transportation than a Pullman car and yet there are enough Army and other Government transport planes sitting idly by, or little used, to operate an entire air-line system capable of performing millions of passenger-miles during the course of a year. There are even surplus 21-passenger transports tied up in training units. The Army-transport-plane utilization per day is so much lower than that of commercial air lines as to bring up serious questions about the Government's attitude toward commercial air transportation in the war.

Is it right for a single medium-rank Army officer to take a 21-passenger plane, with full crew, on a cross-country trip for a conference which could easily have been handled by telephone, or when he could have hopped on a domestic Army cargo plane bound for the same destination? Is it right to have 21-passenger planes providing luxury transportation for 1 or 2 officers when the remaining space is needed for cargo and other passengers? If Pullman cars or Greyhound busses were used with such extravagance the officers would be ripe for court martial. But we are tying up planes and crews right and left so certain officials can "go home" over the week-end. The utter waste of transport airplanes is a sorry phase of the war, especially when transportation is so badly needed throughout the country.

If the railroads used their coaches and Pullman cars only 3 hours a day they would be accused of gross negligence. If the commercial air lines used their planes only 3 hours a day they would be inexcusably derelict in their responsibilities. Then why should vitally needed transport planes of the Army be so wasted as to be used on an average of 3 hours or less per day?

When former President Herbert Hoover was "bounced" from a commercial air line by a priority pilot at Denver a few weeks ago, Lee Casey, editor and leading columnist of the Denver Rocky Mountain News, was moved to point out that the military necessity by which the air lines gave up airplanes to the Army at the start of the war no longer exists. Especially in time of war, he said, it is necessary to maintain the commercial carriers for production and transportation efficiency. "Return of an adequate number of planes to the commercial lines would be an important contribution to the war program."

The crux of the whole problem is simply the lack of recognition in many quarters that a transport airplane is a unit of transportation. It is not a personal air buggy for individual transportation, any more than a Pullman car or Greyhound bus would be so considered in wartime. It is capable of performing a great and vital transportation job for cargo, for mail, and for wartime passengers. There is nothing more useless than a transport plane sitting idly on the ground. Any transport airplane not being utilized at least 10 hours per day over a period of time should be turned over to men who know transportation and who know how to utilize, operate, and schedule these vital units of transport.

The load factors on all vital commercial air routes is as close to 100 percent as is practically possible. Commercial planes are being used to the very top limit of efficiency. Even so, the fight for space is chiefly among priority passengers with lower classes of priorities "bounced" constantly. Air mail and air express is suffering.

Let's cut out the monkey business in air transportation and let a transportation medium and transportation specialists do the job. The air lines must have more airplanes, and there is no longer the slightest shred of a reason why they should not have them at once. This is no time for amateurs, personal privileges, and waste.

Realism

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Realism," which I delivered last night over the facilities of the Mutual Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen. This evening I am privileged to talk with you concerning matters of vital interest to the American people. May I say in this respect that the time has arrived when we must become realistic; in other words, we must become more nationalistic. That is to say, we must consider the national and international matters with a view to strengthening the position of the United States, our country in which we are all interested firstly.

Today the American flag is flying high at 70 places outside of the United States. Today our soldiers are fighting in every part of the world. Today we are stripping our forests, depleting our mines, pumping dry our oil wells, and emptying our pockets in a supreme effort to do our utmost to bring about the defeat of the Axis Powers and to restore order to the world at the earliest possible moment.

We are pouring millions of men into uniform and have made the greatest expenditures of money that any nation has ever made in the history of the world in any war or wars. Fact is, this Nation during its brief participation in the present World War No. 2 has actually made expenditure of more money than the total expenditures of the combined Axis and Allied powers. Only yesterday the Congress of the United States appropriated an additional $71,000,000,000 for war purposes. Last year we appropriated more than that amount, and the probabilities are that we will be called upon to appropriate additional amounts this year for war purposes. These sums are stupendous. They are beyond the comprehension of human computation.

In view of the fact that we are rapidly becoming a "have not" nation in the form of raw materials, and in further view of the fact that our financial situation is yearly becoming more strained, we must now begin to look after the future interests of our own country.

We must remember that World War No. 1 cost us only a few billion dollars in comparison with the amount of money we have already spent during our participation in this war. We must further bear in mind that in World War No. 1 we advanced to our allies in the form of loans only approximately $22,000,000,000. We must further remember that during the last war we had only 52,000 men killed and approximately 250,000 wounded.

When this war is ended a different story will be told. We will have advanced to our allies, in the form of lend-lease gifts many, many more billions than we did in the last war. Instead of having 50,000 men killed and 250,000 wounded, the unfortunate and sad probabilities are that we shall have several hundred thousand killed and perhaps a million wounded or affected by tropical diseases. All of these will require hospitalization over a period of years. When we entered the present war, a quarter of a century after the close of World War No. 1, it is regrettable to note that we did not have sufficient beds in our hospitals to accommodate the veterans of World War No. 1 who were entitled to hospital treatment; and now, with millions of diseased and wounded to be returned from the fighting fronts of the world, we must immediately complete hospital facilities for the treatment of our wounded heroes who are being returned daily from all parts of the world.

In addition, we must now consider well the fact that when this war will have ended we will be called upon to make payment of bonuses, pensions, and compensation to the millions who will be entitled to these benefits

as a result of military service. These payments will require the expenditure of additional billions of dollars.

With this sad picture before us, I repeat that the time has arrived when we must become more realistic, more nationalistic, and more thoroughly interested in the future of our own country—now.

At a time when we are cooperating fully with our allies in the furnishing of millions of men and with the lend-lease-giving of billions of dollars to nations throughout the world, we should call upon them now to consider some of our post-war requirements, at a time when they acknowledge their great need of our services.

We are told that we are fighting to provide more security for ourselves. The only additional security that we can provide for ourselves of a realistic nature is to acquire now, while our allies need us, additional security in the form of island and territorial possessions in this our Western Hemispherical section of the world.

Years prior to our becoming involved in this war I suggested by way of legislation which I introduced in the Congress of the United States the acquisition of certain island possessions of the French and the British, to be credited upon their debts of World War No. 1. I felt that we should acquire these islands in the Caribbean and some in the North Atlantic for the purpose of welding a band of steel around our section of the Western Hemisphere which would make our position impregnable against any attack or attacks of enemy or enemies.

Unfortunately, my pleas fell upon deaf ears. Nevertheless, some months after the introduction of my legislation, the administration traded 50 so-called old-age destroyers for the mere privilege of building air bases on their property leased to us.

It is all very well to talk about policing the world, bringing about international peace and order, but where there is no guaranty of that now and probably no guaranty of it in the future, we should become realistic and practical. We should guarantee our future security by welding for ourselves a band of steel around our portion of the world that will make impregnable our shores against any attack or attacks of any enemy or enemies. Without relying upon any promises now or future treaties, we should look toward our own security.

There are times when the sense of public duty outweighs the natural, personal dislike to present facts of this nature. This is such a time.

Friends of today may become enemies of tomorrow.

Our allies are looking out after their own interests. Why shouldn't we look out after ours? Russia is defending gloriously her own soil from her soil. Her spokesmen are demanding that as a result of her part in this war that she be given all the territory she had at the beginning of the war and more. England is looking out after her interests, and that fact is best evidenced by the statement made by the Honorable Winston Churchill when he became Prime Minister of the British Empire, when he said that he did not become Prime Minister for the purpose of liquidating the British Empire.

To repeat, at a time when our allies acknowledge that they need us is the time for us to begin thinking about what we are going to get out of this war for the security of our Nation and for the benefit of its people. I call to your attention the British Gallup poll held several weeks ago, at which time the British people gave their opinion as to which country had so far made the greatest contribution toward the winning of the war, Russia, Britain, the United States, or China. Their very frank and blunt answer was that Russia had contributed 50 percent; Great Britain, 42 percent; China, 5 percent; and the United States, only 3 percent—this in the face of the fact that the United States has spent more money during its brief participation in this war than the combined expenditures of all the Allied Nations and the Axis Powers, as well as furnishing millions of soldiers.

I advocate and insist upon the acquisition of vital Atlantic and Pacific islands and territories for defense purposes, as well as critical raw-material-producing areas, in return for war loans and war damages for the United States.

We should consider the acquisition of French, Dutch, and British Guiana, just north of Brazil; French and British islands in the Caribbean; Curacao and Aruba, which belong to the Netherlands and are located just off the coast of Venezuela; British Honduras; St. Pierre and Miquelon, French islands off the coast of Newfoundland; Greenland and Iceland, to be purchased, which were occupied by American and British troops before our entrance into this war; and Wrangell Island in the Arctic, claimed now by the Russians and occupied by the Russians, regardless of the fact that it was discovered by American explorers.

In the Pacific, of course, we should take from Japan whatever we deem necessary for the protection of our Pacific ship and air routes. We are entitled to take from Japan the Marshall and Caroline Islands, which the Allies handed over to Japan as a prize for the Japs' aid against Germany in the First World War. The Pacific should be bolstered, the Hawaiian Islands given further defense by the acquisition of other Pacific islands in the South Pacific.

The war will teach us exactly what islands and what bases are necessary for our protection in any international upheaval that might come in the decades following this war. Our first duty should be to protect our own country and not rely upon promises or treaties. Our goal is greater security for our own people.

In conclusion, let me repeat, as I stated in the very outset, that we must become more realistic; we must become more nationalistic; we must become more conscious of the needs of America. American nationalism must prevail at this critical hour when our Nation is becoming rapidly a have-not nation, and when our future is becoming imperiled as a result of our desire to plant the four freedoms in the four corners of the earth, without due regard to the fact that we might lose those freedoms on the home front and thereby destroy the very things here at home that we are seeking to implant in every part of the world.

While we are fighting to restore freedom throughout the world, let's not lose it at home. Above all, the citadel of freedom must be preserved.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the gentleman from New York, Hon. SOL BLOOM, chairman of the Committee on Foreign Affairs, made on the National Radio Forum, conducted by the Washington Evening Star, station WMAL, Wednesday June 30, 1943:

The concurrent resolution unanimously reported by the Committee on Foreign Affairs of the House of Representatives is a declaration of national policy by Congress. It looks to the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace; and it favors participation by the United States in this effort.

Of course, the United States alone cannot undertake to establish and maintain world peace. If that is to be accomplished, this country must cooperate with others, as it is doing now in prosecuting the war.

I want to point out that this is a concurrent resolution. It is solely the expression of the Congress as representing the people. It is not proposed by the administration nor submitted to the administration. It is a declaration of national policy, which if adopted will be the guiding rule of all the authorities of the Government in steps looking to a lasting peace.

What are we fighting for, if it is not for the right kind of peace? A just peace requires the destruction of the powers that work injustice. We cooperate gladly and wholeheartedly with other nations in fighting for a just peace. What this resolution does is to declare that the United States will cooperate as wholeheartedly for a lasting peace as it now cooperates for a just peace. It is recognition of the fact that peace may be just but short-lived unless fortified against warmakers. Only a lasting peace, as well as a just peace, will now satisfy the United States and the world. This resolution makes such a peace the aim of the United States.

If we are willing to shed our blood and pour out the Nation's wealth to achieve a just peace, we certainly are willing to cooperate with other free peoples to make it a lasting peace. We are not fighting for a 25-year peace, no matter how just it might be. We do not intend to have our boys killed in another war. For that reason we are striking down everybody who started this war, and we intend to hold down powerless anybody who might start another war. But we must also destroy the termites who undermine peace. The most pestilent evil that afflicts mankind, next to war, is a treacherous peace, a counterfeit peace that cheats you into a sense of security and then betrays you to the enemy. That was the peace the world had after the last war. "Never again," we say. Against traitorous war and traitorous peace we stand with other free nations and say, "Never again."

Why was this resolution voted unanimously? Because all men of all parties long for just and lasting peace. They differ as to methods of approaching the goal, as is shown by the many bills and resolutions now before Congress and referred to committees dealing with foreign affairs, commerce, finance, ways and means, military affairs, education and labor, and rules. This diversity of approach is evidence that everybody in Congress is groping for the same thing—the achievement of a just and a lasting peace.

Why should this resolution be adopted now? Because the world ought to know that the United States means "never again" when it deals the blows that are putting an end to this war. Friends and enemies must be assured that this is the last world war. The United Nations will fight better if they realize that the coming peace will be lasting as well as just. The enemy will know that this war means their doom; that they need not hope to renew this war after a season of counterfeit peace. As a declaration of peace this resolution is as significant as our declarations of war. It expresses the determination of the world to be and to remain

free. It is a weapon that blasts the hopes of the enemy. It says to them, "Leave hope behind, ye who have taken up the sword; for you shall perish, and we who destroy you will shatter forever the sword arm of your nation."

It should be noted that this resolution is not a commitment in support of any particular peace plan or treaty. The United States, always free, remains free to pass judgment upon any plan to achieve world peace. We declare that what we are doing in the field we are willing to do in council. We are not bound by any war treaty, yet we cooperate. So we are not bound to any peace plan, but we will cooperate in drawing up one that we can approve.

When we declared war we pledged all the resources of the Nation to the successful prosecution of the war. That pledge will have been made in vain if the peace is not just and lasting, for we shall have failed to prosecute the war to a successful conclusion. Fumbling of the peace would be as disastrous as defeat in the war—indeed, it would mean the same thing. Instead of real peace, we would have agreed to a breathing spell preceding another and bloodier war.

The pending resolution gives notice that the United States intends its warfare to be successful and final. The war will not end with victory unless victory is crystallized into just and lasting peace. This resolution, therefore, is part of the war effort. It aims at making forever secure what we are fighting for, so that we shall never have to do the job over again.

Humanity is fainting under the strain of oppression. The stoutest heart weakens when hope is too long deferred.

Now that we see the glimmer of victory, let us hasten to tell those in bondage what victory means—that it will be followed quickly by a just and lasting peace. Our declaration, coming from the greatest of all nations, will hasten both victory and peace. It will stiffen the arm of every fighter under liberty's flag and refresh the courage and endurance of all who are in chains.

As the smile of Almighty God lighted the pathway of our forefathers when they dared to strike for liberty, so we will feel the Divine blessing when we march forward under Old Glory toward the goal of universal, just, and lasting peace.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. CHARLES A. EATON, of New Jersey, on the National Radio Forum, conducted by the Washington Evening Star, WMAL, Blue Network, June 30, 1943:

On Wednesday, June 16, the Foreign Affairs Committee of the House voted unanimously to report out for consideration by Congress the Fulbright resolution which is worded as follows:

"*Resolved by the House of Representatives (the Senate concurring)*, That the Congress hereby express itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace, among the nations of the world, and as favoring participation by the United States therein."

I voted to report out this resolution and am strongly in favor of its adoption at the earliest practicable date by the Congress.

Personally, I have long been convinced that adherence in principle and practice by our American Congress and people to the objectives embodied in this resolution is absolutely essential for the security, peace, progress, and general well-being, not only of our own country but of the entire world in the post-war era.

I am even more profoundly convinced that failure of our Congress and country to take their proper place of leadership and responsibility as defined in this resolution, in establishing a just and lasting peace when the war is won, would be a national and international calamity more disastrous to mankind in its evil consequences than the war itself.

The reasons why our Congress and country ought to announce now that we will participate with all other free peoples in setting up adequate machinery with power to insure a just and lasting peace are as obvious as they are compelling.

We are now fighting a world war to destroy forever a world menace whose avowed objective is to conquer and enslave all free peoples. Our Government and people are united in an invincible determination to win this war at any cost. To this end we are cooperating to the fullest extent with our fighting allies and, in fact, with more than 30 associated freedom-loving nations.

When the war is won it would be the acme of political folly and moral madness for the United States to quit and refuse to finish the job of setting up, along with our fighting allies, a world peace which shall be just and permanent.

If such an irrational and immoral abandonment of our present place of recognized leadership and responsibility among the nations of the world were even conceivable, why should we continue to lay upon present and future generations of Americans a burden of public debt unparalleled in history? Why continue our almost miraculous production of war matériel? Why keep on aiding our allies, without stint, through lend-lease and other governmental agencies? Why send the flower of our young manhood to the far corners of the earth to face wounds and death on land and sea and in the air? Why permit millions of our American homes to become enshrouded in the bleak and somber shadows of personal uncertainty, sacrifice, and sorrow?

Our full and complete participation in the war is the first reason why we must participate to the same degree and with the same authority in the ensuing peace.

A second and increasingly urgent reason why Congress should promptly pass the Fulbright resolution lies in the growing uncertainty among our fighting allies as to the participation of our Government and people in setting up the peace. Unless this uncertainty is speedily and completely dispelled the whole problem of world peace will become dangerously affected.

We are now allies of, and in full participation with, Britain, Russia, and China in fighting the war. If we do not continue to participate on equal terms with these nations in establishing the peace it will be necessary for Britain and Russia to prepare now to take over the European situation and for Russia, Britain, and China to assume full responsibility for the oriental peace set-up. Since we will have paramount interests to protect in all of these spheres, it is our plain duty to announce now that we propose to join with our fighting allies in the peace settlement without abandonment in the slightest degree of our present position of leadership and responsibility in world affairs.

There is a third supreme reason which includes all others why the American people through their Congress should announce now their fixed determination and purpose to take the same decisive part in the peace that they are taking in the war.

This war is a cosmic catastrophe affecting, directly or indirectly, for good or ill, every human being in the world. Its end will mark at the same time the end of an age and the beginning of a new age unlike any known to history. For the first time every nation and group of men everywhere will be in complete and continuous contact from which there can be no escape. We shall, in common with all mankind, have entered upon a world age. Every problem of life—racial, economic, social, political, and spiritual—will be in essence a world problem. Unless political and spiritual leaders everywhere learn to think and act in world terms and upon a world scale their thinking and acting will end in inevitable failure.

Henceforth no nation can live or die unto itself. The new world age will constitute the greatest challenge to the spiritual resources of all mankind ever known. Unless all races and nations can find a common moral standard and a common spiritual impulse by which to measure and upon which to foundation their relations with each other, the new age will mark the end of civilization and the beginning of national and international chaos.

To meet this supreme challenge it is too soon for detailed blue prints of organization and action. It is, of course, reassuring to know that groups in and out of public life here and in other countries are studying and preparing concrete programs of national and international organization and policy. But meanwhile the pressing present need is for the American Congress and people to let the world know that, in setting up the new world order it is their purpose to discharge every obligation which is inherent in their possession of unparalleled power and influence.

For myself I expect the evolution of this new world civilization will be a long, slow, and difficult process. It will take at least a century of time and possibly several centuries to complete. It will involve at every step problems complex and difficult almost beyond human wisdom to solve.

I venture to express the conviction that the first duty of the associated nations, when the war is won will be to set up with full American cooperation appropriate machinery for insuring a just and lasting peace. Coincident with this will be the immediate task of saving from starvation the stricken peoples of the world.

After that, a little at a time, I hope to see the adoption of a few simple but universal principles of international law with necessary judicial machinery for their interpretation and enforcement. Then, of course, will come the long and arduous grapple with national and international, economic, and political problems. All with the purpose of finally establishing everywhere on earth a relationship between men of all breeds and conditions which shall be based upon justice, honor, and free cooperation for the common good.

Address by Hon. Joseph E. Davies

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

delivered by the Honorable Joseph E. Davies, former United States Ambassador to the Union of Soviet Socialist Republics and Belgium, before the Governors' Conference, Columbus, Ohio, June 21, 1943:

Mr. Chairman, Governor O'Conor, ladies and gentlemen, it is a distinction and a privilege to address this gathering of the Governors of the 48 States of our Union.

There is no body more representative of our people. You are each distinctive of the section in which you live. You have retained the virtue of that distinction but are characterized also by a broad-brimmed mental horizon of national unity and interest. You have all reached leadership the American way. There is no easy way to scale the heights you have achieved. Strong men, you represent different political convictions and interest; yet each grants to the other the respect and tolerance which is due from one honest man to another. In an atmosphere of friendship, of mutual respect, you have gathered for common counsel to cooperate for the national good. It is democracy at its best in a republic.

You have asked me to tell you something about my trip to Moscow. I am honored to do so.

I appear before you as a postman. I was charged with the responsibility of carrying a letter to Moscow, and a reply to Washington. My mission, the President has said, was entirely successful. The plain inference from that fact, distasteful as it may be to the Axis, is that there is unity and agreement with reference to matters military, and otherwise, between our great leaders, Mr. Churchill, Mr. Stalin, and Mr. Roosevelt.

What was in these letters are, for the protection of all of us, exclusively the concern of Mr. Stalin, Mr. Roosevelt, and the leaders of the United Nations.

There are things of possible interest, however, which I can properly tell you about. But please understand that I speak for no one but myself. I take the words out of no man's mouth, either Soviet or American official, when I speak to you this evening. I appear simply as a private citizen. My mission was completed.

At the outset, I should like to say that the experiences of th's trip gave me renewed confidence in our ultimate victory, and in a better and more peaceful world, which will lie beyond victory.

I went back to Russia after 5 years. There are great changes. Moscow itself has been greatly improved. It shows little of the scars of war. Outside of an atmosphere of great activity, it gives little appearance of a city at war.

The army looks well clothed. The uniforms of the officers with their new epaulets are smart. The morale appears to be very high.

There are many indications of a severe wartime shortage of food stuffs. Generally, however, the people look sufficiently fed. The rationing is strict. It is graded according to the importance of the worker in the war effort. Those not so engaged have a harder time of it. I am told that many subsist on cabbages and potatoes, which they grow themselves.

Everywhere there are evidences of sorrow and grief. The casualty lists run into the millions of both soldiers and civilians. Every family in Russia has lost some loved one. The resulting bitterness has been intensified by the savage, wanton destruction of their cities, and the horrible brutalities of the Nazi troops. Every man, woman, and child is at war, and is personally the bitter enemy of Hitler.

The sufferings of the people, as well as the determination of their leaders, in my opinion, will be satisfied with nothing short of absolute victory, and unconditional surrender.

I had long talks with their great leaders, Marshal Stalin, Foreign Minister Molotov, Marshal Voroshilov, and other old friends. They are all working long hours and at top speed. Somehow they manage to keep themselves fit.

Marshal Stalin looked well, strong, and unworried. I was again impressed with the modesty, practical common sense, and wisdom of this extraordinary man. In my opinion, he is primarily the man responsible for the creation of the Red Army and the industrial power of Russia, and the welding of them into the machine which was able to resist and stop Hitler. He is, above all else, a quiet man; but he reflects an immense fortitude, courage, and innate power.

I also had visits with old friends who were not of high position. They are not interested in post-war problems. They have only one thing in their minds—to win the war, and to win it quickly. This means to them more sacrifice, more suffering, and even starvation; but they are grim about seeing it through.

Generally there is a belief that this summer Hitler will make a supreme last effort to smash the Red Army or take the Baku oil fields. They do not underestimate the power which they think the German war machine still has. They watch it with anxiety, but without fear. They have confidence in their Red Army and in themselves.

They all spoke with gratitude of Britain's aid, and of lend-lease, and the aid from the United States which is now coming through in a substantial manner. They speak with enthusiasm of our victory in Tunisia as a contribution to the common cause. They are looking forward with natural anxiety and hope, however, to the imminent western land front in Europe to relieve the pressure on their own western lines.

From my trip generally there are some outstanding impressions left in my mind. You might like to hear them.

I. From what I saw, traveling by way of Trinidad, Brazil, Dakar, Nigeria, Khartoum, Egypt, Baghdad, Iran, Moscow, and from Nome to Washington, this stands out perhaps above all others: It is what our war effort has accomplished.

Our Army has done a really great job. It is a great man's army. Practically around the earth, under the most difficult and trying conditions, in Tropic heat and Arctic cold, we find our men putting in gigantic installations in record-breaking time, literally doing the impossible. Vast camps have been built within a few months on square miles of land that had to be cleared out in the jungle, or created out of the swamps, morass, and tundra of the Arctic. Malaria, fever, vermin, cold and heat—all were overcome. Great highways, vast airways were built almost overnight. Hundreds of steel buildings were erected by men handling sheet metal in the bitter cold of 50° below zero. Whether in the heart of Africa or Alaska, our officers and men were doing miracles; but with great modesty as "all in the day's work." But let me tell you that what I saw is a monument to American genius, capacity, and courage, and to the American soldier.

II. During my stay in Russia 6 years ago, I traveled thousands of miles over White Russia, the Ukraine, Caucasus, and the Donets Basin, inspecting industry and agriculture in a region where it was reported 60 percent of the industry of Russia was located. This time I wanted to see more of the Urals and the Siberian country for myself, so I came back via Alaska.

In one Ural city I saw plants which had been transported bodily from Kiev and Kharkov. With these plants families were transported by thousands of freight cars. Hundreds of large two-and-a-half-story brick houses in whole subdivisions for miles on end, in 18 months had been erected for these workers. I had heard of it and read of it, but to see it gives one an appreciation of the terrific job these people have done.

III. As for Siberia, I shall never forget the impression which it made. For hundreds of miles it is one vast expanse of beautiful rolling country, dotted with lakes, groves of trees, traversed by wide sweeping rivers, and ridges.

Flying over this country at an altitude of a thousand to fifteen hundred feet, I saw a tremendous agricultural region. There were hundreds and hundreds of square miles of great fields, bigger than our townships, in different colors of grain, all planted with precision, and, from the air, looking orderly and well kept. The agricultural wealth east of Moscow in Siberia could feed an empire. And all along in this frontier, which corresponds to our West, I saw great cities—boom cities, laid out in squares like our prairie towns, dotted with factories, huge plants and chimneys all over the place—one small Pittsburgh after another; cities that a few years ago did not have a population exceeding a few thousand, now with a population in the hundreds of thousands.

I saw one plant which was turning out fighting planes, the designs of which were unknown in June 1941, and the factories for which and machine tools for which did not exist 2 years ago.

The impression of power, innate strength, vigor, and pioneer energy which one gets from this great section is extraordinary.

This hinterland of wealth, resource, and power, guarded by natural barriers of high mountains and great distances, and these developments are the cornerstone of Soviet military strategy. Both their army and their war plans are undoubtedly based upon this fact. They have an unconquerable new world behind them into which, if need be, they can always retreat. Never need the military authorities of her allies fear that the Red Army will be destroyed. Their strategy will be, if necessary, to fall back again and again, into the big, new bases of agricultural and armaments production, while the German lines grow longer and longer and more easy to bomb or sabotage, and more vulnerable. Napoleon reached Moscow to be smothered in the fastnesses of Russia. There remain still thousands of miles of the Russian featherbed to destroy the German Wehrmacht, if Hitler penetrates it. If you were to see this country it would convince you, I think, that Hitler, and no one else for that matter, could conquer this land and this people.

IV. Another fact that impressed me greatly was that in the leaders of the Soviet Government, I found an extraordinary quality of unspoken confidence and quiet strength. They apparently have found that their Army can take all that the Germans have to give; that they can trade punches toe to toe, and that they can still come back and carry the fight into the enemy's corner. This they have done for 2 years. Apparently they believe they can continue to do so. Their Army's morale is stronger than ever; the stubborn resistance and support of their people is everywhere apparent. Their ace in the hole is their inner bastion of defense, which ensures that they can never be conquered. They have suffered bitterly. They seem to me like men who have withstood the worst, and who have found themselves, and who believe that through their Army, their people, and themselves, they cannot be beaten.

V. In 1938, in Europe it was commonly said that Hitler was on a bicycle; that he had to keep going; that he could not stand still. He is in that position in Russia. In my judgment, what Hitler failed to achieve in 1941 and 1942, he will fail to achieve in 1943. But,

If he fails to attack, he is in constant danger. The Russian Army has never lost its capacity for initiative. It is their supreme virtue. It is Hitler's constant menace in the east.

VI. There is still another outstanding fact which I think you will find pride in. It is briefly this:

Throughout my trip about the earth, from Brazil to Siberia, there was one name on the lips of all the people as one of the great leaders of the earth, and one upon whom the hopes of multitudes of men and women were pinned in this crisis in world history. That was the name of an American—Franklin Roosevelt—your colleague the former Governor of the State of New York. Every American, I am sure, must feel a thrill of pride in that fact.

VII. The impression that I had 5 years ago has been confirmed, namely, that the Soviet people and their leaders desire, above all else, a peaceful world. They believe in Great Britain, the United States, and the United Nations. They demand respect and confidence in their good faith. If they, in turn, have confidence in the good faith and the will of the four great powers of the earth, and the other United Nations, to create a community of nations in the world where law and order will be maintained, in my opinion, they will go the whole way as high-mindedly, as altruistically, and as unselfishly as any of the nations of the earth.

VIII. There is one impression which perhaps was the most vivid and strongest of all, and that was Stalingrad.

Stalingrad stretched along the river for about 45 miles. Practically all of the central and northern part of the city is utterly and completely destroyed. Nothing remained but gaunt, bare walls, roofless and windowless, which seemed to stretch up like twisted, white arms to the sky, or black, charred, huge spaces where fire had burned everything down to the very roots. There were many, many blocks—whole districts—where there remained nothing but an occasional chimney, with all the rest rubble. All around the city for miles—and, in fact, in the city itself—the ground is pockmarked with trenches, shell holes, dugouts, wrecked tanks, crashed airplanes, and evidences of battle.

Words are not adequate to describe the horror of that scene.

All in all, it was the most terrible, horrible, and damnable thing that I had ever seen. It was unbelievable that such a blot on our civilization could possibly be perpetrated by so-called civilized men. It made every one of our party burn with anger.

But it also had another effect: It gave rise to a feeling of veneration for and pride in the manhood which enabled that gallant band of men to stand with their backs to the river, cut off from all retreat, and fight their way up from the verge of annihilation, foot by foot, to victory, and the annihilation or capture of 400,000 of the enemy.

In conclusion, may I say that, after all, it is the simple truth—that without Russia to aid us in this war we would have been in desperate jeopardy. Without Russia, we cannot plan a secure peace. Russia, like the British Empire, China, and ourselves, is too big to be left out of a peace community.

Civilization owes an enormous debt to the British Empire and its immortal Dunkerque, to China, to the valiant Dutch, the gallant Norwegians, the brave Belgians, Czechs, and Yugoslavs, and all those people who are still fighting Hitler in the occupied territories. But we should not forget the tremendous debt we owe to the Soviet Union.

It is, I believe, not an overstatement to assert that but for the resistance of the Red Army and the Soviet Union, the Germans might have overrun Africa; might have made Tunisia impossible, and might have made junction with the Japs in India and on the Persian Gulf. Had that happened, our enemies, and not we, would today be dictating the global strategy.

Of course, it is true they fought for their own liberties and their own homes. But it is also true that they saved our civilization.

If there is to be peace in the world, it must be based on an agreement between Great Britain, Russia, China, the United States, and the other United Nations. That agreement is no better than the confidence which each has in the other. The confidence of Russia in us is as vital as the confidence of the United Nations and ourselves in Russia. We should not forget that.

There are a few in our country who still bicker at Russia; who still carp at Russia; who still quarrel at the way in which they live and conduct their own Government, which is exclusively their own business. To do this is to play Hitler's game. Every possible thing that Goebbels' propaganda machine can do to make us fear and hate Russia and make Russia fear and hate us, Hitler's machine is doing. It is the only thing which might save the skins of the Nazis.

It is neither sensible, wise, nor right to encourage criticisms of the good faith of the Soviet Government or attacks upon its leaders. The conditions under which our children's children will live may depend upon what we do now.

To you, Governors of our great Commonwealth, whom I know to be all lovers of peace and great Americans, I know I can address with confidence the thought that we should all join in a constructive effort to create a public opinion at this critical time when both the war and the future peace is in jeopardy, which would fortify our confidence in our allies and their confidence in us. Russia, Britain, China, or any of the other United Nations, should not be alienated by intolerances or little criticisms of one against the other. That is very vital to all of us. Divided, our nations would perish. United, we can win the war, save the future for our children, and keep faith with our fighting men.

Facts About Russia

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Answering Max Eastman," published in PM of today's issue. The article is an answer to Mr. Eastman's article entitled "To Collaborate Successfully We Must Face the Facts About Russia," published in the July Reader's Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANSWERING MAX EASTMAN

Having written a series of seven pieces on America and Russia a few months ago, I had hoped to keep off the subject for some months more. But the July Reader's Digest is out, with a 14-page article by Max Eastman that is bound to irritate and anger many Americans, confuse more, and confirm millions in their hatred of Russia by giving it plausible reasons to feed on. Eastman gives his attack the title "To Collaborate Successfully—We Must Face the Facts About Russia."

I brush aside the usual amenities with which the article starts, like all attacks on Russia—admiration, gratitude, etc., for the Russians. I am on a search not for protestations of affection but for the facts about Russia which the title tells us we must face.

But before I can reach them I have to wade through pages of attacks, not on Russians but on Americans. The principal targets are Vice President Wallace, Wendell Willkie, and Joseph E. Davies. They are described as "apologists for communism." It is not quite clear whether Eastman charges them with deliberately misleading their countrymen about Russia or whether he regards them as bewitched and deluded softies who talk drivel about Russia.

In either case he is wrong. When the history of American foreign relations in this crisis period comes to be written, Wallace and Willkie and Davies will be shining names in it. Two of them are men of the right in politics; as applied to them, Eastman's statement that "many Americans are fooling with communism just to be on the left" simply makes no sense.

The present "line" of those who write as Eastman does is that the liberals and conservatives who are working for close relations with Russia in the war and the post-war are soft-headed and sentimental, and that "realism" is the monopoly of those who attack Russia.

WHO ARE THE "REALISTS"?

But who are the realists? Are they those who said before the war that Russia is so deeply a dictatorship that there is no difference between it and Germany? Are they those who said that Russia is so rotten internally that the first external attack will cause it to crumble? Are they those who said that the Russian Army was so shattered by the purges that it was incapable of a major war? Are the realists those who say now that the ally fighting on our side is a wicked herd state and slave society between whom and us there stretches a flaming gulf as between hell and heaven?

It is Wallace, Willkie, and Davies who are the realists. What they have done represents the triumph of historic events over past prejudices. They know the faults of Stalin and of the Russian system fully as well as Eastman does. Davies and Willkie have seen Russia at first hand during the past year, while Eastman was there from 1922–24 and has not seen it for close to 20 years.

But they are men of action who are thinking of the battles of the future, rather than embittered doctrinaires who are preoccupied with ancient wrongs. And they know that the war cannot be won unless America and Russia win it together, and that the peace cannot be organized unless America and Russia organize it together. That is why they put Russia's strength and its qualities as a going concern in the foreground, and communism's sins in the background.

Why assume that these men, and others like them, are fools, dolts, gulls? Why not conclude rather that they are triumphant proof of a democracy's capacity to save itself from class-blindness and national suicide?

But the case of American-Russian accord rests not on anyone's opinion, but on the mutual interests of both nations, and on Russia's own accord.

RUSSIANS AND NAZIS

But Eastman proposes to wipe all this off the slate at the very start. "Let us remember," he writes, "that the stubborn resistance of the Russians no more justifies communism than the stupendous assault of the Germans justifies nazi-ism."

This is a curious statement. In the first place, none of the people Eastman attacks

have ever said that Russian resistance justifies communism. They have said that it is a basic argument for our cooperation with the Russians.

In the second place, the admiration of the English and the Americans for the Russian achievement was all the greater because they had been led to believe, by men like Eastman, that Russia was rotten to the core, would not fight, and could not resist.

And finally I am appalled by the cynical way in which, in the sentence above, Eastman tricks the reader into concluding that nothing in their war record distinguishes the Nazi system from the Russian. Is there no moral difference between a nation that makes a stupendous assault upon another, and a nation that offers stubborn resistance to it? Is there no political difference between a nation whose life and aim are war and a nation that wants to build its own social system and, to do so, requires to live at peace with the world?

Is there no difference, finally, to a poet and a humanist like Eastman, between the mask of sadism of the attacking Nazi soldiers and the image of firm and bitter defense by Russian soldiers and civilians?

I thought of the way the Russians were fighting while I was reading the heart of Eastman's article—the "facts" about Russia. They are basically three. One is that Russia is politically a vast concentration camp. A second is that it is, in economic terms, an impoverished and a slave society. The third is that the Russian leaders hate and despise the democracies, and that they plot international revolution against us.

I don't pretend to know, as Eastman does, the final truth on these issues. But I try to use reason on them.

Take the question of international revolution. Eastman quotes learnedly from the theoretical writings of Lenin and Stalin. Yet we all know that a politician's words, especially for home consumption, are less important than his deeds. By quotation, Eastman, in effect, makes Stalin out to be a Trotzkyist, with a hunger for permanent world revolution. Yet if you look at the record of Russia's deeds, you find that, under Stalin, Russia abandoned the tactic of world revolution and used the Comintern mainly for its own safety. And if you look at the record, you know that Russia's so-called Communist plotting has not caused us in a quarter century to add a single soldier to the American armies.

DO SLAVES FIGHT?

On the economic issue, no one has denied the poverty of the Russian people in the last decade when they were arming for a struggle that was to absorb everything but the barest necessities. But what is crucial is that the Russian people know that their total national income is greater than ever, and that when they can live at peace it will mean higher living standards for the people. Lower than ours? Of course. But before you speak contemptuously of the Russian economic achievement, measure the rate of progress in the national income of the two countries in the past quarter century.

As I read Eastman on Russian poverty and the subjection of the people, I kept thinking: If these people are slaves, why do slaves fight so well? Why do starving people form themselves not just into a nation with an army, but a nation in arms? Why do Russian children, as Maurice Hindus described them in Mother Russia, die for their country with a deep joy that would do honor to grown and mature men? Why do Russians have the sense that they are fashioning a new world, with new meanings—a sense that we in America seem sadly to have lost?

If this were all, I should be more enthusiastic about the Russian system than I am. But there is also political suppression, the single-party system, the police state. Eastman quotes enormous figures about people in concentration camps in Russia. Although I don't trust his figures, I am willing to believe that the true ones are large. But the figures are not crucial. What is crucial is that Russians lack freedom of thought. The lesser punishment is absorbed in the greater—the imprisonment of the body in the imprisonment of the mind.

It is because of this lack of freedom in Russia that we on PM have opposed the Russian social system, and opposed all who advocate it for America.

But what follows from Eastman's argument on this score? Does he want us to demand of Russia that she change her social system as the condition of collaboration? Imagine what the Russians could say about our distribution of income, our treatment of Negroes, our class system of education.

Or does he want Roosevelt and Churchill, each time they make speeches, to include denunciations of their Soviet ally?

Or does he want us to break off relations with Russia now, and try to get along without her in the post-war world?

HIS TWO SPECIFIC SUGGESTIONS

He doesn't come out openly for any of these things. His only specific suggestions are two: That America ban the Communist Party; and that we should not "passively allow our schools, newspapers, radios, book and magazine publishing houses, cinema studios, Office of War Information, to be permeated with the agents and apologists of communism."

That is to say, he proposes Stalinist suppression of American political and intellectual freedom. He proposes that we take over from the Russians the one big thing that scars their record, and refashion ourselves in their image.

As for myself, I have more faith in America than that. I have faith in our democratic institutions—so much faith that I believe they can compete in the world with those of a totalitarian socialism—and without our having to resort to suppression.

We need freedom from external attack; and we can get that best by working with Russia. We need internal economic and social justice—and we can get that best by concentrating on our own inadequacies. And we need national stature and moral greatness. But we can get that best not by hating the ways of others but by measuring our strength against our own tasks.

Organized Labor

EXTENSION OF REMARKS

OF

HON. JAMES M. CURLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. CURLEY. Mr. Speaker, that there is a definite and well-defined movement to liquidate organized labor, using as a basis the actions of a small group affiliated with the labor movement, must be apparent to every thinking American. There are many persons who complain about the spots which occasionally appear on the surface of the sun, yet no thoughtful individual would say do away with the sun because of the spots that occasionally mar its surface, and as it is in the case of the sun, so it is in the case of organized labor. Under the circumstances it is well to consider at this time when feeling runs high, the contribution made to the welfare and happiness of the American people through organized labor, so that we may present, if possible, those who would seek to destroy this essential asset to American progress and happiness from the accomplishment of their purpose. In his veto message President Franklin Delano Roosevelt sets forth as follows, and I quote:

I am unalterably opposed to strikes in wartime. I do not hesitate to use the powers of Government to prevent them. It is clearly the will of the American people that for the duration of the war all labor disputes be settled by orderly procedures established by law. It is the will of the American people that no war work be interrupted by strike or lock-out. American labor as well as American business gave their no strike no lock-out pledge after the attack on Pearl Harbor. That pledge has been well kept except in the case of the leaders of the United Mine Workers. For the entire year of 1942 the time lost by strikes averaged only five one-hundredths of 1 percent of the total man-hours worked. The American people should realize that fact—that ninety-nine and ninety-five one-hundredths of 1 percent of the work was not delayed by strikes. That record has never before been equaled in this country. It is as good or better than the record of any of our allies in wartime.

Little did the handful of men dream or visualize even by the broadest stretch of the imagination some 50 years ago when organized labor came into existence in the United States, that as a result of their efforts and a consequence of their contribution there would be created in this Nation of ours what really represents not only an adjunct of government but a contribution to the serenity of the American home.

The theory of our Government has always been that there should be three separate divisions: The executive, the judicial, and the legislative. But without the contribution of organized labor I sometimes wonder just what would be the lot of the ordinary individual worker in the United States of America, and just what would be the conditions that might obtain in the land itself. Organized labor for more than half a century has struggled to better the condition of the worker in America, and through bettering the condition of the worker in America has made life more pleasant and more wholesome for every individual citizen and for every family in the entire Nation.

In the early brave days theirs was indeed a hard lot. Not only obliged to contend with the power and the force of money, but with what was known in those days as company unions, but required in addition to combat the forces that money can always array against any cause which represents social advancement and the promotion of the welfare of the individual worker. So that they were required to combat without funds venal legislature, corrupt judges, corrupt public officials, and not infrequently paid emissaries in the ranks of labor itself.

It remained for a clear message from the seat of Christian morality at a crit-

ical period more than half a century ago to give to organized labor the dignity and the character and the place in the sun that a movement of this nature required in order to succeed, in the encyclical delivered by Pope Leo XIII nearly half a century ago, in which was pointed out the obligation of the employer as well as the obligation of the employee.

In those early brave days there was no limitation except the exhaustion of the individual which governed the number of hours which the worker was required to work. Likewise there was no general system of payment or remuneration for the labor performed by the individual, so that a 12-hour day and a daily wage of a dollar and a quarter for a laborer and employment then only when weather permitted was usually the lot of the worker in America.

It was little better than the system of serfdom which obtained prior to 1865 in the United States and throughout the world. I sometimes wonder if the life was as desirable as actual slavery, where the mind was free but the body was never free. In the old days the slave represented a potential value and it was an obligation and duty, as well as good business investment, for the owner of the slave to see not only that he was properly fed and properly clothed and properly housed and to receive medical attention when it was deemed necessary. On the other hand, the worker rarely lived under conditions that made life inviting or that were in conformity with an honest or clear interpretation of the constitutional guaranty of life, liberty, and the pursuit of happiness on the part of every individual living under the American flag.

But organized labor proceeded with its task and changed the 12-hour day to an 11-hour day, and the 11-hour day to a 10-hour day, and the 10-hour day to a 9-hour day, and the 9-hour day to an 8-hour day, and then an almost universal Saturday half-holiday.

There was no provision made in the early days, not even 30 years ago, for the protection of the worker in industry. I can very well recall, 32 years ago as a Member of Congress, making many visits to the Bureau of Standards in Washington, then presided over by Dr. Stratton, later head of Massachusetts Institute of Technology, and discussing with him various devices for protection of the limbs and not infrequently the life of the worker. Then began the movement in America and throughout the world for the conservation of the limbs and the life of the worker in industry.

Then came the Workmen's Compensation Act, and later the Maternity Benefit Act, adopted, however, in this Nation of ours only in 1913 by a majority of States. So organized labor has made definite progress, and at the present time we are beginning to think in different terms of our responsibility not only to the worker but our responsibility to every element of society.

Of course, we are all familiar with the second Divine Commandment which sets forth we should love our neighbor as ourselves. And we are likewise familiar with the old Biblical saying that "I am my brother's keeper," but little of the brotherly love was evidenced in the treatment of the workers, and were it not for the work of organized labor I question very much if any of these humane laws we love to conjure with and in which we take real pride at the present time would ever have been placed on the statute books of any State in the entire Union.

President Franklin Delano Roosevelt summed up the situation and its application in his message to Congress of June 8, 1934, in which he set forth:

> Our task of reconstruction does not require the creation of new and strange values. It is rather the finding of the way once more to know, but to some degree forgotten, ideals and values. If the means and details are in some instances new, the objectives are as permanent as human nature. Among our objectives I place the security of the men, women, and children of the Nation first. This security for the individual and for the family concerns itself primarily with three factors. First, people want decent homes to live in; second, they want to locate them where they can engage in productive work; and third, they want some safeguard against misfortunes which cannot be wholly eliminated in this man-made world of ours.

Subsequent to this message the President created a committee on economic and social security and this committee, after interviewing many hundreds of citizens, including representatives of organizations in all parts of the country, disclosed the following existing conditions:

In 1935 there were 18,000,000 people, including children and aged, who were dependent upon emergency relief for a subsistence, and approximately ten millions of workers out of employment other than relief workers. Many millions more had lost their entire savings and there had occurred a very great decrease in earnings. The ravages of probably the worst depression of all time have been emphasized by greater urbanization, with a total dependence of a majority of our people on their earnings in industry.

In the slack year of 1933, 14,500 persons were fatally injured in American industry, and 55,000 sustained some permanent injury. Each year, above one-eighth of all workers suffer one or more illnesses which disable them for a week and the percentage of the families in which some member is seriously ill is even greater.

The National Social Security Act which provides among other things protection to aged persons; second, protection for persons who are blind; third, dependent and crippled children; fourth, maternal and child welfare; fifth, public health; sixth, administration of their unemployment compensation laws; seventh, establishment of social security boards nationally and in the State; eighth, the raising of revenue for all of these purposes.

Incredible as it may appear, the fact remains that in a short period of 8 years more social reforms have been adopted in America for the welfare of all the people than in the entire century and a half preceding, and no group of people in America made a greater contribution to the adoption of these social and economic reforms so essential to the welfare and happiness of the American people than did organized labor.

That certain leaders have been guilty of treasonable acts that jeopardized the lives of our boys and that tended to serve as an estoppel of the production of war materials essential to an early conclusion of the war is accepted by everyone, but to condemn organized labor as a whole for the acts of a limited number who have been clearly guilty of treasonable conduct is not justified. The statement that less than one-half of 1 percent of the entire war work was conducted in the year 1942 without interruption and which constituted the greatest wartime record in the history of the Nation is sufficient justification for clear and considered judgment upon the contribution of the organization as a whole, rather than a general condemnation because of the acts of a few.

The Work of the O. W. I.

EXTENSION OF REMARKS

OF

HON. JOE STARNES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. STARNES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on June 29, 1943:

My fellow Americans, Executive Order No. 9182 dated June 13, 1942, established the Office of War Information within the Office fo Emergency Management in the Executive Office of the President. The existing agencies handling foreign and domestic information which were consolidated to form the Office of War Information were:

3. The Office of Facts and Figures and its powers and duties.

b. The Office of Government Reports and its powers and duties.

c. That part of the former Office of the Coordinator of Information which related to the gathering of public information and its dissemination abroad.

4. The Division of Information of the Office for Emergency Management.

The chief purpose in establishing the Office of War Information was to gather and disseminate information at home and abroad concerning the war. Specifically the Executive order outlined its purpose in the following language in section 4:

"Consistent with the war information policies of the President and with the foreign policy of the United States, and after consultation with the Committee on War Information Policy, the Director shall perform the following functions and duties:

"a. Formulate and carry out, through the use of press, radio, motion picture, and other facilities, information programs designed to facilitate the development of an informed and intelligent understanding, at home and abroad, of the status and progress of the war effort and of the war policies, activities, and aims of the Government.

"b. Coordinate the war informational activities of all Federal departments and agencies for the purpose of assuring an accurate and consistent flow of war information to the public and the world at large.

"c. Obtain, study, and analyze information concerning the war effort and advise the

agencies concerned with the dissemination of such information as to the most appropriate and effective means of keeping the public adequately and accurately informed.

"d. Review, clear, and approve all proposed radio and motion-picture programs sponsored by Federal departments and agencies, and serve as the central point of clearance and contact for the radio-broadcasting and motion-picture industries, respectively, in their relationships with Federal departments and agencies concerning such Government programs.

"e. Maintain liaison with the information agencies of the United Nations for the purpose of relating the Government's informational programs and facilities to those of such nations.

"f. Perform such other functions and duties relating to war information as the President may from time to time determine."

The Office of War Information for administrative and functional purposes has been divided into an overseas operations branch and a domestic operations branch. Wide use of press, radio, and motion-picture facilities has been made to carry out its program.

Certainly there is need for an overseas operations branch to let our allies and the neutral countries know what we are doing and can do to win this war. Furthermore, the psychological warfare of President Wilson used so successfully in World War No. 1 in breaking the morale of the German people and paving the way to an early peace was well worth while and we hope the Office of War Information can successfully emulate it in this war. Recent history has shown that the press, radio, and motion picture can be highly successful in breaking the morale of governments and their people. Hitler and Hirohito have gained easy and spectacular victories by their use in disseminating propaganda in the Balkans, the Low Countries, France, and the Far East. We would be foolish indeed if we failed to employ the same weapon against Germany and Japan. Recent signs show that our campaign in Germany and elsewhere in Europe is bearing fruit. It may help to shorten the war appreciably if we continue to tell the German people how destructive our air raids have been to their industrial facilities and how we are prepared and determined to use this effective instrument of destruction to blast their industries, their arsenals, and their submarine lairs to dust.

No effort was made by the House recently to reduce the amount of expenditures from the overseas operations branch below that recommended by the Appropriations Committee.

The Domestic Operations Branch has not functioned as well as the Overseas Branch. Instead of collecting, coordinating, and channeling factual information on the home front, it has provided a subject of debate and controversy within its own group, in the press, and over the radio, as well as in the public forum.

The Director of the Office of War Information is Mr. Elmer Davis, a member of the American Labor Party in New York City. Mr. Davis enjoys a splendid reputation as a writer and radio commentator. He is a man of pleasant personality and undoubted personal integrity. However, he is one of the first to admit mistakes have been made in the Domestic Operations Branch and that poor administrative work has been of no help. Furthermore, he admits some of the pamphlets and publications of the Office of War Information have dealt with domestic problems in other than a factual manner. Their admission justifies that it was indulging in propaganda or a colorization of news on the home front.

The consolidation of the four agencies bringing into being the Office of War Information has not resulted in noticeable efficiency of operation and on the contrary has increased the cost of operation.

In the last year of operation of the four constituent agencies they cost approximately $10,400,000. Under the first year of the Office of War Information this amount was increased to $35,847,292, or more than three times the amount originally spent. The Domestic Operations Branch rather than effecting a reduction in cost or personnel increased both. The monetary increase was over 100 percent, or from approximately $4,000,000 to more than $8,000,000. The personnel increase requested raised the number from 3,253 to 4,407. In the fiscal year 1944 the Office of War Information asked for $47,342,000 and an increase of personnel to 5,438.

The sum of $8,265,900 was requested for the Domestic Operations Branch in 1944, which was a sizable increase over the amount available for 1943. The House Appropriations Committee trimmed the over-all request by $12,869,496. The amount recommended by the committee for the Domestic Operations Branch was $8,500,000, or a reduction of 37 percent. The amendment which I offered from the floor struck this amount from the bill.

Exhaustive and searching hearings on every phase of the Office of War Information were held, covering several days in time and almost 400 pages of printed testimony. The House, when presented with the facts, adopted my amendment by a roll-call vote of 218 to 114.

The chief objections and criticisms leveled against the Domestic Operations Branch of the Office of War Information may be briefly summarized as follows:

1. Poor administration, resulting in an increase of personnel and expense of operation.
2. The employment of too many aliens.
3. The failure to properly collect, coordinate, and channel information so as to eliminate confusion and uncertainty over conflicting statements being issued by the Office of Price Administration, the Petroleum Administration for War, and other agencies.
4. The issuance of propaganda on strictly domestic issues.
5. Colorization of news by improper analyses and interpretation.
6. Attempts to censor and control press releases.
7. The unusual number of requests for deferment from military services of eligible men—more than 50 percent of the male employees of Office of War Information being between the ages of 18 and 38.
8. The failure to reduce personnel to help relieve a critical manpower shortage for the armed services, war industries, and food production.

Certainly we could not sustain our population at home and our fighting forces abroad on the mental diet furnished by the propaganda of the Office of War Information on domestic issues.

The American people know why we are at war. Their Congress has appropriated over $300,000,000,000 for war purposes since July 1, 1940. Their sons are fighting on the seven seas, on far-flung battle lines which encircle the globe, and in the skies over every continent. Unprecedented taxes have been levied upon them to finance this war. Sacrifices, service, sorrow, and travail is our lot until we have finished the task of destroying the military power of the Axis which threatens all we hold dear. The American people are determined that nothing shall deter them from this task. They know who we are fighting, why we are fighting, and for what we are fighting. They need no ministry of propaganda to censor press releases on domestic programs. They need no group of propagandists to preach state socialism at Government expense. I challenge any listener or protagonist of the administration of the Domestic Operations Branch to cite a single worth-while contribution made to our armed forces or to our people on the home front by the character and context of the domestic propaganda foisted upon us by pamphlets and publications printed and distributed at Government expense. Much of this work is an affront to our intelligence and our patriotism.

A free, untrammeled press is one of the most potent arms of a democracy. It is a tower of strength for a free people. We have a free press which can be relied upon to faithfully, accurately, and fairly report upon the doings of the Congress and the executive branch of the Government. The people can be relied upon to act intelligently when facts are fairly presented. Censorship of the press and colorization of the news on domestic policies by a centralized Government agency will blanket the fires of freedom burning on the hearthstones of our people. I repeat, America needs no Goebbels sitting in Washington to tell the American press what to publish or the American people why we are at war. America needs no Virginio Gayda sitting in Washington to hand down tinged news on domestic policies or to influence our thoughts and actions.

Second Anniversary of Attack on Russia

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. RADCLIFFE. Mr. President, an open-air meeting over which I presided was held on the evening of June 22, at the courthouse plaza in Baltimore, on the second anniversary of the brutal attack by Hitler on Russia. The meeting was in the nature of a tribute to Russia. A very interesting program was presented, emphasizing the magnificently heroic stand of Russia against the powerful and ruthless forces seeking her destruction.

The chief speaker of the evening was my colleague, the junior Senator from Montana [Mr. MURRAY]. His address was one of the most eloquent and convincing to which I have ever listened. Historians will bear witness to the fact that the defense by Russia on the longest battle lines of which there is any record in history will always be an inspiration to people who will fight to preserve their independence.

Most assuredly, the magnificent and successful defense by Russia against military power greater than the world had ever before conceived of has not only been helpful to Russia, but has been invaluable to the cause of liberty throughout the world.

It gives me pleasure to request that the highly informative and valuable speech delivered by the Senator from Montana be printed in the Appendix to the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNDAUNTED RUSSIA

Mr. Chairman, honored guests, ladies and gentlemen, 2 years ago yesterday, Russia was

at peace with the world. Men and women were at work on farms, in mines and in mills, in factories and stores, and in all the various activities of a great nation. Millions of happy children were at school or on playgrounds. A great war was raging elsewhere, spreading death and desolation—a war started by a people obsessed by a superiority complex, under the leadership of a group of ruthless militarists. They were determined to set up a new order in the world—an order which would enslave all their near and distant neighbors.

Russia was not a warlike nation. She wanted peace. She wanted only an opportunity to develop her resources and work out a better way of life for her people. Indeed, she had a solemn treaty of peace with the German Government, a treaty which would permit her to escape the deadly ravages of war while devoting herself to the welfare of her people. But Hitler had willed it otherwise.

On the evening of June 21, 1941, one can safely assume, somewhere in the rear of the 180 German divisions poised along the Russian border, there was a conference between Herr Hitler and his most eminent generals. The Fuehrer probably said something like this:

"At 4 a. m. tomorrow, you will strike at the Soviet Union while its people sleep. Move swiftly. Push the panzers through the Bolshevist ranks. Stop at nothing. In 3 weeks, we will meet in Moscow."

A few hours later, at the dawn of June 22, 1941, they struck, and by evening, thousands of Russians were dead, maimed, or prisoners of war at the hands of the German military machine and its regimented hordes. Their solemn pledge not to violate Russian territory, given in August, 1939, had become another German scrap of paper familiar to history.

Two years have elapsed since that treacherous day—2 years of tears, of agony, and of death in Russia. Millions of Russians meanwhile have died in the defense of their soil and the cause of human freedom. It is, of course, expected of soldiers to die on the field of battle, but now we are witnessing a war of extermination of civilian populations as well. Wherever German troops have set foot, they have waged a cruel and bloody warfare against innocent men, women, and children in occupied areas as well as on the battle fronts. Their campaign of ruin and desolation has been relentless and complete. That is why the casualties have been so vast and the tragedy so grim. That is why the indignation of civilized people everywhere is today burning so fiercely against the perpetrators of this unparalleled barbarism.

As I sat down to draft this address, there lay before me three clippings containing photographs brought out of Russia by American correspondents. I am unequal to the task of giving you an adequate word picture of the horrors they depict. A long row of dead bodies of men and women, civilians, mind you, mutilated and left to rot in the fields. Nearby, a group of Russians are digging out of a shallow grave the bodies of other civilians.

The second picture shows wives and mothers crying over the corpses of their loved ones, and nearby are fear-shocked little children weeping and wondering why their fathers and brothers should be so cruelly murdered. Under those two photos an incensed American editor gave vent to the feelings which such scenes always arouse in the hearts of Americans in the following caption: "Not war, but sadistic butchery!"

I turned to the third picture from Russia. As far as the eye could see there was not a house left in the vast area—destruction and death everywhere. Near the ruins of what was once their humble home, a little girl was sitting on the ground gazing in bewilderment at her wailing brother and the background of war-torn territory. He, a bit older than she, was no doubt bemoaning the fate which had befallen him. Bereft of his father and mother, he and his baby sister were left alone in a territory overrun by these cruel invaders.

That, my friends, gives a picture of the theaters of war where Hitler's legions have penetrated. That is the menace which threatens the peace and security of our own people as well. That is what heroic Russian soldiers and guerrillas are fighting to end. For the past 2 years they have been giving their lives by the millions in a heroic effort to block Hitler's road to victory.

My friends, these scenes could be multiplied by the hundreds of thousands, and yet we could not have a true picture of the horrors which have been visited upon the Russian people, who only 2 short years before were unaware of the tragic events soon to engulf them.

Why, we may ask, is all this taking place? In one of his outbursts of candor, Hitler gave the answer when he said:

"If our hearts are set on establishing our great German Reich, we must, above all things, force out and exterminate the Slavonic nations. Twenty million people must be wiped out. From now on this will be one of the principal aims of the German policy."

Hitler has been making good his pledge, but, my friends, he will never overcome the vast heroic armies of Russia. They have weapons in their hands, and they know how to use them. They now have faithful allies in the governments and the peoples of the United States and other members of the United Nations. They know what they are fighting for. They are selling their lives dearly. They are exacting a terrific price from Hitler's legions by their extraordinary courage and superhuman sacrifices. That is why the fanatical Nazis, seeing the handwriting on the wall, are now feverishly waging a war of extermination against the defenseless civilians of Russia. More than 40,000,000 Russians have fallen into their hands in the occupied areas. When the Red Army recaptured some of the cities and villages during last winter's campaign, they found whole populations either exterminated or driven off into slavery.

An American eyewitness, Mr. Edgar Snow, who visited some of those towns, recently wired the Saturday Evening Post:

"It is an experience that we Americans and the British and any people lucky enough to remain uninvaded will never quite understand or fully share. No one who is getting his impressions of this war from photographs, news reels, or simply words can emerge from it with quite the same outlook as those who have been through the ordeal."

England is lucky enough to remain uninvaded because, thank God, the prophecies of some of the so-called war experts that the Red Army would quickly fold up did not materialize. Why? Because in the Soviet Union, the old and the young, the men and women, united under the Soviet flag, are determined to achieve the only goal now before the civilized world—the destruction of our common enemy—the Axis powers.

No quislings, no fifth-columnists, no whispering campaigns, no black markets, no groups sowing the seeds of division and confusion, no disseminators of race or religious hatreds interfere with their united purpose.

My friends, we are gathered here tonight to honor these heroes, the martyrs who have fallen in battle, as well as those who are still fighting in defense of their motherland and for the success of our common cause. We are here to honor the heroes of Stalingrad who smashed Hitler's time table last summer by refusing to yield that strategic sector, irrespective of costs in life and property. We are here to honor the heroes of Sevastopol, Rostov, Kharkov, Moscow, and the many other strategic points on the 1,800-mile Russian front, too numerous to mention here, the heroes who have disposed of the myth of German invincibility.

We are here, as are countless thousands of Americans in other cities of our land, to pledge to the Russian people our wholehearted support and to assure them that we shall stand with them in this struggle until the menace of Nazi Germany has forever been eradicated from the earth.

For 2 years American merchantmen and naval units have been braving the submarine-infested oceans with precious cargoes of American bombers and fighter planes, with American tanks and guns, ammunition, and food for the heroic Russian soldiers and civilians. Our Russian friends have been making good use of the weapons forged by American workers and paid for with our taxpayers' money. Our contributions to the strength of the Russian armies are mounting with each day. We shall continue to share with them our planes and tanks and ammunition; we shall share with them the very bread and butter and other foodstuffs we have in order to achieve our common purpose—the unconditional surrender of our enemies.

This is the only appropriate manner in which we can show our appreciation of her sacrifices; this is the only practical way in which we can give encouragement and inspiration to the men and women of Russia who are today bravely facing more than 200 savage Nazi divisions on the longest battle front ever known in history.

Two years ago yesterday the grains were ripening on the Russian fields, the meadows were green, and the cattle were grazing peacefully. That picture is still true in our own country, thank God. But it is no longer true in the Ukraine, in White Russia, in the Crimea, and in the northern stretches where the brutal forces of the invaders have laid waste to all that was once in bloom.

Our patriotic farmers have responded most enthusiastically to the call of the Russian War Relief Agency with generous contributions of seeds. It is estimated that this summer Russian farmers in the recaptured areas will raise about a million tons of food with seeds received from America. I am happy to say that a son of my own State of Montana, Dr. M. L. Wilson, of the United States Department of Agriculture, an American well known in Russia, is chairman of the emergency seed campaign committee.

It is indeed good for the Russians to know that they have genuine friends in America who are eager and willing to help them through this critical period of their history. Let us beware of those sinister elements which would create division and distrust of our ally because of differing economic and political ideologies. Time will take care of those differences. Let the present bond of friendship, born in the heat of battle against a common enemy, be strengthened so that we may sooner dispose of our enemies and remove from the human family these recurring tragedies. Russia is a great potential partner of the United States and Great Britain in laying a foundation for a just and lasting peace.

The peace and happiness of the world demands that we understand better our Russian allies. There are certain sinister voices whispering around us in America. They must be silenced. Periodic arrests of German agents and their dupes by our Government is an indication that a fifth column is still at work in our midst. The safety and security of our people demand that they be ferreted out and the unity within our Nation and within the family of the United Nations be maintained at the highest level possible.

Our Russian allies must have our fullest friendship and trust and aid, and we need theirs. A sound basis for this relationship

is being forged in this war. We know that our understanding and respect for the Russian people have grown greatly in the last 2 years. Let no one dare to hamper the growth of this long-neglected and much-needed friendship for our mutual benefit.

We Americans, who have always been quick to come to the aid of the needy, regardless of race, religion, or place of abode, will not forget the Russians after victory is won. We are proud of the relief our people had rendered to the Russian famine sufferers after the First World War. We are proud of the technical aid rendered by our engineers and scientists and workers in the industrialization of Russia prior to this war. Those efforts are now paying the cause of humanity good dividends. Without the technical knowledge acquired by the Russians and the great industries they established before the outbreak of the war in 1941, the Soviet Union would have been overrun by the Nazi legions long ago. England, too, might have fallen under German domination, and our own security and our own liberties might well have been in mortal jeopardy.

It is indeed fortunate that the Russian leaders had foreseen this catastrophe long before it began to assume alarming proportions following Hitler's rise to power. While the democracies were being lulled to sleep by Hitler's clever and unscrupulous propagandists, the Russians were more realistic. They were building tractors which could easily be converted into tanks for combat duty; they were building commercial planes which could be converted into bombers; they denied themselves many comforts and necessities of life in order to safeguard their country against designing aggressors. That foresight now stands us, too, in good stead.

It was Russia's great statesman and Commissar of Foreign Affairs, Maxim Litvinoff, who had repeatedly warned the democracies, from the platform of the League of Nations, that safety lies in collective security. The world ignored him and his Government. And now, the world is paying for that failure in blood and in accumulated treasures of past centuries.

We are duty-bound to avoid such mistakes in the future. We would be unworthy of the faith and trust reposed in our present generation by the men who are doing the fighting and the dying at the front, if we fail to learn from the sad blunders of the past.

Statesmen everywhere are now alive to the mistakes made by them or their predecessors in the international arena during recent decades. They are earnestly trying to devise instrumentalities which would avert future conflagrations.

The unanimous resolution, adopted by the House Foreign Affairs Committee on June 15, 1943, a resolution calling for "the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace, among the nations of the world, and as favoring participation by the United States therein," is conclusive evidence that America too is fully awake to its duty and is determined to benefit by the sad lessons of the past.

This will prove heartening news for our Russian allies on the second anniversary of their struggle against her implacable and merciless Nazi foe. This will convince them that not only are we with them heart and soul in the present struggle against our common enemy, but that we will cooperate with them in the future to prevent the recurrence of such tragedies.

At the same time, it should serve to assure the people of Russia that in the peaceful world to follow the present conflict, our two nations will once more be able to release their great creative energies in the realms of art, science, industry and commerce, music and literature, and cooperate to the full to make the lives of our people richer, healthier and happier.

Although the battle still rages on the numerous fronts, the dawn of the happier days is already discernible. The day of victory is on the horizon.

I thank you.

Effects of Disposal of Surplus Property

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able address made by the senior Senator from Maryland [Mr. TYDINGS] on the subject, Effects of Disposal of Surplus Property. This address was delivered at the thirty-first annual meeting of the Chamber of Commerce of the United States in New York before the National Chamber War Council, on April 29, 1943. I am certain that what the distinguished Senator from Maryland has said will be found interesting by all who may have the opportunity to read it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Hoffman, Mr. Johnston, distinguished guests, ladies, and gentlemen, I am very thankful for the remarks of Mr. Hoffman, your chairman, and if he were a candidate for office I would say even more flattering things about him.

If we wish to keep the safeguards, liberties, and the privileges which are guaranteed our people in our National Constitution, to maintain our system of private business and free enterprise, and adhere to our traditional American way of life there must be a keen understanding of, and a ready plan and purpose to deal with, those post-war problems which are beginning to loom on the domestic horizon.

POST-WAR PROBLEMS

What are these great problems which will confront the Nation when the last shot is fired in this tragic war? Here they are:

1. Of the 11,000,000 men in the armed forces, approximately 9,000,000 will be discharged and will be hunting for positions in private employment. To these 9,000,000 must be added the major part of the 20,000,000 workers in the war plants, most of whom will be laid off overnight. They, together with the returning soldiers, will make a temporary unemployed army of between twenty and twenty-five millions of persons now employed.

2. The national debt will likely be $250,000,000,000. That is $7,500 a family. The total assessed value of all property in the United States is approximately $140,000,000,000. Thus, the national debt will be nearly twice as large as the assessed value of all property in this country.

3. It is estimated that in June 1944 the total bank resources of our Nation will be $160,000,000,000. Seventy percent of these resources, or about $112,000,000,000, will then be invested in the bonds of our National Government. The capital assets of all our banks are estimated at $8,000,000,000. A decline of eight points in our National Government bonds would entirely wipe out the capital assets of all the Nation's banks.

4. There will be about $75,000,000,000 worth of outstanding governmental war contracts. These will be canceled overnight. That is 10 times the amount of the outstanding war contracts that existed at the end of World War No. 1. Until these outstanding war contracts are negotiated, adjusted, and settled, hundreds of business institutions will be unable to go ahead. They will not know where they stand. It will be difficult for them to borrow until the lending agencies know what the financial position of these companies is with their unsettled war contracts.

It seems apparent to me that businessmen will have a very difficult time in the post-war effort unless these contracts are promptly settled and fairly settled by our Government, for until they are settled, obviously, businessmen will have a hard time to borrow money from private sources, because private banking institutions will feel that until these contracts are settled they cannot tell with any degree of certainty what the financial position of the applicant for a loan is likely to be.

5. It is estimated that on the date of the armistice the National Government will own $60,000,000,000 worth of materials ranging all the way from ships to machine tools, hotels, shoes, munitions, food, clothing, trucks and hundreds of other items too numerous to mention. Much of these materials the Government will no longer need. The fact that the Government has them and will likely sell them from time to time will hang over the domestic market, create uncertainty, and tend to depress the revival of private business.

6. During the war the National Government has acquired vast amounts of land. It now owns about 47,000 square miles. This is little short of the entire area of the six New England States. The Government will no longer need all of this land. Such land as it does not need will have to be resold.

On the brighter side of our post-war picture, there is the back-log of the unfilled needs of the masses of people for automobiles and tires and gasoline, refrigerators, furniture, clothing, shoes, farm machinery, utensils, railway equipment, housing, and many other articles which it has not been possible for our people to get during war times.

The above, the good and the bad, is an outline of the reasons for our post-war action on the day following the cessation of hostilities.

I agree thoroughly with the remarks of your chairman, who quoted an economist who said that the manner and the speed and the justice with which these post-war problems are dealt with by our National Government will determine the pattern o the United States for the next 20 years in our domestic economy field. We must prepare to solve every one of these problems, not when the war is over, but now.

We must prepare to meet each and every one of these problems, not when the war is over, but now. The whole machinery of orderly and noncompetitive liquidation must be made ready during the war, and the vast work of directing the country from a war to a peace economy must start as suddenly as war itself usually starts.

Everyone in this Nation has a gigantic stake in this whole endeavor. Every manufacturer, every industrial worker, miner, and farmer, every white collar worker—indeed, every citizen in this Republic will experience depression or prosperity according to our ability to deal speedily and successfully with every one of these great problems.

GOVERNMENT'S JOB

What must our National Government do in order to discharge its part in the peacetime rehabilitation of the public life of our Nation, so that the channels of trade may be as free as as humanly possible, so that business may go ahead with a certainty of what future gov-

ernmental policy will be, so that the twenty or twenty-five million unemployed following the armistice may find positions again in private industry at good pay, and so be able to provide for themselves and their families.

Here are the things that Government must do before the war is over:

1. It must set up a liquidating agency, which will study all the factors and plan to resell that part of the national domain which our Government will no longer need.

2. It must set up another liquidating agency to sell, in an orderly fashion and with a minimum interference to private business, the $60,000,000,000 worth of varied materials which the Government now owns. Some of these things, like clothing, shoes, and food, can be utilized by our Government to soften the hardships of the unemployed until private industry can offer them employment. This will lessen any increases in the national debt in taking care of the unemployed during the transition period. Much, however, of the remaining material can only be sold in competition with private business which will then be struggling to readjust itself to our peacetime economy. Some hardship to business cannot be escaped, but a wise liquidation of the vast holdings of Government-owned materials should reduce this hardship to its irreducible minimum and should not seriously impair operations for production and for work.

3. We must have another governmental agency set up with its plans ready to go to work at once in settling the $75,000,000,000 of canceled war contracts. This will be one of the most delicate and important functions of the post-war operations of our National Government. Until these contracts are settled there is bound to be an atmosphere of uncertainty, rumor, hardship, and even suspicion. The Government has a tremendous investment in and ownership of many of the plants with which it has made contracts. Our object should be to get the Government out of these plants and out of private business at the earliest possible moment. Unless these war contracts are settled equitably and speedily, many businesses, already in debt to the National Government for plant expansion, will be unable to borrow from private sources during the transition period. They will look to the Government for additional capital with which to carry on. If that should happen, the Government will get more deeply into private business than it is. This would be unfortunate. It might conceivably change our entire traditional policy. Unless wisely tackled and administered, this problem might not only put the Government farther into business than it now is, but could lead to a governmental totalitarian economic status. After the last war it took 3 years to adjust many of the $7,500,000,000 of canceled war contracts. With that experience behind us, there is no sound reason why each one of these contracts cannot be satisfactorily adjusted within a year after hostilities cease. That can only be done if we plan to do it now while the war is still going on.

4. It is not unlikely that the National Government will have to take some measures to deal with unemployment during the transition period. Most States, cities, and counties have reduced their indebtedness in recent years. The contribution of the Federal Government toward unemployment should be less than it has been in the past. The contribution by local government hereafter should be greater in view of the changing debt status of the Nation and the local governments. Moreover, every large city and many of our States should now be looking into projects, such as roads, bridges, schools, hospitals, sewers and water supply, and the like, as a part of this unemployment program. The things built should be useful things—things so far as possible which the local governments would have to build anyway. There should be as little waste of manpower in this program as is possible.

5. The President and the Congress, through the medium of national laws, should announce to the people of the country that its primary post-war objective is the complete withdrawal of Government from private business and that all governmental measures will be directed toward the complete and speedy restoration of our system of private enterprise as we have known it in this great Nation.

As in the past this will at least declare our national policy and give some encouragement and assurance to businessmen who will be struggling to readjust themselves.

POST-WAR SURPLUSES

Now, to deal specifically with the estimated $60,000,000,000 worth of materials which the Government will own; let us see how that can be treated in general outline. It should be broken down in the following categories:

1. Those things which the Government has acquired during the war which the Government still needs, such as some critical materials, munitions, and supplies for our armed forces, office space for regular peacetime operations, and the like. These things can be removed from the list of materials remaining to be disposed of.

2. Those things which the Government now owns but which can be sold back to private concerns without depressing private enterprise. In this category would be hotels, office buildings, some aircraft, shipways, synthetic rubber plants, war chemical establishments, some machine tools and machinery, and the like.

3. There will be the quantities of materials which cannot be disposed of by the Government except in direct competition with private business which will be producing in whole or in part the same thing. Here is where good judgment must prevail. There should be representatives on this Government liquidating board of concerns that are producing the things the Government is selling so as to feed these things back into the market with as little hardship to private business as is humanly possible. This is going to be a delicate operation. It will require time. Everything the Government sells will, to some extent, depress employment. Business, the workingman, and the farmer will all be affected, favorably or adversely, depending on the wisdom with which this program is carried out. There will be a paradox of administration. On the one hand the Government should dispose of all these materials at the earliest possible moment. On the other hand, it should dispose of them only as it can do so with the minimum of competition with private producers of the same articles.

4. By national law the administration then in power should declare that the proceeds and receipts from the disposal of all properties owned by Government should be applied to reducing our national debt and for no other purpose whatsoever. If this is done not only can the national debt be reduced in the post-war years many, many billions of dollars, but by this reduction our reduced national income, certain to follow the close of the war, will offer the best prospect of keeping the finances of the National Government in a sound, healthy condition, a treatment which would not be out of place, I assure you.

5. And finally, of transcending importance, we should provide either by constitutional amendment or otherwise, that in times of peace the Congress of the United States cannot spend more money than it takes in in any one year without providing for increased taxes to completely wipe out such annual deficit within a period of not more than 20 years from the time the deficit is created.

CONTROL OF DEFICITS

You cannot continue to run this Government, or any other business in the world, on borrowed money, living on the future. That is the path of ruin. Deficits should not be permitted in peacetime unless taxes are provided which, when collected in the future, will wipe out such deficits. That is the easiest way, in the long run. The other way is the hard and ruinous way, in the long run.

This policy should have been adopted long ago. From 1930 to 1940 the National Government spent $27,000,000,000 more than it took in, an annual deficit of $2,700,000,000 a year. In the early thirties this was understandable. In the late thirties it was shortsighted. Now, in the face of all our other war debts we must pay off this $27,000,000,000 of national debt incurred from 1930 to 1940.

And do not suppose that this $27,000,000,000 national debt from 1930 to 1940 was caused by preparations for war. For the 10 years from 1930 to 1940 the entire cost of our Army and Navy, in every particular, amounted to only $11,000,000,000 for the 10-year period. Thus, if we subtract the total cost of the Army and Navy during this period, which was $11,000,000,000, from the $27,000,000,000 of national debt incurred during these same years we see that the Government spent $16,000,000,000 more than it took in during this 10-year period, without a single penny of this sixteen billion remaining being spent in any respect for our Army or Navy for preparedness.

A pay-as-you-go policy must be adopted if we are to have business security in this Nation.

This policy should stop, and must stop completely if our constitutional system and our traditional private business enterprises are to endure. There is no other solution. This country must be put on a pay-as-you-go basis, and when borrowings are necessary there must be the taxes accompanying said borrowings which will pay them off in a period of not more than 20 years in peacetime.

A SUGGESTION TO BUSINESS

Now, a respectful suggestion to the United States Chamber of Commerce: If you find yourself in general agreement with the conditions I have outlined, if you feel that my humble suggestions are worthy of your consideration and action in the main, then do not wait for the President and the Congress to make these matters effective. Do it yourself. Create committees out of your own membership now. Prepare your policies and plans now and have them introduced in the Congress for consideration and study and for appropriate action thereafter. Congress is busily engaged, in the main, with the war. It does not have, and cannot have, the clear understanding, the wealth of detailed information, which many of you gentlemen have concerning the matters which I have discussed. It is imperative, not only in your interests but in the interest of every working man and woman, every farmer and urban dweller in the land that you gentlemen make suggestions to the National Legislature now for the appropriate consideration of our post-war problems.

I believe your suggestions will be sympathetically received. We can have hearings on the suggestions you make. We can perfect these tentative laws to do the job which lies ahead. We can set up the liquidating agencies so they can be studying these problems and so they will be in a position to act the minute the war is over.

By doing so, we can help to save the constitutional system which we love. We can give to private enterprise its greatest opportunity. We can cut the army of unemployed to the minimum. We can have the smallest measure conceivable of Government interference with business. We can furnish the greatest market for the products of the plants, the mines, the forests, and the farms. We can keep down the national debt. We can provide the greatest volume of governmental income. We can the more speedily reduce the

national debt. In a word, we can save in all of its great glory and historical beneficence the traditional America we love, and keep it in the highest place among the nations of the world. Only by doing these things can our Government and you, the leaders of business, aid best our fellow men, keep the door of opportunity open to all, and say to the returning soldiers and sailors, who come back from the battle fronts: "Here is the America you went forth to defend, basically unchanged, basically strong, with its Government as the servant and not the master of the people, with a fair chance for youth to climb the ladder of success, prosperity, and contentment, as millions of Americans have been climbing it ever since our constitutional form of government was adopted by the Thirteen Original States."

Let us resolve here and now not to shrink from any of these looming difficulties, but to go forth in the firm faith that we can and we shall overcome them, that we who stay at home shall keep the faith during the war, and that we will keep it faithfully thereafter.

Address of Hon. Alexander Wiley, of Wisconsin, Before Republican Women of Appleton, Wis.

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the able junior Senator from Wisconsin [Mr. WILEY] before a breakfast meeting of Republican women, at the Hotel Conway, at Appleton, Wis., on June 27, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Madam Chairman, fellow Americans, there is no group I would rather address than a group of American women. You are the wives, the sweethearts, and the mothers of our fighting men on the home front and on the battle front.

Your stake is the greatest stake in the war. This war means the survival or the annihilation of everything you hold near and dear.

The bright-eyed youngsters who once looked up from their cribs at you—they are fighting for us. The home you made for your family may be sadly empty today.

The decent God-fearing self-respecting virtues for which American womankind has always fought, are being ravaged elsewhere. Decency is despoiled in other lands where the sanctity of the home and the sacredness of motherhood and the family are only a hollow mockery in the bloody torch-lit shambles of ravished ideals.

Here in Appleton, this beautiful city of homes, it is particularly appropriate for us to think on these things. My four children attended Lawrence College in this city and my daughters are now grown women. All I ask of life for them is that their children have preserved for them the same opportunities and the same great values which have always marked our land.

Politics has been defined as the science of government. All through history women have been a tremendous influence in the nations—giving direction to government. It was Bathsheba, the mother of Solomon, who secured from King David the kingdom of Israel for Solomon. It was the Queen who brought Daniel to King Nebuchadnezzar to interpret the dream that the King had had.

At no time in American history has the American woman been confronted with as great a challenge as today. Manpower is moving onto the battle fronts and women are taking over more and more of the load not only in factories but in the home.

In the days that are up ahead, the women of America will be great interpreters. They will have in their hands (for probably eleven or twelve million of our boys will be temporarily disfranchised because of their being in service) the destiny of this great Nation. Their votes in November 1944 will be the decisive factor.

In the tremendously important position that you now hold and will hold, I am sure that you women will play your part well. The most important quality for a man or woman to possess in any position is mental poise—judgment.

History, I am sure, will pay high tribute to the pioneer courage and the resourcefulness of the women of this day.

I am reminded of an incident that occurred in my office several years ago. A friend came in to see me and he was obliged to remain in the outer office for a while because I had others already in my office to talk with first. When he did come in, he said: "How can you sit there so calmly?" I said to him, "You remember, of course, Abraham Lincoln * * *," and before I could finish my sentence he said: "No; I never knew the gentleman. What has that to do with being calm?"

I replied that when Lincoln lived in this man's town he was confronted for many months with a condition of affairs that contributed to a lack of poise in many people. In fact, his own Cabinet members were so filled with fear that when he would appear at the meetings he would see his associates with knitted brows and absolutely unfit to meet the situation. What did he do then? He would tell a funny story. Sometimes there was a punch in it and he would seek to make the minds of his Cabinet members function smoothly. His story would cause them to laugh and they would find release for their taut muscles and their inoperative brains.

Lincoln had another safety valve besides that of humor—that of faith and prayer. He said that when he knew of no other place to go, he would go to his knees. He sensed that there was direction and guidance in an ever-available God if man sought Him out. Lincoln had a third safety valve—he returned good for evil and he had faith in the destiny of his country and in the common man.

I then took my friend to the window and showed him a view that I look at daily. I pointed out to him the Washington Monument, the Lincoln Memorial, and beyond that, across the Potomac, the Lee-Custis home where General Lee lived before he took command of the armies of Virginia; I pointed out, to the northwest, the cathedral where lie the bodies of President Wilson, Admiral Dewey, and other famous admirals. And I said that these sights brought to my mind the saying of an ancient philosopher who said, "This, too, will pass."

"Yes," I continued, "time solves many problems, and the worries and problems of the present will become like the worries and the problems of these great men whose monuments we here observe. And the other thought that comes to my mind," I said, "is out of the Book of Books—'The battle is not yours but the Lord's.'"

As I quoted the last, my friend said, "Alex, the devil himself can quote the Scripture," and I could see the humor return to his eyes and with that sense of humor he was calm again. He had come to Washington and had been given the merry-go-round or the ring-a-round and had gotten nowhere, and he was very much agitated and upset. But in getting into that condition he had made himself unfit to solve the very problem for which he was seeking a solution.

This incident illustrates the situation about which we must all be very careful. With the tremendous impacts upon all of us—with the changed conditions that have come into our personal life, into our economic life, our family life, and our national life, if we are wise we will maintain our balance and reach out for the solutions to the problems that are here.

I could speak to you specifically of many problems—domestic and international—our enormous expenditures, over a hundred billion a year; the muddled and critical food problem—feeding our forces, our allies, ourselves, and our stock; our extended bureaus with their incompetency; the threat of inflation; our manpower problem involving the farms and the food plants; our tax problem; strikes; lavish spending of our natural resources like oil and minerals; our transportation problem at home and abroad; meeting the requirements of our allies; planning on the home front for the impact of victory, involving reconversion of our whole economy and life to peacetime pursuits and providing shock absorbers needed; seeking the way to meet the obligation that will be ours when peace comes as a leading nation of the earth—defining a world policy.

I could speak to you of mistakes and misplanning and the lack of planning, but in this swift-moving world I haven't time for that. It is true that the past is prologue, but our job is to make the present a greater prologue to a greater future.

Over against these mistakes and the lack of planning in the past, we can register much that is constructive and worth while. I enumerate from such a magnificent production record—a miracle; a united people dedicated to victory; many efficient public servants rendering yeoman service; the best fighting forces in the world, with the best equipment; a nation made safe on land and sea and air; a nation filled with an awareness of its responsibility; the highest standard of living still unimpaired; a national income near $135,000,000,000 a year.

We have much, my friends, for which to be grateful. A changed world demands a changed outlook and a new appraisal of our individual and our national position in the world.

The future of the Nation and of the world is in the hands of America. We face it confidently. Our boys on all the continents and seas of the earth are facing their duty with courage, sacrifice, and wisdom, hoping and praying that this generation will have the vision to bring about a peace that will mean doing away with war for all time to come. Those boys and ourselves are jointly engaged in destroying tyranny and it is our hope that peoples in all lands will attain freedom and that nations will be able to find the ways and means to enforce peace and settle by methods of peace the disputes which would otherwise be determined by war.

In my opinion this does not mean that nations will now attempt to form a superstate. It does mean that the nations who have a common purpose and are like-minded will unite for collective security.

This war will not change human nature. Human beings will have to undertake a crusade in church, in school, and in the home that will result in setting the things of the spirit above material values, placing right above mere self-interest, and starting a march in the direction of the regeneration of mankind.

All of us here were born free, possessing the great values of American citizenship, and it was difficult for us to believe that those freedoms could be lost, but when we saw

peoples who had lived in freedom as we had—saw them shackled and enslaved—then we became aware of the fact that eternal vigilance is the price of the maintenance of liberty.

We are awake from our apathy, but we must make sure now that while we are alert and while we are worsening the enemy we do not permit, because of the tremendous internal and external problems, discouragement and the sense of futility to enter into our souls. With the aid of Him who is ever present to aid, we can down these enemies of peace and happiness.

This is the Sabbath. To get rid of any sense of defeatism, of any sense of hopelessness or helplessness, or any sense of discouragement, let us follow the injunction that we were taught as children: "Put on the shield of faith, the helmet of salvation, and the sword of the spirit."

Out of these critical times, these challenging times, these world-racking times, I believe there will come a new dignity to the individual and to this beloved country. Men and nations grow through overcoming limitations and solving problems. Out of this war period we are learning the lesson of cooperation. Labor and management have done a tremendous job in that direction. Nations are cooperating as they never have before. I refer, of course, to the United Nations. They are getting rid of those forces which would nullify man's efforts to learn the art of living and working together. They are getting rid of bigotry and misunderstanding and jealousy. Yes, we are learning through the hard course in war to work together. We must not lose that learning when peace comes. United, we must face the problems of peace and find the way to get rid of war.

If we do that, we will not only rebuild a new world enlarging the opportunities of mankind to produce and enjoy new wealth, but life itself will expand and it will have new meaning.

Learn to cooperate is the call that comes to all of us—to labor and management, to farm and city folk, to young and old, and to nations.

The right kind of thinking will bring about the right kind of politics—science of government—which will result in the creation of jobs, of new wealth and healthy communities where industry, enterprise, and virtue dwell.

The O. P. A.

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the St. Louis Post-Dispatch of June 16, 1943, headed "In Fairness to O. P. A."

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

IN FAIRNESS TO O. P. A.

Mr. Roosevelt yesterday defended the Office of Price Administration, and said flatly he had no intention of taking away its food-pricing function. This is opportune, since Office of Price Administration lately seems to have become a favorite whipping boy of virtually all comers.

Even if it worked perfectly, the agency would not be popular; and if very many people ever got around to liking it that would probably be a good sign that it was doing its job very badly indeed.

It will harm no one, however, to give this ugly duckling of public administration its due. All of us depend on Office of Price Administration, desperately. It is all we have to perform a task so large as to bog down the imagination. We look to it to keep us from depriving the armed forces of any food and supplies, and to save us from being swamped by rising prices.

A great deal is heard of black markets, violations of gasoline rationing, spiraling prices of foodstuffs, and other points of failure. It should be remembered that there are also many points of success, and that so far they outnumber the failures markedly.

Gasoline rationing is saving tremendous amounts of vital rubber and fuel. Most markets are white markets, where regulations are observed and controls are functioning smoothly. Rent control is working reasonably well, and has earned the inarticulate but sincere gratitude of the people. Food price controls, unsatisfactory as they are, have put a brake upon inflation, provided a measure of protection for the housewife's purse and saved billions of dollars, reflected in tax savings to the public, for the largest food purchasers of all—the Army, the Navy, and lend-lease.

In view of the magnitude of the task and the obstacles that have been put in the way, the remarkable fact is that Office of Price Administration has not made more mistakes, that it has been able to achieve so much.

Office of Price Administration is seriously handicapped by a shortage of investigators and enforcement agents. It must depend to a large extent upon volunteers, many of them untrained. Large staffs worked day and night, with no compensation for extra work over 48 hours a week, to prepare the recent lists of ceiling prices on foodstuffs.

Our country has never before had to do anything like what Office of Price Administration is having to do now. By contrast with the present system, rationing in the United States in the First World War was of small consequence. So far, Office of Price Administration has done a pretty good job, all told—has done, in fact, much more for the public than the public has done to uphold Office of Price Administration's hands and increase its effectiveness.

Public Opinion Polls Support Post-War Social Security

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD polls from various sources endorsing an expanded social-security program for post-war America.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Chicago Sun of June 20, 1943]

UNITED STATES PUBLIC BACKS SOCIAL SECURITY GOAL

DENVER, June 19.—While Congress considers the American Beveridge plan, providing for cradle-to-grave social security, a large majority of the American public expects there will always be some poverty in the United States, a national opinion research center survey shows.

"Exactly 84 percent of a typical national cross section believe there will always be people in the United States who do not have the kind of food, clothing, and housing they need," said Harry H. Field, director of the center. "One percent qualify their answers, 12 percent think poverty will be completely eliminated, and only 3 percent voice no opinion."

SECURITY FAVORED

The same survey indicated, however, that the public is in favor of the principle of social security. Ninety-four percent of the cross section approved the old-age insurance provision of the present law, 84 percent favored the unemployment insurance provisions, and 85 percent would favor similar legislation to cover health insurance.

Strong majorities also favored extension of social security to cover all workers in all occupations—a proposal similar to that provided in a bill before Congress. Eighty-one percent believed that old-age protection should be universal, and 74 percent took this view on unemployment insurance.

OPINIONS DIFFER

Sharpest differences in opinion on the subject of social security occur between new dealers and the anti-new dealers. On every point involving the need for social security and its extension the New Deal group favored the proposals by a very substantial majority. The anti-New Deal group favored the measures by smaller but still significant majorities.

For the purposes of the survey persons who voted for President Roosevelt in 1940, said they approved the New Deal before the war and wanted more Government control of business after the war are termed new dealers. Persons who voted for Wendell Willkie, disapproved of the New Deal before the war and want less Government control of business, are called anti-new dealers for the analysis.

A summary of the results follows:

"Question. It has been said that there will always be people in the United States who do not have the kind of food, clothing, and housing they need. Do you think there always will be or not?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Will be	84	80	93
Qualified answer	1	3	1
Will not be	12	16	4
No opinion	3	1	2
	100	100	100

"Question. As you may know, under the present social security law, workers in certain occupations have to save money so when they are too old to work they will receive money from the Government, like insurance.

Do you think this is a good idea or a bad idea?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Good idea	94	98	88
Qualified answer	1	(*)	1
Bad idea	3	1	9
No opinion	2	1	2
	100	100	100

(If "good idea" to previous question:) "Do you think this plan should cover all workers in all occupations or not?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Yes	81	91	70
Qualified answer	(*)	----------	(*)
No	10	6	15
No opinion	3	1	3
	94	98	88

Question: "The social security law also requires some workers to save money so they will get money from the Government in case they lose their jobs. Do you think this is a good idea or a bad one?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Good idea	84	93	73
Qualified answer	4	1	6
Bad idea	8	4	18
No opinion	4	2	3
	100	100	100

(If "good idea" to previous question:) "Do you think this plan should cover all workers in all occupations or not?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Yes	74	87	59
No	7	5	11
No opinion	3	1	3
	84	93	73

Question. "Do you think there should be a plan like this to take care of working people while they are sick?"

	Total	New dealers	Anti-New dealers
	Percent	*Percent*	*Percent*
Yes	85	91	73
Qualified answer	2	2	3
No	10	6	22
No opinion	3	1	2
	100	100	100

The survey sampled a typical miniature of the population of the United States, with the proper proportion of rich and poor, young and old, men and women, and various minority groups.

[From Woman's Home Companion of June 1943]

WHAT PRICE SECURITY?

(By Anne Maxwell)

President Roosevelt's proposed "cradle to the grave" social security plan—similar to the much-discussed Beveridge plan for England—raises two important questions: Do Americans want such a plan? How much would they be willing to pay to carry it out?

Our reader reporters have given us their answers to these questions. And because our reader reporters represent a cross-section of all of our readers—they were selected to be representative—we can accept their answers as an approximation of what most Companion readers think today. That is:

"They are for the President's plan."

"But it must not cost too much."

The reader-reporter majority in favor of the plan could hardly be described as overwhelming, however. The margin was too slight for that. And from the tone of the minority's comment, we foresee many hot arguments before the questions are settled. Here are the specific questions we asked, the results and some reader-reporter comments:

ARE YOU FOR OR AGAINST THE IDEA OF AN EXPANDED FEDERAL SOCIAL SECURITY LAW TO PROVIDE FOR ALL EMERGENCY FINANCIAL NEEDS FROM "THE CRADLE TO THE GRAVE"?

Fifty-six percent of our reader-reporters said "Yes," 39 percent said "No," and 5 percent didn't know or wouldn't answer.

That's the straight result. We had an opportunity to make an interesting analysis of the answers on political lines because of a poll we took recently to see how many of our reader-reporters were Roosevelt supporters, how many were for Willkie in 1940. The same reader-reporters were questioned on the security law. Comparing the two results we found that 72 percent of Roosevelt's 1940 friends were for the plan, only 44 percent of Willkie's.

Another interesting way of looking at the answers is to consider the financial status of the voters, their age and where they live. Most in the middle income group were in favor of the plan. Most of those who make $5,000 a year or more were against it. The young were enthusiastic, 66 percent said "Yes," as against the "No" of 53 percent of the women over 45. Voters who live in the Eastern and Northern States were lukewarm; those in the Southern and Western States were favorable. In fact, the West was enthusiastic—63 percent said "Yes."

Those in favor of the expanded Social Security law gave as their chief reason the belief that it would mean insurance against poverty. A frequent observation was: "There should be forced saving as so few people ever give the thought of the future any consideration."

Many voted "Yes, with reservations." Namely: The plan should not be so extensive as to destroy all ambition; it should be properly handled and administered without graft. These voters also would like some assurance that the money would not be spent for something else; want it kept separate from other governmental expenses.

And they want benefits effective immediately. One reader-reporter said: "A good idea if the payment would be immediate. The need for extra money is often desperate as in cases of sickness, accidents, or death."

Further comments: "Am in favor of this if it applies to all workers of every class and a sane government is in control." * * * "This is the sort of post-war planning that makes the war doubly worth fighting for." * * * "Approve for educational purposes only." * * * "Freedom from want, freedom from fear are worth paying for."

Those who are against such a law are ag'in it hard. They show a lack of trust in use of moneys already controlled by the Government; they have no faith in the way present social security is run and resent having the Government control their insurance. * * * "I want to be a part of the Government, not a ward of it."

Some against the law were, however, for compulsory insurance—maybe. But again, please no Government control. Many thought that insurance companies would be able to take care of the problem. "Almost everyone has his own insurance and is able to meet his obligations. Roosevelt is just looking for more money for the Government's pocket."

This law would be a threat to incentive and thriftiness, say many of the women. "Roosevelt's administration has done more to help the lazy and tax the thrifty than is good for any government." * * * "While security is comforting it is enervating and offers no incentive to thrift and foresightedness."

More comment from those not favorable: It tends toward socialism or communism. Some said fascism. Farmers and civil and State employees would not benefit or be covered by this plan. It offers an opportunity for graft and the evil doings of politicians. There's too much taken out of salary already; too much red tape. A wish for less Government control, especially by present administration, was prevalent on both sides of the fence, as a matter of fact.

Other ag'inners: "This would be just another 'pork barrel' for the bureaucrats—more Government employees living off the taxpayers' money." * * * "If any more deductions are taken from salaries at present they should be for more Victory tax. We need to win this war." * * * "I was always taught that security was something you worked for. Now I find you just vote for it!"

WHAT WOULD BE THE LARGEST PERCENTAGE OF YOUR INCOME YOU WOULD BE WILLING TO DEVOTE TO SUCH BENEFITS?

Seventeen percent of Roosevelt's admirers are willing to devote 10 percent of their income to this plan. "The greater percentage the greater the benefits." But the largest group of women (44 percent) feel that 5 percent is sufficient. They said they would like to give more if possible but with so many deductions now they feel 5 percent would be fair for everyone. Perhaps more after the war.

"The amount of income devoted would depend upon the benefits to be received." * * * "Why not continue the 5 percent Victory tax after the war for this purpose?"

[From Fortune magazine of July 1942]

EXCEPT FROM THE FORTUNE SURVEY

To provide which of the following things do you think the Federal Government should and should not collect enough taxes after the war?

	Should	Should not	Don't know
	Percent	*Percent*	*Percent*
Medical care for everyone who needs it	74.3	21.0	4.7
An old-age pension for every citizen over 65	73.8	21.7	4.5
Jobs for everyone who is able and willing to work but cannot get a job in private employment	67.7	25.2	7.1
Compensation for everyone unable to find work until he can find work	57.8	34.4	7.8

On the first 3 propositions there is not a single dissenting majority in any income or occupational group or section of the country. On the fourth—a Federal job insurance—only executives, the prosperous, and the upper middle class object, by majorities of 54.5, 53.6, and 50.4 percent, respectively.

Dangers in Anti-Inflation Drive

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "Haney Cites Dangers in Anti-Inflation Drive" written by Lewis Haney, professor of economics in the New York University, and published in the New York Journal-American of Tuesday, June 29, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HANEY CITES DANGERS IN ANTI-INFLATION DRIVE

Last week I analyzed the battle now going on between the anti inflationists and the inflationists. I showed that they differ merely in the way they would deal with the growth of inflation, the antis, led by Mr. Roosevelt, seeking to use the inflation scare as a basis for fixing upon us a completely managed economy.

The arguments of Roosevelt, Byrnes, Brown, and Eccles are that by fighting inflation by Office of Price Administration methods they can (1) reduce the cost of the war, (2) keep fixed incomes from suffering, and (3) prevent an eventual deflationary crash.

If they could and would really stop further inflation, these arguments would be good. But they do not propose to stop inflation. What they propose is to keep right on borrowing and spending, merely adding Government subsidies to the bill. They are not interested in the relatively few people with fixed incomes, but concentrate on keeping wages up by gearing them to the cost of living.

What they want is a completely managed economy. To this end they would destroy the price system of free markets by the roll-back and subsidy scheme, with all its great cost, bureaucracy, and political abuse. This scheme would be rigid and arbitrary. It would deprive us of the advantage of incentive pay and automatic adjustments between demand and supply.

It would be used to destroy individual saving and private investment.

In short, the anti-inflationists would plunge us into an immediate and lasting deflation of democracy and private enterprise.

On the other hand, the defenders of inflation want to retain the price system, and allow an automatic stimulation of production and adjustment of consumption.

This would be democratic and call for no bureaucracy. They would allow a free coordination of commodity markets, money markets, and investment markets.

As to the costs of the war, they say that we might as well use the excess currency and bank deposits already created. And they argue correctly that what is really needed is economy in production and consumption. They would at least save the waste of Government subsidies.

The danger in the inflationist case is that it may be pushed too far in the way of laissez faire. It might let extreme maladjustments develop that would cause a deflationary crash eventually.

Thus the true solution, as usual, lies in between the two extremes. The inflationists are right in their criticism of the Office of Price Administration, and the scheme to manage the economy under the guise of fighting inflation. They are right, too, in proposing to keep prices in line with the value of money, which just now would mean a higher price average.

But the first step in solving the Nation's problem should be to stop any further inflation beyond what is absolutely needed for war purposes. We should recognize the existing inflation and let prices become adjusted to the depreciated currency. But we should return to sound money and credit policies, so as not to add to the existing inflation.

And everything possible should be done to keep markets open and free from manipulation, so as to hasten automatic adjustments among different prices, and between wages and prices.

We don't want more inflation than we already have. But above all, we don't want any more "managed economy" or "social planning," and the anti-inflation racket must not be used to fool the people.

Subsidies Are Inflation

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from today's Washington News entitled "Subsidies Are Inflation."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUBSIDIES ARE INFLATION

What is the basic reason for the threat of inflation? The fact that the Government is spending so much borrowed money.

How does the administration propose to deal with high food prices, which are one symptom of inflation? By spending some more borrowed money in subsidies to roll back the prices.

Does this plan have merit? It has political merit, for the big labor organizations are demanding these subsidies.

Will the subsidies really reduce prices? No, but the Government will be paying part of everybody's grocery bill and putting the cost on the cuff to be repaid, with interest, by everybody later on.

If the Government pays part of everybody's grocery bill, won't everybody have that much more money to spend now? Yes.

Will the subsidies create more groceries for everybody to buy? No.

But doesn't the administration contend that prices are being forced up because the public has too much spending power at a time when the supply of merchandise that can be bought by the public is sharply restricted? It does.

Won't such subsidies add to the threat of inflation? Yes, to the extent that they increase surplus spending power.

Then, isn't the administration's subsidy policy inconsistent with the administration's professed desire to prevent inflation? Yes, but by this time inconsistent administration policies oughtn't to surprise anybody.

Our Appalling Manpower Waste

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Our Appalling Manpower Waste," from the Christian Science Monitor of June 5, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR APPALLING MANPOWER WASTE

(By Millard B. Holland)

We are wasting at least a billion man-hours a year in our war industries. It may well be two, three, or even four billion man-hours. Let me tell you my experience as a ship worker. Then judge for yourself if my startling estimate isn't really a gross understatement.

And remember, please, that a billion hours of manpower will build 596 destroyers or 961 submarines. What wouldn't we give for a third of these in the Battle of the Atlantic.

And remember also, please, that this year we expect to have 20,000,000 persons in war work. Even if everyone of these workers wastes as little as an hour a day, on a 300-day-a-year basis the waste would be billions of man-hours. Enough to sweep the seas of every German submarine, enough to sink the entire Japanese fleet.

And now let me tell you how, on the average, we war workers waste far more than an hour apiece a day.

Yesterday 6 husky Negroes slowly pushed a heavy cart into the shop where I was working and laboriously proceeded to unload its fantastically light freight for me to coat with aluminum paint—28 thin strips of metal—each 10 inches long and 1 inch wide. It took these 6 men 20 minutes to unload this absurdly trifling cargo, and 20 minutes more before they slowly and industriously began to push their cart back to the building they came from—a distance no more than 10 paces. At the gait they were going, it surely must have taken them another 20 minutes to load their cart before bringing it over to me. I could have stepped across to their building, loaded this metal on one arm, and returned in 5 minutes. It took these 6 men each an hour. That manpower waste cost the yard (and hence the Government) $5.22, for their rate is 87 cents an hour.

Last week I had to clean and paint a number of weldings in manholes cut out of steel plates. These steel plates were small, about 4 by 4 feet, and were not very heavy, as steel plates go; moreover, they were resting in V-shaped racks, which made it easy to turn them over. Nevertheless, a Negro laborer was assigned as a helper to turn them over for me. So every half hour he turned one over as I finished it, and then he waited patiently another half hour until I had the next one ready for him. I didn't need him to turn over that metal any more than you need someone to turn the pages of a book. I could have used him to help clean the plates. But that would have entitled him to a higher rate of pay—a skilled craftsman's rate—and so he was forced to be idle. He "helped" me for 3 days, at a sheer waste of 24 man-hours and $20.88. Yet this "helper" and the six

Negroes who manned the cart all professed their willingness to work. There simply wasn't enough work to keep them busy. They could do nothing else but stall.

It is a common sight in our yard to see six or eight Negro laborers idle nearly all day waiting for something to do. Our white crane crews read papers or doze by the hour. Welders are in a class by themselves. They are mostly young, independent, undisciplined by long application to work, and much in demand. Any number of them make no pretense of working, with all sorts of work for them at hand. On board the ships they rest even more. For there are endless places in the bowels of our great ships difficult of access and where vigilant supervision is next to impossible. In our many shops, such as our electric shop, pipe shop, copper shop, tin shop, there is a leisurely stride unknown in outside industries. I have heard many men say they didn't do a tap all day long. Some say it with a grin, others with chagrin. That man surely would be an optimist who affirmed that in our yard over the year we all averaged 6 hours' good work a day.

Nor is our yard different from other shipyards or other defense work. I have a friend, a master mason, who helped in the erection of a magnesium plant. He and his fellows had a special large costly brick to lay; if my memory serves me right, each brick cost $7. He could lay one of these large bricks every 20 minutes. The spirit of the place—or the lack of it—decreed that one should be laid every 2 hours. For this "work" he was paid over $100 a week. Being a man of character and restless energy, he quit and took a lesser job in another defense plant. Here he had so little to do that he took, in addition, another job elsewhere to keep busy. So now he has a swing shift by night in defense work and another job in nondefense by day. Holding two jobs, one in defense work where the task is light or inconsequential, and another in nondefense work, is becoming no uncommon thing.

The management blames the men for this almost universal stalling, and the men blame the management for not laying out enough work to keep them busy. Sometimes, when they get tired of blaming each other, they unite to blame Washington for not allocating enough materials to make their jobs worth while. And Washington, chary of offending labor, ends by blaming management. So each passes the buck. Necessarily there must be some surplus of men on hand. We are attempting to rush ships and arms through regardless of cost. We need some surplusage to take care of any sudden emergency. But somehow, in the process, vast armies of workers, even the most willing, stall and loaf a good deal of the time. And now the hurrying of women welders to the scene to help save the day seems so far mere additions to the army of underworked.

We talk too much about our shortage of manpower. And with a confusion of thinking. We are enormously, incredibly overstaffed in proportion to what we turn out. What we are really short of is production. And this shortage of production is due in no small part to our enormous wastage of manpower. Said President Roosevelt, January 17, 1943, in his message to Congress on the state of the Union: "We must not forget that our achievements in production have been relatively no greater than those of the Russians and the British and the Chinese, who have developed their war industries under the incredible difficulties of battle conditions. They have had to continue work through bombings and blackouts."

It was an unconscious rebuke to all of us. Under conditions of safety, the achievements in production of the greatest industrial nation in the world are relatively no greater than our allies under fire. In pre-war times we could outstrip them all together. Relatively in war our achievements in production should be 200, 300, even 400 percent greater. We could, we can, we must achieve that now.

Our dazzling achievements in production, so highly publicized, are, of course, tremendous in volume. But they are achieved by an overstaffing of personnel whose engineering curve would show a disproportionate rise in the number of men employed to the number of ships or what not turned out. The real unit of individual achievement has alarmingly fallen. Our tremendous increase in the number of things turned out has only been accomplished by having many more men do a thing than were formerly required.

Are there no remedies we can apply in this disquieting situation? I think there are. But they should work automatically, as impersonally as the cash register and modern auditing work automatically to deter petty pilfering and financial manipulation. The almost endless numbers of movie and other celebrities who visit us to urge us to higher efforts are good as far as they go. But we need other things more relentless if no less insistent. Here are some:

1. Fire every man who won't work—and fire him fast. Then see to it that he does not get back on war work again with its higher wage. This includes those who go through the slow motions of work as well as those who loaf. Incidentally, stop blaming the unions for our loafers. The unions have much to answer for. Washington has tens of thousands of clerks who do little more than draw their salaries—and they are not unionized. Both unions and defense management inherited hordes of idlers from the Work Projects Administration. It is now their joint and patriotic duty to get rid of them.

2. Keep every man busy at something useful all the time. If he hasn't enough to do in his own job, let him help some other man in another job. Forget about the different scales of pay in these temporary changes. This is war!

3. Not all manpower waste is due to labor. Stripped of their legal verbiage, many war contracts break down to a cost-plus or percentage basis. That means the more men management hires the more money it makes. When it is clear that management, for profit, deliberately engages in a policy of hiring far more men than it actually uses, the penalty should be the same as for loafing labor. This penalty should be imposed by Washington, replacing management with more conscientious men.

4. There must be better allotment of materials cleared through Washington. Unless materials arrive, men will either have to stall or be laid off. And with a shortage of millions of workers, the Nation cannot afford to have men on jobs either idling or laid off.

5. There must be real cooperation between management and labor in saving wastage of man-hours. Even if it hurts, management should accept criticism of antiquated methods wasting man-hours.

6. Our card distinctions between Congress of Industrial Organizations and American Federation of Labor waste hundreds of thousands of precious man-hours. For greater efficiency, Washington should abolish these card distinctions for the duration. If both the Congress of Industrial Organizations and the American Federation of Labor are getting the wages, hours, and conditions they want, why should we union men care which card the other fellow carries? It is our union leaders with their possibilities of more and more offices, who care for these distinctions, and not the rank and file of the memberships.

Those of us who were formerly engaged in the building industry think war industries could learn something from our practices. One of the reasons why we are able to rush up buildings so fast is because we have a foreman for every five or six men. A building trades foreman gets about $1 a day more than his crew members, and as everybody wants that extra dollar and the prestige that goes with it, they all step on it to make the higher grade. Good foremanship doesn't necessarily mean sweating the men. On the contrary, the foreman is often the squarest and most popular man in his squad. He finds work for his men, sees that no precious man-hours are wasted.

We think the shipbuilding practice of a foreman for every 18 or 20 men less efficient. He can't get around to each of his men often enough. And from the viewpoint of his men, there's so little chance of 1 man rising among 20 that few try. But with 1 chance in 5 or 6, we think their atttiude would change.

There is finally a warning (but not a threat) that if time and a half for Saturdays is abolished (as some Congressmen advocate) it will cut production. For better or worse, Washington included time and a half for Saturdays in most war contracts, following common practice in prewar agreements between labor and industry. Actually, this time and a half for Saturdays in war industries acts both as a reward and as a penalty to the worker. He must work the full 6 days of the weeks in order to receive it. If he fails, his Saturday's work is reduced to an ordinary day's pay. The incentive, then, to get the extra half day on Saturday keeps down absenteeism, and so makes productive millions of precious man-hours. Even with this incentive, however, absenteeism in shipbuilding alone runs 52,000,000 man-hours a year. Remove this incentive now for 20,000,000 war workers, and it staggers the imagination to contemplate how many extra billions of man-hours will be lost.

The extra cost of the labor bill for time and a half on Saturdays runs about 8 percent. The extra cost of the labor waste in our present set-up, due to idleness, bad management, and poor Government allotments, runs at times in some departments of war industry as high as 75 percent. Isn't it wiser to concentrate on this real waste, reduce it as low as is humanly possible, and then see to it that every man earns his money.

There are millions of highly skilled, patriotic men in our war industries. They never needed a war to find them jobs or wages. They will applaud every effort to cut down man-hour waste, even their own, in order to increase their plants efficiency, for their stake is their country.

Rickenbacker Nets $236,000 in Stock Deal

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Sherrill Hillman entitled "Rickenbacker Nets $236,000 in Stock Deal," published in today's issue of PM.

There being no objection, the article was ordered to be printed in the RECORD, follows:

RICKENBACKER NETS $236,000 IN STOCK DEAL—MAN WHO OPPOSES ALL OVERTIME CLEANED UP BY BUYING UNDER QUOTED PRICE

(By Sherrell Hillman)

(This story is about the man who on February 14 said: "In times like these, I do not approve of overtime pay except for the men in the foxholes, the swamps, the deserts—those making the supreme sacrifice. "There is little reason why those back home should not expend every effort and energy, if for no other reason than that our own skins are at stake.")

Eddie Rickenbacker, who opposes overtime pay for the 48-hour week, has made a profit of $236,000 through the purchase on April 15 of 8,000 shares of Eastern Airlines, Inc. stock at $10 a share—$29.50 less than the present market value.

Rickenbacker, president and general manager of Eastern Airlines, exercised an option granted several years ago to buy the stock.

Securities and Exchange Commission officials said today the shares were purchased April 15, but did not know what Rickenbacker paid for them.

Company representatives admitted, however, that the price—to Rickenbacker—was $10. Eastern Airlines common stock is now selling on the open market for $39.50. The stock has boomed as a result of the company's wartime prosperity. Its high point for 1941 was $34.

The ex-automobile racer and flying ace of World War No. 1, now in Moscow for the War Department, gets a $25,000-a-year salary from Eastern Airlines. He was a leading advocate for repeal of President Roosevelt's limitation on net salaries to $25,000 a year.

"Initiative," said Rickenbacker, "is one of the great American cornerstones."

Rickenbacker's $236,000 profit on his stock purchase—which increased his holdings in the company to 20,000 shares—has not yet been realized. Eastern Airlines representatives said they believed Rickenbacker has no intention of selling the stock.

Officials of the Bureau of Internal Revenue said that if Rickenbacker sold the 8,000 shares within 18 months, he would be required to report 100 percent profit or loss. They estimated he would realize about 40 percent net gain after taxes.

But if Rickenbacker retained the stock until the 18-month period had elapsed, they pointed out, he would have to report only 50 percent profit or loss.

Eastern Airlines officials willingly explained Rickenbacker's wartime financial profit, asserting that it was not inconsistent with his proposal that union dues and initiation fees be discontinued for the duration or turned into War bonds.

They said that when Rickenbacker obtained funds from two Wall Street firms in 1938 to purchase Eastern Airlines from North American Aviation Corporation, he was granted a 5-year option by the two houses, which underwrote Eastern Airlines' stock.

The option to buy the company's stock at $10 a share meant little at the time, they said, because "nobody realized how it was going to boom."

Rickenbacker, they said, also allowed the company's employees to buy stock.

Rickenbacker announced March 13 in a report to stockholders that his company made a net profit of $1,885,503, or $3.28 a share, in 1942. This sum, he said, represented a profit of 16.7 percent over 1941 earnings.

In the first quarter of 1943, Eastern Airlines made a net profit of $757,296.24, as against $619,261.30 in the same period a year ago, the company reported today.

Government Arsenals

REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. CLASON. Mr. Speaker, 80 years ago today on July 1, 1863, in the farming community of Gettysburg, Pa., commenced the greatest battle ever fought on American soil. Just as the men in the armed services of the United States today are equipped with a shoulder weapon superior to any produced by any other nation in the world, friend or foe, the men in the Union Army of 1863 carried the best Army rifles ever produced up to that time. Then as now these rifles were the products of the Springfield Armory at Springfield, Mass. The rifles manufactured in 1861–63 were muzzle-loading, caliber .58, weighing slightly less than the new Garand which is caliber .30 and is loaded by clips. Then as now, the armorers were a highly skilled group of men. Many of them worked an entire lifetime at their trades.

Americans generally will be interested in the speech made by Congressman ENGEL on June 29 last in which he pointed out that the employees of private plants making munitions of war are much better paid than the employees in the Government arsenals. While many of the private plants are, for all intents and purposes, Government-owned and the production is entirely for the Government's war program, yet because the plants are operated or managed by General Motors, Chrysler, Ford, or General Electric, or some other large company, employees receive an average of $2,725 per year in wages as compared to about $2,130 per year at arsenals. The precision work performed at the Springfield Armory is more difficult by far than the average work done in these newly established war plants. Yet the pay of employees in the two types of plants varies greatly. The men working in our private plants receive more than 25 percent better pay on the average than the men in the arsenals. The Government employees actually producing rifles and parts for machine guns have their wages fixed after wage surveys conducted in accordance with Federal laws. Obviously, the surveys must always follow increases in wages in other surrounding plants. One might expect to find that the Government employees were receiving somewhat less pay than the average in private plants, but it is difficult to explain the discrepancy disclosed by Congressman ENGEL's investigation.

It is particularly difficult to understand why armorers at the Springfield Armory, who in many instances are working on parts for machine guns, should be receiving less pay than the employees of the Colts Patent Fire Arms Manufacturing Co. at Hartford, Conn., only 27 miles away. Some of the men in both plants are doing exactly the same work and they should receive the same pay. Congressman ENGEL reports that "the highest paid labor I found was in the plants of this company." He referred to the Colts Patent Fire Arms Manufacturing Co.

In order that an explanation may be given to the country of the varying wages being paid in industrial plants engaged in the same line of work and for the most part on Government contracts at Government expense, I have requested the Secretary of War, Hon. Henry L. Stimson, to cause an investigation of the situation to be made. I believe that the employees in the Government arsenals should be given the same pay advantages which the Government, through other agencies and other boards, is in fact giving to the employees of private plants.

Lawyers in the Office of Price Administration

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which appeared in the New York Times on June 30 entitled "Senator LANGER Is Disputed," signed by Thomas I. Emerson, associate general counsel, Office of Price Administration, and my reply thereto, which appears this morning in the New York Times.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 30, 1943]

SENATOR LANGER IS DISPUTED—HIS STATEMENT ABOUT OFFICE OF PRICE ADMINISTRATION ATTORNEYS IS REGARDED AS INCORRECT

To the EDITOR OF THE NEW YORK TIMES:

In the Times of June 28 Senator LANGER is quoted as saying that "the Office of Price Administration alone has 2,700 lawyers, while in England they only need about 7 attorneys to do the same job." This statement has been made on other occasions. The fact is that both the figures mentioned are seriously incorrect. The number of lawyers employed by Office of Price Administration is by no means out of line with the legal staff used by England.

There are not now and never have been 2,700 lawyers employed by Office of Price Administration. The correct figure is 1,788. This could have been readily ascertained through an examination of the recently published hearings before the House Appropriations Committee.

These 1,788 lawyers serve not only the national office of Office of Price Administration, but nine regional offices, 106 district offices, and 355 defense rental areas. They handle all the legal work on price, rent, and rationing regulations, including drafting, interpretations, amounting to 150,000 a month, adjustments, litigation in the emergency court of appeals, and all enforcement activity.

As the hearings before the House Appropriations Committee reveal, Henry E. Bodman, well-known Detroit lawyer brought in by Mr. Brown to survey the size of the legal staff, came to the conclusion that it would not be "prudent or safe at this time to plan upon any reduction in the number of attorneys." George Burke, likewise an experienced and able member of the bar and now general counsel of Office of Price Administration, reached this same conclusion.

FIGURES HELD INCORRECT

With reference to England, the figure of 7 attorneys refers only to those stationed in the main office of the Ministry of Food. The correct number is 10. There are 4 other agencies in England which handle price and rationing: The Board of Trade, responsible for clothing and household goods; the Ministry of Supply, in charge of industrial materials; the Ministry of Health, with power over rents, and the Ministry of Fuel and Power. The number of attorneys employed in these other agencies is not available. Furthermore, the figure of 10 does not include a very large number of attorneys employed in the field offices of the Ministry of Food, as well as of the other agencies, upon a part-time or fee basis.

In comparing the English figures with the American it is important to note a number of factors which reduce the necessity for a large legal staff in England.

In the first place, British industry is relatively compact, well integrated and uniform. Secondly, the British wartime controls are far tighter and more direct than the American. Thus virtually all food in England is purchased by the Government and distributed under its direct control; clothing is regulated through a high degree of standardization; gasoline for nonoccupational purposes does not exist. This enormously simplifies the formulation, administration and enforcement of regulations. Thirdly, the constitutional, statutory, and judicial limitations under which Office of Price Administration operates are, to a large extent, not present in England. Add to this the fact that England's population is less than one-third that of the United States.

COMPARISON NOT UNFAVORABLE

Even so, the comparison, as I have said, is not unfavorable to Office of Price Administration. If the 10 attorneys in the Ministry of Food are multiplied by three to account for the difference in population, the 30 may be compared with the 88 assigned in the Washington office of Office of Price Administration to the much more extensive and difficult legal problems of food control in this country.

In the field offices the Ministry of Food in 1942 handled 33,811 enforcement proceedings through attorneys retained for each particular case in accordance with British custom. Assuming that each case required 8 hours of time, the total number handled would involve the services of 108 full-time attorneys. Multiplied by three, it would appear that on a comparable basis the Office of Price Administration should have 324 attorneys assigned to food enforcement. Actually, the number is not more than 225.

We are informed that in England there are 800 investigators assigned to food enforcement. On the basis of three times the population, the United States should have 2,400. Actually, not more than 1,200 are available under the present budget.

Thus, putting aside the wholly different legal background in England, the Office of Price Administration legal staff is not substantially in excess, and in some departments is less than in England.

THOMAS I. EMERSON,
Associate General Counsel, Office of Price Administration.
WASHINGTON, *June 28, 1943.*

[From the New York Times of July 1, 1943]

SENATOR LANGER CITES RECORD—TAKES ISSUE WITH OFFICE OF PRICE ADMINISTRATION COUNSEL ON LEGAL STAFF OF ADMINISTRATION

To the EDITOR OF THE NEW YORK TIMES:

In the Times of June 30, Thomas I. Emerson disputes the statement I made in New York on Sunday that "the Office of Price Administration alone has 2,700 lawyers while in England they only need about 7 attorneys to do the same job," and Mr. Emerson states the fact to be that both the figures are "seriously incorrect." He further states that there are not now and never have been 2,700 lawyers employed by the Office of Price Administration. The correct figure, he says, is 1,788. Mr. Emerson's statement simply is not true.

At the hearing by the subcommittee of the House Committee on Appropriations on June 12, 1942, Leon Henderson was asked the following question by Congressman JOHN TABER of New York: "I still do not feel that you have given any explanation that justifies the employment of 534 lawyers in the District of Columbia. I am going to give you a little more opportunity to talk about that. There are some things here I cannot quite follow.

"You have 2,222 lawyers in the field. That is an average for the 48 States of about 46.3. I assume that Nevada and Arizona, New Mexico and the Dakotas probably will not have 46 in each; that perhaps New York and Pennsylvania and Massachusetts and Illinois and Ohio and Michigan would have a few more. Not that I want to recommend any, I do not. I would hate to have the job of recommending any. But it looks to me as though that was mostly window-dressing unless you are planning to do things that go beyond the pale."

To which Mr. Henderson replied: "May I give you my assurance, without any reservation of any kind, that there is no part of this Budget request that has to do with going beyond what the authorization of Congress and the directives of the President are."

UNDERSTATEMENT CLAIMED

Thus you will note that instead of employing 2,700 lawyers the Office of Price Administration employed 2,756 and not 1,788 as was stated by Mr. Emerson.

Also, at the hearings before the subcommittee of the House Committee on Appropriations dealing with the national war agencies apropriation bill for 1944, on page 197, under subhead "Legal Department, attorneys only," is found the following: "For 1943 total attorneys Washington and field and legal investigators 4,427." and for 1944, believe it or not, 1,700 more have been added, making a total of 6,127.

I note from Mr. Emerson's letter that he now claims some of these legal investigators are not lawyers, but I respectfully call attention to the fact that when the Office of Price Administration wanted money from the Congress for themselves they listed the request "Legal Department, Attorneys Only."

BYRD SPEECH RECALLED

Further, I call attention to the radio speech delivered by Senator BYRD, Democrat, from Virginia, on June 22, when he stated that "the Office of Price Administration has been supporting 2,700 lawyers—500 of them in Washington to devise the regulations and 2,200 throughout the country to see that they regulate."

But, as you will note, Senator BYRD missed 56 of them, and that there are 2,756, testified to by Leon Henderson, then head of the Office of Price Administration, on page 118 of the first supplemental national defense appropriation bill for 1943.

Frankly, I feel there are several thousand too many, just as there are now over 3,000,000 civil employees, whereas in the last World War we had approximately 1,000,000, and this wasteful squandering of funds should be noticed by the taxpayers and protests lodged with every Representative and Senator.

The very weakness of Mr. Emerson's ill-advised letter to you is demonstrated when he says I stated that England had but 7 attorneys. He states that my statement was "seriously incorrect," because England has 10. What a travesty some of this horde of taxeaters attempt to make of the real facts when they try to fool the taxpayers.

WILLIAM LANGER,
Senator from North Dakota.
WASHINGTON, *June 30, 1943.*

Lt. Maurice I. Bloch, Jr.

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 1, 1943

Mr. HOBBS. Mr. Speaker, one of the grand boys of my native city, Selma, Ala., Lt. Maurice I. Bloch, Jr., serving in the Infantry of the United States Army, in Hawaii, made the supreme sacrifice recently, while his outfit was cooperating with a tank battalion.

Selma loved this stalwart son.

It gives me pleasure to present and call your attention to this letter:

SAN FRANCISCO, CALIF., *May 29, 1943.*
Mr. MAURICE I. BLOCH,
Selma, Ala.

DEAR MR. BLOCH: This letter is very late in being written, and my one hope is that it doesn't add flames to an already ebbing ember. True, the light that is created by a person as fine as your son could never die out, but I do not want to add to that hardship that you must certainly have been under this past few months by continually reminding you of his untimely end. I am writing this letter to you for three reasons, and I sincerely hope that they will be clear to you.

First, I attended school with your son and I knew him very well. We were always the best of friends, and so I felt that it was my duty to give this letter a try. As you will see as this letter goes on, I have not mastered the art of composing a letter, but in some small way I shall try to make myself understood.

War is a terrible thing. To learn the art of warfare one must run risks of all types. An officer must always lead his men no matter what the risk might be, and it was in this line of duty, I regret to say, that your son met his end. Certainly you must have a sour feeling for these tanks of ours—big, powerful, guns from every angle, and as deadly as a cobra. However, to try to use these tanks without the support of the infantry would be useless. So training and actual combat calls for the infantry to be so close to these ironclad monsters that at some times they actually ride the backs of the tanks. Your son was training for a task, as we all are, a task so great that lives are lost even while not under actual combat conditions. These lives are not lost in vain, as some people think. No; these men deserve medals as does any man serving on the front lines. From each mistake or accident a lesson is learned. This lesson will save the lives of many hundreds of men in the future and teach officers, as well as men, what to do when their lives are at stake in the field of combat. So don't feel that all of the years of loving, worrying, and expense have been for nothing. No; because your son is as great

a hero as any one of the hundreds that have gotten awards from the President. A man who, with utter disregard for his own safety, sees that his own men are safe before thinking of himself will never die in vain. I have visited the grave with those thoughts in my mind, and if it is your wish, and God permitting, I would consider it an honor to accompany the casket carrying the body of one so loved by us all to your home after this war has ended. In the meantime, if you will send me the dates of the days that you want flowers to be placed by the cross, I would again feel honored to be allowed to do that much for him and for you.

Best of luck and wishes for a speedy ending of the war.

DONALD M. BRATTAIN,
Captain, Seven Hundred and Sixty-third Tank Battalion.

Justice to Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Admitted Injustice," published in the Boston Globe of May 29, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ADMITTED INJUSTICE

Whenever Congress finally finds its way out of the mess into which it has got itself in making a new tax bill, it may get around to doing justice to some 7,500 retired Federal employees—no small number of them resident in New England—who were admittedly eased out of approximately $21,000,000, collectively, because Congress failed to make retroactive the revised contributory pension scale of 1942.

This revision canceled the $1,200 maximum and, thenceforth, retiring contributors to the system began to get what it was intended should be theirs for faithful service. But in omitting to make the measure retroactive, Congress denied proper compensation to those long in the system who had before been slighted. Advancing living costs have made this omission the more grievous.

Today there are in the Committee on Civil Service three bills aiming to correct this wrong, all of which somehow strangely continue to be pigeon-holed. If any one of them were reported, it is quite certain to be passed with a whoop. It seems high time that one were.

Couplets for a Congressman

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. ANDERSON of New Mexico. Mr. Speaker, among the many literary people who have contributed to the folklore of the Southwest, is a cowboy poet, S. Omar Barker of Tecolotenos, N. Mex. Mr. Barker has written a number of books dealing with the Southwest, but he is probably best known for his Buckaroo Ballads.

For months he has been writing me protesting about the delay of Congress in passing anti-strike legislation. I have pleaded with him to be patient and have told him that it was the considered judgment of many, if not most of those in direct charge of the war effort, that legislation could safely be postponed as long as labor kept its "no strike" pledge.

Recently Congress moved with speed on the question of strike legislation and Mr. Barker celebrated the occasion by sending me some "Couplets for a Congressman." I believe that his sentiment would interest the Members of the House and I therefore insert them into the RECORD:

COUPLETS FOR A CONGRESSMAN

The Congress can do things—and fast!
Look how that anti-strike bill passed!

If that don't work, why can't you sages
Legislate control of wages?

We don't find paying taxes duro—
Except to support some useless bureau.

If naught but subsidies can do it,
Then pay 'em—but I think you'll rue it.

—*S. Omar Barker.*

Letter from Zygmunt Zygielbojm to Premier Sikorski of Poland

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Zygmunt Zygielbojm, the Polish Socialist Deputy, who committed suicide in London last week. The letter was written in his own hand and addressed to Premier Wladyslaw Sikorski of Poland.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

I take the liberty of addressing to you my last words, and through you to the Polish Government and the Polish people, to the governments and the peoples of the Allied States—to the conscience of the world.

From the latest information received from Poland it is evident that the Germans, with the most ruthless cruelty, are now murdering the few remaining Jews in Poland. Behind the ghetto's walls the last act of a tragedy unprecedented in history is being performed. The responsibility for this crime of murdering the entire Jewish population of Poland falls in the first instance on the perpetrators, but indirectly it is also a burden on the whole of humanity, the people and the governments of the Allied States which thus far have made no effort toward concrete action for the purpose of curtailing this crime.

By the passive observation of the murder of defenseless millions and of the maltreatment of children, women, and old men, these countries have become the criminals' accomplices. I must also state that, although the Polish Government has in a high degree contributed to the enlistment of world opinion, it has yet done so insufficiently. It has not done anything that could correspond to the magnitude of the drama being enacted now in Poland. From some 3,500,000 Polish Jews and about 700,000 other Jews deported to Poland from other countries, according to official statistics provided by the underground bund organization, there remained in April of this year only about 300,000, and this continuing murder still goes on

I cannot be silent—I cannot live—while remnants of the Jewish people of Poland, of whom I am a representative, are perishing. My comrades in the Warsaw ghetto took weapons in their hands on that last heroic impulse. It was not my destiny to die there together with them, but I belong to them, and in their mass graves. By my death I wish to express my strongest protest against the inactivity with which the world is looking on and permitting the extermination of my people.

I know how little human life is worth today, but as I was unable to do anything during my life perhaps by my death I shall contribute to breaking down that indifference of those who may now—at the last moment—rescue the few Polish Jews still alive from certain annihilation. My life belongs to the Jewish people of Poland and I therefore give it to them. I wish that this remaining handful of the original several millions of Polish Jews could live to see the liberation of a new world of freedom and the justice of true socialism. I believe that such a Poland will arise and that such a world will come.

I trust that the President and the Prime Minister will direct my words to all those for whom they are destined, and that the Polish Government will immediately take appropriate action in the fields of diplomacy. I bid farewell herewith to everybody and everything dear to me and loved by me.

Z. ZYGIELBOJM.

Strikes—Wages—Living Costs

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. HINSHAW. Mr. Speaker, I think that the following articles throw some light on the present situation in regard to strikes, wages, and living costs.

The first article is from the Washington Star of June 28, 1943. It gives the undoubted source of the figures concerning time lost by strikes in 1942. It also shows that in 1942 there were 2,968 strikes involving 840,000 workers and 4,183,000 man-days of idleness. I presume there is no positive way of measuring how much production was affected in plants where no strikes occurred but which were subsequent to the struek plants in the chain of war production.

The article from the Star follows:

ROOSEVELT'S MESSAGE QUOTED STRIKE DATA OF LABOR STATISTICS UNIT—1942 FIGURES COLLECTED BY FEDERAL BUREAU PUBLISHED IN MAY

In the message accompanying his veto of the antistrike bill, President Roosevelt told Congress that the time lost by strikes in 1942 averaged only five one-hundredths of 1

percent of the total man-hours worked in the United States in that year.

Though not specifically cited in the message, the authority for the President's statement was, of course, the Bureau of Labor Statistics. According to the Bureau's figures, contained in an article in the May issue of the Monthly Labor Review, idleness during strikes in 1942 amounted to about a twentieth of 1 percent of the time worked in industry, or less than one-fifth of the time lost by strikes in 1941.

During the year there were 2,968 strikes, it said, involving approximately 840,000 workers, and 4,183,000 man-days of idleness. About 28 workers out of every 1,000 employed, the article explained, were involved in a strike at some time in 1942.

DATA COLLECTED FROM 1914

How does the Bureau obtain its strike statistics, and how does it compute the time lost by work stoppages?

The bureau has been collecting and publishing strike statistics since 1914. During the 8 years between 1906 and 1913, no Federal agency was assigned the job of collecting such information, though earlier, from 1881 to 1905, the commissioner of labor had collected strike data.

Compilation of strike statistics is one of the duties of the bureau's industrial relations division, which has been headed since 1934 by Miss Florence Peterson, who studied labor economics at the University of Wisconsin. Prior to entering the Federal service here, Miss Peterson was State director of unemployment relief in Wisconsin. About a dozen of the division's employees at present are assigned to the work of collecting and analyzing strike statistics.

GIVE MAN-DAYS INVOLVED

The three basic measures used by the Bureau in compiling strike data are the number of strikes, the number of workers involved and the man-days idle. Since it incorporates the two elements of number of workers and the number of work days these persons lost during the work stoppage, the number of man-days idle is regarded by bureau experts as one of the best criteria of the magnitude of a strike.

The man-days idle during a strike are arrived at by computing the calendar days idle minus holidays and any other days these employees would not have worked had there been no strike.

For statistical purposes, the bureau defines a strike as a work stoppage due to a labor dispute involving 6 or more workers that lasts for one day, or one shift, or longer. No attempt is made to collect data on stoppages involving lesser amounts.

Daily newspapers, labor and trade journals, and reports from Federal labor boards provide the Bureau with its principal "leads" with respect to new strikes. It receives clippings from more than 700 daily, weekly, and monthly papers and journals, and Bureau officials believe that few, if any, strikes escape their attention. The Bureau also receives information from half a dozen industrial States that maintain strike-reporting services.

SEND FOR INFORMATION

On the basis of leads from these and other sources, the Bureau sends out schedules to employers and unions involved, asking for specific information. In some instances, when unable to obtain a reply to its questionnaire, the Bureau sends out into the field its own agents.

In large strikes, the Bureau often takes special measures to assure the collection of authentic statistical and other data, including the dispatch of field agents. In the present stoppages in the soft coal mines, the Bureau receives from the Government managers in each mine regular reports in the number of workers idle, etc.

The coal stoppages are reflected in the Bureau's May strike figures, released yesterday, which show that idleness during strikes amounted to about 0.16 percent of available working time in industry as compared with 0.08 percent in April, 0.03 percent in March, 0.02 percent in February, and 0.06 percent in January.

Then, Mr. Speaker, I present an article from a publication known as Greater Los Angeles Labor, under date of June 15, 1943, page 14. This article quotes figures presented by J. C. Gotschall, said to be an expert in the Bureau of Labor Statistics. It does not state that these figures are "official" figures of the Department of Labor, except inferentially. As it is a Los Angeles County publication, the references are to conditions in that county.

The article from Greater Los Angeles Labor follows:

PURCHASING POWER OF WORKER IS UP 37.7 PERCENT HERE REPORT SHOWS

Purchasing power of Los Angeles workers employed in manufacturing is up 37.7 percent. After allowing for the rise in the cost of living, it is stated in a statistical report prepared by J. C. Gotschall, Bureau of Labor Statistics expert.

Arthur G. Coons, Office of Price Administration consultant, discussed the report before Office of Price Administration's labor advisory committee, in a meeting joined in by Office of Price Administration officials including David Barry, Jr., Rent Director; Howard Freeman, regional rent representative; Robert Pettengill, assistant district price officer, and Samuel Leask, Jr., Office of Price Administration director, acting as chairman.

Gottchall's figures disclosed that in the 3 years and 8 months of the present war, the cost of living has increased 25.2 percent in Los Angeles, as compared to 25.9 percent for the Nation.

In World War No. 1, cost of living had soared 39.9 percent over an equal period of time.

"Thus," Coons said, "the cost-of-living rise at this time is only 65 percent of what it was for a similar period during the last war. In addition, of the 25.9 percent national cost of living increase, 17.6 percent, or about two-thirds of the present increase, was prior to the birth of Office of Price Administration.

Coons outlined a chart showing the Los Angeles area cost of living for the 11 months before and 11 months after Office of Price Administration was organized, showing that Office of Price Administration has done a great deal to slow up the ascension of the cost-of-living balloon:

	11 months	
	After O. P. A.	Before O. P. A.
All items	6.5	11.8
Food	14.1	18.9
Miscellaneous	3.7	7.3
Clothing	1.3	21.1
House furnishings	.4	12.7
Rent	0	3.1
Fuel, electricity	0	10.0

It was further pointed out that Office of Price Administration's authority in May 1942, its birthday, covered less than 60 percent of foods. In October, the remaining 40 percent began to come under control, and by December Office of Price Administration's authority took in 90 percent of the food items. Then when fresh fruits and vegetables were added in March, 98 percent of all foods in the family budget were protected.

The national average weekly pay check of the worker employed in all manufacturing industries is up 73.1 percent, the figures disclosed. In the last war, the wage increase was 53 percent for the same period of time.

The Los Angeles industrial area wage increases for all manufacturing industries is 72.4, according to the State division of labor statistics and law enforcement comparison to last war figures was impossible, because Los Angeles had no great manufacturing industries at that time.

The cost of living increase was compared to the enlargement in the manufacturing worker's pay check, revealing a 37.7 percent difference in the worker's favor. However, a good portion of this increase is taken care of through income taxes and the fact that the worker has now bettered his standard of living. He now buys better quality goods.

There are 438,200 persons in Los Angeles, listed as manufacturing workers in April of this year, according to the State report.

Of great interest was the chart showing the increase in the cost of living since the war started 3 years and 8 months ago. Food has shown the biggest jump, while rent shows only a 2 percent increase. Utilities, such as fuel and electricity, have decreased 4.7 percent in Los Angeles against a national increase of 10.3 percent.

	Los Angeles	National
All items	25.2	25.9
Food	54.5	50.4
Clothing	27.2	27.4
Rent	2.0	3.5
Fuel, electricity down	4.7	10.3
House furnishings	18.5	23.9
Miscellaneous	13.6	14.3

No Time To Recess

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette:

NO TIME TO RECESS

Congress is beginning to look forward to a 2-month recess this summer, from mid-July to mid-September.

Under present plans, it could be called back into session by the President, by the Vice President and Speaker of the House, by the majority leaders of Senate and House, or by the minority leaders of the two branches of the National Legislature.

Those safeguards would seem to cover any conceivable emergency which might come up during the 2-month recess. But they do not take into consideration the emergency that exists now, with respect to the chaotic food situation which the resignation of War Food Administrator Chester C. Davis has just emphasized. Congress has done substantially what is necessary to reinforce the war front. But the home front requires attention before Senators and Representatives lock up their desks and go home.

The wide chasm between the views of the President and those of Congress on stabilization of food prices, use of subsidies and centralization of control over food production, distribution, and costs needs to be bridged. Congress has taken tentative steps to block the administration policy of using subsidies

to roll back the price of food. If, before it recesses, these steps are completed, Congress will have rejected one policy without providing another to take its place. If the steps are not complete, it will have abandoned its post for 2 vital months during which the kind of subsidies to which Congress objects may become entrenched in the economic system.

Congressional leaders have expressed the belief that wartime food powers should be more greatly consolidated; while the President insists upon the present looser system of partial controls, with Economic Stabilization Director Byrnes as the impartial arbiter between the various agencies concerned with food. This conflict of views, also, should not be permitted to go by default for the next 2 months. If changes are warranted in the system, it is none too soon to make them.

Under our system of government, the determination of domestic policies rests with Congress. It cannot adopt the negative attitude of merely rejecting or hampering administrative activities without establishing some more acceptable system. Granting that it is hot in Washington in the summer, and Congress has kept its nose to the grindstone for a long time, the fact remains that a serious issue has arisen between the President and Congress and it is imperative that it be settled one way or the other before Congress rests. If Congress leaves its post in the middle of a home front battle, it will deserve and receive public disapprobation.

MacDonald White Paper Must Be Set Aside—Suggested Conclave Between Arabs and Jews

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. CELLER. Mr. Speaker, at the recent Bermuda Conference called to consider the rescue of refugees from Nazi oppression, the conferees were precluded from giving consideration to Palestine as a haven of refuge.

On the 21st day of September 1922 the American Congress approved the promulgation of the now famous Balfour Declaration of 1917, which established Palestine as a Jewish homeland. The resolution adopted was as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States of America favors the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of Christian and all other non-Jewish communities in Palestine, and that the holy places and religious buildings and sites in Palestine shall be adequately protected.

That resolution favored creation of a Jewish homeland in Palestine under a British mandate. Fifty-three nations, including the United States ratified the Balfour Declaration. Speeches in the House and Senate specifically instructed Britain as a mandated power to facilitate the setting up and furtherance of the Jewish homeland in Palestine.

Over and beyond the universal acceptance and approval of the Balfour Declaration, on December 23, 1924, a convention was signed by the then Prime Minister of Great Britain, Austen Chamberlain, and our then Secretary of State, Frank B. Kellogg, concerning the rights of Britain and the United States and their respective nationals in Palestine.

Article 15 and subarticle 7 of article 28 are as follows:

ARTICLE 15

The mandatory shall see that * * * no discrimination of any kind shall be made between the inhabitants on the ground of race, religion, or language. No person shall be excluded from Palestine on the sole ground of his religious beliefs.

SUBARTICLE 7 OF ARTICLE 28

Nothing contained in the present convention shall be affected by any modification which may be made in the terms of the mandate, as recited above, unless such modification shall have been assented to by the United States.

The above clearly indicates the interest of the United States in the British mandate over Palestine and operations thereunder.

What has been the attitude of Great Britain? It has been one of open defiance of such convention. There has been a continual violation of the aforesaid article 15 since persons are excluded from Palestine solely on racial grounds.

Eugene M. Kulischer, of the Research Institute on Peace and Post-War Problems of the American Jewish Committee, states in Jewish Migrations while discussing Palestine:

The times of greatest need for new homes, the immigration of Jews has been grudgingly limited by the British administration and was strictly controlled at the ports of entry; that of the Arabs is neither supervised nor controlled. In their efforts to limit the immigration of Jewish workers, the British employed the excuse of "economic absorptive capacity," while at the same time they greatly diminished Palestine's possibilities of absorption of immigrants by cutting off the vast area of Transjordan, the western part of the Holy Land. In contrast to the workers, Jewish capitalists were admitted more liberally. Under these conditions, the investment of capital by Jews has in some ways worked against Jewish colonization of Palestine. It could not stimulate the immigration of Jewish workers which was arbitrarily limited. It therefore stimulated the influx of Arabs. The greater the Jewish economic activity, the larger the Arab proletariat.

In 1939 there was promulgated the so-called MacDonald White Paper, limiting the entrance of Jews into Palestine to 75,000 within a 5-year period. Of those 75,000, roughly, only 29,000 certificates of entrance remain unused. This repudiated the Balfour Declaration and violated subarticle 7 of article 28 of the 1924 convention since the MacDonald White Paper modified the terms of said convention to which both Great Britain and the United States were signatories.

Our Government has been derelict in its failure to protect the violation of the Balfour Declaration and of the aforesaid Kellog-Chamberlain Convention. Opportunity was presented at the Bermuda Conference to reopen the question of immigration, but our delegates were instructed not to raise the question since the British Foreign Office had removed Palestine from the agenda as a possibility for a haven for the Jews. We are not blameless because of our silence and lack of remonstrance.

It is interesting to note that Prime Minister Churchill in 1939 had designated the so-called MacDonald White Paper as a "breach of faith." We can do no less than emphasize the words of Prime Minister Churchill and broadcast them generally to our people.

In view of the aforesaid, it seems incumbent upon our Government through the State Department in the light of the urgent need for finding havens for the hapless victims of the Nazi scourge to call to the attention of the British Foreign Office its failure of observance of its solemn obligations and that our State Department petition the forthcoming Intergovernmental Committee on Refugees which will stem either from the Evian Conference of 1938 or the Bermuda Conference that Palestine be reconsidered as a refuge for persecuted Jews. Such a homeland as contemplated in 1919 is doubly needed today. The Nazi atrocities have doubly accentuated such need.

On the 18th day of March 1943 in endeavor to impress on the conscience of free men the vastness and ghastliness of the Jewish tragedy, Congress passed a concurrent resolution which was originally offered by the esteemed majority leader of the Senate, Senator BARKLEY of Kentucky, which is in part as follows:

Whereas the American people view with indignation the atrocities inflicted upon the civilian population in the Nazi occupied countries and especially the mass murder of Jewish men, women and children: Now, therefore, be it

Resolved, That the dictates of humanity and honorable conduct in war demand that this inexcusable slaughter and mistreatment shall cease.

That resolution clearly reflects American public opinion and indicates its all embracing sympathy that the Americans have for the plight of the Jews and, furthermore, manifests an earnest desire to aid the Jews in finding escape from oppression.

Moreover, the Legislatures of Connecticut, California, Illinois and Pennsylvania, by unanimous vote, have allied themselves with eight other States—Alabama, Florida, Georgia, Maryland, Missouri, New York, South Carolina and Texas—which have recently adopted resolutions condemning the extermination of the Jews by the Nazis and demanding the establishment of a Jewish Commonwealth in Palestine after the war.

It is hoped, therefore, that the good offices of the United States might be used to the end that the cruel conditions of the MacDonald White Paper be set aside and that the doors be opened to Jewish immigration in Palestine and that the Balfour Declaration be restored to its original purposes.

Furthermore, the prestige of the high office of our Secretary of State might well be used to the end that the British Ministry and our Department of State call a

conclave of representatives of the Arabs and Jews so that those two races might settle whatever differences might exist between them in Palestine by resolving in conciliatory resolutions their conflicting activities and that that conclave be held under the joint auspices of Great Britain and the United States.

This method of arriving at a peaceful and amicable solution is quite apparent. When left to their own devices, and not subject to the pressure of selfish groups and interests, the Arabs and Jews agree. A worthy example of this ability to agree is exemplified in the convention or treaty entered into by His Royal Highness Prince Emir Feisal, representing and acting on behalf of the Arab Kingdom of Hejz and Dr. Chaim Weizmann, representing and acting on behalf of the Zionist organization at the time of the Peace Conference at Paris. It was agreed among other things that all relations and undertakings between the Arab state and Palestine shall be controlled by the most cordial goodwill and understanding and that accredited agents shall be established in the respective territories, and that all measures shall afford the fullest guarantees for carrying into effect the Balfour declaration and that all necessary measures shall be taken to encourage and stimulate immigration of Jews into Palestine on a large scale and as quickly as possible.

Common humanity dictates that we in the United States take some affirmative action.

The Job Color Line in the Nation's Capital

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD two articles which recently appeared in the Socialist Monthly Bulletin of the Washington Local of the Socialist Party.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

It so happens that with exceptions so rare that they can be counted on the fingers of one hand, the District of Columbia government has a lily-white hiring policy.

We are told that when committees of citizens went to the District Building to remonstrate and to ask that applicants for jobs be hired according to merit and not color of skin, Commissioner Guy Mason told them that Negroes had no right to ask for jobs on the basis of merit or on the basis of their proportion in the population, which is something like a third.

Whites have a special claim on jobs, he said, because they are the major owners of property in the city, and therefore, pay the taxes that support the municipal government. Negroes, much less than supporting the government financially in proportion to their number are nothing but an expense to it, since the major incidence of indigency is among the colored and they have high rates of crime which raise the city's police bill.

Besides, the Commissioner said, Negroes are known to be petty thieves and can't be trusted in office jobs.

We think this is brazen talk from what is supposed to be a responsible public official conducting his office in the interest of all the people—"all" meaning white and black.

JIM CROW IN THE DISTRICT GOVERNMENT

We'll start with the District government. With the exception of the Jim Crow school system, a few police and firemen, some case workers on the Welfare Department and juvenile court staff, and a few others, Negroes are barred from clerical, administrative, and supervisory jobs in District agencies from Assessor to Vehicles and Traffic.

As a sop, one administrative post traditionally has belonged to the Negro—the Recorder of Deeds. It is significant that one-third of the staff of this office is white.

Negroes are hired practically exclusively as laborers, custodial workers, elevator operators, garbage-truck workers, and in other menial capacities. Even on the garbage trucks, the truck driver, who supervises the truck crew at a higher wage rate is usually white.

If you're black you can't be a water meter reader, a building inspector, a weights and measures inspector, a guard in the penal institutions, a librarian, or a host of other things.

The District won't break down its Jim Crow hiring practices, even when the lives of the city's residents is endangered by failure to do so. There's a shortage, for example, of firemen and many fire stations are understaffed. There are applicants on the civil-service lists, but they're black, and there's a surplus of men at the District's single all-colored Jim Crow fire house No. 4 in the 900 block of R Street NW., but the department refuses to appoint Negroes to other stations than this, so a good many of the other stations go undermanned.

JIM CROW IN THE FEDERAL GOVERNMENT

The Federal Government now has a somewhat more enlightened policy. Before the war, of course, it was only the occasional courageous liberal administrator in the Government service who would hire a Negro secretary and the only other Negro office workers were the few race relations officers and their small staffs.

When the war came and the supply of whites was drained, the expanding agencies had to resort to the Negro labor supply even for office workers. Many agencies that did hire Negroes continued to practice more subtle forms of discrimination. Negroes were segregated from white workers; they were given more onerous jobs; they were put on night shifts; they were assigned to pools rather than to individual secretarial jobs; they were taken on as clerks and put to work operating mimeograph machines.

Some agencies continued to refuse to hire Negroes in clerical capacities. True the civil service application form no longer asks the applicant to indicate his race. But some agencies send to persons certified to them by the Commission their own application forms, and these do ask "what race?" Or other agencies detect the color of the applicant by looking at his previous place of employment.

The highly skilled craftsmen jobs in the so-called Government factory agencies are white monopolies. If you're a Negro, you can't be plate printer at the Bureau of Engraving (you may pass the civil-service exam for apprentices, but you won't be appointed); you cannot be a pressman at the Government Printing Office; you can't be a mechanic at the navy yard in smelting or brass or tin or gun assembly or molding or blacksmithing or welding or bombsight.

If you're a white woman and are hired by the navy yard, you may be doing gun wiping, electrical work, or gun assembly or inspection or checking. If you're black, you won't do anything but pack and stamp cartridges which is dirty work at low pay.

JIM CROW IN PRIVATE INDUSTRY

If anything, the door to jobs is shut even tighter in private industries, and it grieves us, as Socialists, that a major share of the responsibility for this situation lies with the local trade-union movement.

One of the city's most important industries is building construction. All of the big Government building projects are closed-shop jobs and so are most of the big private construction projects. Negroes are barred either openly or covertly from many of the building-trade unions. Negro craftsmen, consequently, are compelled to work on small residential construction and building-repair jobs which are open-shop at lower wage scales.

Because materials shortages have compelled the retrenchment of private residential construction, many of these workers are now unemployed, but are barred from the larger jobs—even though the unions are having difficulty supplying workers for them.

Even in peacetime, when Negro building craftsmen were able to find jobs on small projects, they were disadvantaged. It was only on the large projects that new building methods and materials were employed. Negroes, relegated to small-house building, could learn none of the skills connected with concrete construction, air conditioning, ventilation, cable splicing, power-plant work, modern heating and plumbing-system installation.

Negro youths who want to learn building craft have to learn it catch as catch can, on open-shop jobs or in the schools. They have none of the opportunities of white boys to acquire an all-around skill through apprenticeship training because the unions won't appoint Negroes as apprentices.

UNIONS DISCRIMINATE

Some of the unions, as we've said, don't admit any Negroes at all. The mechanical-construction unions don't, for example, nor do the plumbers, electrical workers, elevator constructors. Some admit a few Negroes to membership and then bypass them when they make assignments to jobs, even though they're supposed to make assignments in rotation. This is true, for example, of the bricklayers and carpenters. Negro union members will be assigned from union headquarters to jobs designed for Negro occupancy. When these jobs are completed they have to fend for themselves. The common practice is for them to take open-shop jobs—a practice for which a white brother would be penalized by the union—at low wage rates.

Negroes who have traditionally held some of the building construction jobs either have been or are now being squeezed out. Twenty years ago, for example, most of the steel rodmen's jobs (they set rods to reinforce concrete) were held by Negroes. At that time the work was considered to be dirty and reinforced concrete construction wasn't very popular among contractors. When more and more builders began to use this process, however, and the work of the structural iron workers was cut into, whites began to squeeze out the Negroes by replacing the older Negro craftsmen when they died with younger men. The union is now almost entirely white.

Negro drivers of pre-mix concrete trucks are being squeezed out of their jobs because they are high paying, the drivers being classified as mixing engineers.

Negroes are being squeezed out of hoisting engineers' jobs. They operate elevators on construction projects.

Some of the unions will admit Negroes, but only in inferior status jobs. The stone setters, for example, will permit Negroes to work as helpers to journeymen stone setters, but won't let them be promoted to journeymen status, although the helper frequently does stone setter's work.

Relegation of the Negro to nonunion work results in this kind of a discriminatory wage situation: Union carpenters get $13 a day, nonunion $7; union bricklayers get $1.75 an hour, nonunion $1; union painters get $1.40 an hour, nonunion 70 cents; union electricians get $1.40 an hour, nonunion 75 cents.

Normally in peacetime the white union workers worked about 9 months a year, the nonunion Negro worked 3 or 4 months. In other cities Negroes have been admitted to building trades' union locals and the white and black members have worked cooperatively on their jobs without friction.

The barriers to Negro employment in the public utilities are widely known in at least one of its aspects because of the wide publicity given to the Fair Employment Practices Committee proceedings against the Capital Transit Co. In spite of the Fair Employment Practices Committee cease and desist orders, aroused public opinion and shortages of manpower that the company can't make up in spite of newspaper ads as far south as Charleston, S. C. and as far north as New York, Negroes are still not hired in streetcar and bus operating capacities. One reason according to Capital Transit's president, E. D. Merrill, is that "Negroes, unlike whites, don't have the historic experience and cultural background of taking fares from the public"!

The other utilities companies also practice discrimination. No Negro, for example, is employed as a meter reader, although this a simple transaction job that Negro householders, themselves, are frequently asked to do if they are out when the reader calls on his rounds.

Jim Crow doesn't even stop working at the private professional level. Negro doctors have no opportunity for specialist training in pediatrics or psychiatry, because they're not admitted to the staffs of Children's Hospital or St. Elizabeths Hospital. Because they are barred from membership in the District Medical Society, they have to do without the services rendered white doctors—lectures on current medical developments, a library of up-to-the-minute medical literature, a referral agency that tells persons looking for a doctor whom they might see.

We present all of these facts to highlight a situation that prevails throughout the whole field of employment in the District of Columbia that we think is shocking. One-third of the population of this city is, to all intents and purposes, condenmned to economic serfdom—locked in jobs that are menial, nasty, or fatiguing.

If you look at the census figures you'll find that in 1940 Negro men made up 91 percent of utilities laborers; 92 percent of the charmen, janitors, and porters; Negro women made up 90 percent of the women elevator operators: 82 percent of the charwomen; 85 percent of the cooks.

On the other hand, you'll find Negroes almost completely barred from some white-collar office and professional jobs and from skilled craftsmen jobs in industry. For example, there are no Negro mechanical engineers out of a total of more than 1,000; 9 designers and draftsmen out of almost 1,100; no railroad conductors; no boilermakers; 1 telegraph operator; 30 male bookkeepers out of 5,100, and 41 male stenographers out of 2,300; 3 railroad brakemen, 44 machinists out of 3,000.

Negro women are also kept from the better and cleaner jobs. There were 218 Negro female stenographers out of a total in the city of 22,000, and 554 other clerical workers out of a total of 20,000 in this category.

If you look at the picture from an industrial, rather than an occupational angle, you'll find that either Negro men or Negro women are hired in limited numbers by industries like telephone and telegraph, banks, radio broadcasting, retail stores, and that they're hired in great numbers in trucking and warehousing, eating and drinking places, hotels, laundries, and cleaning and dyeing establishments, and in domestic-service work.

You'll also find that the jobs that Negroes hold are low-paying jobs, and the ones where they're not hired are high-paying jobs.

If you check back through the census records, other facts about Negro employment in Washington come to light. You find, for example, that in the late 1800's, Negroes held near monopolies of jobs like barbers and waiters and waitresses, and that they are being effectively squeezed out of these jobs, larger and larger proportions of persons in these jobs being white. In 1890, 9 out of every 10 barbers were Negro. In 1940 this was reduced to only about 3 in 10. In 1910 over one-half of all waitresses were Negro; by 1940 less than one-quarter were Negro.

Well, now what can be done about all this? What can be done to permit Negroes to rise out of their poverty? To let them acquire skills on a basis equal with whites? To let them practice these skills freely? To give them opportunities for employment from which the color of their skin now keeps them?

We don't know the whole answer because part of the problem is to uproot intolerance that is planted deep in the soil of men's minds. But we think we know part of it.

We think that procedures should be set up to make effective the nondiscrimination policy in Federal employment and to prevent circumvention by all manner of subterfuges. We think that the District government should begin hiring its personnel exclusively on the basis of merit. We think it should be made unlawful to discriminate on the basis of race, creed, or color. We think there should be legislation particularly making it unlawful to discriminate in hiring by public utilities and in employment under public utilities and in employment under public-works contracts. We think educational facilities for teaching Negroes production and office skills should be expanded.

We think there ought to be a standing commission in the city empowered to hold hearings and subpena witnesses and records, to compel private employment agencies to disclose their records, to prevent discriminatory want ads, to conduct a full-fledged educational campaign to wipe out color prejudice and to assist in the integration of Negroes into industry, and to expose discriminatory situations.

The other day we came across an article in a 1929 issue of Factory and Industrial Management called "The Southern Negro; An Excursion Into the Psychology of Making Men Like Work," in which a cotton-compress manager said, among other things: "What types of work do they fit most admirably? Certainly not jobs that require initiative or independent action. A Negro needs a white boss close at hand to tell him what to do and see that he does it. A white man who works alongside his Negroes sinks in their estimation. A Negro has to think of his bosses in respectful terms. * * * Every Negro must obey any white man who gives him an instruction. No questioning or arguing is allowed."

These are the notions that go with job discrimination. We want to wipe them, once and for all, out of the life of this city.

Mrs. Anna Walker—A War Hero

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. LANE. Mr. Speaker, "I think that if we all do our part we will win the war." We hear these words frequently and it is well that we do, for they express a deep and abiding confidence in ourselves and in our country, a confidence that hastens victory. Such confidence is a good thing. But very few people have as much justification and right to make this statement as this person concerning whom I desire to make these remarks. And if we all meant what this patriotic woman means by doing our part, victory would be more swift and sure. But we are not all heroes.

There is more than one kind of hero, and Mrs. Anna Walker, 139 Howe St., Methuen, Mass., is most certainly one of the finest kind. Her outstanding contributions have been called to my attention frequently which indicates, by the way, that her efforts never tire, that she persists courageously. In the first place she persists at her work day in and day out in the Shawsheen Mills, Shawsheen Village, Andover, Mass., one of the textile plants that is working for Uncle Sam.

But this alone is not what marks Mrs. Anna Walker as a hero. Consider this, that she is the mother of six children. Moreover, three of them are nurses, one is in the Air Corps, one in training, and another assisting the Red Cross. A son served in the armed forces until his recent medical discharge. This is a fine record for a war worker and mother.

But Mrs. Anna Walker did not consider that even this was "doing her part" sufficiently. Consequently, she began a personal campaign to increase purchases of War bonds and stamps. Her efforts have been untiring; her patience has been remarkable. Day after day she reminded her coworkers of the urgent necessity that we all buy bonds and stamps to the utmost of our ability. And what were her results? In less than a year, Mrs. Anna Walker has sold over $7,000 in stamps, not to mention, as she says modestly, quite a few bonds. This is the day-by-day quiet heroism which we associate with women, and which Mrs. Walker demonstrates to an extraordinary degree. If this can be termed "doing our part," as our heroine modestly calls it, then I wish that we all were doing our part. But times of emergency and crisis always cause the greater ability and greater courage of some men and women to rise above the others to be a help and an inspiration to all others. And Mrs. Anna Walker of Methuen, Mass., has been a help and an inspiration to all who know of her efforts and her success, and she is one of America's foremost citizens.

A Senator Looks at Congress

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. TRUMAN. Mr. President, I ask unanimous consent to have inserted in the RECORD an article appearing in the Atlantic Monthly for July, written by the distinguished senior Senator from Wisconsin [Mr. LA FOLLETTE]. The article is headed "A Senator Looks at Congress." It is a most interesting article. I hope all Members of this body will read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR LOOKS AT CONGRESS

(By ROBERT M. LA FOLLETTE, JR.)

I

Wars and dictatorship have swept aside all but the merest vestiges of representative government elsewhere in the world. It should come as no surprise that representative government in the United States is on trial for its life.

Probably no other Congress in recent history suffered so much abuse and public derogation as did the last one, which served the Nation throughout the grim and difficult days of 1941 and 1942. James Bryce many years ago observed that Americans "are fond of running down Congressmen." There never has been any doubt that they are; criticizing Congressmen has always been one of the precious liberties of democracy, second only to perhaps to the privileges of voting for them.

The unjustified attacks which have been made upon Congress during the last year or two, however, are of a different character. They strike a note which has sinister consequences for the future of Congress as an institution of democracy. When a newspaper columnist makes the reckless and unsupported charge that "the ignorance and provincialism of Congress render it incapable of meeting the needs of modern government," more is involved than the ancient and honorable pastime of "running down Congressmen."

The hullabaloo raised in the press and on the radio over "X" cards for Congressmen, and the despicable misrepresentation of the law enacted to broaden the Federal Government's retirement system, were parts of the campaign to undermine the faith of the public in their elected Representatives in Congress. In some quarters the misrepresentation was deliberate; in others it was more or less unconscious as newsmen sought to pander to the mood of the moment. The net effect, however, was the same. Congress was pilloried over every radio in the country and verbally was hanged in effigy on most front pages of the press for "politics as usual" in time of war.

Attuned to this rising crescendo of public criticism, the President used the tone of a dictator on Labor Day to charge, in substance, that Congress by its inaction had brought the country to the brink of a disastrous inflation. He threatened that, if it did not repeal certain legislative restrictions in the price-control law which were objectionable in his judgment, he would do so himself.

Without attempting to set forth all the errors in these attacks, suffice it to say that the delays with which the President charged Congress were caused as much by the indecision and confusion of the executive branch as by the legislative. The particular restrictions in the price-control law to which he referred had been put there only a few months before with the full support of the Secretary of Agriculture. The X cards were not a special and exclusive congressional privilege. Under the initial and temporary gasoline rationing plan, Office of Price Administration gave out thousands of X cards to Government officials. Of the 15,000 issued in the District of Columbia alone, only 200 went to Members of Congress.

The truth about the alleged pension grab is equally instructive. Actually the legislation so termed was designed to bring under the Federal Government's long-established retirement system a great number of employees not previously eligible. Coverage for elected officials was made optional, subject to certain required minimum periods of service. So far as benefits were concerned, they were to be exactly the same, in proportion to length of service and the amount of the individual's contribution, as those enjoyed by any other Federal employee taken into the system, from the lowest-salaried clerk up to employees in the Executive branch receiving higher salaries than those paid to Senators or Congressmen.

When the President of the United States can seriously propose to repeal an act of Congress by Executive order, it is time for the American people to take stock of the situation—war or no war.

II

What is wrong with Congress? There certainly is no dearth of volunteers to answer that question. If criticism alone could make for perfection, Congress would by this time be one of the most perfect of all human institutions. From Publius to Pegler it has been a favorite target for the disgruntled, the disappointed, the intellectual snobs, and the doubters of democracy alike.

But most of this criticism is not constructive. It springs from personal prejudice, political bias, and above all from an utter lack of knowledge of the workaday problems with which a great legislative body must deal.

The current critics who accuse Congress of lacking political courage can for the most part be divided into two groups. Those who have complaints against the President's policies uppermost in their minds charge it with being a rubber stamp and are vehement in their demands that it reassert itself and show the Executive who is boss. Those who want to overpower all opposition to his policies make loose charges that Congress yields to pressure groups—the farm lobby, the labor lobby, local interests—and other accusations of venality too numerous to mention. Seldom does anyone express aloud the idea that Members of the House and Senate, like other people, may be following their own best judgment and sincere convictions.

It is always easy to attribute the shortcomings of Congress to the fact that it no longer has men of the caliber of Clay, Calhoun, and Webster among its Members. But even when those eminent statesmen were alive Alexis de Tocqueville, writing upon his visit to the United States, complained: "The race of American statesmen has evidently dwindled most remarkably in the course of the last 50 years."

This type of criticism lumps the sins of Congress under the head of personal ignorance and political timidity. There are many critics who would have the public believe that the average Congressman is a pusillanimous ignoramus who looks under the bed every night to see if there is a voter there waiting to lop off his political head on election day.

Those to whom the simplicity of this analysis appeals would do well to ponder a statement coming from the eminent American historian, Charles A. Beard: "As a more than casual student of the CONGRESSIONAL RECORD, I venture this opinion: It is possible to pick out of the RECORD for the past 10 years addresses (not orations) which, for breadth of knowledge, technical skill, analytical acumen, close reasoning, and dignified presentation, compare favorably with similar utterances made in the preceding century by the so-called great orators. * * * Considering the complexity of problems before Congress today, and taking account of the distractions which now beset Senators and Representatives, the quality of serious speeches in both Houses is amazingly high. There is, to be sure, more trash—bad poetry, demagogic claptrap, and clotted nonsense—in the RECORD of the past 10 years than there was in the Annals of Congress from 1789 to 1799. Yet after studying the operations of the first Congresses of the United States and the operations of the Seventy-sixth Congress, I am convinced that for disinterestedness, absence of corruption, and concern with the public good, the present body is of higher order."

III

The role of Congress in time of war is a difficult one. Sweeping powers must of necessity be concentrated in the hands of the Commander in Chief so that he may direct with dispatch and decision the striking power of the Nation. In total war the home front is an integral part of the fighting front. Therefore it is not easy to define the limits of authority that should wisely be delegated to the President.

To preserve independent judgment where the people's interest requires it, to protect them from the excesses of a relatively irresponsible bureaucracy operating under vast delegated powers, and at the same time to avoid the pitfalls of blind obstructionism that would impair the Nation's strength for total war is a task that is bound to be thankless and often misunderstood.

The record of Congress in this grave crisis, if it were known and appreciated, would be sufficient defense against the common types of criticism. Breaking all records for speedy action, the last Congress provided appropriations and authorizations amounting to $240,000,000,000 to win this war. In the delegation of essential powers to the Commander in Chief, it has unhesitatingly cooperated. Where some individual Members or congressional committees took issue with the administration's judgment on manpower, aluminum, steel, agriculture, inflation, and rubber, events have shown that they were right and the slide-rule artists who advised the President were wrong.

But those who wish to see representative government preserved in America cannot afford to let the matter rest there. Whether the customary criticism of Congress is justified or not, whether it is constructive or not, the fact remains that it is symptomatic of a growing belief that Congress is not adequate to the "needs of modern government."

The tasks confronting Government are tremendous. The problem of mobilizing and coordinating the efforts and resources of 130,000,000 people toward a common goal staggers the imagination.

It is estimated that in the next fiscal year the Federal Budget will total $120,000,000,000, more than three-quarters of the expected national income. The fate of almost every individual, certainly every business enterprise, is wrapped up in the problem of how that money is raised and spent.

The Federal Government is now an organization of almost two and a half million employees, excluding the armed forces. A multitude of agencies are reaching into the homes and lives of each and every citizen, affecting what he shall eat, what he shall wear, how warm or cold his house shall be, where he shall work, how he shall do business, what prices he shall charge, or, if he is a

farmer, what he shall raise and what he will get to do it with.

It is comparatively easy to sit back and deal with these problems in their broad aspects. For example, if it is finally demonstrated that military requirements demand an additional 5,000,000 men in the Army this year, it is easy to calculate that it shall be recruited at the rate of 400,000 per month through Selective Service out of certain estimated reserves. But when it becomes translated into 400,000 individual cases every month, each with its problems, the needs of modern government come to light in their true proportions.

IV

A successful government must be able not only to formulate broad policies but also to apply them fairly in the individual case. The true aim of government should be to serve the individual.

In the early days of the Republic the problems of government were simpler because the economy of the Nation was expanding and was to a great extent self-propelling. The vast resources of the frontier opened by Government to exploitation and use offered great opportunities to those individuals who were threatened with oppression from capitalistic excesses. Except for questions of tariff, monetary policy, internal improvements, and public lands, the Federal Government was left free to devote its energies to matters more strictly political.

The legislative process accordingly was more leisurely. The problems themselves were more general, except for the tariff. Consequently it was possible to draw legislation, as the separation of powers theory of the Constitution assumes, to provide in advance for most contingencies.

That is no longer true. The phrase delegating to the President or some one of his recognized agents the power to "issue such regulations and orders as he may deem necessary or proper in order to carry out the purposes and provisions of this act" is now one of the indispensable and most significant portions of most policy legislation adopted by Congress.

The constantly growing body of Executive or administrative law has become both a necessity to the operation of modern government and a threat to the constitutional function of Congress as the legislative, policy-making branch of the Government.

As the function of government has become more and more technical, the administrative problems have become more significant in the formulation of legislation. Consequently there has been a growing tendency for Congress to turn to the Executive for guidance in drawing new legislation—not out of any lazy desire to avoid its responsibility, but rather out of conscientious effort to frame good legislation that will prove workable. The administrators of the Government are for the most part responsible to the Executive, and as a result the Executive's function in proposing and drawing new legislation has been tremendously enlarged.

With this growing emphasis upon the day-to-day application of laws, the policy-making function of government is drifting away from the point at which the laws are passed.

Basically, the present weakness of Congress lies in its failure to meet this problem. To check on an administrative agency's appropriation after it is spent is a crude discipline at best—a negative approach, capable of crippling an agency and its offending program, but incapable of putting something positive and constructive in its place.

The special investigative committee technique, currently exemplified by the Truman committee of the Senate, is one significant advance in the direction of such a relationship between the legislative and executive branches. Its success in exposing administrative errors already committed and preventing others, through constructive recommendations embodied in its periodic reports, together with the ever-present possibility of exposure and censure, has been spectacular.

The weaknesses of this technique in the long run are that it is not sufficiently continuous and that it is not applied to all phases of the Government's program.

If the control of governmental policy is to remain with the people's elected representatives, as the framers of the Constitution intended it should, and not drift into the hands of a relatively irresponsible bureaucracy, Congress will have to streamline its organization. At the same time it will have to devise new instrumentalities and methods which will afford a positive, constructive liaison and high-policy relationship with the administrative arm of the National Government.

V

The committee organization has long been the backbone of the lawmaking machinery; therefore streamlining efforts should begin with drastic reorganization of the committee structure. There has never been any rhyme or reason governing the establishment and growth of the present committee set-up in either House of Congress. Many committees were originally established to attend to specific problems of a particular period and have later been made standing committees, sometimes active, sometimes not.

Until comparatively recently, Congress provided its Members with clerical assistance only when they were chairmen of committees. This complicated the committee organization because it encouraged the continuation of a number of useless committees solely for the purpose of providing necessary office staff for their chairmen.

At the present time there are 33 standing committees of the Senate and 10 special committees. The House has 45 standing committees and 7 special committees. As a result of the large number of committees in the Senate, more than half the Senators serve on 6 or more committees. One Senator is serving on 10 different committees.

This diffusion of energy and responsibility among a large number of groups, many with overlapping jurisdiction, is not conducive to the formulation of coherent and continuous legislative policy. Neither is it conducive to developing a well-recognized and continuing relationship with executive agencies administering the laws.

The confusion is evident in the efforts that have been made to keep a watchful eye on the Executive departments and agencies directing the war effort. While the special Truman committee has taken the leadership with a sustained and energetic review of many phases of the war program, the committees on Military Affairs, Naval Affairs, Agriculture, Appropriations, and various special committees have likewise been delving into various aspects of the war program. The renegotiation provisions of the law regarding war contracts, for instance, originated in the Senate Appropriations Committee but later were revised and amended by the Senate Finance Committee in connection with the tax bill.

The Congress cannot expect to cope with the complex problems of today unless the number of committees is drastically reduced and unless their jurisdiction is so defined that they can deal continuously with homogeneous segments of national policy corresponding roughly, at least, to the main outlines of administrative divisions in the executive branch.

Taking the Senate for example, it would be possible to reduce the number of committees to 10 or 12 in the interest of greater efficiency.

One committee on armed forces could better serve in guiding the Senate's actions in the sphere of war and national defense than can the divided counsel of the two present committees—the one on Military Affairs and the one on Naval Affairs. The day when the Army and Navy could safely be considered is independent and not necessarily coordinate arms of the military service has long since passed. Moreover, the unified approach of a single committee would be more likely to give air power the consideration and standing it deserves than do the present committees tied up traditionally with the Army and Navy. This committee should also take over the jurisdiction of the Pensions Committee and the veterans' affairs jurisdiction now exercised by the Finance Committee.

In the field of business and the regulation of commerce one committee could do a much more intelligent job than is possible under the present division of responsibility and jurisdiction among such committees as those on Interstate Commerce, Commerce, Manufactures, and Patents.

A committee on the interior, natural resources, and public works could combine the limited jurisdictions of a host of present committee, such as those on Post Offices and Post Roads, Public Lands and Surveys, Indian Affairs, Irrigation and Reclamation, Mines and Mining, Territories and Insular Affairs, Interoceanic Canals, and Public Buildings and Grounds.

A committee on labor and public welfare could well take over the present jurisdiction of the Committee on Education and Labor, the Committee on Immigration, and the subject of social security now under the Finance Committee.

The Finance Committee and the Banking and Currency Committee should be merged. It is recognized that the fundamental problem of the business cycle, inflation, and deflation, is closely related to tax policy and monetary and credit policies. At present the Finance Committee is charged with responsibility for the one, and the Banking and Currency Committee for the other.

Such committees as those on Audit and Control of the Contingent Expenses of the Senate, Printing, Enrolled Bills, Privileges and Elections, and the Library could very properly be combined with the present Rules Committee, which has the responsibility already for much of the administrative business of the Senate.

The committees on Foreign Affairs, the Judiciary, and Agriculture already have clear and unchallenged jurisdiction over their respective spheres and should retain it.

The Claims Committee should be abolished. Congress should set up an organization to hear and dispose of all claims against the Government, thus relieving the members of the burdensome task of investigating petty claims and of invoking the cumbersome procedure of passing private bills through the House and Senate.

Congress should pass a model city government statute for the District of Columbia and quit doing a poor and time-consuming job as its common council.

In the vital field of appropriations Congress has already recognized the necessity of bringing all appropriations before a general Appropriations Committee with an over-all familiarity with the entire National Budget.

In 1899 the Senate Appropriations Committee was given jurisdiction over some of the appropriation bills, but others of great importance were considered by the committee that had jurisdiction over the enabling legislation authorizing it. Thus, for example, appropriations for rivers and harbors were passed on by the Commerce Committee.

In 1922, when the Appropriations Committee was given jurisdiction over all appropriations bills, the logic of securing the assistance of members of the committees under whose jurisdiction the various activities fell was recognized by providing that three members of the Commerce Committee, to pursue the illustration, would sit ex officio with the appropriations subcommittee designated to

consider the appropriation for rivers and harbors, and one member of the Commerce Committee would serve on the conference committee representing the Senate.

A Committee on Expenditures in Executive Departments should be brought to life to perform the functions now being discharged by a special joint committee.

VI

Simplification of the committee structure would afford a greater opportunity for each individual Senator or Congressman to concentrate his energies on one or, at the most, two committees. He would become more expert in his chosen field, and the service and effectiveness of the committees would improve accordingly.

Reduction in the number of committees should be accompanied by a drastic reduction from their present size.

Reorganization would also pave the way for more collaboration between the two Houses of Congress through the instrumentality of joint committees, such as the present Joint Committee on Internal Revenue Taxation. This committee, with its staff of experts, has proved of great assistance to both the House Ways and Means Committee and the Senate Finance Committee in the highly technical, detailed, and intricate task of formulating tax legislation.

The question of adequate and expert staff is of vital importance. Undoubtedly one of the great contributing factors to the shift of influence and power from the legislative to the executive branch in recent years is the fact that Congress has been generous in providing expert and technical personnel for the executive agencies, but niggardly in providing such personnel for itself.

One of the traditional powers of Congress over the Executive is supposedly control over the purse strings. Obviously, that control cannot be exercised intelligently unless Congress has the facilities and the expert staff to appraise and evaluate appropriations just as the Budget Bureau does. Yet the annual appropriation for the staff of the Bureau of the Budget is 13 times as large as the appropriations for the staff of the Senate and House Committees on appropriations combined.

In the next few months Congress will be facing such far-reaching and intricate problems as renewal of reciprocal trade agreements and lend-lease legislation, price control, and the over-all manpower program for military, agricultural, and industrial service. Practically all the committees before which these great problems will come for legislative determination of one kind or another will have the usual staffs of five or six employees. In most cases the top salary paid to any member of those committee staffs will be $3,900. Positions of similar responsibility in the executive agencies would afford salaries almost double that amount.

The Congress should establish at once joint committee staffs made up of competent and well-paid personnel for each of the major streamlined committees as outlined. Thus an efficient and well-informed group of independent experts would be available to the various major committees of the House and Senate. With this vital aid supplemented by the excellent legislative counsel's staffs now serving the respective bodies in drafting legislation, with Members able to devote their time to only one or two committees, Congress would be in a position to render the people more efficient and constructive service and to reestablish a better balance of power with the executive branch.

Each individual Senator and Congressman is in the same position as the Congress as a whole, insofar as staff is concerned. Their responsibilities have multiplied over and over again in recent years. As the Government has stepped into the individual lives of each and every one of their constituents, the demand for assistance in all sorts of problems has descended upon them in an increasing torrent.

Yet when the proposal was made 2 years ago that each Senator should be allowed the services of an executive assistant with a salary of $4,500 per year, it was defeated. The administrative assistant in countless district offices of the Office of Price Administration or any other Federal agency gets that salary, but a United States Senator, representing a constituency of millions of people, is denied this necessary assistance simply because of the unwillingness of Congress to spend the money that is necessary to equip itself to do its job.

VII

Reorganization of committee structure, concentration of members' time on fewer committees and subjects, and development of adequate staffs, although vitally important, will not alone serve to meet the major problem presented by the necessity, in war and in peace, for the delegation of vast legislative powers to the executive arm of the Government. Despite all protestations to the contrary, by the "outs" seeking to be made the "ins," the complexity of our economic life now and after the war will force the Congress to continue the process of delegation of power in order that government may function with a reasonable amount of satisfaction to the people. To meet this necessity and at the same time to preserve democracy will test the genius of the American people for self-government as never before. In the compass of this article there is only space to suggest methods by which the legislative branch of the Government can discharge its full responsibilities without undue interference with the Executive's power.

Congress could establish a joint legislative and executive council made up of a small number of Members of the House and Senate selected by ballot or by the majority and minority in both Houses, to confer regularly with the President and the heads of departments and agencies. The council should only consider the broad questions of policy and not those related to purely administrative functions.

Thus the Congress, through representation and with the cooperation of the President, would be in a position to make certain that the delegation of its power in various fields of government action was being exercised as the Congress intended. It would save the executive branch of the Government from many a mistake and relieve it from the justifiable charge of usurpation and abuse of power.

This device, like any other human institution, will depend for its effectiveness upon cooperation between the executive and legislative branches of government. I have confidence that it holds out real hope of success in meeting one of our most pressing problems in the preservation of the American democratic structure.

Another means of holding the Executive to a stricter and current accountability in the exercise of the vast powers placed in his hands would be to require the attendance of Cabinet officers and heads of agencies for questioning before the House and Senate, respectively, at stated intervals This idea was advocated by my friend the late Senator Bronson Cutting. It has great possibilities in the solution of our present problem of preserving the balance of power and at the same time enabling government to function efficiently and adequately.

Many people are looking to their representatives to reassert the power and independence of the legislative branch.

If this resurgence is to express itself in a positive, constructive way, rather than in a dog-in-the-manger attitude toward the President, Congress will have to overcome its inferiority complex, provide a staff with the best experts money can hire, reorganize its outmoded committee system, and seriously set itself to the job not only of passing better laws but of working with the executive departments constantly to see they are made to produce the results intended.

Congress has an opportunity now to show what it can do. If it fails to be constructive, there is no telling how long an impatient people will support representative government in America.

The Fresh Beef Situation

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Billings Gazette, of Montana, which was sent to me by Mr. B. L. Surface, of 322 Park Street, Bismarck, N. Dak. The article is entitled "Says Fresh Beef Rots on Tracks." I also ask that Mr. Surface's letter be printed.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

BISMARCK, N. D., *June 25, 1943.*

Hon. WILLIAM H. LANGER,
United States Senator North Dakota,
Washington D. C.:

The enclosed is self-explanatory.

Will you try and find out why shipment is not or was not diverted to the west coast, and turned over to the west coast packers, for distribution, we have no decent meat in the markets here.

Understand this was caused by no refrigerated boats available at coast points, even so why let it rot, when the whole country is short of meat.

Yours very truly,

B. L. SURFACE.

SAYS FRESH BEEF ROTS ON TRACKS—ASSERTS MEN NEEDED FOR REICING CARS

HELENA, June 23.—More than 20,000 tons of fresh beef is spoiling on railroad side tracks from eastern Montana to Seattle while Federal war agencies do nothing to obtain labor for reicing refrigerator cars, James D. Graham, president of the Montana Federation of Labor, charged Wednesday.

Movement of the meat, bound for overseas under lend-lease contracts, has been delayed for several weeks due to a traffic jam between Chicago and Seattle, Graham said, and appealed to the War Manpower Commission and the War Labor Board to take immediate action.

"At least 1,000 refrigerator cars loaded with dressed beef are strung out on side tracks along the Milwaukee railway from Miles City, Mont., to Spokane, Wash., a distance of 750 miles, awaiting shipping orders and rotting while they wait," the Montana labor leader declared.

Information received by Graham revealed that cars are stranded at Miles City, Harlowton, Alberton, and at Avery, Idaho, he said.

Communistic Influence on Racial Disorders

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 1, 1943

Mr. RANKIN. Mr. Speaker, the gentleman from New York [Mr. CELLER] said a moment ago that they ought to seize the farmers' meat and cattle in order to feed the people in New York. Now, if he will send that gang of communistic Jews and Negroes that came down here day before yesterday and tried to storm the House restaurant, and went around here arm in arm with each other in this Capitol, if he will just send them down into Texas, or out into the West, or anywhere else in the cattle-growing belt, to do the seizing of those cattle, they will not have so many people to feed in New York.

It is dawning on the American people who is creating and promoting this race trouble and these race riots throughout the country.

I want to say to the gentleman from New York [Mr. CELLER] that when they dig into those race riots in Detroit and elsewhere, they will find that the same element promoted them, and they will find the same element stirring up race trouble here in Washington.

When those communistic Jews—of whom the decent Jews are ashamed—go around here and hug and kiss these Negroes, dance with them, intermarry with them, and try to force their way into white restaurants, white hotels and white picture shows, they are not deceiving any red-blooded American, and, above all, they are not deceiving the men in our armed forces—as to who is at the bottom of all this race trouble.

The better element of the Jews, and especially the old line American Jews throughout the South and West, are not only ashamed of, but they are alarmed at, the activities of these communistic Jews who are stirring this trouble up.

They have caused the deaths of many good Negroes who never would have got into trouble if they had been left alone, as well as the deaths of many good white people, including many innocent, unprotected white girls, who have been raped and murdered by vicious Negroes, who have been encouraged by these alien-minded Communists to commit such crimes.

They are spreading their poisonous doctrine of hate among the Negroes and thereby making it impossible for them to live in peace with the white people around them.

Communism is dying in Russia, or rather it is being run out of Russia by the Russians themselves, but it is still active in this country, as the records of these race riots show.

I have before me a letter written by a patriotic American soldier from Detroit, Mich., in which he tells of these Communists stirring up trouble among the Negroes in Detroit. He said that one night in August 1942 he went into "Paradise Valley" and witnessed a big Communist turn-out, attended very largely by the Negroes of Detroit. The Communists, he said, set up loudspeakers and in a short time a large crowd had gathered, and in 10 minutes those Communist agitators were spreading their doctrine of hate and revolution among those Detroit Negroes. One of these speakers, he said, shouted, "The party of the Negro people is the Communist Party." They told them, "If you want to be free and happy, you should join the Communist Party of Michigan as soon as possible." They also shouted, "If you want good homes, you must fight for them." One of the speakers said, "The rich capitalistic white people of Detroit have robbed you of the good homes and schools that you should rightfully have. The Communist Party is your only hope of getting back what is yours."

He said the Communist Party sponsored meetings of this kind almost every week in Detroit, and had the Negroes there stirred up almost to the point of revolution—"after some of these crafty Communist orators had finished their outpouring of hate." He said that all these meetings were designed "to turn Negroes against whites," and that "This latest bloody outburst is just the beginning, if communism is allowed to continue its revolutionary program in Detroit and the United States of America."

This young man says further: "'I am preparing to lay down my life on a distant battlefield for my country. There are millions of us who are now training for war against the Jap and Nazi aggressors. In the name of God, in the name of our Constitution, in the name of our Republic let us destroy that horrible beast known as the Communist International."

He says in conclusion, "If it is not done now, we will do it when the mess is cleaned up over there."

Mr. Speaker, that young soldier expresses the views of millions of our brave boys who are now in the service, as well as those of a vast majority of the people at home. If these Communists are able to stir a race war in America, it will have the most demoralizing effect on this country, and especially on the men in our armed forces, of anything else that could possibly occur.

The disgusting spectacle we saw here in this Capitol on the day before yesterday ought to be enough to arouse the most complacent individual to the dangers that confront this country here at home.

While our boys are fighting and dying to protect our country from without, let us see to it that our sacred institutions are not destroyed from within.

Opinions of the People

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 30, 1943

Mr. VOORHIS of California. Mr. Speaker, the successful working of democratic government depends upon the closest possible relationship existing between a Representative in Congress and the people of the district which sends him there. It is part of the duty of a Representative to keep in as close touch with the people of his district as possible. And it is particularly important for him to have as much knowledge as possible with regard to the thinking of the people on important problems and questions of the day.

With this thought in mind, I prepared a short time ago a list of questions covering a number of the more important matters requiring decision or solution by our National Government and sent them to some 30,000 people in my district with a request that they answer the questions and return them to me in order that it might be more possible to gage the sentiment of the people of the district on these matters. It is, of course, true that every conscientious Member of Congress confronts from time to time the dilemma as to what he should do in cases where his own profound convictions impel him to cast a vote contrary to what appears to be the majority opinion of the people of his district. And there will always be times in the career of every Member of Congress when he must do the thing he himself believes to be right even though it will be likely to cost him his reelection. It is nevertheless extremely important that Members of Congress develop all possible means of keeping in the closest possible touch with the people of their districts, particularly in these days when it is so seldom possible for them to be at home for any extended period of time.

Better than a 10-percent response has been received from this questionnaire, and they are still coming in. This response was an extremely good one, particularly in view of the fact that 33 questions were asked, some of which required answers other than a simple yes or no, and in view of the further fact that those answering the questionnaire had not only to spend many hours in making it out but also to address and pay postage upon their replies.

More than 3,100 answers to the questionnaire have now been tabulated and the trend of the answers is so clear and so unvarying that I think it is time that they be made public for such guidance and benefit as they may be. I want to say further that in my judgment the answers given by the people of the Twelfth District of California to this questionnaire indicate a most earnest

and intelligent interest in the problems of their country.

The first question read as follows:

What single action by the Government do you believe would do most to strengthen our war effort and hasten our victory?

Obviously no "yes" or "no" answer was possible and the answers given included an extremely wide variety. Indeed, it is quite impossible to indicate any consensus of opinion with regard to this first question. The main result obtained from this question was to indicate clearly that there is no one thing upon which people generally agree as being the main need of our country from the standpoint of strengthening our war effort and hastening our victory. It is at least interesting, however, to observe that about 10 percent of the answers contained one or another of the following six ideas as the opinion of the person as to what single action by Government would most strengthen our war effort:

First. Eliminate politics on all sides for the duration of the war.

Second. Total conscription of all manpower, property, and wealth for the period of the war.

Third. Outlaw strikes.

Fourth. Give more complete news to the people regarding all phases of the war effort.

Fifth. Eliminate all profits for the period of the war.

Sixth. Reduce overlapping of governmental agencies and simplify governmental action.

These six answers presented in various forms comprised, as I have said, about 10 percent of all the answers received to question No. 1. There were, in addition, however, a variety of other answers, including "prevent inflation," "closer international consultation with our allies," "draft of capital," "draft of labor," "Government control of industry," "more support for the President," "more constructive opposition to the President," and many more.

Questions Nos. 2, 3, and 5 all had to do with the development of closer collaboration among the United Nations for the successful prosecution of the war. In every case an overwhelming majority favored the formation of the war councils projected in these questions, though a significant number, approximately 10 percent of the people in each case, declined to answer the question on the ground that it was a matter for military decision. Question No. 2 read as follows:

Do you favor the formation of an Atlantic war council composed of representatives of Britain, America, and Russia to develop overall strategy for the European theater of the war?

Eighty-nine percent of the people answered "Yes."

Question 3 read as follows:

Do you favor the formation of a Pacific war council composed of America, Britain, and China to develop over-all strategy for pressing the war in the Pacific?

Ninety-two percent of the people answered "Yes."

Question 5 read:

Do you favor a supreme war council to include official representatives of all the United Nations and to plan war strategy?

Eighty-seven percent of the people answered "yes."

All of which would seem to add up to the fact that people of the Twelfth District of California are in favor of the closest possible cooperation among the United Nations.

The fourth question was one in which west coast people have a peculiar interest and it is perhaps not to be wondered that it received the second highest percentage of "yes" votes of any question that was asked, namely almost 96 percent. This question read:

Do you believe material aid to China should be sharply increased and greater emphasis placed on the war against Japan?

There were a significant number of people who qualified their answers by stating that they were ready to leave even the matter of aid to China and increased emphasis on the war of Japan to the decision of military leaders. It is, of course, however, very natural indeed that the people of the west coast are tremendously concerned to see the war in the Pacific prosecuted with all possible vigor. And they said so.

Question 6 was divided into six parts. It was prefaced by the following statement:

One of our major problems is that of food supply. Already some supplies are short. In order to increase food production, would you favor—

There then followed five specific proposals. The first of which was—

Exemption of agricultural workers from the draft.

Eighty-four percent of the people answered "yes."

Next, it was asked whether the person answering favored—

Higher prices to farmers for some of their crops.

Sixty-seventh percent of the people answered "yes."

Third, people were asked whether they believed food production would be increased by providing—

Complete control by the Food Administration over farm prices, farm machinery production and distribution, recruitment and transportation of farm workers, and all other matters affecting food production.

About a third of the people declined to answer this question and a number of the answers to this question were qualified by the words "if necessary" but 90 percent of the people who answered said that they did believe such a centralization of authority and responsibility would help. On the proposition of the—

Formation of a victory land army of volunteer workers to be enlisted for 6 months of a year and to be moved about the country into areas of agricultural labor shortage.

Ninety-one percent of the people indicated they would support such a program and believed it would help.

I then asked whether it was believed that it would be helpful in promoting food production if Congress were to—

Repeal the Soil Conservation Act.

A considerable number of people declined to answer this question on the ground that they were not familiar with the terms of the act. But those who did answer it comprised more than two-thirds of the 3,100 people who answered the questionnaire.

Sixty percent expressed themselves as opposed to repeal the Soil Conservation Act.

And in the case of some of those who said they favored repeal, the answer was qualified in such a way as to indicate that they were confused between the operation of the Soil Conservation Act as such and some other phases of the governmental agricultural program. It is obvious, however, that in answering a questionnaire of this sort particularly in view of the large percentages of "yes" votes on all the preceding four questions, the majority against repeal of the Soil Conservation Act is significant and important. The final subsection of this sixth question on food production asked:

What other measures would you suggest?

Here again, there was no considerable unification of opinion and the answers varied widely indeed and included all manner of proposals. Approximately 8 percent of the answers, however, could be fairly grouped under one or another of the following heads:

(a) More equitable price ceilings as between different products.

(b) Provision of more adequate supplies of labor and machinery.

(c) A greater degree of local control over the food production program.

(d) Let farmers make more of their own decisions.

(e) A judicious use of subsidies to encourage increased production.

The twenty-eighth question really belongs with the ones I have just discussed having to do with food production. It reads as follows:

Do you favor the passage of the Pace bill which would provide for including the cost of farm labor in determining parity prices for farm crops?

I believe the answers to this question are very significant, particularly in view of the fact that my district is three-fourths urban and only approximately 25 percent agricultural. Approximately one-fourth of the people declined to answer this question on the ground that they did not have sufficient information. But of those who did answer it, comprising better than 2,200 people.

Eighty percent said that they would favor passage of the Pace bill. And this included a substantial majority of those who indicated on their questionnaire that they were members of labor organizations.

The seventh and eighth questions had to do with war contracts. They were asked largely because of the very great number of communications which I have been receiving protesting against inef-

ficient use of manpower and equipment in connection with cost-plus-fixed-fee contracts. The seventh question therefore asked:

Do you believe the Government should stop letting contracts on a cost-plus-fixed-fee basis?

Here again a significant percentage, namely, about 20 percent, declined to answer on the ground that they did not have sufficient information. But of those who did answer, 71 percent said they did believe that we should now stop letting contracts on cost-plus-fixed-fee basis.

The eighth question then read:

If your answer to question 7 is "Yes," what other system of letting contracts would you propose?

In this case there did not exist the wide variety of answers which marked the reply to the first question and the final subsection of question 6. On the contrary, over 50 percent of those who answered this question declared that they believed that competitive bidding should be used.

The next most frequent answer was that—

The Government should take over all industry during the war.

But only 1 person gave this answer for every 10 that advocated competitive bidding. A third answer which was given by a considerable number of people called for "flat-price contracts."

And this answer was generally qualified with some such statement as—

There should have been enough experience by now to enable contracts to be let on a flat-price basis.

The ninth question asked:

Do you favor a general draft of manpower?

Sixty-two percent said "Yes" and 38 percent said "No."

The tenth question then asked whether the person answering believed a draft of manpower "could be justified unless plants and factories in which people worked are likewise drafted and profit eliminated."

Upon this question, which is closely associated with the previous one, 34 percent said "Yes" they did believe that a draft of manpower could be instituted without drafting plants and factories. But 66 percent said they did not believe this could be justly done.

Approximately 40 percent did not answer this tenth question for the obvious reason that they were only requested to answer it in case their answer to the ninth question was "Yes."

Questions 11 and 12 had to do with democratic control of labor unions. The eleventh question asked:

Do you favor a law limiting the amount of initiation fees a labor union can charge?

Ninety-one percent said "Yes" to this question.

On this question and the twelfth one as well, I segregated from the other questionnaires the ones which came from members of labor unions. Even in their case, however, 54 percent answered "Yes" to question No. 11.

In the case of question 12 which asked:

Do you favor a law requiring regular secret ballot elections for labor union officers and regular financial reports by labor union officials to their membership?

Ninety-three percent of all those answering the question said "Yes," and even 70 percent of the members of labor unions did so.

The significance of the answers to these two questions seems to me to lie in the fact that they indicate a broad support for measures calculated to assure democratic control of labor organizations but which do not deprive the unions of any of their fundamental rights or freedoms. It is, however, I think significant that there was comparatively much more opposition from the ranks of labor itself to attempts at regulation of the amount of initiation fees by law than there was to provisions for regular election of officers or financial reports to membership. And no doubt the reason is that, as pointed out by many of the labor union members, the best of the labor organizations already do follow the practices indicated in question No. 12.

The thirteenth, fourteenth, fifteenth, and sixteenth questions all had to do with the matter of rationing. Question No. 13 asked:

Should local rationing boards have more or less power to make decisions with regard to individual and local problems?

A considerable number, about one-third of those sending in questionnaires, did not answer this question. Of those who did answer it 71 percent thought local boards should have more power and 29 percent thought they should have less.

On question No. 14 which asked:

Do you favor rationing of scarce commodities during wartime?

There was the largest affirmative vote that was cast on any question in the whole questionnaire, namely, 96 percent of the people said "yes."

Not so much, of course, because they like rationing particularly as because they recognize clearly that it is the only fair way to bring about an equitable distribution of scarce commodities under present circumstances. The fifteenth question asked:

What other method would you use to assure an equitable distribution of scarce commodities, if your answer to question 14 is "No?"

Not only, however, was there absolutely no agreement among the few answers made to question 15, but in view of the overwhelming affirmative vote on No. 14 there were only a negligible percentage of people who were called upon to express their opinion on the fifteenth question at all. Question No. 16 was asked because of a proposal made over the radio by Commentator Fulton Lewis, Jr., concerning which I received a considerable amount of mail. This question read:

In cases where a commodity is rationed, do you favor the removal of price ceilings so far as that commodity is concerned?

The answers to this question are interesting, particularly in view of the fact that I received a number of letters from my district urging that this procedure be adopted. But the result of the questionnaire indicated only 14 percent of the people in favor of Mr. Lewis' idea, and 86 percent opposed to it.

Questions 17 and 18 had to do with preparation for the problems of the post-war period. The seventeenth question read as follows:

Do you believe that it is too early for the Congress and the people of the country generally to consider and work out a program for meeting the problems which we shall face within our own country, and also the problem of establishing a permanent peace throughout the world when the war has been won?

Eighteen percent of the people said "Yes."

That is, they did believe it was too soon for us to consider a program for meeting the problems of post-war period and that we should not devote time or thought to such problems, but that the war should be won first. However, 82 percent said "No," that they did not believe it was too soon.

The eighteenth question asked:

Do you favor the formation of a national commission for this purpose now?

Eighty-four percent answered "Yes."

This was naturally encouraging to me, since I have been advocating such a national commission for the past 3 years. It seems to me, furthermore, that this is a matter which the Congress cannot, if it is to do its duty, neglect further, especially since it voted virtually to abolish the National Resources Planning Board.

The twentieth question had to do with a matter upon which there is a very great deal of public discussion and obviously a tremendous amount of popular interest. The question read:

Do you favor America participating with other nations in some sort of international organization or international police force which would be effective in preventing future aggression from getting started and for the maintenance of peace after this war has been won?

As to this question there was a smaller number of people who failed to answer than was the case with any other question, excepting only the fourteenth question about rationing. This indicates a high degree of popular interest in the question. Furthermore, 93 percent of the people said "Yes" and only 7 percent said "No."

It will be observed, therefore, that the people answering my questionnaire voted 93 to 7 in favor of practically the same proposition as is contained in the Fulbright resolution recently reported by the House Committee on Foreign Affairs.

Question 22 dealt with the continuation of reciprocal trade agreements. And while this has now been settled by the Congress, it is encouraging to those who supported an extension of the trade agreements program to observe that 78 percent favored extension of the trade agreements program.

Questions 23, 24, and 25 all dealt with the security of the people in the broadest sense of that term. The twenty-third question asked:

Do you favor an expansion of the school-lunch and penny-milk programs for American children?

And 87 percent of the people said "Yes."

Furthermore, only a negligible number failed to express an opinion on this question. This is interesting, I believe, in view of the very wide support which it indicates for further emphasis on a phase of wartime rationing which has so far received little consideration in this country though great emphasis has been placed on it in England. I refer to the principle that rationing should operate not only to limit purchases in order to make certain that an equitable distribution takes place but also to see that those groups from the population who have the greatest need for certain things actually obtain them. And certainly this principle applies to the school children of the Nation, who at least should receive as much milk as they actually need for a healthy diet before milk supplies are used for other less important purposes. The twenty-fourth question asked whether the person answering favored "a broad expansion of the social-security program."

This, of course, was a general question but the answer to it showed 79 percent of the people saying "Yes" and only 21 percent opposed to that proposition.

This, I think, is interesting in view of the negative if not hostile reception which has been accorded by the Congress to proposals for such an expansion of our social-security program. It is important to remember that such a measure could be a very effective means of combating inflation during the war period and also of working effectively against deflation after the war has been won. The twenty-fifth question had to do with old-age pensions and received one of the largest affirmative votes of any question. It asked:

Do you favor enactment of a general national old-age pension law?

To this 89 percent said "Yes" and only 11 percent said "No," with hardly anyone refraining from expressing his opinion. I then asked whether they believed such a national old-age pension system should go into effect now or after the war, and on that proposition 63 percent said it should go into effect now but 37 percent believed it should wait until after the war; a significant percentage, it seems to me upon the whole.

The twenty-sixth question read:

Do you favor Government purchase of the capital stock of the 12 central Federal Reserve banks?

This was one in connection with which I was especially interested in observing the outcome. And it is useless for me to attempt to conceal the fact that I was profoundly encouraged to find that 75 percent of those answering this question said "yes." That is, three-quarters of the people said they did believe that Congress should purchase the capital stock of the 12 central Federal Reserve banks.

Question 27 was directed at the problem of providing for a continuance of education and training for people now in the armed services of the country. It read as follows:

Do you favor enactment of a law which would provide educational grants to men in the armed forces to enable them to continue their education after the war?

As might, I think, have been expected, 89 percent said "Yes" to this proposition. Incidentally, there are sound seasons why the matter of some such provision of educational grants should be taken up now by the Congress. For an increasing number of men will be coming back from the fighting fronts with varying degrees of disabilities and in view particularly of the difficult time which many of our colleges and universities are having it would seem the part of wisdom for some action on a matter of this kind would be taken in the very near future.

Question 28 has already been discussed above.

The twenty-ninth question asked:

Do you favor restrictions on the use of liquor during wartime?

And as to this approximately 30 percent of the people declined to answer. But of those who did answer 80 percent said "Yes" and only 20 percent said "No."

The thirtieth question then asked those who had voted affirmatively on the twenty-ninth question to indicate what type of restrictions on the use of liquor during wartime they would favor. Of those who answered this question, which, of course, included only those who had answered affirmatively to the twenty-ninth question—

(a) Twenty-five percent favored outright prohibition.

(b) Twenty percent favored some form of rationing of liquor.

(c) Eight percent favored restriction of the use of liquor as to men in the armed forces alone.

(d) Five percent suggested that control be exercised simply by curtailing production and devoting the materials which otherwise would go to liquor manufacturers to other purposes.

The last three questions on the questionnaire were directed toward a problem which Congress has now acted upon, namely, that of pay-as-you-go taxation. Question 31 asked:

Do you believe it is important to put tax payments on a pay-as-you-go basis?

And as to this 91 percent said "Yes," indicating a wide support for pay-as-you-earn tax system.

When, however, the same people were asked in question 32 whether they favored—

Accomplishing this by excusing all taxpayers of the total amount of the taxes on their 1942 incomes—

Sixty-nine percent said "No" and only 31 percent said "Yes."

The final question said:

If your answer to question 32 is "No," what general plan of getting on a pay-as-you-go basis would you favor?

As might be expected, the answers to this question varied widely. But the most frequent answer was the suggestion that one-half of the 1942 tax liability be forgiven. The next most frequent answer was that none of the 1942 tax liability be forgiven, but that taxes for both 1942 and 1943 be collected together in one year. Next in line came an answer which proposed that the Robertson-Forand bill be adopted, and fourth came the suggestion that 1942 taxes be spread over a number of years. The action of Congress, in forgiving approximately 75 percent of the tax liability for 1942 and all of it as to taxpayers whose liability was less than $50, would seem therefore to have been somewhat more generous than the people in my district might have asked for, but nevertheless not seriously out of line with their opinions.

In conclusion I want to express to each person who went to the thought, effort, and trouble of making out this questionnaire my sincere gratitude. It was not an easy task, but I am convinced that it was a worth-while one both from the standpoint of the people from the Twelfth District of California and from the standpoint of their Representative in the House.

Address of Maj. Gen. Eugene Reybold Before Mississippi Valley Association

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Maj. Gen. Eugene Reybold, Chief of Engineers, before the Mississippi Valley Association at St. Louis, Mo., on last Monday.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is more than 18 months since it was my privilege to address the Mississippi Valley Association, and I am glad to be with you again. Since that occasion, our whole mode of living has changed. From mild indifference to the threat of war, we have passed to the stern reality of prosecuting war, war of a character and magnitude hitherto unknown to the world.

Here in the Mississippi Valley, you are in no way strangers to this change. This area, in keeping with the historical examples of other important river valleys, has thought in terms of progress—of production for peacetime uses. In recent months, however, you have seen the systematic flow of peacetime goods transformed into a mighty flood of materials of war—a flow of such a volume that it has extended all transportation facilities to the very limits of their capacity. You have seen large areas in fertile valleys taken out of their normal production of food and feed and changed almost overnight into great training camps, or airfields, or ordnance

plants. Here in the very heart of our country, you have seen the transformation of men, machines and materials from the multiple objectives of peace and progress to the all-embracing purpose of winning a struggle against those who threaten the existence of our national and personal ideals.

This intricate and difficult change has strained the machinery of Government and private industry alike; but we have proved equal to the task, and we have come a long way. Defects have been corrected and adjustments have been made as rapidly as experience has indicated the required remedies. Methods and procedures that were at first, by necessity, largely empirical have been swiftly and steadily improved by applying thereto the skill, science, and genius with which the men and women of this Nation are so bountifully endowed. The results have far exceeded the expectations of everyone. By reason of this success, our armies spread all over the world are growing continually in numbers, equipment, and effectiveness. They may even now be poised to strike mortal blows where the enemy least expects them.

Our growing strength must, at all costs, be maintained, and once the major offensives are begun, we must redouble our efforts. Manifestly, if we are to do this, we cannot totally disregard the hazards of nature on the home front. Such hazards, as we know too well from recent experience, can slow down war production and reduce yields of farm crops. No one must expect or look for waterway improvements during the war on anything like a normal peacetime scale, but critical flood situations should be taken care of and complete plans should be ready for prompt initiation when the war is ended.

Uncontrolled rivers are terrible threats. Remembering the Mississippi flood of 1937 and our mutually successful efforts in the lower valley against that flood, we are taking every precaution to be fully prepared in the future for any extraordinary flood waters that may flow down the Mississippi River.

The Congress has recognized the destructive power of floods and it has recognized the national responsibilities with respect to flood control. Under the Flood Control Acts of 1936, 1938, and 1940 total authorizations of more than $900,000,000 have been made for nearly 500 projects in the United States, exclusive of the $660,000,000 project for the lower Mississippi River. Thirty-eight reservoirs and 92 local protection projects have been complettd. This is a substantial beginning, but there are hundreds of millions of dollars needed for additional work that should be constructed as rapidly as is feasible.

Temporarily, the war has brought flood control construction to a virtual halt. The administrative policy that no new projects should be undertaken during the war has prevented the initiation of much new work, including that authorized in the 1941 act. A directive of the War Production Board suspending all projects except those needed for the war has resulted in the stoppage of a large amount of our work that was actually under way.

Let me recount briefly the period between May 1942 and May 1943 which has been an unusual flood year. In late May 1942 the floods in the headwaters of the Delaware River caused damages in several cities of Pennsylvania and New York. June 1942 found the lower Mississippi out of its banks, inundating tens of thousands of acres of fertile Missouri bottom lands. Many of the levees built by local interests were overtopped and severely damaged. Later in the summer of 1942 record-breaking floods occurred in the upper Allegheny and Susquehanna basins, and floods again visited the tributaries of the Delaware River, disrupting transportation and some war industries. The old year ended, and 1943 began with the New Year's Eve flood on the upper Ohio River. Six flood-control dams were in full or partial operation above Pittsburgh when the rains came, and although the storm did not center over the controlled areas those six reservoirs reduced the crest stage at Pittsburgh by 3 feet and prevented property damage estimated at over $15,000,000. Furthermore, the reduction in the flood crest downstream made it possible for war industries to continue production without interruption. Below Pittsburgh and including Wheeling, the estimated benefit of this reduction in flood crest was an additional $14,000,000, making a total in the Pittsburgh-Wheeling area of $29,000,000 of damages prevented in one flood. Other benefits, for which I do not have monetary values, include the full protection behind completed flood walls of Ceredo and Kenova, W. Va., and Ironton, Ohio, and the protection of Huntington and Portsmouth by successful emergency closures of gaps in their nearly completed flood walls. At Johnstown the completed concrete flood channel carried the flood flow without spilling a drop over the banks. In fact, Johnstown people hardly knew a flood was roaring past their steel mills. During the past fall and winter floods of considerable magnitude occurred on the Pacific coast, and at Washington, D. C., there was a high water of almost record proportions.

Finally, in the parade of the last 12-month period, we come to the April and May 1943 floods here in the Midwest. Excessive rains forced the Missouri, Illinois, Upper Mississippi, Wabash, Verdigris, Grand-Neosho, Arkansas, White, and St. Francis Rivers out of their banks and, as you know, river stages reaches unprecedented stages in a number of locations. The meteorological conditions associated with these floods were similar except for seasonal modification, with the conditions that caused the record flood of January 1937 in the Ohio Valley.

On the Missouri River the first flood was critical above Kansas City only, and the second flood was serious below Kansas City. But Kansas City was not allowed to escape unscathed, since a third flood in June centered in that reach of the Missouri River and exceeded flood stage by some seven feet. On the Illinois River stages on the lower river exceeded all previous records by several feet, although the discharge was about the same or only slightly in excess of the flood of 1844. On the Upper Mississippi River from Keokuk downstream to Cape Girardeau, Mo., the tributary and local inflows were excessive, resulting in stages only slightly less than the maximum recorded in 1844. In the Wabash Basin new record stages were established in some of the smaller tributary watersheds and the 1913 and 1937 records on the main stem were exceeded at several locations. The recent flood flows out of the Verdigris and Grand-Neosho Rivers were double the previously recorded maximums. It is therefore not surprising that the floods on the middle Arkansas River were unprecedented. The flood on the White River in Arkansas, though major in classification, produced crests from 1 to 5 feet lower than the established high stage records of 1927 and 1915. On the St. Francis River, the Wappapello Reservoir reduced the flood flows to the safe capacity of the leveed channels below the dam. A peak inflow of 88,000 second feet into the reservoir was reduced to an outflow of about 6,000 second feet.

The critical areas in those recently flooded basins are being examined in the light of the 1943 flood in order that the experience gained may be incorporated in the ultimate plans of development. However, in the meantime, we are going ahead with repairs as rapidly as practicable and to the maximum extent possible with funds available for that purpose.

Mention of the word "war" associates our thinking with the outstanding activity of our troops in the recent flood fights. I would indeed be remiss if I did not speak briefly of their fine work in cooperation there with the Coast Guard, the Red Cross, and our own personnel and with the local people generally. When it became evident from weather reports and headwater stages that serious floods would occur, warnings were given, and the prearranged flood-fighting plans of the Department were immediately put into operation. Experienced officers and civilian personnel quickly formed effective working organizations, specified the areas where flood fights might reasonably be expected to be successful, arranged for ample supplies of sand bags to be where wanted, and coordinated the work of our own forces, troops, labor volunteers, and local interests. The work of the troops in particular was magnificent, and in order that you may have an over-all picture, I will briefly summarize the extent of their use. In all basins, over 23,000 officers and men worked with the Corps of Engineers, using Army trucks, amphibious jeeps, assault boats, and landing barges in evacuating thousands of people and tens of thousands of livestock. They saved levees and walls at points where the flood crests exceeded the tops of the structures. They worked around the clock when necessary. At one point they worked 28 hours continuously in knee-deep mud. Records were established for filling and placing sand bags. The soldiers did their job and did it well with the help of over 10,000 pieces of their own equipment.

Many of these same soldiers will soon be on their way to fight for all of us on active fronts all over the world. There they will fight with as much determination against their Axis enemies as they fought with against the surging waters along the flood fronts of this country.

Let us never forget that our Nation is waging a war not on one front, not on two fronts, but on many fronts—from the Aleutians to Australia, from Britain to Buna, from India to Iceland. There is now no major field of operations which does not find either American men or American equipment either fighting or in place ready to fight. The military situation has improved steadily as the wheels of production, the program of training, and the strategy of actual operations have been meshed into a powerful machine of modern warfare. Our enemies played for a quick and cheap victory. They expected the democracies to falter and fail in the face of dramatic initial defeats. Their strategy of war is failing, just as their estimate of the psychology of democratic people has failed.

Today the Allied forces are moving ahead with confidence—sure of their mission. The long battle of the Atlantic is being won, and the Nazi submarine is becoming less important as a menace to our overseas shipping. The security of our convoys in the Mediterranean has been materially enhanced through recent victories.

American and British bombers from England continue to add to the jitters of Hitler with their incessant and effective bombing attacks on German industrial areas. The bomber commands in that theater are rapidly gaining in experience and strength and are delivering air blows on a round-the-clock schedule. In addition to the destruction of installations, these roads are diverting German fighter planes from the Russian and other fronts.

In the southwest Pacific, Army and Navy flyers are reporting spectacular victories in their raids on Japanese installations and shipping. Almost without exception, the Japanese efforts at retaliation have resulted in heavy losses for them. Within recent weeks, against exceptionally adverse weather conditions, our forces have retaken the westernmost outpost of the Aleutians, clipping another of the grasping arms of the Empire of the Rising Sun. In another part of this globe-encompassing conflict the Chinese

Army has taken full advantage of American air support to drive the Japanese from some of their richest rice-producing areas. The powerful Russian Army is maintaining its stand against Germany's panzered might. The eventual outcome of such exploits will be victory for us and our allies, just as surely as there is a God on high.

But never for a moment let us forget that we are waging a "coalition" war and that certain dangers are inherent in this type of warfare. When confronted with such a coalition, it is always the aim of the enemy to breed dissension and distrust among the Allies. Already too many people are interpreting our initial gains to mean that the end of the war is just around the corner. The overconfidence and complacency resulting from such beliefs can seriously hinder our vital struggles for production on the home front. Through overconfidence or through criticism of our leaders and our allies, we can serve the Axis' purposes almost as effectively as if we had furnished them a piece of valuable military information. We cannot, we must not, falter now. We have just begun to fight on a substantial scale. Through united and unfailing purpose, we must continue to fight on through shell fire and hell fire to a complete victory for the everlasting good.

There can be no lack of incongruity, however, between a complete devotion to our primary job of winning the war, and the hard-headed desire to win the peace. Although long months of effort and heartache are undoubtedly ahead, this was is not going to last forever. We can well devote some time to planning for our post-war activities.

The control of floods and the conservation of water for agriculture, for the development of hydroelectric power and for other purposes are important subjects to which the intelligent people of this country, should apply their best mental energies. Just because problems of this character have not been solved in the past, I refuse to admit that they cannot be solved. If the training, education and development of civilizations is not used to improve our natural resources for the betterment of mankind, then we are failing in civilized procedures. All experience teaches us that the education of human beings has resulted in the solution of problems which were considered unsolvable by preceding generations. I visualize the lands of the entire Mississippi watershed made more fertile and productive by the waters that will be conserved by man. Transportation will be improved and expanded by the same waters, which will also be used for the production of hydroelectric power that can and will lighten the burdens of farm labor. The floodwaters that have devastated the valleys of the streams in this great region must and will be controlled and stored to be used by man for his own benefit rather than to be allowed to destroy his property.

We must plan with vision but we must also make practical plans. In recent years there has been much talk of planning reservoirs for the full utilization of each site. This, of course, should be the ideal plan to be visualized, but such idealism should not prevent or delay interminably the prosecution of a practical plan. There is not enough surplus capital, either governmental or private, in this country to permit the immediate prosecution of all the improvements that we would like to have and that can be used by the people. In many instances, we should plan to execute first the less expensive practical plans with the purpose of converting at some later date these practical plans into ideal plans. This is the kind of planning procedure that has been followed in the alluvial Valley of the lower Mississippi, and the results there demonstrate the soundness of such a procedure.

For many years your association has led the way forward and has refused to recognize defeat. Let us formulate our plans in a practical way with the idealistic ultimate viewpoint ever before us. Let us look forward to a Mississippi Valley that is free from floods and free from drought—a vast region here in the Midwest where every drop of rainfall is saved, and where it is used to increase the output of farms and to decrease the labors and hardships of the people.

Statement of Judge Marvin Jones

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Judge Marvin Jones:

In accepting the responsibilities of the Office of War Food Administrator, I do so with the firm belief that nothing is more important to the war effort and our domestic economy than a sound and acceptable food production and distribution program.

The wide variety of foods we produce and use; the growing amount needed for Army, Navy, and lend-lease; the increased purchasing power of our own people, combine to make the problem difficult. And yet it must be met and solved.

This war is bringing home to the American people the importance of the farmer in our economy and the value of the products of his fields. Our farm people are doing a magnificent production job in this national crisis. Through long hours of hard work, and in spite of shortages of implements, repair parts, and labor, the farmer has stepped up production all along the line.

As I view the present picture, several things are needed.

First. A full allotment of materials for new machinery, supplies, repair parts, shelter, and storage as well as processing facilities. This is being done but must be followed through and continued allocation assured.

The Food Administrator has the authority to present the farm-machinery equipment needs to the War Production Board and if these needs are not met the Food Administrator has the right to appeal to the President. I intend to exercise that authority.

Second. Farm labor has been and will continue to be a problem. There is a shortage of labor in all production lines but much has been done to keep sufficient help on the farms to produce and harvest our crops. I am confident this problem will be cared for. We must keep in mind, however, that war always creates a manpower shortage.

Third. Production requires seed, feed, fertilizer, and credits. These essentials must be planned for well in advance of planting time.

Fourth. A fair return must be assured the farmer for his production. This must be related to other prices in fairness to all.

There are other steps that need to be and will be taken. I expect to counsel with the representatives of farm organizations and also with representatives of industry as to the food program.

Full use should be made of State, county, and community organizations. Food is not produced in offices in Washington. It is produced in the far stretches of this big country. No program can be effective unless it has the support of the American people on a wartime basis.

There is talk about food shortages. This has created fear on the part of some of our people that they and their children may go hungry. We may not throughout the war have all we want and everything we prefer but we will certainly have enough to assure a healthful diet.

Too little emphasis has been placed on one important fact—the American people today are eating more and better than ever before. Our civilian population is consuming 10 percent more food than during the 5-year period prior to Pearl Harbor.

There is a limit to our capacity to produce. The demands are great. First of all, we must supply those in our armed services. Our civilian population must be provided with an adequate diet; and to assure equal distribution, rationing of essential commodities must be maintained. We must bolster the food supplies of our allies.

I have great faith in the patriotism of the American farmer and his determination to do his part in winning the war. I have spent the best years of my life in working for what I conceived to be the best interest of those who live on our farms. As War Food Administrator I expect to do the best job I can with the tools at hand. Conscious of my own limitations, I ask the cooperation of all. I hope that those who are disposed to criticize will make their suggestions and then join the team.

If we work together, plan properly, and recognize the production and marketing problems of the farmer and the processing and distribution problems of the food industry, I am confident we can supply the necessary demands for food, provided, of course, that God in His infinite wisdom blesses us with good weather.

I have the highest regard for Chester Davis. We worked together on farm questions for a number of years. He is an able administrator and I regret that he resigned. I appreciate his assurance that he will cooperate with me in this work.

I am familiar with the splendid staff of the War Food Administration. I am asking the keymen to remain with me and I am sure the entire organization will continue to function in its important work without interruption.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. LAMBERTSON. Mr. Speaker, we are looking for another veto tomorrow, something to make explosives for the Fourth.

Henry Ford, the rugged American, is 80 today. He is a beacon light in a foggy world.

The two Houses have refused to rise above principle and compromise on Watson, Dodd, and Lovett, but they may.

When BEALL, of Frostburg, Md., leaves the District of Columbia, driving home, he is in his own congressional district all the way.

The Upper Body seems to be the immovable force which met head on with

the invincible object, the House, on the three professors.

A delegation from what was Poland sat in the House Gallery today. They are the true object of pity. What would they be in the "One World?"

Crop insurance hangs on the longest of all the items of difference between the two Houses on Agriculture. It may outlive the N. Y. A., which seems to be sinking at this writing.

Everybody knows that HENRY WALLACE would never have dared to jump on Jesse Jones without first talking it over with his Chief. His humble obedience got him where he is.

Two Joneses, Marvin and Jesse, particularly from one State, even if it be Texas, seem to be too heavy. Chester and Elmer Davis were too much. The ones will stay longest who stay nearest, regardless.

The father of scarcity, Marvin Jones, however, no Joseph who saved from the surplus of the 7 good years for the 7 lean ones, has the Nation and the world to feed now. Feeding, after all, is the important thing.

When you call the Navy Department and ask for Mr. Draper he answers his own 'phone, and has for 14 years at least, courteously and definitely. He is what Elbert Hubbard wrote about in the man Rowan who carried the message to Garcia.

National Youth Administration's Training Program

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday June 30, 1943

Mr. LUDLOW. Mr. Speaker, from the beginning of the titanic world war in which we are now engaged I have adopted the policy, in respect to furnishing manpower and implements of war, of following the recommendations of those in the positions of management and leadership on whom rests the primary responsibility of winning the war. I believe it is a sound and patriotic policy. Their knowledge of such matters with which they are in intimate contact should be comprehensive and complete. They are our chosen leaders in the desperate business of making war. If we cannot trust them, whom can we trust?

I have followed this policy in determining what my vote should be in reference to the continuation of the National Youth Administration's training program. My first impression was that the time had come when the National Youth Administration and all of its works should be liquidated and closed out. I was thinking of the old National Youth Administration as we knew it when it was a relief agency and I could see no more reason for its continuance, if as much, as for the continuance of the Civilian Conservation Corps. But knowing that the question would come up for a vote I have made a thorough investigation during the past week which has somewhat changed my viewpoint.

I find that the old N. Y. A. as we knew it and understood it has been streamlined into a training agency. Its overhead has been drastically reduced and it has been shorn of the features that brought about so much criticism. The old N. Y. A. already has been liquidated and in its place we have the N. Y. A. training program which is now in the very midst of training thousands upon thousands of persons for work in war plants and essential industries and which is doing a really important part toward winning the war on the industrial front. I find that there is no other going training program that is just like it; that it enters into a different field and taps a potential source of timber for skilled manpower and womanpower that is not reached by any other training agency. To attempt now to transfer the N. Y. A. trainees to other training activities would hold up and dislocate the entire training program at a time when training should go full speed ahead and it probably would be more costly in the long run. The entire cost of the N. Y. A. training program is less than one-half of the cost of a battleship.

We have one of these N. Y. A. training units in Indianapolis and as a sort of thumbnail picture of what all of them are like I submit for printing in the RECORD part of a letter I have received from Mrs. Ollie M. Weeks of our city, who is much interested in the unit. She says:

As per request in your letter of June 19 relative to information I submit the following concerning the Indianapolis projects of the National Youth Administration: There are 750 young persons receiving training in arc welding, radio, machine shop, aircraft, sheet metal, foundry, pattern making, clerical, and power sewing. All receive 160 hours of training per month. The shops are operated on 2- and 3-shift bases. Despite the great effort and resourcefulness there are still not facilities to take care of youths who need and request training for war industry. This program has been especially beneficial to colored persons who are anxious to accept every avenue that will contribute to the war effort. If your investigation goes far enough you will find that the National Youth Administration has offered us the greatest opportunity for training in vital industries and for making a greater contribution to the national defense and general welfare than any other agency in the history of our country.

Over 600,000 persons are being trained throughout the country in units similar to the one at Indianapolis and in addition to the skills that are being created and developed by this training program the trainees are producing materials for the armed forces worth untold millions of dollars. The trainees, when their period of training is over, are going into the war plants at the rate of 700 a day.

The conclusion I have reached is that the N. Y. A. should be continued as a training program until the emergency is over and should then be abolished outright. If it were possible to offer an amendment to the pending bill I would propose that a provision be written into the bill ending the life of the N. Y. A. at the close of the present emergency.

I submit a letter from Chairman Donald M. Nelson of the War Production Board which is convincing as to the value of the N. Y. A. training program as a contribution to war production:

DEAR CONGRESSMAN LUDLOW: This is in reply to your request of June 19 asking my opinion of the value of the National Youth Administration training program in helping production of war materials and implements.

I believe that the National Youth Administration has done satisfactory work in training young men and women for work in war production plants. It has some 35,000 training stations in the country and last year trained over 500,000 persons, which is a substantial contribution to our manpower needs.

Sincerely,

DONALD M. NELSON.

In seeking light on the need of continuing the N. Y. A. training program for the present I quite naturally asked for the views of War Manpower Chairman Paul V. McNutt, whose responsibility is to see that manpower is furnished to meet the exigencies of the national emergency and I submit for the RECORD the following exchange of letters on this subject:

JUNE 18, 1943.

Hon. PAUL V. MCNUTT,
Federal Security Administrator,
Social Security Building,
Washington, D. C.

DEAR GOVERNOR MCNUTT: I was reminded today that the National Youth Administration now belongs to your family of activities.

In anticipation of a vote on the proposition of the continuance of N. Y. A. when the bill returns from the Senate, I would value your opinion and such information as you can send to me in regard to the wisdom and practicability of closing out this agency at this time. I want to do the right thing, and I need more information.

I take it that we have a duty to cut out duplication and overlapping wherever possible, and I am sure you will agree with that policy. We are told that there are several agencies—perhaps half a dozen—that are training men and women for services in connection with the war effort. If by a consolidation of agencies and the reduction of overhead the same training can be obtained at less expense should it not be done?

I am deeply conscious of our obligation to cut down the terrific expenses of the Government whenever and wherever it is possible to do so.

I know your broad-mindedness, and from your over-all vision of the requirements of the Government in the broad picture, is it not possible for other training activities to take over and complete the National Youth Administration training program, so that the National Youth Administration trainees may proceed to finish their course, and would not this be a saving and in the public interest? Or is the National Youth Administration training program so differentiated from other training programs that this would not be practicable?

I am conscientiously seeking light about this matter, and I would like to know more about the National Youth Administration training program. I would like especially to know what effect the abolishment of National Youth Administration at this time would have on the training program now being carried on by the National Youth Administration. If you can take time to advise

me, I will be appreciative. I would have come down to see you, but I am so interminably busy it is difficult for me to leave the Hill.

With best wishes, I remain,

Very sincerely yours,

LOUIS LUDLOW.

WAR MANPOWER COMMISSION,
June 28, 1943.

DEAR LOUIE: I am in receipt of your letter in which you ask my opinion and such information as I can send with respect to the wisdom and practicability of closing out the National Youth Administration at this time.

I am very glad to have the opportunity of writing you with respect to the values which I believe the National Youth Administration possesses in relationship to the war. I shall forego any expression of the loss which I believe would be involved in the meeting of the long-range obligations of the Nation to its young people in the destruction of this agency and will confine myself entirely to its services to the war.

As you have repeatedly heard, I am sure, this agency has been training during the past year approximately 1,000 persons a day in critical skills needed by the war effort. Of this number, between 650 and 700 find their way each day into the war production plants of the Nation. It is inconceivable to me that any question could even be raised with respect to its value, especially so since I, as Chairman of Manpower and supposedly in a position to speak for that segment of the war effort, have repeatedly stated that this agency was needed and filled a place which no other agency in the training field filled and which no other training agency was in a position to fill.

In Indiana alone the National Youth Administration has turned out more than 10,000 young men and women trained in some particular skill during this past year. If, after you have had these facts presented to you, there still remains in your mind any question with respect to the desirability of continuing this agency, I am submitting letters from one or two war production concerns in Indiana, who state unqualifiedly that they desire the National Youth Administration to continue based upon its service to them.

The Hoosier Lamp & Stamping Corporation, of Evansville, writes:

"We wish to take this opportunity to express to you our appreciation of the training program which you are conducting at the National Youth Administration center here in Evansville. We heartily endorse any preemployment training, especially with reference to war needs. We feel that the training which you are giving your people is especially related to this end. You are aware of the nature of our work, which is devoted 100 percent to the war effort, and we feel that you are qualified to give this type of training which will fit the prospective employee for work in our plant. We wish to assure you of our cooperation in your program, and we hope that you will be able to help us in our employment and training program."

C. G. Conn, Ltd., received a letter from the Navy recently which said that "instruments produced by the men and women of C. G. Conn., Ltd., played a significant part in America's great north African invasion." The personnel director of C. G. Conn wrote the following:

"We are particularly proud of the work we have been doing manufacturing binnacles and compasses, and we would like you to know that the greater portion of the persons employed in these departments are former National Youth Administration trainees. These girls who have taken training at the National Youth Administration center, Route 4, South Bend, Ind., have without exception been excellent in the work performed here, and their training shows an aptitude for precision work that is outstanding. Every foreman who has had National Youth Administration trainees in his department is very enthusiastic about the effectiveness of those persons both as to job attitude and training ability."

And here is what the M. Fine & Sons Manufacturing Co. of Jeffersonville writes:

"For your information we might state that we have taken from the Jeffersonville National Youth Administration shop no less than 30 people who have proved highly satisfactory, and if we were able to reach out today and obtain another 30 to 100 people from your project, you would have our undying thanks. Should you happen to be in this territory we would be glad to have you call and give us the benefit of your knowledge and advice."

Sincerely,

PAUL V. MCNUTT, *Chairman.*

Alaskan Highway

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. MAGNUSON. Mr. Speaker, as this House well knows, for many years, along with others, I have been a very vociferous advocate of building a highway through Canada from the United States to Alaska. We had pretty tough sledding in this matter until the war broke out—now a military highway to Alaska is an accomplished fact. I have also been chairman, for many years, of the Alaskan International Highway Commission. This Commission, prior to the war, made exhaustive studies regarding the feasibility of such a road. Although the present military road does not follow to Whitehorse the route recommended by the Canadian and American Commissions, it is acting as a definite and important connection between the United States, Canada, and the vital frontier that is Alaska. We are hopeful that as soon as practicable a connection will be made to the present road from the so-called Prince George, British Columbia, area to the present military highway, somewhere near the conflux in the Whitehorse area. This, of course, would give the Pacific coast and British Columbia a real Pacific highway—something we in the West have been seeking for many years. I am sure that all this will be done and, of course, until it is done the Commission, myself, the able delegate from Alaska, Mr. Dimond, the Foreign Affairs Committee, and others, will continue our strenuous efforts to accomplish the purpose.

But further than that, Mr. Speaker, we believe these conversations with our northern neighbor, in view of present world conditions, should be broadened to include not merely highway routes but rail connections and air routes. All these will be increasingly important when peace comes to the world.

After all, the most cursory examination of the problems and possibilities of the Pacific give rise to the inevitable conclusion that there will exist a north Pacific empire. Its proper development will be mainly contingent upon how deep and how intelligent Canadian-American relations become.

The airways issue, for example, is already an integral part of the highway problem. Certain military airfields exist in the interior of Canada which provide the main reason for the establishment of the Alaska Military Highway, and incidentally the only reason, so far as we can learn, for its interior location. No commitments have been made on the part of the Canadian Government for the availability of these fields by both countries after the war. Both countries have spent a great deal of money upon them. I maintain it would be to the best benefit of our two great and friendly nations that these fields and these roads be maintained after the war. It may be that the importance of the interior road will lessen when peace returns, but nevertheless it will still have a great value. If a connection is built along the more convenient and practical route, north from British Columbia, it will increase in value with airfields also along its route. All these things are going to be a vital part of the airways proper when you consider it on a global basis.

Canada and the United States should have no fear of each other. The international boundary of over 3,000 miles, unfortified for more than a century, should provide eloquent testimony to this. We are sure that a satisfactory solution of these international problems will be had, but we know that they only can be had by constant attention to the great importance and possibilities that are now looming large for the future of the North Pacific area. In my opinion, it is to be the great development in the world to come.

People and industry are fast revising their concepts regarding the economic and strategic importance of this area to world trade. Polar project maps change all thought with respect to trade routes of the future. Alaska and the North Pacific region could easily become a way point for much of the commerce of the world, and definitely for all of Asiatic commerce.

In order that there be as complete an understanding as possible of this situation I would like to point out to the membership, through the medium of the RECORD, some succinct and intelligent observations on this question. They are resolved in two articles. One on the North Pacific region, and the other relating to the same subject by Charles Lucrin Shaw, an able student and observer of this section for many years. I wish I could also insert the maps accompanying these articles. They are revealing and startling. Both articles, as well as many others, have appeared in the trade magazines through the instance of one of the ablest observers of the Orient and the North Pacific region, Mr. Miller Freeman, of Seattle.

Mr. Freeman has been a pioneer in these matters. Had his far-sightedness been heeded much of our difficulty with the Japanese Empire might have been averted. Long before others even gave it a thought, knowing the Japanese as he

did, he advocated the theory of this North Pacific development as a buffer and a mailed fist in the face of Japan. Had this been done Japan would not have dared to attack us.

The new outline of international development for the North Pacific region has been intelligently blueprinted by Mr. Freeman and his associates. The articles are provoking food for thought. Both eastern United States and eastern Canada know too little and understand less about this great area. The decent and logical development of the same in the post-war world makes it necessary that they do know now what we are fighting about in the Pacific and what Japan covets, as she coveted the southwest Orient.

These articles, as strategic in peace as in war, are as follows:

OUTLINE OF AN INTERNATIONAL DEVELOPMENT PROGRAM FOR THE NORTH PACIFIC REGION

The outbreak of war has changed overnight the comparative isolation of the North Pacific region to a key position in the world. Hundreds of millions of dollars are being expended for defenses, the construction of highways, airways, and pipe lines traversing the immense stretches of western Canada and Alaska. While this development work is now being rushed through to meet the immediate threat of invasion, there will be much of permanent benefit in opening up heretofore inaccessible areas.

The two Governments of Canada and the United States have just created a joint economic committee to undertake a cooperative study of the North Pacific area—Alaska, Yukon Territory, northern British Columbia, and the Pacific Northwest States. This region embraces about 1,000,000 square miles. Early in April, a permanent office to direct the study was established at Victoria, British Columbia, in charge of Russell K. O'Dell, assistant to Dr. Charles Camsell, Deputy Minister of Mines and Resources for Canada. O'Dell emphasized that the present activity is concerned with research, not development—that there is no question or thought of joint administration of any territory.

A statement previously issued by B. H. Kizer, who was first authorized by the Washington State Planning Council to explore the possibilities of collaboration of the United States and Canada in the study based on memoranda by J. C. Rettie, J. L. Fisher, George Sundberg, and R. F. Bessey, gives an outline of the proposed joint international research program.

The region to be studied is one of the large undeveloped sections of the world, in which we find a challenge to resource development and settlement; where a strong community of interest has already provided a framework and habit of cooperation, and where results may be expected that will serve as a demonstration of the fields, methods, and possibilities of international collaboration.

From the standpoint of specific development projects of a physical character chief interest will be centered at present on Alaska, Yukon Territory, adjoining parts of the Northwest Territories, and Alberta, and that part of British Columbia north of the Canadian National Railway. Blanket development is not contemplated—only certain strategic areas are likely to be considered for intensive development. In the study of overland transportation problems, however, a rather wide area of the western part of the North American Continent, both in Canada and the United States, will be considered.

A prime essential in the study is the active leadership of our own western citizens. We should ourselves join in dealing with the problems of the region, rather than to have our destiny ordered for us by governmental agencies and private organizations located on the other side of the continent.

If Captain Vancouver, on his voyage of exploration along the North Pacific coast in 1792, had sailed into the Columbia River instead of into Puget Sound, all of the Columbia Basin, the Willamette Valley, and perhaps as far south as the California border and east as far as Salt Lake might well have become a British dominion. Certainly, the entire Pacific Northwest area would have been under one flag. There would have been no boundary bisecting this region along the forty-ninth parallel, with its economic, political and social restrictions of what is otherwise so largely a geographical unit with common problems which should be dealt with for the good of the whole area. The United States-Canadian boundary is unfortified. Said to be the only boundary between nations in the world that remains without fortifications; this in itself is evidence of mutual trust and confidence, symbolizing the aims of the two peoples to live in peace. But, it should not be assumed that because the boundary does not bristle with guns, there is no boundary there. It has been a real barrier, in some respects gradually increasing its restrictions, until the outbreak of war, when there has been some temporary liberalization of the application of tariff, exchange, and other barriers. The practical effect has been to stifle trade, free movement of the peoples and cooperation directed to the sound maximum development of the whole region. Where there are little more than 3,000,000 people in the Fraser River, Puget Sound and Columbia River areas there should be a population of 20,000,000.

The major political divisions of the region, with their areas and population, are:

	Area in square miles	Population (1940)
Alaska	586,400	[1] 72,524
Yukon Territory	207,076	[2] 4,687
British Columbia	366,255	[3] 809,203
Washington	68,192	1,736,191
Oregon	96,981	1,089,684
Total	1,324,904	3,712,289
Adjacent area:		
Alberta	255,285	[3] 788,393
Idaho	83,557	524,873
Montana	147,138	559,456
Grand total	1,810,884	5,585,011

[1] 1939 figures, comprising about 41,000 whites and 31,000 aborigines.
[2] 1941 figures, comprising about 3,100 whites and 1,600 aborigines.
[3] 1941 figures.

Sources: Census of Canada (preliminary); U. S. Census.

Within the area the population is concentrated in relatively small sections: In Oregon, the Willamette and lower Columbia Valleys; in Washington, the Puget Sound district, Spokane, and the Yakima Valley; in British Columbia, the vicinity of Victoria, Vancouver, and the lower Fraser Valley; in the Yukon Territory, the Whitehorse and Dawson districts; in Alaska, the southeast coastal strip and the central railroad belt. The remainder of the area is either sparsely settled or totally uninhabited. At present, over one-third of the area's total population lives in the five cities of Seattle, Portland, Vancouver, Tacoma, and Spokane. The strip of land from Vancouver and Victoria south, including Puget Sound and the lower Columbia and Willamette Valleys, includes about 70 percent of all the people in the whole North Pacific area.

This leaves the largest land area of the region almost vacant. Let us point out that Alaska and Yukon Territories have between them nearly 800,000 square miles and only about 75,000 population (of which 32,000 is aboriginal). The Scandinavian countries—Norway, Sweden, Finland, and Denmark—located in a position on the European continent corresponding to that of our territories on the North American, contain 450,000 square miles and 17,000,000 population. In other words, our country is almost twice as big but contains only one-half of 1 percent of the population of Scandinavia. We should, of course, quickly add the caution that we cannot expect Alaska-Yukon ever to be as thickly populated as their European counterpart in the same general latitude.

Of all the great quarters of the continent the Northwest has been explored and settled most recently, and even now the process is nowhere near complete.

During the period 1860 to 1930 people were attracted to the Northwest by the substantial natural resources of the region—the furs, the forests, the fish, the gold and other minerals. In the depression years of the 1930's a large number of farm families from the drought-stricken Great Plains migrated into the Pacific Northwest States and into British Columbia in search of better land. A flow of workers to the war industries and military base construction jobs in the Northwest began in 1939 and has accelerated right up to the present time. Shipbuilding in Portland, Seattle, Vancouver, and Prince Rupert; airplane construction in Seattle; port improvements in Prince Rupert; aluminum manufacture in the Columbia Valley; Army and Navy base construction at many inland and harbor points in the area; and road building and airfield construction on a large scale are among these activities. The War Production Board order that all gold mining cease except for very small operations, will cause a considerable depopulation of interior Alaska. If Canada adopts a parallel policy, the same thing will happen in the Yukon and in northern British Columbia unless these men can be absorbed in other approved mining operations.

At the present time the North Pacific area is going through a period of remarkable change. From a region in terms of war strategy. In order to defend the populated parts of the North American Continent against enemy thrusts from the far side of the Pacific Ocean and in order to lay the groundwork for purposes of offense across the North Pacific, Canada, and the United States have embarked on a program of constructing vast improvements in the transportation facilities of the area.

The old problem of this northwest frontier will remain. There will still be insufficient capital for full development. The area will still depend on the industrialized Midwest and East of the continent for many of its industrial materials. The high dependence on extractive industries, such as mining, timber, and fisheries, will not disappear. The climate will continue to impose sharp seasonal fluctuations in industry and the population of the area will for a long time still be small. Large amounts of wealth will continue to be drawn off to other parts of the world which are more mature economically. Freight rates, whether by railroad, truck, ship, or plane, will remain relatively high because of the natural difficulties of distance, mountains, and climate. The transportation problem which so long handicapped the economic growth of the area, will not be completely solved by new construction.

However, the needs of the war are resulting in millions of dollars being invested in improvements to the transportation routes of the area. These may be sufficient, if put to effective use in the post-war period, to bring in their wake a considerable development of many of the resources all the way from the Columbia River to Alaska. If the northern part of the area has been held down in a vicious circle of underdevelopment (scanty population, inadequate transportation routes, high cost of living, etc.) then

it is entirely possible that the circle will have been cut by the provision of a vastly more adequate transportation system.

The post-war world in all likelihood needs relatively undeveloped areas in which demobilized families can settle. The post-war world will need also vast opportunities for profitable public and private investment. The vigor and forethought which go into laying plans now for post-war development, in areas such as the North Pacific, will in some degree determine the whole future of that world. Courageous policies embodying international cooperation are an obvious necessity.

Almost all the large problems of the North Pacific region are common problems of Canada and the United States. On both sides of the international boundaries are wild, vast, undeveloped, and inaccessible areas. These are almost unoccupied and because of their characteristics can be considered as forming one of the truly "backward" areas of the earth. This is particularly true for the more northerly sections—Alaska, Yukon Territory, northern British Columbia, and adjoining parts of the northwest Territories and northern Alberta.

The general problem of this area is one of reasonable use of its resources for the benefit of both nations, for the benefit of the area itself and for a general increase in wealth and standards of living, not only in these nations but throughout the world.

Security against foreign aggression is one of the dominant interests of this area. The efforts to achieve security have already wrought great changes there. In the present struggle Alaska has been recognized as a key to the security of both the United States and Canada. The effectiveness of the key depends upon the strength of the whole North Pacific area. An answer to the problem of security lies in bringing about a degree of exploitation of resources, occupancy of land, expansion of industry and improvement of transportation to make this strategic area stronger economically, considerably more self-sufficient and more readily accessible. This last must be achieved through providing means of transportation suited to all the kinds of traffic likely to develop in the area.

In the North Pacific area transportation is distinctly an international problem, whether sea, air, rail, road, or pipe-line transportation is involved. The problem is not only one of regional transportation but of world routes. The North Pacific, and especially Alaska, is the hub of newly developing airways on the main line between the United States and two of our most important Allies, Russia and China. The airplane is emerging as an important commerce carrier and courier just at the time we begin to realize that our destiny is linked most closely with that of these people to the west of us. History, geography, and invention conspire to make the North Pacific a place of supreme importance in the new day which is dawning. It is obvious that North Pacific transportation is an international concern of the first order and that the international cooperation now being demonstrated there with respect to transportation lines for prosecution of the war should be continued for broad aims and high rewards after the struggle is won.

It is probable that plans and policies that may be worked out for colonization and settlement in the North Pacific area will have demonstrational values in the anticipated world-wide problem of resettlement of dislocated people. The end of the war is certain to find large numbers of people determined to get away from Europe, where two wars in one generation have destroyed resources, homes, millions of people, institutions, human values—in some sectors everything but the soil. For the Dutch, French, Belgians, Poles, Czechs, Finns, and Scandinavians, possibly for others, the urge to leave will be stronger than it has been at any time in history. Many of these people will be in desperate condition. In the countries overrun by Germany the people have seen their equipment, livestock, seed—everything—stolen from them or destroyed. They will have nothing but their skills and a desire to build new homes in a new land.

While the opportunities for colonization and settlement in the north Pacific region are not vast, they are tremendously important from the standpoint of resources development and security. The problem involves development of a policy and plans for immigration, settlement, and land development. These policies, while not letting down all the immigration barriers, should permit rational settlement by foreign groups on the basis of assimilation into the regional and national economies of both nations. Obviously parallel policies on the part of Canada and the United States would be very desirable.

Industry, too, should be developed with an eye to improving the security of the area through the attainment of some better degree of self-sufficiency, to provide strong local support for the military establishments, for bases, for the transportation system, and so forth. Industry also would contribute strategic and essential materials—known to exist in some quantity—to national industry and the national economies. Local industries will be based primarily on the mineral wealth of the area—the extent of which is not at present known—and on services to enlarged local establishments and activities.

Answers to the industry problem lie in the fostering of optimum development of the area and use of its resources. In industrial fields the pooling of raw materials and markets—in contrast to destructive competition, duplication of effort, and blanketing of development by trade barriers—are important international aspects.

Since the North Pacific front affords the closest approaches from America to Asia by land, sea, or air, the significance of the area from a trade standpoint and the opportunities in this field are very great. Potential advantages await both of our Nations in the cooperative use and development of this front and its terminal facilities in connection with world reconstruction of physical facilities, industries, transportation, and commerce.

Looking at the more regional aspects of the trade problem, the area is one in which physical and political boundaries and barriers have in the past played a large part. The war has helped wipe these barriers away, at least for the present. An unparalleled opportunity will exist after the war for demonstrating that there can be amicable and natural solutions of such problems between nations. Better access across Alaska, to the Yukon Territory, and to northern British Columbia from the sea, will be advantageous to Canada, and access to Alaska by way of western Canada will be advantageous to the United States. This suggests the increased use of free ports and shipments-in-bond, as well as a reduction of the formalities for persons wishing to cross the borders. In this last resspect the United States might well conform more closely to Canadian practice.

The broad problems of the North Pacific break down into a number of important major phases—transportation, settlement, industry, agriculture, trade, travel, and recreation, and so forth—in all of which parallel, harmonious action on the part of both nations in exploration, research, planning, development, and trade policies is absolutely essential if this area is to realize its potential development. International cooperation of a high order will be called for. There are a number of excellent examples of collaboration between the two nations, including the international halibut and salmon commissions; the fur seal convention; international control of boundary waters; and overland transportation. In the latter field the military highway built last year through Canada to serve Alaska has been an impressive achievement.

Pacific North America—Strategic in Peace As in War

(By Charles Lugrin Shaw)

A friendly tide is rising in Pacific North America.

It is a warm, invigorating tide bearing the happy burden of good will and collaboration between the people of the United States and Canada.

You can glimpse the effects of this smooth-flowing development in countless ways and places—in the perfectly functioning program for joint defense of the West coast, in the readiness of both countries to share their human and material resources to mutual advantage, in the realization by many businessmen and industrialists of British Columbia and the West coast States that the road to tomorrow's wealth and security lies in the expansion of trade between North and South rather than in dependence on transportation routes, markets, and sources of supply across the mountains between West and East.

You can see the spirit of teamwork being transformed into action in the building of air bases across British Columbia and the Yukon primarily for the service of American war planes roaring north for the protection of Alaska and in the construction of the Alaska highway, largely across Canadian territory, for a similar objective. You can see it, too, in the improvement of British Columbia harbors for the handling of American military and naval supplies, in the laying of a 400-mile pipe line from the Norman wells in Canada's Mackenzie River ocuntry to Whitehorse in the Yukon to relieve the pressure on California's oil fields in meeting the north's wartime needs.

And these things are only the beginning.

It is just as well to recognize the existence of this influence now and to appreciate its full significance, because no other force possesses greater potentiality for shaping the future destiny of the Northwest on a constructive pattern; no other instrument can so easily guarantee the fullest and most profitable realization of the area's natural assets.

The events of the past year or so in this northwestern empire are stimulating and encouraging to us, but to the war makers of Japan they are very bad news indeed, and it must be poor consolidation to the little brown men of Hirohito's military clique to realize that they themselves are largely responsible for the speed with which this new situation has been brought about.

When Tokyo allied itself with the Axis early in the war Canada received its first tip-off of happenings to come, and so did the United States. While Congress appropriated funds for the fortification of Alaska and the establishment of military bases there, Canada put into motion plans for the reinforcement of her own western shores. Both the western nations fortunately realized, in time, the strategic value of Alaska in offensive action against hostile powers in the Far East, just as they appreciated, in grim reality, the vulnerability of that northern frontier to attack. Military men in Canada and the United States remembered the warning uttered in a more complacent age by the late Billy Mitchell that Alaska held the key to victory in the inevitable conflict in the Pacific.

Canada moved boldly in defiance of Tokyo's protests when she set about the job of establishing a chain of air bases across the wilderness of British Columbia and the Yukon to Alaska. Japan interpreted this as a warlike move in a time of peace, but Canada knew that her security was as much bound up in

the safety of Alaska, isolated except from the sea approaches, as was that of the United States. Canada ignored the yammerings of Tokyo's diplomats and newspapers and got on with the job.

Those air bases, carved out of the forest in a country previously known only to Indians and the occasional trapper and prospector, wrote a new page in history for Pacific North America and in the friendly relations of Canada and the United States. To engineers and surveyors who charted the way by dog team across the snow, and the tough bulldozer drivers and swampers who followed them by tractor, it was probably just another task of blazing a trail into the unknown, but in reality they were rolling back the frontier of tomorrow's peaceful commerce.

By early December 1941 Canada had air bases in operation at such remote and almost unheard-of places as Dawson Creek, Fort St. John, Fort Nelson, and Watson Lake, and huge transport planes and bombers were winging across the snows to the land of the midnight sun. The people of Alaska could breathe a little easier. Their period of overland isolation was ended.

Then came the near miracle of the Alaska Highway. There had been talk of such a project for years. In the Puget Sound country it was discussed usually as a tourist enterprise. In the early 1930's the late Premier Simon Fraser Tolmie, of British Columbia, had envisioned such a road as a means of encouraging the settlement of the undeveloped north. His successor, Premier T. D. Pattullo, had regarded the Alaska highway as a way of making his dream of Yukon annexation come true. A grizzled sourdough mushed overland to the Chicago exposition with his team of malamutes to prove that the route was passable, and Alaskans began campaigning for the highway, because it would provide an alternative to the slow and sometimes hazardous journey by boat along the foggy west coast. But it still seemed a far-away prospect.

The threat of war suddenly made the road to Alaska a vital necessity. There were those who said it couldn't be built; so-called experts who claimed the muskeg swamps of the north would be impassable, who said the heavy snows would paralyze traffic most of the year. But they had discounted the resourcefulness of the United States Corps of Engineers and B ig. Gen. Bill Hoge who were assigned to the job. Within a year the engineers had punched through a passable road to Alaska, while a group of Canadian contractors proceeded with the construction of a wider, more durable highway along the same route. The skeptics were silenced. The Alaska Highway had passed from the dream world to reality.

The air bases and the highway were important steps, but others were to follow. Already considerable progress has been made in the laying of a pipe line from the Mackenzie River to Whitehorse and from there the oil from the northern field will be transported to Skagway and thence to Alaska—another daring enterprise which in peace would have been considered impossible but in wartime an undertaking of first-rate importance.

Expansion in the international Northwest is really rolling now. Every big construction project seems to be merely the curtain raiser for another. The air bases, for instance, preceded the highway. Then came the pipe line, and largely because of the pipe line and the main highway to Alaska a new network of connecting roads is under construction. The public hasn't heard much about these new roads because most of them are in virtually unknown country and because military precautions make it advisable to shroud a good deal of such developments in secrecy.

With so many seemingly impossible things already accomplished, even a railroad to Alaska no longer seems such a remote prospect. The proposed route of such a line has already been surveyed by a group of engineering parties under the general direction of Frederick Delano, the spry 80-year-old uncle of President Roosevelt. Men who know that stretch of country say that railroad construction there would not be costly; the tracks would be laid along a natural trench extending almost to the border of Alaska, a series of lakes and rivers providing easy transportation for construction supplies.

If such a road is built, steel ripped up from abandoned mountain lines in some Western States may provide the rails, and old but still serviceable locomotives now gathering rust in roundhouses across the country may come out of retirement. The railroad to Alaska, built for an emergency, may not be a crack, streamlined proposition in its early years, but it would get the freight through and that's the factor that counts.

The line would probably run north from Prince George, the war-booming little town in central British Columbia through which the Canadian National transcontinental passes to Prince Rupert. This connection would provide the needed link with the west coast and the Middle West, but long-term planners in Pacific North America look forward to another development that will add immeasurably to the value of the proposed railroad to Alaska—the extension of the Pacific Great Eastern Railway which would have the effect of giving Seattle, Vancouver, Portland, and other Northwest cities straight-line rail connection with the far north.

The Pacific Great Eastern, operating wholly in British Columbia and owned by the Government of that Province, was originally conceived as a means of opening up the potentially wealthy area between the Canadian National's Prince Rupert line and the Canadian transcontinental roads through the southern section of British Columbia. The line now runs from Squamish on Howe Sound in the south to Quesnel in the north—a situation which has prompted some critics to say it has neither beginning nor end. But even at that the little 340-mile railroad is more than paying its operating expenses. To make it an effective link in the north-south chain it would be necessary to complete the road from Quesnel to Prince George and provide a feeder line from Clinton or some other town along the southern section of the road to tie in with the transcontinental services into Vancouver.

Premier John Hart, of British Columbia, a resolute believer in the desirability of expanding business between north and south, and a champion of collaboration between all sections of the Pacific Northwest regardless of political boundaries, hopes that the Government's railroad may serve in the manner outlined to weave the interests of the international northwest into closer harmony. Mr. Hart, like many other British Columbians, feels that the great barrier of the Rocky Mountains has fostered a kinship between British Columbia and the coast States that may have tremendous benefits for the entire area. Fast transportation, he realizes, is one of the surest instruments for accomplishing that end.

If the railroad is not built, there is a good prospect of a highway being built north from Prince George to connect with the Alaska road; in fact, such a project is essential if the Puget Sound country and the Coast States as well as southern British Columbia are to avoid being by-passed by traffic to and from Alaska and other northern points now routed via Edmonton and the Alaska highway.

Development of airways will make it easier to maintain contact with the north in future years, and giant transport planes will carry on the job pioneered during the past decade or so by Canada's bush pilots. Aircraft, combined with the other agencies of transport, are hastening settlement in one of the continent's richest regions—a region neglected since the dawn of time but now a field for broad cooperative study with a view to long-term economic development.

The two nations are working together on this project that may have a vital bearing on future development of the whole Northwest, even though the area directly affected is northern British Columbia, the Yukon, Alaska, and a part of the Northwest Territories. No one knows the North more thoroughly than Dr. Charles Camsell, Canada's deputy minister of mines and resources, who, with Dr. W. A. Macintosh of Ottawa, will head the Canadian committee. Dr. Camsell, indeed, was born at Fort Liard in the Northwest Territories, and he has covered thousands of miles by dog team and airplane in the north. Dr. Alvin H. Hansen of Harvard university, and James C. Rettie of Portland, Oreg., the American representatives, are similarly well informed on the resources of the million-mile area to be studied.

They know that this vast stretch of land comprises an area double that of Norway, Sweden, and Finland combined, and that the general nature of the country and its resources is similar to that of Scandinavia, although the population—barely 100,000—is less than one-hundredth that of the three European countries.

They know that the fertile sweep of the Peace River Valley, to mention only one section, has grown grain fine enough to win the world's championship at Chicago; that there are enormous deposits of high-grade coal there; that the geological formations suggest the presence of several major oil fields.

Fur attracted the first white men into that little known land, and gold—the Yukon alone yielded $200,000,000 in its peak years—brought the second advance. Fur and gold may continue for some time to be important products there, but future statistics will have more to tell about production of oil—from Peace River, the Norman field now serving the pipe line to Whitehorse, and the fabulous tar sands of Athabaska; grain and other farm produce from the valleys of the Peace and other mighty rivers; coal from the mountainous seams of Hudson Hope; lumber and pulp from virgin forests that extend to all horizons.

Here indeed is a vast new world for peaceful conquest by commerce and industry and British Columbians have learned to depend on American capital and resourcefulness to help them in the mighty undertaking that lies before them.

One of Canada's greatest provinces, with an area greater than that of Oregon and Texas combined, British Columbia, with a population of barely 800,000, has welcomed the cooperation of Americans in developing an annual industrial revenue of more than half a billion dollars.

Up to the present time probably the most important factor in the development of interior Alaska has been gold mining, but it is the belief of many that in the future greater significance will be attached to its other minerals.

While the amount of prospecting for metals other than gold has been relatively small, substantial reserves of industrial raw materials are known to exist throughout Alaska. The fabulously rich copper deposits of the Copper River country are said to be worked out, but numerous other prospects are reported in southeast Alaska. Likewise, substantial deposits of iron are found in various areas, notably on Prince of Wales Island, subject of a most encouraging report by the United States Geological Survey in 1941.

In the Fairbanks district tungsten is being produced in increasing quantities. Quicksilver operations are underway in the valley of the Kuskokwim, and there have been chrome developments near Seldovia on the Kenai peninsula. The vast nickel deposits on Yakobi Island have been under study, and

antimony mining will likely become of considerable importance in the Kantishna Hill and Tok River areas.

Not to be overlooked are the possibilities for tin mining in the Cape Prince of Wales region, as well as at various placers in other regions—some of which would probably be in production today if more favorably located. Oil reserves such as those at Yakutat will likely aid in the over-all development of the Territory.

The Douglas fir recognizes no international boundary, nor does the sockeye salmon, and Americans have not hesitated to cross the border to help British Columbia build her forest industry to the point where it yields more than $100,000,000 a year and her fisheries more than $25,000,000, and Americans have played their part in the creation of a $75,000,000 mining industry in a Canadian Province probably endowed more lavishly by a diversity of metals than any other.

This unity has been strikingly exemplified in the history-making developments of the past 2 or 3 years—the hastening to reality of aspirations that might otherwise have waited generations for fulfillment. The speed with which so many of these events have come to pass during the emergency of war suggests the rapidity with which other phases of northwest expansion may be realized if the people of both countries are not lacking in faith and determination.

The fact that must not be ignored—the fact that carries with it the most promise for tomorrow—is the comradeship that has prevailed among Canadians and Americans working together toward a common objective. Here in Pacific North America we have seen the rich fruits of a realistic good-neighbor policy among people speaking the same language and upholding the same ideals—the classic example of what two nations in practical cooperation can achieve.

In the years to come it will be our opportunity to prove that what can be done under the stress and pressure of global war can be duplicated, extended, and improved by the same spirit of constructive teamwork, blessed by the influences of peace.

Radio Address of Edward R. Murrow

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following radio address made by Edward R. Murrow over the Columbia Broadcasting System from Philadelphia on June 20, 1943. Mr. Murrow is chief of the European staff of the Columbia Broadcasting System and has been stationed in London for the past 6 years. His reporting of the events prior to the war and during the war has interpreted to America the war situation in all of its ramifications. It might be well for Congress and the American people to ponder seriously the suggestions and comments made by Mr. Murrow on this occasion:

A few weeks ago I heard two Englishmen talking about anti-British sentiment in this country. One of them remarked: "We really shouldn't be disturbed when the Americans say harsh things about the British. After all, they say some quite frightful things about each other." For the last week I've been listening to voices and looking at faces in Washington and here in Philadelphia. We certainly haven't lost our habit of plain talk. And we're friendlier people than we were, riding in crowded busses, sharing taxicabs, doing without several things we thought were essentials, but which we discovered were, in fact, luxuries. It doesn't seem to me that we're complaining very much about rationing, but some of the talk you hear in Washington is a little confusing. The first couple of times I heard someone say "We'll win this in 1944" I thought they were talking about the war. Anyone who does a little listening in Washington these days is liable to get the impression that we're fighting two wars. No one who has seen what's happened to Europe, even before the shooting war began, could deplore the continuation or political discussion, but whatever our domestic political differences may be there can be no doubt that the enemy of this people is to be found on foreign soil, not in Washington.

That city is a bewildering place, all right. There is some border warfare in the uncharted "no man's land" between administrative agencies. There are people who will tell you that the whole thing is a mess—no clear-cut definition of function or authority—three agencies trying to do the same job. A lot of personal jealousies in high places. Some of those things may be true, but they can't all be true. It just isn't possible. For if Congress is stupid and our administrators incompetent, then how is it that we've trained and equipped huge armies, whipped the Axis at their favorite game of economic warfare, and geared our whole economy to war production? I've seen some of the things we've done abroad—the flood of weapons and supplies pouring into north Africa; the great military establishments in Britain and Iceland and Newfoundland. It is the outpouring of a great, strong nation and at the end of the day it will produce victory, but that victory may be delayed, its fruits soured, if our domestic political war takes precedence over the war against our enemies.

That city of Washington is filled with hard-working people. To this reporter it's the hardest working capital in the world. They tell me there are a lot of bureaucrats down there. That's probably true, but bureaus are needed to run a war and men and women are required to man the bureaus and that's how they become bureaucrats. Whatever name we choose to call them they're a lot of hard-working Americans down there trying to help win this war.

The House of Representatives has decided to abolish the domestic activities of the Office of War Information. If the Senate concurs, that organization will fold up. Maybe it should, but there ought to be a reason, and claiming that Elmer Davis is another Goebbels isn't a reason—it's ludicrous. As I understand it, the Office of War Information was established to help win this war. Its success or failure at that job ought to determine its future. No one can be sure what part propaganda and psychological warfare has played so far, but there can be little doubt that the time is coming and soon when the Germans will be vulnerable to a sustained campaign designed to weaken their will to fight. If that job is done well, it might shorten the war by months, and shortening the war by months means the saving of a great many American lives.

Next winter in Europe will be a terrible winter. As it closes in the German people will be weary and wondering. If we have anything to say to them that will be the time to say it. Optimism and courage are pretty hard to hold on to when you're cold.

I'm not competent to speak of the domestic activities of the Office of War Information, but I can tell you that if that organization is wrecked our campaign of political warfare against the enemy will suffer, and I can report that in the opinion of every competent observer, military and civilian, that I have seen in the course of considerable traveling we are not so near to winning this war as to be justified in discarding anything that might help win it.

There are those in Washington who see in this effort to fragmentate the Office of War Information the opening gun in the 1944 campaign, the Presidential campaign. It's difficult—almost impossible—for one recently returned from the fighting fronts to accept that explanation. Healthy political controversy is one of the safeguards of democracy, but it just can't be that any of us are confused about the relative importance of the 1944 campaign and the bloody, bitter campaigns of the winter of 1943.

In Britain, ministers of information came and went with surprising speed. They once talked of forming a club for ex-ministers of information, but the principle of political warfare was never seriously questioned, because it was agreed that it might help win the war. If the Office of War Information can't do anything to help win the war, then we would all agree that it should be abolished, but if it can then those who destroy it, for reasons of politics or personalities, are assuming a considerable responsibility.

Yesterday, Mr. Robert Patterson, the Under Secretary of War, said that Army production was considerably below schedule for the month of May and the first 10 days of June weren't much better. Mr. Patterson was worried about complacency and overconfidence. The belief the war is as good as won. It's part of the Office of War Information job to combat such complacency. Maybe what they need is more money, more time to get on with the job—free from threats of liquidation.

There's been a fair amount of optimism noticeable during the past week. The closing of the Syrian frontier has served to remind us of the existence of the well-equipped Ninth and Tenth British Armies, but their use depends upon Turkey's actions and, while the opening of the western Mediterranean has encouraged the Turks, there is no reason to think that they are any nearer to active participation in the war. The problem that confronts them is one of timing. Their interests demand that they insure their peace, their place in the post-war settlement. Their interests also demand that they enter the war at a time when they can achieve their objective at the smallest cost. And one of their main objectives must be to make it unnecessary for the Russians to come too far into the Balkans.

There have been reports, reeking with optimism, coming out of Stockholm—one of the most unreliable news centers of the world. There have been more stories of Italian peace feelers, but they originated in Algiers, and the climate there seems to be particularly suited to the growth of rumors.

The time may come when the Allies can settle with Italy, if they are prepared to accept a fascism that would be favorable to us instead of favorable to Germany, but that time has not yet arrived. When it does we shall see the second great test of Allied policy. The prospects, so far as one can judge them from talking with responsible people in London and in Washington, seem to be encouraging. I have heard many assurances that we will have no dealing with Badoglio, the House of Savoy, or Grandi, or anyone else who is a good Fascist so long as he thought it would pay.

Today the Berlin correspondent of the Swiss newspaper Baseler Nachrichten was permitted

to send an interesting dispatch out of Berlin. He says the Germans have altered their basic strategy and will not now attempt a major campaign in Russia, that they have decided to conserve their strength to repel an Allied invasion from the west. It's just possible that that is what's happened. Certainly, most military observers in London expected the German attack to get under way something like 3 weeks ago, but, then, London military men have not always been correct in their assessment of the position in Russia. I remember when Germany first attacked Russia the estimate was generally given as 6 weeks.

We are engaged in a campaign of nerve warfare against the Axis and in a campaign of that kind, attempting to mislead them, we're in some danger of misleading ourselves and the conquered people of the continent. If the Germans have in fact decided to follow a purely defensive strategy it is certain that they hope to hold us off until the Allies fall to quarreling amongst themselves. Exaggerated hopes—optimism about an early and cheap victory—might form good ground for quarrels and disappointments later on. I don't know any more than you do about how long this war will last, but I have had the opportunity of talking with a lot of men who will be in charge of the fighting and every last one of them talked in pretty solemn terms about the price we shall have to pay and the time it will take to do the job. I have yet to meet one who expects the conquest of Europe to be either easy or quick.

One of the problems that confronts the British and ourselves is the simple one of communications. Consider the present labor crisis here. The other day I noticed a story by an able journalist, Raymond Clapper; he was writing from London, and he reported that it was quite impossible to explain the coal dispute to the British people. That's certainly true. But that isn't because the British journalists here have done a bad job in reporting it. Their dispatches have been good reporting. There are plenty of people in Britain disposed to sympathize with the claims of the miners. Their record in Britain has been one of prolonged bitterness between miners and management. But the principle of collective bargaining and industrial arbitration has long been accepted. There is wartime labor legislation in Britain, and I suppose it would be called restrictive. It simply gives the right to tell all workers in essential industries where they shall work, and for how much and for how many hours. They can't quit * * * they can't be fired unless the representative of the Minister of Labor agrees.

Labor is under the control of Ernest Bevin, an old-time trade-union leader who enjoys the respect of the workers, and labor is conscripted and that includes women. Single women may be called up and sent from the south to the north. They may be taken out of textile factories and directed to go and work in ammunition factories. These regulations are sweeping, and they tie the worker to his job. Persistent absenteeism is punished by fines or imprisonment, and some of the fines and some of the terms of imprisonment are heavy, indeed. But it was realized at the beginning that legislation to control only labor simply would not work. So along with labor legislation went what was called the excess-profits tax, which just meant that business profits above the pre-war level would be taxed 100 percent. Then if prices of food and essential goods were not the force of demand for higher wages, something had to be done about that. So there was established a system of government subsidies designed to keep prices down. The system doesn't work perfectly. Much of it probably wouldn't work at all here for our problems are different and in many ways more complex, but it is based on one principle, and that is that sacrifices, whether of money or personal liberty must be made as equal and as universal as possible. And it was based on something else, too, the realization that unless labor and business gave up some of their freedom of action they stood in mortal danger of losing it all. In those days the danger was apparent. It came down out of the night sky. You could go down to Dover and look across the Channel and see it. Our danger may not be so apparent, but that doesn't make it less real."

Thirteen-Point Peace Plan

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I insert, by request, a certain peace plan as outlined by Mr. Frank E. Vanderhoof of this city:

VANDERHOOF 13-POINT PEACE PLAN TO ELIMINATE FUTURE WARS AFTER VICTORY

1. An organization or association to be formed among the United Nations, and those others which will have been freed from the bondage of Germany, Japan, and Italy.

2. These nations large and small shall be permitted to set up their own form of governments, without influence or demand.

3. These nations shall set up a new code of international law.

4. Present enemy nations shall not be barred from membership in such organization or association.

5 Each nation in association, to be acceptable to membership must adopt or write a constitutional amendment, waiving all right by power of their government to declare war, unless attacked by forcible arms. The association to decide what constitutes forcible attack.

6. All power to so declare war must rest with the people of each respective nation, by popular vote.

7. The armament of each of these nations shall not be in excess to that which will be necessary to maintain internal order. Size of each respective army to be determined by the assocation or union.

8. An international chamber of commerce to be organized with equal representation among these United Nations, to create markets and guide in the fair distribution of raw materials and manufactured goods. The main object of such chamber is to eliminate competition among nations as much as possible. Tariffs of each member nation to be regulated by the association.

9. The principal of freedom of religion must be a point of adoption among these nations. This to be the constitutional right of all the peoples of these respective nations.

10. The principal of freedom of trade, of the seas, and in the air must be adopted.

11. Any nations not joining this association or union, by adoption of agreement as set forth in paragraphs 5, 6, and 9 shall be cut off from international trade, postal exchange, and diplomatic relations with all nations of this association. Citizens of the outlawed nation will not be permitted to enter the boundary of any of the associated nations.

12. Each nation of these United Nations, both large and small shall have only equal representation in this association. Territorial claims and boundary disputes to be settled by the association.

13. A sizable international police force or army to be maintained in readiness to occupy any aggressing nonmember nation. Also to see that the laws of this association are justly maintained.

O. P. A. Price Regulations on Farm Food Products

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. SCHWABE. Mr. Speaker, the following report of a meeting of farmers living in Howard County, Mo., provides the Congress what I believe to be an up-to-date picture of problems facing the average rural community in my State:

FAYETTE, MO., *June 19, 1943.*

A REPORT OF A MEETING OF HOWARD COUNTY FARMERS

A group of Howard County farmers studying transportation problems met in the court house at Fayette, June 15, 1943, and out of this meeting came the idea that there are more serious problems affecting the farmers personally and directly than those of transportation. The much more serious problem is that of forced liquidation of livestock caused by uncertainties from—

1. The threats of price ceilings on live animals.

2. The price roll-back on meats.

3. The inability to secure feed—either grains or proteins.

4. The lack of sufficient labor for crop and livestock production.

The situation is bound to become worse as long as the Office of Price Administration insists on holding farm prices down during a period of rapidly rising costs of production and labor shortage on the farm. This is certain to reduce food supplies, which in itself creates an economic tendency to inflation and black markets because of the unavoidable condition of an inadequate supply of food to meet an ever-increasing abnormal demand.

The tendency of farmers is to liquidate unfinished animals and, in disgust to let down in all lines of their farming activities. Farmers are attempting to conserve capital, earned the hard way, and to avoid losses on future operations. This situation exists in spite of the fact that patriotism had spurred them to unusual efforts of production in the past.

The Government's present attitude will unquestionably result in the conditions outlined by the Doane Agricultural Service as listed below:

"1. Livestock will be rapidly liquidated.

"2. Farmers' financial losses will be heavy.

"3. The Nation's food losses will be serious."

The committee feels justified in making the following recommendation:

Prices of farm food products will have to be increased if farmers are to produce the needed supplies.

GUY E. JAMES, Glasgow, *Chairman.*
W. W. HARVEY, Armstrong.
JULIUS JOHNMEYER, Fayette.

N. Y. A.

EXTENSION OF REMARKS
OF
HON. WIRT COURTNEY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include a letter from Hon. Gordon H. Turner, manager of Nashville master project of the National Youth Administration, together with a report by Dr. S. L. Smith, chairman of the Tennessee National Youth Administration advisory committee, for the fiscal year just closing:

NATIONAL YOUTH ADMINISTRATION,
NASHVILLE MASTER PROJECT,
Nashville 3, Tenn., June 29, 1943.

Hon. WIRT COURTNEY,
Representative from Tennessee,
House Office Building,
Washington, D. C.

DEAR MR. COURTNEY: Dr. S. L. Smith, of Peabody College, and chairman of the Tennessee National Youth Administration Advisory Committee, suggested that I send you a copy of the report of our work for the year recently prepared. I am attaching one herewith.

Regardless of the future of National Youth Administration, I think we have done a good job and a very necessary job on this master project. I hope you will take the time to read this report. I am sending copies to Mr. PRIEST, Mr. MCCORD, Mr. GORE, and both of our Senators. Since so much has been said for and against the National Youth Administration, and since much of our middle Tennessee work is located in your district (Dickson, Columbia, and Lawrenceburg) you might like to insert this report in the Appendix of the CONGRESSIONAL RECORD. Practically all people in this section who know about our program are strong for it.

Our job has been to train young people for employment by private industry, mostly in defense plants holding war contracts. It is very gratifying to me to know that from this one master project alone approximately 2,000 young people have been sent into private industry during the fiscal year now closing, more than 1,400 of whom have gone directly into war jobs. I honestly believe no Government agency has a better organized and operated program than has my unit of the National Youth Administration. Our supervisory personnel are the best we can find, skilled in their trades and selected because of their ability to lead, direct, and inspire young people, and because of their moral character. There has been no scandal in connection with our program, no grafting, no embezzlement, and, I believe, no extravagance. We have the finest group of young people in training, morally, educationally, and physically, that we have ever had, and our project units stand in the highest favor of the best people in the communities where we operate. Whether we are "dead" by the time this letter reaches you or whether we continue I am sure you will appreciate this information.

If you care to use any of the above statements, with or without my signature, please feel free to do so. I appreciate your high regard for the facts and I believe the great mass of the American people, even the Members of Congress, are still impressed by facts.

Very sincerely yours,
GORDON H. TURNER,
Project Manager.

ANNUAL REPORT OF NASHVILLE WAR PRODUCTION TRAINING PROJECT, NATIONAL YOUTH ADMINISTRATION

(By Dr. S. L. Smith, chairman, Tennessee National Youth Administration Advisory Committee)

As another fiscal year closes, a general report is in order covering the year's work of the National Youth Administration. The Nashville master project has served the 35 counties commonly referred to as middle Tennessee. Project headquarters is located at 434 Stahlman Building, Nashville, Tenn. Work locations are:

(1) Dickson, Tenn.: A project training white girls and boys, housed in a modern facility built by the National Youth Administration in cooperation with the city of Dickson. Modern dormitories, supervised by capable counselors, provide living quarters for the youth. Training is offered in welding, sheet metal, and machine shop.

(2) Columbia, Tenn.: A project serving white girls in the Columbia Institute property. The girls live in the dormitory and are offered training in sheet metal and machine shop work.

(3) Cookeville, Tenn.: A training program in connection with the Tennessee Polytechnic Institute, where training is given in welding, sheet metal, and machine shop, the college furnishing board and room to youth who live out of town by contract with the Federal Government.

(4) Lawrenceburg, Tenn.: A single unit training shop serving local girls and boys in sheet-metal work.

(5) Nashville, Tenn.: (a) Raines School—A power-sewing unit for white young ladies offering training preparatory to employment by needle industries in Nashville working on war contracts. (b) Agricultural and Industrial State College—Multiple shops for Negro girls and boys, offering training in welding, sheet-metal and machine-shop work; Negro youth accepted on a State-wide basis and housed and fed at the college by contract with the Federal Government.

During the fiscal year now closing the National Youth Administration has been training young peoples in shops for employment in war industries. At the work locations on June 9, a reporting date, youth were in training as follows: Dickson, 102; Columbia, 80; Cookeville, 76; Lawrenceburg, 22; Nashville: Raines School, 44; Agricultural and Industrial, 182; total 506. Of the 506 youth in training on the Nashville master project, 324 were white, 182 Negro, and of the 506 youth in training, 256 were male and 250 were female.

It is interesting to note that on June 16, another reporting date, young people were assigned for training at the various work locations of the Nashville master project from 52 Tennessee counties extending from Knox County in the east to Shelby County in the west. Ninety-three young people were in training at the various work locations from Davidson County; 36 from Lawrence County; 24 from Maury County; 21 from Putnam County; 20 each from Madison, Rutherford, and Giles Counties; 19 from Hamilton County; 18 from Dickson County; 17 each from Hardin and Shelby Counties, etc.

The age limits for trainees on our program begin at age 16 and extend through age 24. Reports indicate that approximately half of all trainees are under 18 years of age. Most of the male trainees are under 18, those over 18 years of age being either draft deferred or physically handicapped. All trainees are, however, employable. No boys are accepted for National Youth Administration training who are essential farm workers.

Since the purpose during this year of the war production training program of the National Youth Administration has been to train workers for direct employment in war jobs, it is interesting to observe the actual results obtained. From October 1, 1942, through April 30, 1943, a 7-month period, 820 young people have gone to war jobs from the Nashville master project, distributed by shops as follows:

Dickson: From 98 work (training) stations, 210 youth were sent directly to war jobs.

Columbia: From 45 work stations, 104 youth went to war jobs.

Cookeville: From 74 work stations, 111 youth went to war jobs.

Lawrenceburg: From 25 work stations, 80 youth went to war jobs.

Nashville: (a) Raines School—from 30 work stations, 68 youth went to war jobs.

(b) A. and I.—From 58 work stations, 144 youth went to war jobs.

From shops formerly operating in Nashville and Murfreesboro, 103 youth went to war jobs. By operating some training units 2 and 3 shifts per day, the 330 work stations of the Nashville master project trained and sent into war jobs 820 young people. At this rate of training for the fiscal year ending on June 30, more than 1,400 young people will have been trained by the middle Tennessee projects of the National Youth Administration and sent directly into war jobs—approximately 61 percent of whom are male and 39 percent of whom are female.

The power-sewing training unit for white girls has done an outstandingly good job. From this unit 209 young ladies have been trained and placed in private industry this year, 88 percent of them going directly to garment manufacturers holding war contracts. This is a typical example of how the various units of the National Youth Administration have been geared to meet the demands of the War Effort.

Another interesting thing about the National Youth Administration program this year is the fact that the percentage of female trainees has constantly increased, indicating that the plans of the War Manpower Commission are being realized as more women enter industrial occupations.

Mr. Gordon Turner is director of the Nashville (middle Tennessee) war production training projects of the National Youth Administration, and President Everett Derryberry, of the Tennessee Polytechnic Institute, Cookeville, is chairman of the advisory board of this area. Judging from reports of this year's activities and personal visits, I feel that the work has been honestly and efficiently administered and supervised, contributing substantially to the War Manpower Program. Reports from east and west Tennessee are not at present available, but I understand they, too, have done good work.

Meat Price Regulations

EXTENSION OF REMARKS
OF
HON. H. H. CARSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. CARSON of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

WOOSTER, OHIO, *June 25, 1943.*

At a Wayne County mass meeting of farmers, consumers, packers, processors, and retail meat dealers, held in Wooster, Ohio,

on June 25, 1943, the following resolution was unanimously adopted:

"Whereas a condition of chaos exists in the meat industry in Wayne County, Ohio, causing injury and threatened greater injury to the consumers, the farmers, the processors and packers, and the retail meat dealers; and

"Whereas this condition is due to the present price regulations and to the roll-back system and a proposed insufficient and improper subsidy, which is obviously not designed to meet the variance between costs and selling prices under the present conditions; and

"Whereas this acute emergency is forcing the independent packers and processors in Wayne County, Ohio, out of business, and will so limit the supply of retail meat dealers as to render it absolutely impossible for them to serve the consuming public, and is forcing black-market operations to an unheard-of volume, beyond the enforcement power of any organization or of any number of enforcement officers; and

"Whereas in the present and proposed condition it is economically impossible for the farmer to buy feeder livestock and sell at any price at which they can be slaughtered and sold under the present system; and

"Whereas the natural result of present price ceiling and roll-back policy has been the disruption of the feeding of livestock by farmers, the commercial marketing of livestock, and the packing and processing operations of the entire meat industry, and the practical effect is an unnecessary and dangerous shortage of meat to the armed forces and to the consumer: Be it therefore

"*Resolved*, That the Government be urged to abandon the roll-back policy; that the Congress be urged to defeat the insufficient and inequitable proposed subsidy; and be it further

"*Resolved*, That the expressed intent and purpose of Congress, as contained in existing laws, to provide for and allow an adequate and fair margin of profit to the farmer, to the packers and processors of meat, and to the retail meat dealers, be made effective and be enforced."

COMMITTEE OF FARMERS, PROCESSORS, RETAILERS, AND CONSUMERS,
GUY RICHARD, *Secretary*.

New Deal Alphabetical Agencies

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, the bureaus and commissions brought into existence under the Roosevelt administration have become so great in number that it is doubtful whether anyone in or out of the Government could compile a complete list of them. These agencies have not only usurped the functions of the Congress through regulations, so-called, and curtailed the activities and constitutional rights of our people, but have also placed upon them a burden of expense which can never justify their existence.

However, Mr. Speaker, an incomplete list has been compiled by Mr. E. M. Biggers, of 100 Sabine Street, Houston, Tex., and in order that the people may have an opportunity to see for themselves who and what is responsible for the present confusion in administrative activity and the enormous increase in the cost of the civil arm of the Government, I ask unanimous consent to extend my remarks in the RECORD and include therein a statement by Mr. Biggers, four short quotations from Franklin D. Roosevelt, a list of 103 of the alphabetical set-ups, and a quotation from the Land O' Lakes News.

The matter referred to follows:

ALPHABETICAL AGENCIES CREATED UNDER THE ROOSEVELT NEW DEAL PARTY

File this away. It will be prized in years to come as an index to the "goofiest" period of America's history; as the decade during which we were governed by bureaus, bureaucrats, and "crackpots"; governed by those who were never elected by the people, never accountable to the people, but derived their power by appointment, decrees, and directives.

This list was secured by reading newspapers and magazines, and is as nearly complete and accurate as I could get. There was no list available, and a clipping agency in Washington replied: "The task is too great for us to undertake at this moment, and the cost would make it prohibitive to you."

I also endeavored to get the total annual appropriations of all of the bureaus, but met with the reply that it would "take several months and cost many thousands of dollars" to dig up the financial cost.

I have sought to name only the parent bureaus, no attempt having been made to list the offspring, which would run into the hundreds.

To list the bureaus and departments having the right to undertake real estate transactions alone developed to a research project. The report covers 80 typewritten pages and shows 96 such bureaus in the present Government set-up. Most of them, tax-exempt, are competing with each other and with tax-paying insurance companies, banks, building and loan companies, and private capital.

Additional copies may be had by addressing F. M. Biggers, 100 Sabine Street, Houston, Tex.

"I know something of taxes. For 3 long years I have been going up and down this country preaching that government—Federal and State and local—costs too much. I shall not stop that preaching."—Franklin D. Roosevelt, Chicago, July 1932.

"I accuse the present (Hoover) administration of being the greatest spending administration * * * in all our history. One which has piled bureau on bureau, commission on commission. Bureaus and bureaucrats have been retained at the expense of the taxpayers."—Franklin D. Roosevelt, Sioux City, September 1932.

"The people in America demand a reduction of Federal expenditure. It can be accomplished by reducing the expenditures of existing departments; by abolishing many useless commissions, bureaus, and functions, and by consolidating many activities of Government."—Franklin D. Roosevelt, Brooklyn, November 1932.

"But, remember well, that attitude—the way we do things—is nearly always the measure of our sincerity."—Franklin D. Roosevelt, Butte, Mont., September 1932.

TEN POINTS—THEY COST SO LITTLE. THEY ARE WORTH SO MUCH

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help small men by tearing down big men.
4. You cannot help the poor by destroying the rich.
5. You cannot lift the wage earner by pulling down the wage payer.
6. You cannot keep out of trouble by spending more than your income.
7. You cannot further the brotherhood of man by inciting class hatred.
8. You cannot establish sound security on borrowed money.
9. You cannot build character and courage by taking away man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

America's Fighting Congress

EXTENSION OF REMARKS
OF
HON. FRED A. HARTLEY, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "America's Fighting Congress" by William P. Kennedy, Litt. D.:

PART II. COMPLETING THE RECORD OF HOUSE MEMBERS WHO SERVED IN THE ARMED FORCES, AND OF MEMBERS OF THEIR FAMILIES WHO HAVE GONE INTO THIS GLOBAL WAR

The women in Congress, as well as the men, have given important war service. Today each woman Member has an important post on the major committees engaged on war-emergency legislation. Mrs. MARY T. NORTON, Democrat, New Jersey, is chairman of the House Labor Committee; Mrs. EDITH N. ROGERS, Republican, Massachusetts, and Mrs. FRANCES P. BOLTON, Republican, Ohio, are on the Foreign Affairs Committee; Mrs. MARGARET C. SMITH, Republican, Maine, is on Naval Affairs; Mrs. CLARE BOOTHE LUCE, Republican, Connecticut, is on Military Affairs; Miss JESSIE SUMNER, Republican, Illinois, is on Banking and Currency, considering inflation, price fixing, etc.; Miss WINIFRED C. STANLEY, Republican, New York, is on Civil Service and Patents.

Outstanding among the women Members for important work in the World War is Mrs. ROGERS. She is a member of the Women's Overseas League and the American Legion Auxiliary, by good rights, for she served overseas in 1917. She was with the American Red Cross in charge of the disabled, 1918-22. She was appointed personal representative in care of disabled veterans by President Harding in 1922, reappointed by President Coolidge in 1923, and by President Hoover in 1929. Mrs. BOLTON also was active at that time in public health nursing and nursing education and social service. Mrs. NORTON and Mrs. SMITH did important work on the home front during the World War period.

In the House the war-service records run all the way down from House Leader JOHN W. MCCORMACK, who is an Army veteran of the World War. The House whip, ROBERT RAMSPECK, Democrat, Georgia, who is also chairman of the Civil Service Committee, has eyewitness and family participation in the supreme act of treachery by the Japs that brought prompt declaration of war. His daughter, Dorothy, was in Pearl Harbor when it was bombed and has since married Lt. Jarrel R. Dunson, who was on a destroyer in the battle of Pearl Harbor and is now a submarine officer. His second son-in-law is Lt. John S. Leedy, Army Air Corps.

The House has daily, conspicuous testimony of the calamities of war in the person of Representative WILLIAM J. MILLER, Republican, Connecticut, who attends sessions in a wheel chair, with both legs amputated, having been shot down in an airplane crash in 1918. He had enlisted as a private in the aviation section, United States Army, and served in France for 2 years, where he received flying training and qualified as a military aviator, and was commissioned with flying status. As a result of being shot down, both legs were amputated. He is past national executive committeeman of the American Legion and department commander for Connecticut.

Representative BERNARD W. (PAT) KEARNEY, Republican, New York, whose second daughter, Joan, joined the WAAC's, has a distinguished military record. He advanced from private in the New York National Guard, later in the Cavalry, with 9 months on the Mexican Border, was commissioned Captain in the 2nd Officers Training School, served overseas at St. Mihiel and the Meuse-Argonne, advanced to Colonel, was commissioned Brigadier General and retired in 1940, due to "physical disabilities incurred in line of duty," with the rank of major general. He was decorated by the French Government with the Legion of Honor and the Croix de Guerre. He was commander in chief of the Veterans of Foreign Wars in 1936.

There are 13 House Members whose sons, or sons-in-law, are First Lieutenants: Representatives A. LEONARD ALLEN (Democrat Louisiana), who has two sons in service, both overseas, Maj. Harwell Leonard Allen and Lieutenant Lyndon Blaine Allen, both in the United States Army; Mrs. BOLTON (Republican, Ohio), whose son is Lieutenant Oliver P. Bolton; Chairman CLARENCE CANNON Democrat, Missouri), of the Appropriations Committee, whose son-in-law is Lieutenant Harry B. Hackenthorn; FRANK W. BOYKIN (Democrat, Alabama), one of whose three sons in the service is Lieutenant Riley Smith Boykin, United States Navy; EDWARD W. CREAL (Democrat, Kentucky), whose son is Lieutenant James Grady Creal; CHARLES S. DEWEY (Republican, Illinois), who was a volunteer in the World War, served on the *U. S. S. Mississippi*, was promoted to Senior Lieutenant, and was later Assistant Secretary of the Treasury, whose son Albert Peter Dewey is First Lieutenant in the Army Air Forces, and whose two sons-in-law are Frederick M. Alger, lieutenant commander in the Navy, and Edward Byron Smith, a Navy lieutenant; WESLEY E. DISNEY (Democrat, Oklahoma), whose son Wesley V., is First Lieutenant in the Air Corps; BEN F. JENSEN (Republican, Iowa) whose son-in-law is Donald G. Fitzpatrick, Army; AUGUSTINE B. KELLEY, Democrat, Pennsylvania, whose son, Regis, previously mentioned, is in Anti-Aircraft service in north Africa; MELVIN J. MAAS, Republican, Minnesota, whose son-in-law, is Elmer J. Wood, of the Marine Corps; JAMES A. O'LEARY, Democrat, New York, one of whose sons-in-law is James K. Lucey, Army; whose son and namesake is an ensign in the Coast Guard and whose other son-in-law, John D. Lucey, is also an ensign in the Coast Guard. JAMES W. WADSWORTH, Republican, New York, whose son, Lieutenant Beverly Wadsworth, previously mentioned, is an Army Lieutenant; and DAVID J. WARD, Democrat, Maryland, whose son, Howard P. Ward, is a First Lieutenant in the Army and his second son, and namesake, David J. Ward, Jr., is a lieutenant (junior grade) in the Navy.

One of the outstanding war heroes, "Swede" Larsen, is the nephew of Representative KARL STEFAN, Republican, Nebraska, who was with the Telegraph Division of the Philippine Constabulary during the Felizado campaign in the Philippines. Lt. Harold "Swede" Larsen was in command of the United States Torpedo Squadron 8 at Guadalcanal. "Swede" Larsen was one of the heroes decorated several times for effective sinking of numerous Japanese fighting craft, and was the subject of Ira Wolfert's stories which ran in the Washington Evening Star. Lieutenant Larsen is again somewhere in the South Pacific. His detail of the Navy Torpedo Squadron 8, with other flyers, are credited with halting the Japs' attempt to take important positions in the South Pacific. "Swede" reorganized Squadron 8 and helped the marines hold Guadalcanal. He was born in Omaha, Nebr. Another nephew of Representative STEFAN is Lt. Karl M. Stefan, also a flyer with the United States Navy. He also was born in Omaha, Nebr.

Representative FRED A. HARTLEY, Republican, New Jersey, has a son and one brother in the service. The son, Henry Allan, is an Army aviation cadet; one brother, Alfred, is a Navy ensign, now somewhere in the South Pacific.

Other House Members with sons or sons-in-law in the service include: Representatives WATT ARNOLD, Republican, Missouri, whose son, Sam M. Arnold is lieutenant (junior grade) in the Navy; JOE B. BATES, Democrat, Kentucky, whose son, Joseph Rice Bates, is in the Army Officers Candidate School; C. W. (Runt) BISHOP, Republican, Illinois, whose son, Jack H. Bishop, is a yeoman in the Coast Guard; WILLIAM W. BLACKNEY, Republican, Michigan, whose son and namesake is an Army sergeant; FRANK W. BOYKIN, Democrat, Alabama, whose son James Robert is a cadet in the Army Air Corps, and Richard Ainsworth is going into the Coast Guard; MICHAEL J. BRADLEY, Democrat, Pennsylvania, whose son, Raymond J., is an ensign in the Navy; CLARENCE J. BROWN, Republican, Ohio, whose son-in-law, Robert A. Haynes, is a petty officer in the Navy; PAUL BROWN, Democrat, Georgia, whose son Robert T. Brown, is a Navy ensign; THOMAS F. BURCHILL, Democrat, New York, whose son, John J. Burchill, is an Army private; HENDERSON R. CARSON, Republican, Ohio, whose son-in-law, Leonard W. Snyder, is an Army private; RALPH E. CHURCH, Republican, Illinois, whose son and namesake is an ensign, United States Naval

Reserve; J. BAYARD CLARK, Democrat, North Carolina, whose son and namesake, is a lieutenant (junior grade) in the Navy; CLIFF CLEVENGER, Republicen, Ohio, whose son, John G. Clevenger, is a technical sergeant in the Army Medical Corps; WIRT COURTNEY, Democrat, Tennessee, whose son and namesake is a private in the Army Air Corps; E. E. Cox, Democrat, Georgia, whose son, Lemar P., is a Navy lieutenant; ROBERT CROSSER, Democrat, Ohio, whose son and namesake is a private in the Army Air Corps, and his son-in-law, Charles A. Sweeney, is a lieutenant (junior grade) in the Coast Guard; FRANCIS D. CULKIN, Republican, New York, whose son Francis H. Culkin is a second lieutenant in the Army; PAUL CUNNINGHAM, Republican, Iowa, whose son, Edward P., is private, first class, Marine Corps; JAMES M. CURLEY, Democrat, Massachusetts, who was a House Member 30 years ago, later mayor of Boston and Governor of Massachusetts, has two sons and a step-son in the armed forces—Leo F. and George J., both ensigns in the Navy, and George Dennis, United States Naval Reserve.

Representative CHARLES S. DEWEY, Republican, Illinois, besides having a son first lieutenant in the Army Air Forces, has two sons-in-law, Frederick M. Alger and Edward Byron Smith, in the Navy, the former lieutenant commander and the latter lieutenant. Representative MARTIN F. DIES, Democrat, Texas, chairman of the special committee investigating subversive activities, has a son and namesake who is an apprentice seaman, V 7. Representative J. WILL DITTER, chairman of the Republican Congressional Committee, has a son and namesake who is a seaman in the United States Naval Reserve.

Representative GEORGE A. DONDERO, Republican, Michigan, has two sons in the armed services, Robert Lincoln, an appprentice seaman in the Reserve Officers Training Corps at the University of Michigan, and Stanton G. in the Navy as an ensign at Harvard University. Representative HENRY C. DWORSHAK, Republican, Idaho, has two sons in the service, Henry I., second lieutenant in the Army, and Ward W., United States Military Academy cadet. Representative ALBERT J. ENGLE, Republican, Michigan, who was commissioned first lieutenant in the World War, served at the War Department and in France and Germany for 23 months, and promoted to captain, has a son and namesake a private in the Army. The late Representative Harry L. Englebright, Republican, California, minority whip, had a son, Harry Jackson Englebright, an ensign in the Navy. Representative IVOR D. FENTON, Republican, Pennsylvania, who was lieutenant and captain in the Army Medical Corps in the World War and served 20 months overseas, has a son-in-law, James J. Kernan, Jr., who is an Army sergeant. Representative JOHN W. FLANNAGAN, Jr., Democrat, Virginia, has a son, Francis W., a staff sergeant in the Army Air Forces. Representative ROBERT G. FURLONG, Democrat, Pennsylvania, who served with the Two Hundred and Eighteenth Ambulance Company, Twentieth Division in the World War, has a son, a first-class seaman, Keen A. Furlong, in naval aviation. Representative RICHARD P. GALE, Republican, Minnesota, has a son and namesake who is an Army private. Representative LEONARD W. HALL, Republican, New York, has a stepson, H. Wyndol Carroll, a naval aviation cadet. Representative BUTLER B. HARE, Democrat, South Carolina, has two sons, Robert Hayne and James Butler, both of whom are lieutenants (junior grade) in the Navy.

Representative SAM HOBBS, Democrat of Alabama, besides having a daughter in the WAVES, also has a son, Truman Hobbs, a Navy ensign. Representative PEHR G. HOLMES, Republican of Massachusetts, who was born in Sweden, has a son, George Everett Holmes, a private in the Army. Representative CLIFFORD R. HOPE, Republican of Kansas, who attended the first officers' training camp at Fort Riley, Kans., and served with the Thirty-fifth and Fifty-eighth Divisions in the United States and France in World War No. 1, has a son and namesake, an Army private. Representative ED. V. IZAC, who graduated from the Naval Academy in 1915 and served on various men-of-war. During World War No. 1, for service above and beyond the call of duty he was awarded the Congressional Medal of Honor and was decorated by foreign governments. Because of wounds received as a prisoner of war in Germany he was forced to retire from active service in 1921. He is a member of the Legion of Valor, past commander of the Disabled American Veterans, and the American Legion and national aide-de-camp of the Veterans of Foreign Wars. His wife's father was an Army general. His son and namesake is a Navy ensign, and a son-in-law, Robert Melvin Waller, is an Army staff sergeant.

Representative Ross RIZLEY, Republican of Oklahoma, has contributed two sons and two sons-in-law to the war, R. Q. Rizley, a corporal in the Army Air Corps; Robert S. Rizley, private in the Marine Corps; Melvin S. Camp, Army lieutenant; and Paul Barrere, Army private. Representative BEN F. JENSEN, Republican of Iowa, attended officers' training school and was commissioned second lieutenant during World War No. 1, and is a past commander in the American Legion. His son-in-law, Donald G. Fitzpatrick is a first lieutenant in the Army. Representative CALVIN D. JOHNSON, Republican of Illinois, comes of pioneer stock who landed at Jamestown in 1635. He has three sons under arms today, Lt. John B., Air Corps; Calvin P., Engineer Corps; and Dean F., an Army private. Representative J. LEROY JOHNSON, Republican of California, was a pilot in the One Hundred and Fourth Aero Squadron in World War No. 1. He participated in the St. Mihiel and Argonne drives, and received the Silver Star medal. His son, William A., is now a private in the Army Air Corps. Representative ROBERT W. KEAN, Republican of New Jersey, after graduation from Harvard served in World War No. 1 with the Second Division, American Expeditionary Forces, as a first lieutenant, Fifteenth Field Artillery and was awarded the Silver Star medal and the Distinguished Service Cross. His son and namesake is an Army private. Representative FRANK B. KEEFE, Republican of Wisconsin, has a son, B. F. Keefe, who is a flight officer in the Troop Carrier Command.

Representative WRIGHT PATMAN (Democrat, Texas), after receiving his law degree from Cumberland University, was in the United States Army, 1917-19. His three sons are Capt. Connor Wright Patman, United States Army, aged 23, who enlisted December 10, 1941; James Harold, aged 21, staff sergeant in the Marine Corps in the South Pacific, who enlisted December 18, 1941, and William Neff, aged 16, an Eagle Scout attending Kemper Military School, Bonnville, Mo. Representative PATMAN is a member of the American Legion, the Disabled American Veterans of the World War, although not privileged to serve overseas during the war by reason of a service-connected disability, and an honorary member of the Veterans of Foreign Wars.

Representative JOSEPH P. O'HARA (Republican, Minnesota) served 27 months in the World War, including the American Expeditionary Force, and is past State commander of the American Legion. He has two sons in service—his namesake an Army private and Edward M. a cadet in the Air Corps. Representative MICHAEL J. KIRWAN (Democrat, Ohio) has a son, John Joseph, an Army private. Representative FRITZ G. LANHAM (Democrat, Texas), chairman of the committee that has handled all the war housing legislation, has a stephson, John D. Head, who is a lieutenant, junior grade, in the Navy. Representative WILLIAM LEMKE (Nonpartisan-Republican, North Dakota) has a son, Robert, who is second lieutenant in the Army. Representative EARL R. LEWIS (Republican, Ohio) has a son, Robert N., who is in the Army Medical Corps Reserves.

Representative JOHN LESINSKI, Democrat, Michigan, during the World War and for 13 years thereafter headed up Polish efforts, helped to recruit the Polish Army known as the Haller army that was sent to France. He was also in charge of the sale of Polish bonds and was honored by the Polish Government. He has a son and namesake who is a petty officer in the United States Navy. Representative CLARE BOOTHE LUCE, Republican, Connecticut, has a stepson, Henry Luce III, who is awaiting call to the United States Navy. Representative WALTER A. LYNCH, Democrat, New York, has a son and namesake, a private in the Army Air Forces. Representative J. HARRY MCGREGOR, Republican, Ohio, served in the Field Artillery in the World War. His son-in-law, Monroe Horst, is an ensign in the Navy. Representative DONALD H. MCLEAN, Republican, New Jersey, who was a Senate page 46 years ago, has two sons in the service—Capt. Donald H. McLean, Jr., Service of Supply, War Department, and Edward R., on a special war mission.

Representative MELVIN J. MAAS, Republican, Minnesota, ranking Republican on the Naval Affairs Committee, served overseas in the aviation branch of the Marine Corps during the World War. He is now a colonel in the Marine Corps Reserve, Aviation. His son-in-law is a second lieutenant in the Marine Corps. Representative THOMAS E. MARTIN, Republican, Iowa, graduated from the First Officers Training Camp, Leon Springs, Tex., and received a commission in the United States Regular Army. He served throughout the war with the 35th Infantry, and after his honorable discharge was professor of military science and tactics at the University of Iowa. His son, Richard C., is a cadet in the Military Academy and his son-in-law, Raymond H. Reiser is second lieutenant in the Army.

Representative ARTHUR L. MILLER, Republican, Nebraska, was discharged from the Medical Reserve Corps in January, 1919. His son, Richard K., is a private in the enlisted Army Medical Reserve. Representative CAMERON MORRISON, Democrat, North Carolina, former Governor and United States Senator, has a son-in-law, James J. Harris, a lieutenant in the Navy. Representative JOHN R. MURDOCK, Democrat, Arizona, has two sons in the Army—David N., an Army lieutenant, and John B, an Army captain. Representative REID F. MURRAY, Republican, Wisconsin, has a son and namesake, a pharmacist in the Navy. Representative JAMES A. O'LEARY, Democrat, New York, has a son and namesake, an ensign in the Coast Guard, and two sons-in-law, James D. Lucey, an ensign in the Coast Guard, and John K. Lucey, a first lieutenant in the Army. Representative STEPHEN PACE, Democrat, Georgia, has a son and namesake, a West Point cadet.

Representative JOHN R. PHILLIPS, Republican, California, served in the United States Army during the World War No. 1. His two sons, Carl and Robert W., are in the Air Corps, respectively second lieutenant and corporal. Representative WILLIAM A. PITTINGER, Republican, Minnesota,, has a son, Robert W., an Army private. Representative LOUIS C. RABAUT, Democrat, Michigan, has a son, Vincent C., in the United States Naval Reserve. Representative HOMER A. RAMEY, Republican, Ohio, has a son, Bernard C., Officers' Candidate School, in the Army. Representative JOHN M. ROBSION, Republican, Kentucky, has a son and namesake, a Coast Artillery captain.

Representative ROBERT F. ROCKWELL, Republican, Colorado, has two sons in the service—Robert F., Jr., lieutenant (junior grade) in the Navy and Wilson M., an Army private.

Representative TOM ROLPH, Republican, California, besides having his son, Henry R., a major in the Marine Corps, has another son, John R., an Army private.

Representative ED ROWE, Republican, Ohio, served in the World War in the United States submarine chaser service of the Navy and is a member of the American Legion. His son and namesake is a Navy aviation cadet.

Representative DAVE E. SATTERFIELD, Jr., Democrat, Virginia, served as a commissioned officer in the Naval Flying Corps during the World War. Today he has two sons in the naval aviation service, David E. III, an Ensign and Richard B., an aviation cadet. Representative THOMAS E. SCANLON, Republican, Pennsylvania, saw 1 year's service in the World War. His son, Edward A., is now a corporal in the Air Corps. Representative A. C. SCHIEFFLER, Republican, West Virginia, served in Government units during the World War. His son, Robert A., is a private, first class in the Air Corps. Representative HOWARD W. SMITH, Democrat, Virginia, graduated from the Bethel Military Academy in 1901 and during the World War served as assistant general counsel of the Alien Property Custodian. His son and namesake is an Army captain and his son-in-law, John H. Tonnahill is an ensign in the Navy. Representative JOE L. SMITH, Democrat, West Virginia, has a son and namesake, an Army captain, and another son, Hulett C. Smith, a Navy ensign.

Representative LAWRENCE H. SMITH, Republican, Wisconsin, who was a first lieutenant of Infantry, Thirty-second Division, during the World War, later Wisconsin Department Commander, national executive committeeman, and national child welfare chairman of the American Legion; has a son, John L. Smith, private first class, in the Medical Corps. Representative ANDREW L. SOMERS, Democrat, New York, has a son, Arthur S., a lieutenant in the Marine Air Corps. Representative JOHN J. SPARKMAN, Democrat, Alabama, was a member of the Students Army Training Corps during the World War and is a lieutenant colonel in the Organized Reserves. His son-in-law, T. T. Shepard, Jr., is an ensign in the Navy. Representative JOE STARNES, Democrat, Alabama, served with the American Expeditionary Forces. His son and namesake is an officers candidate school cadet.

Representative MAURICE J. SULLIVAN, Democrat, Nevada, was adjutant general of Nevada during the World War, disbursing officer for the United States Government, and draft executive for the State. He was colonel in the Army of the United States from May 11, 1922, for 10 years. He is author of a book, "Nevada's Golden Stars," a biographical memorial volume of Nevada men who died in the service during the World War. His son and namesake is a lieutenat in the United States Army, Engineers. Representative JOHN TABER, Republican, New York, has a son, Charles, who was injured in service. Representative J. PARNELL THOMAS, Republican, New Jersey, during the World War, immediately after the declaration of war, enlisted in the United States Army and saw active service in the front line. He was honorably discharged as captain, was past vice commander of the American Legion and is a member of the Veterans of Foreign Wars. His two sons in the services are—Stiles, a corporal of paratroops, and his namesake, J. Parnell, who is an Air Corps cadet. Representative R. EWING THOMASON, Democrat, Texas, has a son, William E., a major in the Army, and a son-in-law, Ben Decherd, an Army captain.

Representative JOHN H. TOLAN, Democrat, California, has a son and namesake a lieutenant (junior grade) in the Navy, and a son-in-law, William Gale, a lieutenant in the Army Air Corps. Representative CHARLES W. VURSELL, Republican, Illinois, has two sons in the armed forces, Charles E., lieutenant (junior grade) in the Navy, and H. D., an Army private. Representative RICHARD J. WELCH, Republican, California, has a son, Garrett J., a lieutenant, United States Naval Reserve. Representative MILTON H. WEST, Democrat, Texas, has a son and namesake a lieutenant (junior grade) in the Navy. Representative WILL M. WHITTINGTON, Democrat, Mississippi, has a son and namesake, a lieutenant (junior grade) in the Navy. Representative THOMAS D. WINTER, Republican, Kansas, served in the air service during the World War. His son is Second Lt. Robert G. Winter in the Engineers. Representative JAMES WOLFENDEN, Republican, Pennsylvania, has a son-in-law, John J. Tomalino, a lieutenant (junior grade) in the Navy. Representative CHARLES A. WOLVERTON, Republican, New Jersey, has a son, Donnell Knox Wolverton, an Army major.

Representative ROY O. WOODRUFF, Republican, of Michigan, enlisted as a corporal in the Thirty-third Regiment, Michigan Volunteer Infantry, during the Spanish-American War, and saw considerable service. He served for 2 years in the World War as an Infantry officer and rose to the rank of major during service in France. His son, Devere H. Woodruff, is now a captain in Army Motor Transport.

Representative CHARLES H. ELSTON, Republican, of Ohio, was in the United States Army aviation service during the World War, is a member of the American Legion and Forty and Eight. His son-in-law, Robert P. Dietz, is a second lieutenant in the Army Air Force.

During his third term as commander in chief he headed the good-will delegation of veterans touring the Orient. He served as chairman of the Veterans of Foreign Wars national legislative committee, 1936-38. He is now serving as member of the national council of administration, Veterans of Foreign Wars.

Representative BEVERLY M. VINCENT, Democrat, of Kentucky, served in the United States Army during the World War, 1918-19, and is a member of the American Legion.

Representative JOHN M. VORYS, Republican, of Ohio, was a pilot in the United States Naval Air Service, overseas, in the World War, retiring to inactive service in 1919 with the rank of lieutenant (senior grade). He was assistant secretary of the American delegation, Conference on Limitation of Armaments and Pacific and Far East Affairs (1921-22), and director of aeronautics of Ohio.

Representative COMPTON I. WHITE, Democrat, of Idaho, served in the Army in the Spanish-American War.

Representative RICHARD B. WIGGLESWORTH, Republican, of Massachusetts, served in France as captain, Battery E, and commanding officer of First Battalion, Three Hundred and Third Regiment, Field Artillery, Seventy-sixth Division, United States Army. He is a member of the American Legion, Forty and Eight, Veterans of Foreign Wars, Military Order of the World War, Military Order of Foreign Wars. He was legal adviser to the Assistant Secretary, United States Treasury, in charge of foreign loans and railway payments, and secretary of the World War Debt Commission (1922-24). He was assistant to the adjutant general for reparation payments, Berlin, 1924-27.

Representative JESSE P. WOLCOTT, Republican, of Michigan, during the World War served as second lieutenant, Machine Gun Company, Twenty-sixth Infantry, First Division, and saw active service in France during the Meuse-Argonne offensive. He was State commander and past department commander, Veterans of Foreign Wars, member of the American Legion.

Representative ORVILLE ZIMMERMAN, Democrat, of Missouri, volunteered for service in the World War and served as a private. He is a member of the American Legion and Veterans of Foreign Wars (honorary).

ROSTER OF VETERANS IN THE SEVENTY-EIGHTH CONGRESS

(W1 denotes World War No. 1; W2, World War No. 2. The letter "S" denotes the Spanish-American War; the letter "O" indicates service with the Army; an asterisk (*), Navy service; and the letter "M" denotes service with the Marine Corps.)

National Youth Administration

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

FORTY-SEVEN MILLION EIGHT HUNDRED THOUSAND DOLLARS—COUNT IT

The Senate has voted the National Youth Administration $47,800,000.

That's enough to pay a month's wage for 9,560,000 buck privates in the Army—but that's more men than we have in the Army, Navy, and Marine Corps.

That's more money than the Government will collect in 1 year by its new withholding tax from 136,000 married men with two children each and earning $2,500 a year each.

And what will the taxpayers and the war effort get for this money? The National Youth Administration says its main business is training youth for war industries. The record shows that the National Youth Administration actually trains only 3 percent of all who are trained for war-industry jobs—and that less expensive training and better training is provided by training within industry and by the public schools vocational training.

All that the taxpayers and the war effort will really get from this money is a lot of soft jobs for boondogglers and ward heelers.

The House of Representatives, we think, is the wiser of the two branches of Congress. It voted $3,000,000 to liquidate the National Youth Administration. That's too much. As Senator MCKELLAR has said, the whole shebang "isn't worth two bits."

Proposed "Four Freedoms" Flag

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. MCKENZIE. Mr. Speaker, the following resolution adopted June 28, 1943, by Sons of the Revolution in the State of New York is of interest and should be brought to the attention of every American:

Whereas it appears from statements in the public press that a "four freedoms" flag is projected, symbolic of the United Nations, to supplant the flag of the United States of America in ceremonies overseas. According to the United Press account, "The two-flag system was arranged in unofficial discussions between Chairman Brooks Harding of the "four freedoms" committee and representatives of all the United Nations. In cere-

monies overseas the United States will be represented in a "four freedoms" flag flown beside the standard of the Nation in which the event is held"; and

Whereas the flag of our country was chosen by Congress on June 14, 1777, and was carried by our ancestors in the Revolutionary War, sustained in the War of 1812, the Mexican War, and the other conflicts in which our country has been engaged; and

Whereas it is the emblem of freedom and the symbol of the unity of our country for which our ancestors died and our sons are fighting, and is a token of all that has made America great and for which there can be no substitute: Therefore be it

Resolved, That the Sons of the Revolution in the State of New York, with unyielding conviction, protests and condemns the flagrantly unpatriotic and spiritually destructive proposal to have the United States represented in ceremonies overseas by a "four freedoms" flag, flown beside the standard of the Nation in which the event is held, and demands that no flag other than the Stars and Stripes, adopted by Congress on June 14, 1777, shall officially or unofficially represent the United States directly or indirectly, nor may the Stars and Stripes be merged, amalgamated, symbolized, or in any manner be abridged or be included in any composite of flags; and be it further

Resolved, That a copy of this resolution be sent to Members of both Houses of Congress, the President, the Secretaries of War and the Navy, as well as the Governors of all the States and to the press, to the end that the patriotic citizens of our country be aroused in defense of their flag and all it represents.

Mr. Speaker, let us give credit to the well-intentioned global-minded. Let us cooperate in every way for a real world peace; a world understanding and respect—each nation for the rights, the culture, the ideals of the other. But, Mr. Speaker, let us not forget that we of the United States of America are Americans with our own culture, our own ideals, our own rights, our own "four freedoms." And, all these American privileges are represented in and typified by one ensign, the emblem of freedom, the Star-Spangled Banner. We will not subordinate it to any other.

Winning the Peace

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 22 (legislative day of Monday, May 24), 1943

Mr. PEPPER. Mr. President, one of the ablest addresses which have come to my attention on the subject of post-war organization is an address entitled "This Time We Must Win the Peace," delivered by William G. Carleton, of the faculty of the University of Florida, at the annual district conference of Rotary International, one hundred sixty-seventh district, comprising the State of Florida, at Jacksonville, Fla., on April 12, 1943. I ask unanimous consent that this able address be printed in the Appendix of the RECORD for the notice of Senators and others fortunate enough to observe it. The estimate from the Government Printing Office indicates that the cost of printing the address of Mr. Carleton will be $171.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I

For the second time within a single generation the American people will have an opportunity to build a world peace in the spirit of enlightened internationalism. No opportunity of equal magnitude has ever come to another great people even once. To have failed the first time was tragic for us and for the world. To fail the second time may be fatal to civilization itself.

II

Make no mistake about it, we can build a peaceful world. Wars are not inevitable. Those who claim that warfare among nations is but an expression of human nature are blind. Superficial men always contend that whatever happens to be established at any given time in society is necessary and grounded in human nature. They said that about polytheism and polygamy. They said that about serfdom and slavery. They said that about aristocracy and the divine right of kings.

As a matter of fact, this thing we call human nature is wondrously malleable. Men are largely the products of their training and of their social environment. Is there anything inborn in putting on a uniform, goose-stepping in a regiment, and fighting fellow human beings with guns and tanks and planes? Of course not. Such conduct is man-made, and not inherent in human nature. When we change the social and political setting we will change men's conduct.

Formerly tribe fought tribe, city state fought city state, feudal province fought feudal province. Today tribes and city states and feudal provinces are merged into nations and the conflicts which once were settled by physical combat are now settled by the peaceful methods of national government and national law. Today men don't say that fighting between one part of a country and another part of the same country is "human nature."

The time will come when the conflicts between nations which once were settled only by war will be settled by the machinery of international government and the processes of international law. And then this thing called human nature will respond, as it always responds, to social and institutional changes, and wars between nations will go the way of idol worship and voodooism, human sacrificial offerings and witchcraft, polytheism, and polygamy, human slavery, and the divinity of kings. And then what was once called human nature will be called superstition.

World peace, however, can never come by individual persons proclaiming that they will not bear arms in a national war. It will never come by one nation or even several nations proclaiming that they will not fight. That is the way of the impractical pacifist and is only an invitation to attack by the nations which as yet have made no such renunciation. Peace will never come by unilateral denial. It will only come by the multilateral cooperation of all nations and the substitution of international political and legal machinery for violence as the means of adjusting and compromising the conflicts of interest between the various parts of the world.

III

With respect to the peace there are three distinct classes of Americans. Let us take up and analyze each of these.

First, there are the isolationists. The isolationists are nationalists, and they would express that nationalism by cutting us off from the world and going it alone in the Western Hemisphere. These men claim that there will always be wars, that war simply can't be prevented and that it behooves us Americans to build a system in the Western Hemisphere that will insulate us from them.

But isolationism is an illusion. There is no such thing. The history of the last 30 years shows that isolationism actually means nonparticipation in the diplomatic events that might prevent wars but participation in the wars themselves. Thus so-called isolationism robs us of the opportunity of stopping wars before they start but cannot prevent the shedding of our blood in those wars after they get started. We had no voice in the events that led up to the First World War, yet we poured out our blood and our treasure in that war. We had no voice in the events that led up to the Second World War, yet we are now pouring out our blood and our treasure in this war. Thus by a fatuous policy of our own choosing we have in peacetime no more voice in international affairs than Venezuela or Paraguay or Bolivia, yet unlike them, when war comes our actual world interests force us to do the fighting and the dying. Isolation is in effect taxation without representation. It is equivalent to being called upon to pay a blood tax in wars the making of which we have no voice, a blood tax we probably would not have to pay at all if we were represented in the peacetime councils of the world.

Then there are the American imperialists, who, like the isolationists, are also nationalists. American imperialists claim that wars can never be eliminated, that international cooperation is an idle dream, and that American security must look only to American might. Unlike the isolationists, they contend that in order to protect America it is not enough to retire to the Western Hemisphere. According to them, America must have the strongest army, the strongest navy, and the strongest air armada of any nation on the face of the globe. According to them, America must have protective bases under exclusive American control in Africa, in Asia, and in the western Pacific. According to them, America, operating alone or with shifting allies of her own choosing, must be vigilant and assert herself in every part of the earth.

Now this is nothing but the age-old and discredited system of militarism, imperialism and power politics. This is nothing but the old system of the balance of power with the United States temporarily the "top dog." At its worst, this is the old system exemplified by Sparta, by Rome, by Spain under Philip II, by France under Louis XIV and Napoleon, and by Germany under Wilhelm II and Hitler. And at its best, this is the old system exemplified by Britain when for the last 300 years that country has been called upon to take part in almost every Asiatic and European struggle in order to maintain the balance of power.

Have we no other alternative but the dreary prospect of succeeding to Britain's place as the maintainer of the Asiatic and European balance of power through participation in periodic wars? Such a policy opens up for future generations of Americans a never-ending vista of bloody wars fought in every part of the globe. If we of this generation make such a peace and adopt such a policy we are in effect but unsheathing a sword and plunging it into the hearts of our own sons.

No, there is a better way. That way lies along the pathway of enlightened internationalism.

There is, then, a third group of Americans, the internationalists, who know that both long-run national self-interest and humanitarian idealism dictate that America take the lead in establishing a truly world peace

conceived in the spirit of international justice. These men are determined that mere naked and unabashed power shall no longer be the measure of influence and the standard of conduct in international relations. They realize that we have lived not in an international order, but in an international disorder, an international anarchy, an international jungle. They are resolved that the rule of the tooth and the claw shall be made to yield to an international order in which immorality, irrationality, might, and violence are supplanted by morality, rationality, righteousness, and law.

IV

The path to a truly international peace will be a hard one, but we must not turn back because of the difficulties. Rather we must foresee them clearly, the better to master them.

There are, I believe, six chief barriers to American leadership in an international peace. These are our unwillingness to surrender a portion of our national sovereignty to an international organization; the wartime impulse to visit vengeance upon the Germans and the Japanese and thereby plant the seeds of another war; the failure of some Americans to see clearly that nineteenth century imperialism is a played-out game; our reluctance to make any adjustments or concessions to freer world trade; prejudice in America against cooperating in the international sphere with socialist countries; the temptation to exploit for political and partisan purposes the reaction against participation in world politics which may come when a war-weary nation relaxes its exertions in the hour of victory. Let us analyze each of these.

V

First, there is the American unwillingness to surrender a portion of our sovereignty to an international organization. Even many of those who favor participation in world politics maintain that a continuation of the alliance between the Allied Nations will be all that will be necessary to maintain peace in the post-war world. But that merely means the perpetuation of balance-of-power politics which never has maintained a durable peace and will prevent the development of a pattern of international collective security. Power politics is not enough; we must press on toward collective security.

The small nations of Europe should be joined in regional federations. In addition, a general European federation should be formed with the large nations and these federations as member units. Then on top of this should be built a system of world collective security.

This time, collective security must go beyond the League of Nations. The League of Nations had no international police force and it could only recommend that its member states enforce article 10 or declare an economic boycott. On the other hand, a plan as drastic as "union now," which in effect creates a federal state with power to operate directly on its own citizens, to tax them and to force them into its armed services, is too extreme for our times and would prevent collective security from ever making a start by scaring America and other nations from joining. To begin with we should seek to create an international organization strong enough to be effective in maintaining peace and yet not so strong that present-day nations will not join it. Such an organization should take the form of a confederation with its own police power and air force, maintained by contributions and quotas levied on member states and not directly on the individuals composing those states.

We must not expect that power politics and class politics will be eliminated from this organization, because power politics and class politics are based on conflicts of interest which cannot always be avoided, but with the passage of time and the building of peaceful precedent, these conflicts can be canalized into political, constitutional, and legal channels just as sectional and class conflicts within nations have been so canalized.

Is America less interested than other countries in the building of such an organization? Is America more reluctant to yield up some of her sovereignty to such an organization? I am afraid the answer is yet. What are the reasons for this? There are several. For over a hundred years it was our traditional policy to stand aloof from world affairs. We have had less experience in taking part in international diplomacy, participating in international conferences, and thinking internationally than any other great nation in the world. There is still considerable isolationist opinion in the country. Then, too, we are a young Nation, strong and vigorous, and have never yet suffered in international wars in any way like the degree other nations have suffered. Even in this age of air power, we seem remote from the actual battlefields. Hence many feel that in such an organization we would because of our relative strength, location, and security, give more than we received.

During the months ahead the advocates of an international peace must hammer home to the American people the significance of our being forced into a world war for the second time within a generation and the fact that this is the very last war in which America can escape being in the actual war zone, since the next war, if it comes, will be an intercontinental air war. We must also look into the future and face the possibility that some time nations stronger even then we are may develop in Europe and Asia, and the day may come when we more than some other people will stand in need of an international organization to curb aggression.

VI

A second barrier to American leadership in the building of an international peace is the danger that we shall visit upon Japan and Germany a punitive and draconic peace and thus plant the seeds of World War III. There is a naive but dangerous notion prevalent among Americans that Germany as a nation and Japan as a nation are inherently wicked and must be drastically dealt with. This is what Dorothy Thompson has aptly called the application of the doctrine of original sin to world politics.

This view of innate depravity leads to many unwise proposals with respect to the peace. Some would have us dismember Germany and return her to the pre-Bismarkian days of petty states. This was an anachronism in 1870 and would be a political and an economic absurdity today. Others advocate the armed occupation of Germany indefinitely. This would further fan the flames of resentment and hatred. Still others would saddle Germany with billions of dollars of reparations. This would dislocate world trade and for the sake of revenge give us another unworkable peace from which we would all suffer. Lately there has been made a proposal that we take over and supervise the German educational system. This could only be done by regimentation and armed occupation. It is founded on a grossly exaggerated notion of the influence of formal education on national ideals and policies. It would bring the United Nations into disagreement since the Russians and the Americans would have different views as to what should be taught. And it would defeat its own purposes since such education would become odious when imposed from without. German students would bootleg the old ideas and they would be stiffened in their errors rather than cured of them. Do you not recall how the radical republicans during the reconstruction came down here in the South and attempted to supervise our way of life? What did they get? Not the solid Republican South that they expected, but instead the solid Democratic South.

We are, I think, misjudging the situation in Germany. It is not necessary to resort to Hegel or to mysticism or to so-called racial biology to explain the rise of the Nazis to power. The effect of the last World War on Germany, plus the disastrous inflation of 1923–24, plus the impact of the world depression upon German life, will suffice to do that. In Germany the world depression was the last straw. I am strongly of the opinion that had there been no world depression there would have been no Hitler. The reduction of trade barriers, the operating of world markets, and the restoration of the free flow of world trade will do more to solve the German problem than all the vindictive peace treaties in the world.

There are millions of Germans who hate Hitler even more intensely than we do because they have cruelly suffered at his hands, and these Germans can be trusted to take over Germany and to cooperate with us in the building of an international peace. The Socialists and the Social-Democrats ruled Germany under the Republic, and if the Allies had given them as many concessions as they later gave the Nazis I am confident that the Nazis would never have come to power. There are today millions of Germans who in their hearts are Socialists and Social-Democrats. In the last free elections in Germany and as late as 1933 they polled millions of votes. Their ideals are the ideals of democracy, social democracy, and peace. Let us put them in power, cooperate with them to the limit, and allow them to do for us inside Germany what we as outsiders could not possibly hope to do.

Even in Japan there are groups among the laboring and peasant classes who will respond to the new world now being built. When given a chance, they will reject the conventional standards and fanaticism of the Japanese upper classes. The Chinese know these groups better than we do, and I think the Chinese can be trusted to pick the groups to be placed in power in Japan after we win the victory. When these groups are placed in power in Japan we should cooperate with them to the limit. It is significant that the Chinese, who know the Japanese better than we do and who have suffered bitterly at their hands, never speak of a vindictive peace.

Germany and Japan should be admitted to the international confederation if that organization is to be a truly world organization. If they are excluded, the concept of collective security will become a delusion. In reality, "collective security" will become the old balance of power in another guise—the alliance of those inside the confederation and the counterbalancing alliance of those outside.

Not long ago Herbert Hoover made the remark, "We can have revenge or we can have peace but we cannot have both." A little later HENRY A. WALLACE declared, "We Americans must remember that we are no more a master race than are the Germans." It would be well for us Americans who want a genuinely international peace to proclaim these sentiments up and down the highways and byways of America.

VII

A third barrier to American leadership in an international peace is the hold imperialism has over some American minds. There already is ambitious talk about the necessity for American bases in Africa and in Asia under exclusive American control. Joseph Patterson, publisher of the New York Daily News, has announced that when we Americans conquer the Dutch East Indies we ought to keep them. Several members of Congress from the Pacific coast have come out for American ownership of New Guinea and the Solomons. Colonel Robert McCormick of the Chicago Tribune in an editorial last fall entitled "A Republican World in the Making,"

insisted that at the end of this war we must see that the Dutch get out of the East Indies and the British out of India in order to increase our own opportunity for investments and concessions in those areas. (You will notice that when you scratch an isolationist below the surface you often discover an imperialist.)

Now we Americans must understand once and for all that the old nineteenth-century imperialism is a played-out game. And if we don't learn this simple lesson, then we will be taught it during the twentieth century by events written large and red in blood. We will ignore at our peril the patent truth that the twentieth century is to be one not of more imperialism but of less imperialism.

The colonial and backward peoples of the earth, stirred by new and deep and vital urges, are on the march. The nineteenth century imperialism of the western powers planted the seeds of nationalism among the colonial peoples and today those seeds are bearing fruit. Everywhere those people are awakened to their strength and their rights. Everywhere they are in revolt against political and economic exploitation—in Tunisia under the Destourians, in Egypt under the Wafds, in the Philippines under Manuel Quezon, in India under the Nationalist Congress of Gandhi and Nehru, in China under the Kuomintang of the immortal Sun Yat Sen and of Chiang Kai-shek.

During the past 20 years the western powers have been loosening their holds on the colonial peoples as evidenced by the British treaty with Egypt, the British treaty with Iraq, the French treaty with Syria, the grants of new powers to India in the acts of 1919 and 1935, the Tydings-McDuffie Act with respect to the Philippines, and the Washington conference treaties with respect to China. This trend would have become a full retreat had it not been for the fears aroused by the rise of a cruder and more ruthless imperialism undertaken by the Germans, the Italians, and the Japanese.

And now the crucible of war is further crystallizing colonial nationalism. Under the impact of war, China is developing unsuspected sources of unity and strength.

Morally the United Nations are bound to respect and further colonial rights. Twenty-five years ago we waged a war for the self-determination of peoples. Today we are waging a second war in the name of the same principles. The Atlantic Charter applies to the Pacific as well as to the Atlantic. And the principles of self-determination and of the Atlantic Charter have since been sealed with the blood of the Filipinos on Bataan and with the blood of the Chinese spilled on a hundred heroic battlefields.

Remember, too, that this revolt is not merely against political imperialism but also against economic imperialism. The colonial peoples are determined to build for themselves mass-production industries and modern technology. They have no native capitalist class and no native middle class sufficient to finance these enterprises. On the other hand, they are determined not to pay tribute to foreign concessionaires and the investment bankers of the West. They are determined not to furnish cheap labor for absentee capitalism. Therefore, they are more and more being driven to the development of modern industries by the collective devices of state ownership. This was the method of Mustafa Kemal when, 20 years ago, he freed Turkey from western exploitation. This is the developing method in China, where the new war industries are state-owned.

We must find a constructive solution to the colonial question. We must lift from China all servitudes on her sovereignty. We must give political independence to all peoples who are ready for it—the Egyptians, the Syrians, the Hindus, and the Filipinos—and admit these peoples into the world organization as member states. Victors and vanquished alike in this war must surrender all colonies not yet ready for independence to the world organization, to be held and prepared by that organization for eventual nationhood and ultimate admission to the world organization as member states. The economic interests of the colonial territories held jointly by the world organization should be safeguarded, and all the nations of the world treated equally with respect to access to territorial raw materials, markets, and trade. This solution differs from the old mandate system of the League of Nations because under that system only the colonies of the vanquished nations were surrendered, and then these were parceled out and turned over to specific mandate powers and held by those powers in a manner not differing greatly from mere colonies.

The development of modern industrialism in China and India should be welcomed by us. It will increase the purchasing power and the effective wants of these people, not only for their own products but also for the products of other countries. The industrialization of a country does not injure the older industrial countries; on the contrary, it is usually followed by a great increase in the volume of trade between the newly industrialized country and other countries.

VIII

A fourth barrier to American leadership in a truly international peace is the reluctance in America to make the necessary governmental readjustments in the field of economics. We live today in an international community which in trade, in economics, and in technology is one and indivisible, and our post-war economic adjustments must recognize this interdependence as the most fundamental economic reality of our time. When we defeat the Fascist attempts to put the continents together politically by force, then we must at least find a way to put them together economically by consent.

If international trade is to revive, if the "have-not" nations are to be given a chance, if world prosperity is to return, if this potential era of plenty is not to be perverted permanently into self-imposed poverty, then the neo-mercantilistic barriers to trade which existed in the 1920's and the 1930's—the quota systems, drawbacks, embargoes, prohibitive tariffs—must be removed. Our own high protective tariff was one of the chief contributing causes to the world depression of the 1930's.

In order to get more foreign markets for the products we produce best and most economically, we must lower the tariff and open our markets to those products which we produce less advantageously than other countries. Just which products in America are advantageously produced here and which are disadvantageously produced here is a subject for technicians and research workers, but these decisions must be courageously and wisely made in the post-war era in the interest of greater general prosperity for the Nation and for society as a whole, even though some specific American industries are thereby sacrificed.

IX

A fifth barrier to American support of and leadership in an international peace is the aversion of some Americans to cooperating with socialist states. We had better get over this aversion if we expect to play a leading part in the building of a peaceful post-war world, because when the forces of fascism go down there will be a lurch to the left and additional socialist states are likely to emerge in Europe and Asia.

Too many Americans are thinking of international cooperation in terms of the Wilsonian world of 25 years ago. We must constantly bear in mind that the world with which we must cooperate at the end of this war will not be the Wilsonian world of 25 years ago, but the new world born out of the revolutionary sweep of events of the past quarter of a century.

Whether we like it or not, the truth is that for the past 25 years Europe and Asia have been passing through a socialist revolution. Even by 1914 a socialist party of one kind or another had become either the first or second political party in almost every nation on the continent of Europe. From 1917 to 1920 occurred the Russian Revolution with the result that about one-sixth of the earth's surface went Communist, the most extreme form of socialism. For a time in 1919 and in 1920 the Communist revolution threatened Hungary, Poland, and Germany. In the 1920's socialist parties were in power in Germany and Austria, and "Green Socialism" was in power in most of the states of Balkan and Danubian Europe. The fundamental truth is that had Socialists and Communists been able to bury their differences and present a united front in the 1920's, socialism would have triumphed in Europe in the decade following the Paris peace settlement. It was only because of this division between Socialists and Communists that fascism, which at first was in a decided minority, was able to come to power in Italy and Germany as a counterrevolution to socialism.

During the 1930's middle-class parties and democratic parties were disappearing in all parts of Europe and the twe extremes, socialism and fascism, faced each other in growing hostility. In Germany and Italy the conflict had been resolved in favor of fascism, and socialism had been driven to underground resistance. But in other continental countries the two antagonists faced each other in open and bitter conflict. In Spain this conflict reached a climax in bloody civil war. Even in France, the home of representative government and democracy on the continent, middle-class and middle-of-the-road parties were declining, and Frenchmen were gravitating either to socialism or fascism. In the elections of 1936, the last held in France, the Socialist Party became the first party in France and the Communist Party made tremendous gains. At the same time, Fascist organizations were growing in France and army leaders and politicians of the right—Petain, Weygand, Laval, Tardieu, Flandin, Bonnet—were inclining more and more to fascism. These men seemed actually to prefer German nazi-ism and Italian fascism to any form of French socialism. Out of this internal division came the paralysis of appeasement, the indecisions of war, and the collapse of the Third Republic.

And now the forces of fascism and socialism are locked in gripping and titanic conflict on the continent. In the end fascism will go down and with it will go Hitler and Mussolini and Laval and Petain and Franco and Mannerheim and Antonescu and Horthy. Then will come a lurch to the left and the rise to power of some form of socialism in perhaps every country of Europe. When this stage of the drama arrives, some of our conservatives and imperialists will then clamor for us to underwrite semi-Fascist groups in Europe in order to stave off socialism. But this would make the United States the successor to Germany as the defender of fascism in Europe. Such a policy could not in the end be successful even if we were foolish enough and inconsistent enough to attempt it. Such a policy could not for long prevail against the liberal and dynamic forces of Europe, released and given new energy as the result of our own victory over the Fascist powers.

The triumph in Europe of socialism in some form is not a mere matter of increasing the number of Socialist converts. By no means. All the Socialists and Communists could be dumped into the Atlantic Ocean, and still the victory of some sort of socialism in Europe seems indicated when the Fascists do down. Conditions, circumstances and deep-rooted forces are working a revolution in the older

ways of capitalism in Europe and destroying the independent middle classes upon which that system depended. Even before 1914, capital and economic control were being concentrated into giant syndicates and cartels. Small and moderate-sized businesses were being driven out. Since 1914 the disappearance of the independent middle class and capital-supplying class has been accelerated to revolutionary tempo. First came the economic waste, destruction, and dislocations of the first World War. Then came the disastrous inflation of 1923–24 in Germany and central Europe which liquidated more of the middle class. Then in countries like Britain that escaped destructive inflation came confiscatory taxation which made it less and less possible for the declining middle classes to buy stocks and bonds and finance private industry. Then came the world depression of the early thirties which wiped out more of the middle classes and further increased taxes for social services. Then on top of all this came the second World War within a generation with all of its destructiveness, economic waste, economic dislocations, and economic uprootings. At the same time these events were occurring, the Russian revolution and the revolts in all parts of the colonial world against economic imperialism were closing large parts of the world to capitalistic investments and capitalistic expansion, thereby further liquidating European investments. Thus there has been occurring before our very eyes the processes of deep-seated social revolution in Europe.

In Asia, too, the trend toward socialism in some form seems unmistakable. In Europe the independent middle class has been declining. In Asia it has never existed to any extent. However, the colonial peoples of Asia are determined to develop modern industries and technology. They are equally determined that they shall not pay tribute to western capitalists and absentee owners for the use of foreign capital. Therefore, they are being driven to collective action and government ownership as the means of developing their industries.

We in the United States, too, are moving in the direction of more and more government intervention in our economic life. This trend did not begin with the New Deal and with Franklin D. Roosevelt. It began several decades ago, but the events of the past 10 years have greatly expanded and accelerated it. The war is accelerating it still more. And the controls necessary to prevent the ravages of a post-war depression will accelerate it still more.

Yet, when all this is conceded, there still remains the basic fact that we in America will not go as far or as fast in the direction of statism as Europe and Asia are going. There is a difference in degree, and that difference is considerable. Conditions do not require us to go so far or so fast in the direction of government intervention. We are relatively young. We have a small population and tremendous resources. We do not suffer an economic pressure comparable to Europe and Asia. We do not have the European tradition of class conflict. We still possess the largest independent middle class in the world in spite of its relative decline during the past few decades.

It is precisely this difference in degree in social development and rate of social change that raises the possibility of our failure to cooperate with socialist states at the end of the war. However, our only alternative is to cooperate wholeheartedly with the socialist, social-democratic, democratic, and nonimperialist forces of Europe and Asia, for in this cooperation lies our only chance of achieving a truly international peace settlement. It will enable us to prepare ourselves mentally for such cooperation if we keep certain considerations in mind.

First, if we must choose between fascism and communism, the most extreme form of socialism, it seems to me that communism, even Russian communism, is preferable because it respects the literature, art, music, science, technology, and cultural achievement of all peoples regardless of racial and national origin, banishes racial hatred and persecution, does not in theory exalt dictatorship as the ultimate and ideal form of government in spite of the acceptance of dictatorship as a transitional revolutionary device and whatever you may think of it, possesses a distinct social ethic in contrast with the brutal and tribal dynamism of fascism. Moreover, as the books of Wendell Willkie and Joseph Davies on Russia show us, there is a wide opportunity under the Russian system for ability and brains to reach the top, whereas the Fascist systems are corroded with party favoritism, corruption, and racketeering.

Second, if communism, the most extreme form of socialism, were to triumph in western Europe, say in France, it could not help but be more libertarian and democratic than in Russia, since revolutionary change necessarily is conditioned by the social and national culture in which it works.

Third, it is very probable that a much milder form of socialism will triumph in western Europe, one which leaves room for some private enterprise and one which respects civil liberties and democratic processes. Perhaps it would even be more accurate to call this social-democracy rather than socialism. This is almost certain to be the case in Britain, where socialism in our time is not likely to go beyond the Beveridge report, the wise declarations of the humanitarian Archbishop of Canterbury and the objectives of the Labor Party.

Fourth, and most important, socialism is not aggressive and it is not imperialistic and it does not represent a physical threat to the Western Hemisphere as fascism does. As a matter of fact, socialism has in it a large element of pacifism which augurs well for the future peace of the world.

We in America cannot change these trends in Europe. Even military occupation would not alter them because military occupation could not duplicate in Europe and Asia the conditions in North America which still make possible and which will continue to make possible a large degree of free enterprise. We will never get in Europe a social, economic, and political system which coincides exactly with our own system and our own ideals. Let us, then, prepare to cooperate with the socialist, social-democratic, and nonimperialistic forces of Europe and Asia, for only in cooperation with these forces can we hope to achieve a peace settlement that is just, durable, and truly international.

X

Finally, a sixth barrier to American leadership in world cooperation is the tradition in America of violent political partisanship. Unlike the British, we do not in time of crisis bury partisanship or debate great issues with the detachment and objectivity the British debate reports of royal commissions on fundamental questions. We have no tradition of party cooperation and coalition. No less a figure than Winston Churchill has warned that the bitternes of our party battles would wreck another peace treaty.

Yet in order to win the peace all believers in international cooperation must put first things first, hew to one line, and subordinate all domestic questions and all personal and partisan advantage to the attainment of this supreme end. That is powerful opposition in America to an international peace, and if the believers in that kind of a peace allow themselves to be diverted from that end by domestic issues and partisan motives the peace will surely be lost.

There is a danger that when victory comes and the common danger is removed Americans will relax and indulge even more than today their irritations, their sense of grievance and discrimination suffered during the war, their concern over domestic questions. International relations will seem less important than questions of taxation, debt, and domestic politics. Many men will say in effect that while international peace is important and even connected with far-sighted economic adjustments at home, still it is more important to get a government at Washington that will restore us to "normalcy." But "normalcy' is just another name for short sightedness, a refusal to face realistically post-war planning and our long-run relations to the new world, and the scuttling of an international peace.

To put it bluntly, we will not get an international peace unless in 1944 we elect a President who means business on this subject and a Senate and a House that will aggressively and courageously back up the President. And what can we as individuals do to insure this result? If we are Democrats we can see to it that our Party comes out squarely for an international peace as it did in 1920. And in Florida we can vote in the primary for a Senator and for Members of the House who really ring true on this issue, no matter how much we may differ from them on other questions. Republicans have an even more difficult task. They must prevent their Party from falling into the hands of the isolationists or the imperialists, and just as important, they must prevent their Party from straddling the issue. They should fight for the nomination of a Willkie or a Stassen, and, failing that, have the courage to bolt their own party and vote for the Democratic candidates, if these candidates come out unequivocally for American leadership in an internationl peace.

There is a very real probability that the Republican Party may face both ways on this issue, work both sides of the street, and play both ends against the middle. In some parts of the country the Republicans may exploit the isolationist records of their Congressmen, point with pride to the isolationist position of their leader in the House, JOE MARTIN, and their leader in the Senate, CHARLES MCNARY, and boast that their Party caucus in the Senate demoted as party whip Senator AUSTIN because of his internationalist views and that their new national chairman, SPANGLER, was elected over the Willkie men. On the other hand, they may encourage Willkie, Stassen, and the New York Herald-Tribune to give the impression that the Republican Party is internationalist. And then they may name for President a political mediocrity with no expressed views on vital international questions to present a Janus face during the campaign and thus catch votes coming and going. The party that gets control of our Government after such a campaign and after using such tactics will be in no position to drive through the difficulties to an international peace.

How reminiscent all this is of 1920. You will recall that in that year the Republicans nominated for President a midwestern mediocrity who one day would sound off like Hiram Johnson and the next day like William Howard Taft. That year the Republicans told us they would cooperate with the world all right but would not surrender one iota of national American sovereignty and that they would get us into a league but not the Wilson league. In the East Taft, Root, Hughes, and Wickersham were telling international-minded audiences that Harding would take us into the League at the very time Johnson, Borah, La Follette, Norris, and Jim Watson were telling midwestern and western audiences that this same Harding would keep us out of the League.

Let us hope that the internationalists in the Republican Party will move heaven and earth to make their party an internationalist party so that both parties in 1944 will favor

an internationalist peace. And should they fail in this, let us hope they will have the courage temporarily to subordinate their views on domestic questions, and, assuming the Democrats in 1944 ring true on the issue, join the Democrats, and elect a President who feels in every fiber of his being the need to put American leadership squarely behind the winning of an international peace.

XI

Let us pray that when this war is won we will not relax from our exertions but instead will press forward with strong wills and steadfast hearts to the winning of a healing peace that will bind up the world's wounds and set mankind again on the high road of human progress.

The Good-Neighbor Policy

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, July 2 (legislative day of Monday, May 24), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting address delivered by former Gov. Alf M. Landon on June 15, 1943, at the annual meeting of the Kansas Institute of Inter-American Relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here to clarify our thinking. The greatest problem of all times confronts the American people today. That is helping build a just and durable peace in the world.

As I see it, we are repeating the same mistakes that have been the curse of our foreign policy time and time again in our history.

First, we are approaching the difficulties and the responsibilities involved in an old-fashioned camp-meeting hallelujah way.

Second, we are assuming in our thinking that we are solely responsible for the kind of world we will live in and do business in.

If we are to help build a stable world, we must avoid those two fatal traps.

Too frequently we have approached the question of international solidarity on the theory that we are senior partners of God Almighty, whereas we are only one, even if a powerful, member of a family of nations. Other countries have their ideologies radically different from ours, but vital to their way of thinking.

We are basing our present foreign policy as announced by the national administration of collaboration and cooperation on a hand-out instead of a helping-hand basis.

Our missionary societies long ago learned that the way to help people was to teach them to help themselves.

Private enterprise has applied that principle over the years to the development of the natural resources of new countries. Yankee ingenuity spurred by the profit motive, of course, has been responsible for the development of the natural resources of many countries and for the bringing to those countries modern conveniences produced by Yankee inventors.

That development has not been without its scandals and its abuse. Not only has this been true of the United States, but also of the colonial policies of our allies.

Somewhere between the hand-out method seemingly advocated by Vice President WALLACE and other administration spokesmen and ruthless exploitation of the natural resources and trade markets of underprivileged peoples lies the road toward building a stable world based on rights and justice for all minorities.

Appeals are being made to the generous emotions of the American people hinting at the establishment of an international organization superior to the American Government and by implication designed to give away the resources of the American people.

But any peoples capable of development want to contribute their fair share to their own advancement. Government or intergovernmental charity merely robs them of an opportunity to stand on their own feet.

We Americans have no monopoly on enlightened self-interest. We may leave the subject of control of international capital movements to the various governments in whose area investments are proposed, but always realizing that the widest participation of the native peoples is for the best interests of a stable world and is the soundest international policy to foster.

It would be a great mistake to allow this or any other administration to make the good-neighbor policy a political issue. The way to prevent our good-neighbor policy from becoming a political issue is for the Republican Party to realize that it is at least equally entitled to stand forth as the champion of the good-neighbor program on the basis of historical fact. We all want to be good neighbors. The point at issue is whether we are to be good neighbors on the basis of a helping hand or a hand-out.

Address by Senator Tobey to Hampton Beach Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, July 2 (legislative day of Monday, May 24), 1943

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by me on Tuesday last to the Hampton Beach Chamber of Commerce, at Hampton Beach, N. H.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Your Excellency, and fellow Americans, it is a privilege to address this gathering of the Hampton Beach Chamber of Commerce and their friends, and through the mystic radio, a larger audience on the air. I can say in all sincerity that there is no group of men in New Hampshire who are more loyal in their devotion to their own community and its interests, than you of the Hampton Beach Chamber of Commerce, and this is the second time I have been privileged to be your guest speaker.

For 2 years I spent summers at Hampton Beach with my family, and have memories of many fine associations.

In this time of stress and trial, it is good to have such a place to come to and relax, and this is not only a true statement, but is an invitation to all who are listening in.

There is a great responsibility resting upon a public speaker in this hour of national crisis, and I hope that what I may say to you tonight may have some suggestions that find echo in your hearts.

Washington is intense today. Everything is on a war basis. Temporary buildings have sprung up in parks and recreation grounds. Armed guards, machine guns, and jeeps are conspicuous. New bridges have been erected across the Potomac, and hotels and taxicabs are crowded. One of the features of wartime Washington is the new War Department building, the largest ever built by man. It is called the Pentagon Building, has 5 wings each 1,000 feet long, is 4 stories high, houses 42,000 clerks, and has in it 25 miles of corridors.

Many who visit Washington on official business are unfavorably impressed with the red tape and static minds, which are often in evidence.

As illustrating this situation let me tell of an experience which a sister of President Compton, of Tech, had in India a while ago. She was building a home, and employed a native electrician to wire the house. But he kept running to her to ask her how she wanted this or that thing done, until finally she cried out, "Oh, use common sense." With a solemn bow the native replied, "Madam, common sense is a gift from God. I have only a technical education."

There are many officials in Washington today like this Indian, lacking in common sense, but long on technical education.

On the other hand, in all fairness there are officials today who are handling tough jobs with courage and ability, and there are able businessmen who have given up their private business for the duration to give the war effort their experience and knowledge.

It is the duty of each of us to support those charged with the responsibility of directing the war effort.

Mere carping criticism of men or measures, for political purposes, is unworthy of any true American in this time of national peril.

But constructive criticism, having for its purpose the speeding up of the efficient conduct of the war and safeguarding the welfare of our Nation, is always in order and is the very heart of patriotism.

For many months I have urged that the people be told the truth about the war situation.

The people have a right to know, within those limits made necessary by military security, the strengths and weaknesses of their fighting men and fighting machines. It is their right to be informed and to debate these vital questions. When we meet reversals and the pull to victory seems to grow long and hard, Americans will do well if they indulge to the full their genius for critical self-analysis.

I desire now to give you a few word pictures incidental to the war effort. First, I bring you some details of the marines' campaign on Guadalcanal, and these were told the Naval Affairs Committee of the Senate, of which I am a member, by General Vandegrift, who was in command of those operations.

The first time our marines landed on the island the Japanese, who were in the hills and woods, believed it was only a temporary landing, but when our ships steamed away empty they realized they had a fight on their hands. Our men erected barbed-wire around their quarters and the second night the Japanese charged off the hills in a fierce attack. In the morning 1,200 of them were taken off the barbed wire by our forces.

An instance showing the treachery of the Japanese is that of the Japanese prisoner who had been wounded and who lay on the grass before being taken to a dressing station. He called for a glass of water and one of our young doctors in uniform took the water to him as a Good Samaritan, but just before the doctor reached him the Japanese took a bomb from his uniform and timed it

to explode as the water was given him, and both men were blown to pieces. I said then to General Vandegrift that this incident should be told all our troops in the East and West, and from now on the innocent must suffer with the guilty.

Then there is the story of the brilliant presence of mind of one of our soldiers who was lying in a foxhole when a Japanese tank charged and stopped over the foxhole in which he lay. He had the presence of mind to drop a bomb in the caterpillar tread. The tank started on and the bomb exploded, ruining its steering gear, so that it could only go forward into the ocean where it was captured with its men. The soldier whose quick thinking caused this capture was given a Distinguished Service Medal.

May I take you with me on a trip I made as a member of the Board of Visitors to the Naval Academy at Annapolis? It was an interesting sight to see 3,200 splendid young Americans marching to the great dining hall and be served dinner at one sitting. The second day we went out in the harbor where was anchored the largest battleship ever built—the *Iowa*—nearly 800 yards long, and having the most powerful armament ever built into a ship. She has a speed greater than many destroyers, and while we were there a force of planes attacked this ship in sham battle and every gun crew was at station training the guns upon the planes as they made their attack.

It was there we had a demonstration of the most wonderful invention of modern times—a scientific apparatus, applying electronics, which, in the opinion of many, will be the largest factor in winning the war. I refer to the new device, radar. It has been almost an unknown and untalked-of subject until recently. Suffice it to say that through its operation rays can be sent out and pick up, just as well in absolute darkness as in broad sunlight, a ship many miles away. When the ship shows on the screen of the radar, as it does in a certain formation, the distance of that ship from the radar is automatically shown on a dial; the guns are sighted at that range and fired. The progress of the projectile appears on the screen and it is immediately evident whether that shot has hit the ship or not. Radar can also be operated against planes 150 or more miles away in the air. It is radar that allowed one of our largest cruisers to destroy a number of Japanese warships in the middle of the night, the enemy ships becoming visible to our ships on the radar screen and being sunk by gunfire, yet never knowing what the ship was, or where it was, that sunk them.

Large scientific agencies, both Government and private, are working constantly in research work to further improve this science, and after seeing it in operation, I recall the words of Thomas Carlyle who said in one of his essays: "The age of miracles as it ever was, now is."

One of the Government agencies, of which little is known, is the Board of Economic Warfare, or the B. E. W. as it is commonly called. As its name implies, the purpose of this Bureau is to wage economic warfare on Germany, supplementing the efforts of our armed forces.

They have started large plantations of a new rubber tree in South America, called chrystostegia. It resembles our forsythia and will come into bearing in 12 months, and produce 200 pounds of rubber to the acre.

Then there is a little-known wood which is being planted in tropical countries, called balsa wood—a wood which is extremely light when dry, and will be a large factor in airplane construction in the future.

When, awhile ago, our country was short of mica, a much needed item in the making of magnetos for bombers, having only 3 weeks' supply on hand, the Board of Economic Warfare sent a group of Army planes to the heart of India, loaded them with mica and came back safely with an ample supply for sometime to come.

The same thing happened with tungsten when we sent planes into the heart of China to replace our depleted supply of this vital mineral.

Much of the operations of this Bureau are romantic and venturesome, and make a distinct contribution to the war effort.

For instance, we lost 95 percent of our quinine supply sources when Japan invaded the East Indies. We also found ourselves with inadequate reserves to meet the needs of total war.

For substitute sources the United States turned to Latin America, the original home of the cinchona tree from which quinine is gotten.

It was necessary literally to establish a new industry, because for years the world's supply had come from the Far East. Under the direction of the Board of Economic Warfare two types of operations were launched; finding and gathering bark from wild trees, and establishment of cinchona plantations.

Technical staffs were established to direct the harvesting of wild bark. Agreements with some of these South American republics gave the United States the exclusive right to develop cinchona resources. The Board of Economic Warfare is fighting for every pound of wild bark as though a soldier's life depended upon it, which it well may a year or two from now.

To guard against the eventual depletion of wild-bark sources, plantations are being established. Normally 7 years pass before stripping of the trees begins. The trees could be harvested within 2½ years after planting, however. This would be unprofitable in terms of dollars and cents, but a wise investment in protecting the lives of our soldiers.

One plantation project in Guatemala calls for the growth of 300,000,000 seedlings, to be transplanted in small units throughout Guatemala. The total cost of this project is estimated at $6,000,000.

Col. Arthur F. Fischer of the United States Army, escaped from the Philippines with 2,000,000 cinchona seeds of the highest yielding varieties. Working in cooperation with the Army, Board of Economic Warfare is arranging the development of plantations from these seeds. These trees also will be available for emergency harvest at the end of 2½ years.

The economic commandos of the Board of Economic Warfare have achieved what seemed to be the impossible on the quinine front.

Let me give you a picture of the campaign on Attu, that island in the Aleutians which the Japs held but which we recently took over. The Japs were well entrenched but we annihilated them. Our men killed 1,500 Japs and took only 15 prisoners. That's about the right proportion.

A sad and heroic happening was the incident of one of our men who had both legs shot off and whose liver was punctured and who was in a dying condition. Looking up at a comrade standing near him, he said "I am not afraid to die if my sacrifice will have helped the cause we are fighting for, but oh, why, why, when men are dying, will men back home strike?" This is a true incident, thought-provoking and moving.

I want at this time to sound a warning note that a serious food shortage is threatened for this fall and winter. The implications of this threat are a challenge to us. At the present time there is an acute shortage of corn, and we of New England, who have responded so finely to the Government's appeal of 6 months ago to increase our production, now find ourselves in a tragic situation.

In view of this, I took the floor of the Senate 2 weeks ago and offered an amendment to the lend-lease bill, then under consideration, calling for immediate release and sale of 50,000,000 bushels of Government wheat. It passed and became a law, and shipments are going out under that authority, but that does not directly help the corn situation, and we are working earnestly to better that. The Government has put a ceiling on corn in Chicago of $1.07 a bushel. Adding freight rates and charges to that ceiling price, it becomes about $1.20 here in the East, and the farmers in the West who have grain stored on their farms are not selling it. The ceiling price is too low, they say. Instead, they are feeding it to their hogs, and by marketing the hogs at current prices, they are getting more for their grain than the ceiling price.

Heroic treatment is called for and in conference with a high Government official at the White House recently, he told me it might be necessary to commandeer corn in private hands to secure adequate distribution. What this scarcity means to dairy and poultry farmers only they know, but I can assure them we are going to do everything possible to help in this dilemma.

If the war should end in 12 months, we would have no adequate food supply to care for the three or four million starving people of Europe, in addition to our own country. Colossal food production is going to be necessary for 1944. Further rationing of food and commodities are said to be on the way.

Probably no question affects more people than the gasoline regulations. Two major factors are responsible for the current shortage; first, the need for supplying our armed forces. The uncertainty in estimating this is due to the sinking of our tankers. Not only is the cargo of oil and gasoline lost but the tanker is lost also. The second factor is transportation of gasoline to the East. The recent floods in the West caused a break in the big pipe line by which much oil was lost. The movement of tank cars and railroad traffic has been seriously impaired. The final problem is how to get more petroleum into New England, and this is largely a problem of transportation.

The Congressional delegation from the Eastern States has worked earnestly on this problem for many months. The 20-inch pipeline from Indiana to the Eastern States is well under way and should be finished in September.

One improvement I strongly recommend is that the whole matter of fuel and gasoline supply and the rationing of such, should be coordinated under one responsible head. It is now a divided responsibility.

The best news I can bring you on the gasoline situation is a statement Donald Nelson made at a conference which I attended last Monday, when he said: "We can promise you relief at this time as we could not before. You can look toward complete solution of the problem in the fall."

This was interpreted in Washington to be in line with the proposed new relief program for the East, which has been resentful of restrictions imposed, while the rest of the country is permitted to drive about freely. What I have been demanding, and earnestly so, has been equality of sacrifice in this gasoline matter.

It is understood that under the relief program, the Federal agencies involved, plan to make an immediate survey of tank cars now in use hauling asphalt, and divert them to hauling petroleum products, and also to make maximum use of the 12,000 tank trucks available, by substituting them wherever feasible for tank cars, in order that the latter may be made available for long-distance hauling from the oil fields.

We shall explore every possible expedient to assure that the population of our industrially important eastern States, shall have no less than their fair share of gasoline.

The cost of carrying on this war is running to figures which are beyond the understanding of the average man.

It is estimated that if the war runs until July 1944, the national debt will be $300,000,000,000. Only last week the Senate passed a

bill giving the Navy $27,000,000,000, and passed it unanimously with but a few minutes debate. And there has also just passed a bill giving the Army $71,000,000,000, on top of tremendous sums already used.

We have enacted a tax bill which is going to hurt, but it is the only thing to do. So far as possible, this war must be paid for currently. There are only two ways of paying for this war; by taxation and money raised from bond sales. This burden is going to bear down heavily, particularly on the average family in our country—the people whose incomes are in the lower brackets. It will call for sacrifice and self-denial; but when the American people are being called on to make such sacrifices, and to give and to lend their money for the war effort, it is the duty of those of us in Congress to examine these appropriations and apply our best judgment as to whether or not they are necessary. There can be no question about that. But over and against all this, I now bring to your attention a situation which angers me, and which should arouse righteous indignation in every home in the land. Because, while you are being called on for sacrifice and self-denial, and to lend your money, yet there are certain people in this country who have a lust for money and profit, and who would secure that objective even through dishonest practices. But that is not the whole of it. When dishonest practices are employed, which endanger the lives and safety of American boys in the armed services, then somebody must cry out loud in this country.

A few weeks ago, I made a speech on the Senate floor in which I followed this course, and brought to the attention of the people the fact that one of the large steel corporations in the country which had a contract for millions of dollars worth of steel for the Government, to be built under specifications which it had accepted, had cheated the Government and endangered the lives of American boys in the service, by turning out steel which was deficient and below specifications. When called before the Truman committee and put under oath, the management of this plant admitted its guilt and testified that on its books this business had been listed with a capital F on the page, and that F stood for fake.

Mothers and fathers who may have sons in an American submarine, the sides of which might have been built with this defective steel, which might collapse under a German depth bomb, what do you say about such rotteness?

Then, there was the incident of the large wire and cable company which made millions of dollars worth of wire for the use of our troops and allies, to be used to signal men in the front lines to advance or retreat, or bring up reinforcements. This wire was found to be defective and would not deliver the goods, and the manufacturers have acknowledged it. Think that over, people in the homes of America.

Only the other day the Truman committee made a trip to Kansas City to inspect a new powder factory. The original cost of this plant was set at $40,000,000, but instead it is going to cost $130,000,000. Completion was scheduled for 1942 but it cannot be finished until 1944.

Listen to this—a contractor was called from Denver to Washington by Army engineers, and was introduced to a stranger whom the War Department told him was to be his partner. These men were told their joint fee on this job would be $800,000 and to divide this sum between them. They considered together and split it on a 70–30 basis. The junior partner did not know a thing about this work, and was of little value and had to be moved out of the way, but he got $240,000. The other man never got nearer to Kansas City than Washington, and knew nothing about local conditions, local labor, or anything of the required duties. All the Government and the taxpayers received for their $800,000 were the names of these two men. The general superintendent testified his previous experience was only in looking after Civilian Conservation Corp camps and he had never been in full charge of anything before, but had only worked for others at an average salary of $3,000 to $4,000 a year. The plan will never be good for anything. A quantity of new structural steel had been buried up as the grounds were graded off.

It is such crookedness that Members of Congress should be, and are, looking into, The money of the people shall at least be used honestly, if occasionally inefficiently, but cheating and treachery (for that is what it is) on the part of any concern or individual, cannot be condemned too severely.

We must hold in our minds constantly the sacrifices which our youth are making. Every city and town has made a contribution of its youth to build up our armed forces to approximately 10,000,000 men at the present time. They have gone out to all parts of the world. Many of them are still in training, and many have seen actual fighting. They die for us. The least we can do is to buy for them.

Buy bonds, to finance the purchase of guns, ships, radar, planes, supplies, medicines, and all necessary equipment.

You of the Hampton Beach Chamber of Commerce are to be commended for dedicating this summer season to our armed forces, and building up our national strength and unity, by inaugurating a season-long campaign for the sale of War bonds and stamps.

When an individual buys bonds, he is giving nothing to the men who are fighting for us, he is only loaning his money and receiving in exchange the strongest security in the world, plus interest—the note of the United States Government, your country, your native land, and it promises to repay in the future what you loan now.

During and after the last World War, it was my privilege to have charge of the various Liberty Loan campaigns throughout New Hampshire, and I well recall one man whom I asked to buy bonds. He was a tightwad, a cynic, and he replied: "Why should I? I can get more interest in other investments. Do you see anything green in my eye?" "No," I said, "and neither do I see anything red, white, and blue."

This war in which we are engaged is literally a war for our survival—nothing less.

Before Pearl Harbor, we had differences of opinion as to our getting into the war, but with the Japanese attack, the Nation became a unit. We have put our hands to the plow, and we shall make a straight furrow to a victorious conclusion, and that conclusion should be effected only when our enemies have made an unconditional surrender.

So, while we as a people are determined to win this war, whatever its cost, yet deep in our hearts we cherish the hope of peace and an enduring peace, as speedily as possible.

But, referring to the time when the war shall end, let me point out that the problems involved in shifting from a peacetime economy to a wartime economy are mild in comparison to the problems which will accrue in making the shift back again to conditions of peace. It will have to be done when the resources of private enterprise are at a low point, and there is a crushing debt on our backs. It will have to be done when a starving and impoverished world cries out for assistance, and when we have a sense of fear for the future.

It is not too early, then, to project our thoughts into the aftermath of the war. I am convinced that this country should begin now to lay a foundation of basic principles for the peace, in cooperation with the other United Nations, and to make that peace as permanent as possible, so that the aggressor nations may not again have an opportunity to disturb the peace of the world.

Over on the western front in 1917 they picked up one of our doughboys in no man's land and brought him back to the dressing station behind the lines, where he passed away. They found pinned to his undershirt these words, written by him in lead pencil in the trenches the night before. They represent the aspirations of his soul:

"Ye that have faith
To look with fearless eyes
Beyond the tragedy of a world at strife,
And know that out of death and night
Shall rise the dawn of ampler life,
Rejoice, whatever anguish fills the heart,
That God has given you the priceless dower
To live in these great times, and have some part
In freedom's crowning hour.
That ye may tell your sons, who see the light high in the heavens,
Their heritage to take;
I saw the powers of darkness put to flight,
I saw the morning break!"

He had a vision—a hope for better things to come, and he died in that hope; but were he alive today, how disillusioned he would be.

He thought that he was taking part in a war which was to end all wars, but, in sad contrast, the world today is engulfed in the greatest war in all human history. The powers of darkness which he thought had been put to flight are still doing business, and the dawn of the new day which he dreamed of is still far below the horizon.

On us who carry on, whether at home or in official position, is the great and grave responsibility to keep faith with that American doughboy of 1917 and those who died with him, by a grim determination to win this war, whatever it may cost, to demand an unconditional surrender and to make a just and enduring peace so that those who come after us may not again be called upon to drink this cup of suffering and sorrow, and that peace and the blessings of peace may become the normal attribute of civilization.

God help us to keep faith with this ideal.

Address by Senator Maloney at Commencement Exercises of St. Joseph's College

---

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, July 2 (legislative day of Monday, May 24), 1943

Mr. MALONEY. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD an address which I delivered during commencement exercises at St. Joseph's College, West Hartford, Conn., on June 11, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Right now I wish that I possessed a greater gift of language, for I am pleased, beyond my ability of expression, to be back home among my neighbors—and visiting with the neighbors' children as they receive the precious evidence of their college accomplishments.

I know your feeling of pride—and I think I understand your feeling of satisfaction, and the eagerness with which you look toward tomorrow—and I am certain that I

know the pride and the satisfaction of your parents. If these years have at times been difficult for you, they have at the same time, and at other times, been much more difficult for them, for your lives have been their lives. Your successes have in many instances come through their sacrifices and while this is a great day for you, be certain that it is a greater day for them. You are looking forward—all of you in different directions—toward the chance of achievement and success. They are looking forward with you—though with perhaps a more modest ambition than most of you now entertain. All that they hope for you, and it is much, is that you retain your sweetness and your goodness—and that you find ultimate happiness. They know that success is happiness and peace of mind—and they know that those who find happiness and peace of mind here are destined to live in the household of God and amid the never-ending beauties of eternity.

And may I say that I am honored, as well as greatly pleased, by this opportunity to participate in the commencement ceremonies at the center of women's education in the Hartford diocese. This College of St. Joseph, coming every day to be known better to the people of Connecticut, exemplifies the cultural aspects of the church in Connecticut. It is a monument to the zeal of a great bishop who has recognized the necessity for a sound development of the proper educational facilities for young women, and an outstanding example of the great work of the Sisters of Mercy, that inspiring order which has won the respect and admiration of all enlightened persons. It would be presumptuous for me to attempt to appraise Sister Rosa's contribution to your college—and to you—and to this community, and the State of Connecticut. We are, all of us, deeply in her debt.

I doubt very much that more than a few of you as yet fully appreciate the rich privilege that has been yours in these recent years, as you have lived under the guidance of good women who have a special "call" on God's attention because they have given their lives to work in His vineyard.

The church of which most of us are members has an enduring philosophy. It doesn't change with the wind or the tide, or soften its teachings to meet the emotions and passions stirred by social upheaval or economic storm. Founded upon the rock of Peter, it has weathered the fury of centuries, and after these hundreds of years, and in the most terrible period the world has yet known, there is no other institution to which man can look for so much comfort and with so much faith as toward this bulwark against all of the evils of mankind.

With each passing year you will come to a better understanding of the value of the time you spent here. Your hearts and your minds will turn again and again to this college, and your gratitude to the nuns here and to your lay teachers will be almost boundless. It will only be exceeded by your thanks to God and to your parents.

To me, however, St. Joseph College, in its maturing development as an authentic institution of higher learning, has an even greater significance. It demonstrates the cooperative part the church has played in nourishing the Connecticut tradition for education. By the leadership of its men and women and in the support of academies, colleges, and universities established within its borders, our State has contributed much to the teaching of America. St. Joseph College, although still in its infancy as we measure time, has already become an important part of that Connecticut tradition. It is living evidence that the church is no alien force, but rather a strong ally in carrying out the cultural objectives to which the Commonwealth from colonial days has been dedicated.

And so I congratulate you upon the signal honor and privilege you have been accorded today in receiving a degree from this great institution—an institution which recognizes above all things that the development of the human mind and the human personality must have for its very core the recognition that we are made to the image and likeness of our Creator. It is from this recognition that there flows the proper emphasis upon education as receiving its true sanction from God Himself. It is this recognition that provides the order and discipline which is so characteristic of the higher Catholic education. This privilege is all the more to be prized because you are graduating into a world of conflict.

All about us are visible the results of total war. Its impact is felt on the farms, in the factories, in the homes of the great and wealthy, and in the cottages of the poor. This kind of war leaves no one unscathed. The price our citizens must pay is not for all of us the same. However, the call of our country must be heeded in order that freedom may live and tyranny be swept from the face of the earth. This is so even though for some of us the price of that call may be to give up life itself.

Let it be emphasized that it was not a war of our making. It came to us in stealth by nations who sought to divide the earth in their lust for power and their savage ambition to rule the minds and bodies of mankind. It is a war which in retrospect makes the ancient method of battle seem by contrast both sportsmanlike and chivalrous. In it there is not even the prospect of a truth of God, and the pleas for the innocent bystanders fall on deaf ears. The world has become almost immune to pity, and civilization itself seems to have blacked out as man carries on a pitiless war against his brother. But there is no alternative for us because the sawdust Caesar's had prepared with malice aforethought a program which they so falsely thought would give them possession of a new order bent to their wills. To destroy this tyranny we have been forced to meet fire with fire, and we are fighting them successfully in manpower, in arms, and in sacrifices.

Into this strange world you are sent—a world where the position of women has developed in ways never believed possible. All over the earth women are performing every conceivable task, in some places even bearing arms. This new place of women as combatants makes us shudder at the curse which has come upon our world. In the factory, even in the armed services, women have broken with all taboos and society ferments in most unexpected ways. Because you enter a world of bewildering change you are to be congratulated that you possess knowledge and faith, which more than anything I can think of will constitute the guaranties that your life will have meaning in the ways in which your teachers have planned.

That added quality of your education imposes an obligation which in conscience you cannot avoid, for it is to you, by reason of your trained intellect, that your school and your church will look upon to insure that the essential values are not destroyed or swept aside in the boiling society engendered by this war. Already the thoughtful among us can see the high price which society will have to pay for its disruption of the home, brought about by the new demands upon women. Each generation has the task to govern by example so that the world may be a better place for their having lived in it. Each has the obligation to attempt to leave a sweeter and happier society for those coming after. But war is a grim and ruthless monster who too often transforms the good and the beautiful into the evil and the ugly.

So in adulations and congratulations of today we must in sober thought take into account that a changing world needs the philosophy of the wisdom which you have received from these kind and loving preceptors. I can think of no greater obligation than for you to use your influence in your social life, in your business life, in your teaching profession, and in your home life, to insist that home, the cornerstone of society, be preserved and safeguarded through all our dislocations.

The tragic dislocations of this war are indeed sad events. In many cases they are an unavoidable part of the price total war exacts. But the danger is that the dislocation will come to be taken as a permanent part of our institutions and that the security of the home, its esential preservation as the source of true discipline for the youth, will become lost to us. This fundamental principle of family influence and responsibility may threaten the better society we all hope to see in the bright tomorrow.

It is unfortunate that each generation must so often learn anew from bitter experience that which earlier generations' mistakes could have disclosed to it. As one writer recently put it, much of today's trouble is caused by our failure to read the minutes of the last meeting.

The now ludicrous dictator who launched this terrible war is only a symbol of a society which had turned its back on the teachings of our Saviour. And even in our land those men without faith have been destructionists, and their mark can be seen upon our own times. But thank God their false philosophies have not been able to rob us of our faith as a nation or of our love of country as a people.

It may be a bit inappropriate, after having successfully passed your examinations, to receive on this day of your gladness even a passing word of advice, but I do believe that too many of our fellow Americans are becoming victims of catch phrases, and too few of us are critically examining the labels which are tossed around with reckless abandon. More and more, it seems to me, we find a label used as a substitute for critical thought. To that end the admonition is: Be on the alert; use your God-given talents and the spiritual insight you have been taught here.

My further advice to you young women now being graduated, is that you appreciate the full value of your alma mater, and that you estimate it over the years, as I know you will, with the pride it has justly won.

But we are concernod today not alone with our institutions, however hallowed they may be, but wi'h the lives, the hopes, and the destinies of our young men and women. We have not educated them for war—yet they move forth from their schools and colleges this year faced with the tremendous responsibility of bearing the brunt of the battle for freedom. We have not sought to make them the creatures of a military organization, yet all over the land they are closing their books during these early days of June to step into the ranks of disciplined warriors. It would be a sad commentary upon our way of life if the precepts of our religion and the principles for which our country stands had not fortified our children against the despair that must fill the human soul if warfare is to be the final justification of life.

We find it difficult to understand why men make war. We ask ourselves why it has happened to us. Sometimes—because it is all so completely beyond our finite minds—we ask ourselves why God permits it. And still we know—although we cannot explain how we know—that God is permitting man to work out his salvation—that He has given man an irrevocable free will—and that mankind shapes its own destiny. We do know that if man kept God's commandments there would be no war. We do know that it is only when we leave Him, or when those about us leave

Him—that there is unhappiness. He has tried to teach us that we are responsible to and for each other He has told us that we are "our brother's keeper."

And it is because of all of this that we have institutions of learning, and especially why the church is so deeply concerned with Catholic education. The great purpose is to help men to help each other—and especially in the way set forth by God.

The world had again fallen from grace. Greed and avarice and a lust for power overcame the frailty of man. War has come to your generation for the first time. It came for a second time to your parents.

We of an older generation may have failed in many ways. We may have been too headlong in our pursuit of this world's goods. We may have conditioned ourselves too readily to a blind sense of security. But, thank God, we have kept alive in our schools and colleges those spiritual values, the true inheritance of American patriots, which give to our young men and women the vision to see beyond the conflict that rages around them.

To me, the great inspiration of this war is the wisdom and understanding of our children. In many ways they, better than we, know the purposes of this war. They, better than we, do see beyond the enclosures of the battlefield. They have the uplifting hope that leavens our own despair. It has required no regimentation to give them the firm resolve to fight now and fiercely, that they may have the opportunity to mold their own futures as free men and women. Whatever may have been our mistakes in the past, we have through the grace of God saved for this new generation of American patriots, a sense of justice, an appreciation of the fruits of liberty, an understanding that the future of America is worth fighting for. And thus, even on this day, and at a college for women conducted by nuns of the Cloister, we witness the emergence of the spirit of American youth unquenchable and unconquerable in an hour of crisis.

This is true because these girls go forth to battle no less than their brothers. They are as men in the tasks of war that must now be assumed. Whether they go to the factory bench, or to the auxiliary units of the armed forces, to the noble ranks of the Red Cross or to the scientific laboratories of war research—they take their places side by side with the men who carry our weapons. It is true, indeed, that in this total war we count on our daughters as well as upon our sons and it is equally true that in our daughters we are finding the same courage, the same readiness for sacrifice, and the same resolution for victory.

But there is an even higher purpose and a nobler responsibility for the women of America at war. It is a destiny created for them by the Mother of God on the desolate slopes of Calvary. It is a destiny which alone can save the world. It is to this deeper, this nobler purpose of women at war, that I would in part address this class of graduates today.

No matter how just a war may be—and God knows the war we wage is just—its activities are ugly. We fight for love of our country, but to win that fight we are unleashing forces of destruction unparalleled in the history of the world. We are training our boys to be the roughest, the toughest, the most unrelenting warriors on earth. We are giving them the weapons of terrible death—we are sending them forth to meet the enemy and to destroy him. In no other way can victory be assured, because we are in mortal conflict with evil men whose brutality is their greatest strength.

But there must be on our side some counteracting influence—some balancing force that will save the Nation from the permanent ravages upon the spirit of mankind which might follow the horror and ugliness of war. For this, we place our hope in our daughters. Theirs is the sacred duty during this awful conflict to keep alive the dignity and nobility of the human soul.

Does this mean that we ask our women to remain in an ivory tower? Does it mean that we seek for them a quavering reluctance to be exposed to the realities of the grim conflict? Does it mean that we want them to dilute the determined courage of our sons by querulous protestations against ugliness of fighting? By no means. Indeed such an abject attitude would be impossible for any true daughter of America. The ancestors of these young women stood side by side with their men in other battles for freedom. Indeed, the fortitude of a woman's heart has always been a bulwark in a war justly waged.

I ask you only to consider the example of St. Joan. She was a warrior—but she also was a saint. She rode forth to battle and to victory but she sacrificed not a whit of the goodness and purity that made her the true child of Our Lady. She led the men of France in a fight for liberation, but she also lifted up their hearts and saved them from the degradation of mere brutality. She had courage—but she was gentle. She rode into the midst of a bloody struggle but her spirit of goodness shed light and hope and charity on the field of battle.

Such is the noble purpose that our women of America must fulfill in this war. Theirs is the sacred task of assuring that we shall not be branded with the brutality that war breeds. They must dedicate their lives now to the solemn duty to see to it that America shall one day emerge in the full glory of victory, but with none of the dirt and taint of war. Theirs is the mission to lead our Nation once more toward the cleansing light of a peace justly and nobly won. They must keep alive the ennobling spirit, the human dignity, the goodness of the immortal soul. Theirs is the destiny to lift up our warriors from the field of battle and make them men again. Theirs is the destiny to give strength to the "lines" at home.

And with the lessons learned here—and the responsibility imposed upon you by the church—I am certain that you will help hold aloft and keep aglow the torch of eternal light which has burned for more than nineteen centuries.

As you go forth you face a world still suffering from the cruel blows of a depression and the terrific shock of war. You will find men and women bewildered and saddened and oftentimes angered. You will find some people yielding to frustration. That is the way of war. With war comes waste, extravagance, and fury. People become bewildered, and then intolerant. Self-restraint is difficult, and imposed restraint, which is oftentimes necessary, sometimes seems tyrannical. All of this is a great challenge to you. It will test your own forbearance and your faith.

Those of us in the generation ahead of you may be growing a little tired. We have been rowing upstream for a long time—and the current has been swift. We have taken hard blows—as you will—but you are young and fresh and strong. Your minds will develop rapidly from this day forward. You hold our hopes and you have our faith.

And so I say to you young women, on this day of your commencement—be strong hearted—be brave, be determined for victory—but be good and pure and gentle. Surrender not the dignity of womanhood in the excitement of a nation at war. Help your brothers fight the good fight but be noble as well as courageous—and keep ever in mind that upon you depend not merely the aid, the comfort, and succor you can now give to fighting men—but also the precious inheritance of an unimpaired and untainted spirit that must be handed down to the generations of Americans that will follow you in peace.

"Who shall find a valiant woman?" asks the Book of Wisdom. We fathers of America are today finding her in the daughters we have reared. May she fulfill her destiny in the grace of God and in the hearts of her countrymen.

Control of Appropriation and Expenditure of Public Moneys

REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. COFFEE. Mr. Speaker, for many years we heard much of waste and diversion of funds appropriated to bring about recovery from the depression; and for months we have been and are now hearing, and seem destined to continue to hear, about waste and extravagance in the war program. Speaking to the theory that neither a depression nor a war justify wanton waste and extravagance, I suggest that something ought to be done about it. Mark Twain said there was much complaining about the weather, but nobody did anything about it; and it certainly seems high time that Congress do something tangible and enduring about the waste of the taxpayers' money.

One of the first things that should be done is for Congress to see to it that proper restrictions—restrictions in keeping with old acts of Congress that require the application of funds to the specific purposes for which they are appropriated—are revived and thrown around funds appropriated to the various agencies of government. And Congress should make it impossible for funds appropriated to one department or agency to be transferred to another department or agency except pursuant to express authorization by Congress. Furthermore, we should see to it, for the future, that old and venerable statutes, such as the one prohibiting the employment and payment of publicity experts and the one inhibiting the purchase of land without express appropriations therefor by Congress, are complied with religiously and faithfully. In other words, Congress should recover its powers over the purse strings and make it its business to know how appropriated funds are used and applied.

Much has been said on the subject of waste and illegal expenditures by various agencies of government, and it may not be amiss to mention a few of the well-known instances.

It has been shown that the United States Maritime Commission and the War Shipping Administration, both headed by one and the same man, have adopted the view that, according to their judgment and ideas, Congress failed to provide just compensation for vessels

requisitioned for title or use in the war emergency; and they merely adopted a policy of their own—a policy of paying more than the act of Congress provides to be paid. In other words, Congress said out of an abundance of experience gained in World War No. 1 that vessel owners should be compensated for their vessels on the basis of the vessels' costs, plus improvements, and less depreciation to the time of taking; and that, in no instance, should the values of the vessels be deemed enhanced by the causes necessitating their taking. In this way, Congress took into account the many heavy subsidies paid shipowners to enable them to compete with shipowners of other countries, and guarded against buying the Government's investment in the ships when they are needed for emergency or war purposes. Certainly Congress, at least theoretically, is the policy-making power of this Government—not the United States Maritime Commission or the War Shipping Administration, or any other Government agency. It is said, too, on good authority, that the War Shipping Administration is assuming war risk and other insurance on vessels requisitioned for use during the war at 10 and 12 times their book value—that many times in excess of their depreciated value, which is the amount required by the Merchant Marine Act to be paid for the vessels.

Much has been disclosed concerning unheard-of and unconscionable earnings of vessels operated in the lease-lend service to the Red Sea area; but, with a single exception, not one shipowner has disgorged any part of his ill-gotten gains. Quite to the contrary, the rest of the owners have refused to make any refunds because their charters, being with an agency of the British Government, though the Maritime Commission paid the charter rates, our own Government is powerless to force any refund of their unjust enrichment. Such practice of allowing a British Government agency to make contracts calling for the spending of our appropriated funds is most unusual, to say the least.

We have had any number of instances of unconscionable profits by shipbuilders and other contractors serving their Government in its hour of need; and we are told that the Maritime Commission is engaged in spending more than $100,000,000 in the revival of the concrete ship and barge program of World War No. 1, which proved such a colossal flop. The concrete construction program of the Commission is going on apace, although Admiral Land has twice told committees of Congress that no enthusiasm may be expected from him for the program. His sole and only excuse for this wasteful and unauthorized concrete program was that the venture was undertaken as a form of insurance for people who could construct concrete ships and barges but could not build steel ships. Is the war effort thus to be turned into a program for the relief of people merely because they cannot construct steel ships? Is it another W. P. A. project, operated without rhyme, reason, or excuse?

Inordinate or fraudulent profits should not be countenanced for one moment; and particularly is this true when we consider that Congress has made funds available to finance contractors, and most of them have no substantial investments in their work. I have in mind a case considered by the House Committee on the Merchant Marine and Fisheries where it was shown that a defunct company at Tampa, Fla., was reorganized with the aid and assistance of the Maritime Commission and the R. F. C.; where the assets were written up beyond all reason; and where, for the paltry sum of $500, one man, a banker, became the owner of the stock of the new company; and where that company, as far back as December, last, had contracts with the Government aggregating $200,000,000—contracts financed with Government funds.

Mr. Speaker, as I have said, much has been disclosed, but little seems to have been done. Congress has two agencies, and one in particular, which seems to be clothed with the duty of assisting Congress in the preparation of the annual Budget and in keeping track of how appropriated funds are expended. I refer, first, to the Bureau of the Budget; and secondly to the General Accounting Office, which is presided over by a highly respected former Member of the House. Theoretically, as I say, the Budget Bureau was established in the thought that it would assist Congress in its budgetary and appropriation work; but speculation is becoming rife as to whether, after all, it was not a grievous mistake to place the Budget Bureau under the Chief Executive and the administrative departments of government. One of our House committees but recently had before it on one or more occasions representatives of the Budget Bureau and experienced great difficulty in discovering what aid, if any, is being rendered to Congress by that agency. Most all questions elicited answers tending to show that the Budget Bureau performs entirely at the direction and pursuant to the wishes of the President, without regard to the Bureau's responsibility to Congress. Indeed, it may well be suggested and concluded that the Budget Bureau has become a mere rubber stamp for the Executive and is a hindrance rather than a help to Congress.

As to the General Accounting Office and the Comptroller General, we do hear and read where, on not too frequent occasions, the Comptroller renders a report to Congress; but, with the great amount of public disclosures concerning waste and extravagance, both during the relief spending and during the conduct of this war, it does seem that the Comptroller's communications of illegal expenditures to Congress are too few and too far between.

And one may well believe that the Comptroller has failed fully to understand the powers, duties, and functions conferred upon—yea, enjoined upon him—by the plain language of the Budget and Accounting Act of 1921. That act specifically requires that the Comptroller General shall make investigations at the seat of Government and elsewhere; that he shall make annual and special reports to Congress of every contract and expenditure made in any year in violation of law; and that he shall make suggestions to Congress looking to greater efficiency and economy in Government. As stated, the Budget and Accounting Act was approved in 1921; but can any Member recall any recommendation made either by the first Comptroller or any of his successors looking to greater efficiency and economy in Government?

Despite these plain and mandatory duties, the present Comptroller General, estimable and loved gentleman though he is, made a recent appearance before the Ramspeck committee and delivered a most astounding statement. He said that he had reported numerous extravagant expenditures for such as cocktail parties, entertainment, and the like; but that they were legal because they had been made on a certificate of an emergency. It seems to me that Congress, though making lump-sum appropriations in even too many instances has never intimated, even provided, that appropriate funds could be spent for such purposes, regardless of the certificate that an emergency existed. Why the Comptroller did not denominate those expenditures as altogether illegal and unauthorized I am totally unable to understand. The Comptroller further told the Ramspeck committee that Congress has no idea how appropriated funds are spent in the departments and agencies of Government, including those appropriated for his own General Accounting Office. Who, of all officials of this Government, should know but the Comptroller General himself? The law requires that he know, and that he report to Congress all illegal contracts and expenditures. Yet the Comptroller General further and astoundingly suggested that Congress should create an organization which will inform Congress as to the way and manner in which appropriated funds are spent. He makes no disclaimer that he is unable to comply with and perform the duties enjoined upon him; but he suggests that Congress should afford a means which will furnish it the information it ought to have.

Hearings on the 1943 independent offices appropriation bill reflect that the General Accounting Office had investigated twenty-odd matters involving Maritime Commission transactions; and that committee was assured that reports concerning those investigations would be forthcoming. While the Comptroller had previously reported a few such matters, it is understood that the greater part of that work yet remains unreported to Congress. I am told, too, that the same promises and failures to perform obtain in respect of similar matters as between the Comptroller General and committees of the Senate. Why should this condition of inaction and apparent purpose of plain evasion of duty be continued further? There is now pending in the Senate a resolution calling for an investigation to determine whether the General Accounting Office, as presently constituted, organized, and manned, is equipped and competent to render to Congress the services it has said by the Budget and Accounting Act shall be rendered.

We have all heard complaints of inaction by the Department of Justice in matters affecting Government funds, and its failure to press for the collection of debts due the Government. Much the same situation must have existed at or about the close of the Civil War; for Congress then passed an act authorizing private citizens to bring suit for and in the name of the Government in cases where fraud had been practiced against the United States, and where the law enforcement officers failed to act in the public interest.

The act provides that if such a person shall bring such suit, and shall finance the costs thereof, he is entitled to recover double damages and to have as his compensation one-half of the recovery. That self-same act was but recently held valid by the present Supreme Court in a sweeping decision. Now, however, we have the spectacle of the Attorney General urging the repeal of that ancient statute; indeed, largely if not principally on the Attorney General's recommendation, the bill to repeal that act got on the Consent Calendar of the House some weeks ago and slipped through without discussion or apparent notice. It has now been reported favorably by a committee of the Senate. It seems to me, Mr. Speaker, that if there ever was a need for this particular act it is now; and it seems also that the recommendation of its repeal by the Department of Justice comes with bad grace. Surely, if there is not a right in someone to protect the interests of the Government in cases where the Department of Justice fails to act, as it frequently does fail, the taxpayers are, indeed, at the mercy of the profiteers and chislers. And I recall that, when the Comptroller General made his appearance before the Ramspeck committee he further said, in substance, that the Government is at the mercy of the cost-plus-fixed-fee contractors who write their own ticket and get what they write. Again, that worthy official failed to explain the whyfors of his failure to report more such matters to Congress, instead of asking the creation of another agency to do so; and his suggestion was the sum total of his contribution on the subject.

I suggest, Mr. Speaker, that the time is ripe for Congress to bestir itself in the matter of safeguarding the appropriation and expenditure of public moneys.

Address of Gov. John W. Bricker, of Ohio

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Gov. John W. Bricker, of Ohio, before the Wisconsin Bar Association in Milwaukee, Wis., on Friday, June 25, 1943:

Although our legislature really adjourned several weeks ago, the sine die adjournment became effective yesterday. The National Governors' Conference was held in our capital city the first 3 days of this week. Preparation was that, the sessions held, the immense amount of work done, and territory covered prepared me for this particularly pleasant trip into your State.

I enjoy therefore very much meeting the Wisconsin bar. You have produced great leaders in the field of the law. This is the profession to which I have devoted my life and to which I will return. It is a short step from the practice of the law, dealing constantly with public matters, into political life. I made that step several times. It is likewise a very easy step to take back again. I suppose one should not call it a step, but rather a push and that I have done also.

The years of public service have not in any way diminished my love of the law or my gratification in association with lawyers.

At the Governors' conference, two important matters were considered. The first—how we can implement and aid the conduct of the war from the standpoint of the States, and, second, how we can best meet the problems of rehabilitation and reconstruction following the war. The deliberations of that conference brought clearly into the foreground of our thinking many national problems.

The national problems that we are facing these days result from the accumulation of unsettled questions over a long period of years. For that reason those problems are of supreme importance. Upon the wisdom of our solutions for them rests the welfare of our people for many years to come. It is necessary, therefore, in discussing them to do so with the utmost care and, so far as possible, in the most specific manner. There are those who believe that these problems can be settled through the method of easy generalities. I do not share that view. The problems that beset us cannot be solved by words or phrases, however happy; they can be settled only by consistent thought and determined action. I should like, therefore, today, to limit myself to one aspect of our post-war problems. My subject concerns the principles and policies that should be adopted and followed by the United States in order that this Nation may, as we hope it will, be strong and effective and cooperative when the war is won.

Beyond this war lie two vital and grave decisions. Those decisions will have to be made by the American people after widespread discussion and long and serious thought. The first is, what part this Nation will play in world affairs. What, in short, will be its foreign policy? The second is the question of what domestic policies this Nation will adopt in fitting itself for its proper role in the world beyond the war.

It is obvious that these two problems are intimately related. There are those who are able to discuss the one without any consideration of the other. But I cannot share such easy and complacent assurance. Whatever we promise to the world is in the nature of a promissory note. When men give promissory notes they must, if they are honest, know how their promises can be kept. If their personal future is cloudy, if their health is infirm, and their earning power doubtful, they must take that into consideration. We dare not destroy the hopes of the world because we have not been honest with ourselves.

I join with those who wish to lend the strong arm of American help in the solution of world problems. I find, moreover, as I meet people in all walks of life and talk with them of their fears and hopes, that they feel that the destiny of America must be, to a greater extent than before, involved in the destinies of the world at large. I find, in short, that people want to be shown how the United States can effectively join with other nations in solving some of the fundamental causes of war. Since that desire is so wide-spread and so evident, no one should ignore it. I shall never do so. That desire born of the suffering of war must be strengthened and implemented. I propose, at a time not too far removed, to speak of the possibilities of American participation in world affairs, in some detail and with specific suggestions. But today I should like to create the foundation for such an expression by looking to the state of this country's affairs and to discuss with you the basic reason why our position in the world depends upon policies and principles which we pursue within our borders. For what we do abroad, must in peace as well as in war, depend upon what we do at home.

For 10 years our national administration has pursued a domestic policy which, at every point, hampers and contradicts its professed foreign policy. Ten years ago, we adopted certain domestic policies that were based upon an America isolated from the currents of world affairs. In the field of agriculture, the President announced and compelled the adoption by Congress of a policy which was professedly intended to free the farmer from the shackles of world prices. That agricultural policy was set up for the purpose of establishing within the borders of this country a self-sufficing economy. We were to grow what we needed for our own purposes, and only what we needed for our own purposes. Surpluses of food were viewed as a national calamity. We embarked on a policy of suppressing production. Millions of acres were put out of production. The tragic results of that policy now face us with grim and forbidding reality. Hunger stalks around the world and we are rationed here, because of such fallacious programs.

But that is only one of the handicaps under which we shall suffer as we seek to take our proper place in the world after the war. Let us consider another example. One of the most obvious necessities, not only for our own sake but for the sake of all nations, is the need that America participate freely in the trade of the world. Since we have proved, in this war, that our capacity for production is so great that we can meet the necessities of half of the world at war, we ought to be able to look forward to that time when, after swords are turned to plowshares, we shall be producing for many nations no longer the machines of war, but the machines of peace. If we can supply the world with tanks and guns, we ought to be able to supply the world with trucks, reapers, refrigerators, and automobiles.

But at the end of the war we shall meet, in foreign markets, competition of a most formidable nature. That competition will produce goods created by workers who are able to work for low wages. But American workers are not willing to lower their living standards. And they are right. We must, therefore, make up the difference by the superior efficiency of our system of production. I have confidence that we can make up that difference under conditions that are tolerable to bear. But, if at that moment of trial, we encounter another handicap, we shall be crippled beyond measure in our effort to carry on world trade. That other handicap that threatens is destructive inflation. If, as the result of unsound financial policies, inflation overtakes us, the cost of production in this country will grow prohibitively large. That will mean that when we attempt to meet foreign competition in the markets of the world, we shall be laboring under an insuperable handicap. Any man who deals in goods and knows the simple rules of trade realizes that the misfortune that we shall meet is a misfortune from which wise policy might

have saved us. And yet, we have an administration in Washington so divided within itself that for 10 years the State Department and, at times, the President and other agencies, have exalted the mission of America in promoting foreign trade. At the same time we have had other departments, and you can supply the names of those responsible for those departments, who have been telling us that sound economic policies require continuous inflation. And the President has supported that side of his administration too. But the New Deal cannot change the laws of mathematics. The consequences of this ruinous division of policy are already appearing. No official pronouncement, no matter how exalted, can reconcile a policy of inflation with a policy of increased foreign trade. There, in all of its reality, is perhaps the most striking of the examples of how foreign policy must, in the last analysis, depend upon domestic principles.

Another aspect of this conflict of policy has to do with the management of our economic life generally. There were those in high office who sought to lead us to believe that our industrial production should, in all of its details, be managed by an all-wise bureaucracy. Manufacturers were to be told what to make and how much to make. Businesses were to be regulated in every detail. The farmer was to be told what to plant and where, how many pigs to let live and how many to kill. The abundant life was to come from a nice set of blueprints made by some bureaucrat in Washington. Here again, a matter of infinite importance to the foreign relations of our country is involved. A nation which has launched itself upon a totalitarian economy cannot be the good neighbor of any other nation. You cannot have a managed economy at home and abundant trade abroad. That choice the President has never made. Whether he has perceived it, I do not know; but if he has perceived it, his words and policies have never given evidence of it. If there were one point on which all the Governors agreed it was that the people ought to have the right to vote on our policy-making officials, and that rampant and costly bureaucracy must be curbed or our free government will be destroyed.

The most tragic aspect of an economy of scarcity is already being pressed home upon us. We shall, when this war is over, be faced with a hungry and impoverished world. Whether we give food or whether we sell it, there will be demands from the four corners of the world; but we shall have to answer that we have had different plans with respect to food in the past few years. We have systematically cut away our power to produce what the world needs. Continuation of these policies, or a continuation of those responsible for such policies makes an empty mockery of any expressions by them of a desire to help the world. I believe that we should contribute in every way that we can to the abolition of want in the world, but I cannot believe in the sincerity of a national administration which tells the world in one breath that we shall keep it from want and at the same time tries to limit our capacity to meet those wants.

I have no desire to claim that all regulation is bad. I find few people who believe that under modern conditions we can go back to unbridled individualism. Neither business, labor, nor agriculture wants that. They all recognize that the increasing complexity of life requires many Government regulations. The public interest can be protected in no other way in the Republic. And when we have laws we must have people to enforce them. Nor do I claim that all of the increased Federal regulations of the past 10 years are bad and unnecessary and should be abolished. I have the honor to have served 4½ years as Governor of a State that, like your own State of Wisconsin, has pioneered for more than 30 years in social and economic reform. I only wish that the experience of the states had been studied more carefully by Washington. Nor am I going to be intimidated by the shop-worn New Deal question begging cry of "What would you abolish?" In my good time, I propose to be very specific on that point and my specifications will not be pleasant reading in some high quarters in Washington. But because the New Deal has never made up its mind on either its economic principles or its policies of regulation, it is necessary to clear away the underbrush before we survey the land and set the stakes. When we know what we want to accomplish, we can know what laws we need to achieve those purposes. Law should follow policy, and policy to be effective, must be consistent within itself. Law, it has been said, is the public opinion of yesterday. That is another way of saying that before we make tomorrow's law, we must know our policy today.

Let us look at a few basic principles.

When a business is sufficiently invested with a public interest, and when, in the conduct of that business, a monopolistic interest is involved, it is a proper exercise of governmental power to provide the means by which the public can be protected from unfair prices and poor service. In such cases, the Government should not, except in the most extreme cases, enter into direct competition with private business. The public interest is never protected by the Government using the taxpayer's money to compete with him or to deprive him of a right to engage in business.

But the public must at all times be protected from the evil of public or private monopoly, and to that end laws are placed upon the statute books. Those laws should be strictly enforced, but they should not be used as official blackmail to compel business to conform to economic theories inconsistent with a free economy. There is such a thing as using the antitrust laws to enforce not free competion but ironbound Government regimentation of little and big business alike.

Through the States and the Nation in close cooperation, it is a legitimate purpose of government to assist citizens in their quest for security against the needs of old age, against unemployment. In the administration of social security, the beneficiaries are entitled to the most sacred trusteeship by government and to the full truth in all promises of future benefits. I believe that our existing social-security facilities in States and Nation should be reconsidered after this war, to the end that inequities may be eliminated and that extension of its benefits be made wherever they are consistent with a sound economy and fiscal system. Our fiscal experimenters must not gamble with the dollars that our tax collectors take from our people. By faithful performance in this field we can build an abiding confidence in our Government.

All Government regulation of business, labor, and agriculture must be imposed as a quasi-legislative function of government but with a judicial impartiality. Rules of procedure must be kept within the limits of established law. Such agencies as are vested with this responsibility must not usurp the powers of the courts. Their orders ought to be reviewable by the courts. Those in charge should be persons of balanced judicial temperament, concerned with strict justice and fair consideration of the rights of all parties concerned. These agencies should never be empowered to determine public policy under the cloak of administrative processes.

Moreover, in every act of Congress extending Federal authority the competence and constitutional authority of the States must be respected. In 10 years, during which Federal authority has added to its power, many powers were seized from the States that might better be left to the States. Our Federal Government has the right to grow. But there is a big difference between growing and swelling. Growth is normal; swelling is evidence of disease.

Finally, in the extension of regulation in the Nation and in the States, every step should be taken in line with consistent economic policy. Either we believe in the future of free enterprise and competition in America or we do not. Either we believe in the future of America or we do not. If men contemplate the present state of American enterprise as mature, washed up, finished, and ready for the socialist undertaker, those men are not competent to guide the destinies of a vital, growing nation. And dozens of official new dealers have said just that of our economy. In fact, so many have expressed that view that we can only conclude that such is the official New Deal Party faith. That feeble faith is not enough for the times beyond this war. We cannot move forward half socialistic and half capitalistic. For my part, I choose America of private enterprise and equality of opportunity.

The presence of such un-American doctrines does a lot to explain the tragic inconsistency of policy that we have witnessed. In the field of antitrust law enforcement, the inconsistency has been glaring. In a Federal court in this very State—Wisconsin—the spectacle was revealed of one department of the Federal Government prosecuting people for the very thing that another department had told them to do. Mr. Thurman Arnold sought certain changes in labor regulation. Other Federal departments opposed them. The controversy became a public scandal. And Mr. Arnold was elevated to the bench. It seems to be a favorite practice with the New Deal, when two new dealers cannot get along with each other, to silence their outcries by making them Federal judges. This is a curious test for judicial fitness. It suggests that the Federal courts are to be regarded as a species of official doghouses. That makes for neither good administration nor good courts.

Even in our agencies created to meet the specific problems of war, this inconsistency is apparent. Under the guise of war, administration activities looking toward permanent radical changes go on. Only recently, it was revealed to a House comm ttee that the former chief counsel for the Office of Price Administration had spent his time gathering material wholly irrelevant to his job of price administration. Perhaps that is why price control has been such a tragic failure. Some men are so intent on making America over that they would ruin America in the process. Like an amateur at watch repairing they can easily take the thing apart, but they cannot make it run.

Nor are we given any assurance of when or how our war controls will be terminated. In the last war, President Wilson was most explicit again and again that war controls were temporary. He said something in that connection that might well be repeated now:

"Our people, moreover, do not wait to be coached and led. They know their own business, are quick and resourceful at every readjustment, definite in purpose, and self-reliant in action. Any leading strings we might seek to put them in would speedily become hopelessly tangled because they would pay no attention to them and go their own way. All that we can do as their legislative and executive servants is to mediate the process of change here, there, and elsewhere as we may. I have heard much counsel as to the plans that should be formed and personally conducted to a happy consumption, but from no quarter have I

seen any general scheme of reconstruction emerge which I thought it likely we could force our spirited business men and self-reliant laborers to accept with due pliancy and obedience."

No such assurance has been given during this war.

Meanwhile, in spite of official confusion, our war effort proceeds. The strength and spirit of our people is a tribute to the deep patriotism and efficiency of a people grounded in freedom. Our armed men are winning victories wherever they fight. The leadership of our armed forces is superb. The Nation to which our fighting men return must be worthy of their courage and sacrifice. We must resolutely prepare for the future beyond the war. The United States, in that future, will play a generous and constructive part in building for permanent peace and a better way of living. In our public discussion, we shall examine every reasonable plan for world order as our sacred duty.

I have sought today to make clear how closely we must match our considered foreign policy with rational domestic policies. For a nation which is to play a helpful part in the world must be sound at home. America cannot reach out a helping hand unless we have a strong arm. We cannot inspire others to be free unless we love liberty here at home. We cannot show others how to govern themselves unless we save and strengthen self-government in America. Nature has given us the materials for that righteous role and our Creator has given us minds and hearts to achieve it. Let us build a nation worthy of our great opportunities.

Overton and Allen Vote Right

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following editorial from the Alexandria Daily Town Talk, of Alexandria, La., of June 29, 1943:

OVERTON AND ALLEN VOTE RIGHT

Senator JOHN H. OVERTON, of Alexandria, and Representative A. LEONARD ALLEN, of Winnfield, were among the Democratic Members of Congress who voted "right" in overriding President Roosevelt's veto of the anti-strike bill last week.

We are glad to know that our Eighth District Congressman and our Senator were close enough to the people back home to know that the Presidential veto was unpopular.

Statutory authority for seizure of war plants and mines and maintenance of present employment conditions and terms are covered in the Smith-Connally measure. A number of newspapers pointed out that the veto constituted the first major set-back for the President on labor legislation. It showed an unusual independence in Congress; the Members evidently have decided to think for themselves, and it was a tremendous blow to all of the John L. Lewises who are leading labor into a degrading and unpopular and unpatriotic position.

Senator OVERTON and Representative ALLEN cast patriotic, 100-percent-American ballots.

Protesting Refusal of Stabilization Director Vinson To Grant an 8-Cent Adjustment in Pay of Railroad Employees

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following letter from Mr. James McAndrew, president of the Port Jervis Local Shop Crafts Federation, Port Jervis, N. Y., protesting against the recent ruling of Stabilization Director Fred M. Vinson in denying an 8-cent adjustment in wages paid to railroad employees.

This is a matter which should be investigated by the Congress, as it must be apparent to everyone that such an increase is warranted and justifiable in view of the mounting cost of living and the higher wage scales paid in war industries, and particularly because practically all railroads are now earning far more money, and have been since the war started, than ever before in their history.

The railroad employees and the American people would like to know whether or not Stabilization Director Vinson acted within existing law, or merely under Executive orders. The ruling of Director Vinson affects a million non-operating railroad employees, who are contributing loyally and very effectively to the war effort. No group of American wage-earners has done more to help win the war, by keeping war materials and food supplies rolling to war plants, ports of embarkation, and to consumers at home.

The letter from Mr. McAndrew follows:

BROTHERHOOD RAILWAY
CARMEN OF AMERICA,
PORT JERVIS LODGE, NO. 962,
Port Jervis, N. Y., June 27, 1943.

Hon. HAMILTON FISH,
Congressman, Twenty-sixth District.

DEAR CONGRESSMAN: It is difficult to describe the stunned amazement of the average railroad shop worker when he first heard that Stabilization Director Vinson had denied the recently granted 8-cent adjustment in shopmen's wages, or the resentment, disappointment, and anger when it gradually developed that this denial was based upon a phony fear of inflation. Some needlessly cruel and terrible things have been done this past year in the name of inflation, but there has been nothing so utterly unbiased or so willfully stupid as this latest blast from the Washington bureaucrats.

Director Vinson says that the raise would be in violation of the Little Steel formula. But this is patently untrue. The Little Steel formula specifically states that gross inequalities in wages should be eliminated and that minimum wages should not go above 75 cents an hour. The findings of the Railroad Labor Board, after months of hearings, conclusively proved that there do exist gross inequalities between railroad wages and the wages paid in comparative industry, and that minimum wages on the railroads are about 25 cents below those in other industries. It was because of this that the Board ordered a readjustment. If Mr. Vinson does not know this, then he is an ignorant man and certainly not fit for an important post in these times of war; if he does know it, then he is guilty of willful and malicious discrimination against railroad workers. In either case he is guilty of contributing toward disunity and perhaps disorder on the home front on a scale that Herr Goebbels could never accomplish in a thousand years.

For railroad workers are not likely to accept his report meekly. The rewards of meekness, we have learned from bitter experience, are to be ignored and shunted aside when we try to press our just demands. For more than 20 years there have been no major strikes in the railroad industry. We have brought our grievances to the conference tables and have submitted to endless "cooling off" periods while in other industries strikes, violence, and disorder flared. But today in the other industries the workers earn from 10 to 25 cents more per hour than we do for the same kind of work.

The railroad unions have been praised; they have been held up as an example to other unions, and very nearly everyone, from the President down, has promised that we would be treated fairly. But now we see these promises betrayed. We still can recall the praise, of course, but one can't buy many War bonds with praise.

There are few of us who can understand this so-called threat of inflation. Is it that the workers of this Nation must be driven to the very brink of pauperism to escape inflation? Must everything that we have fought for these past 50 years be thrown out the window because two men, representatives from the poll-tax-ridden States of the South (Byrnes and Vinson) decide that money in the hands of the workers to provide their families with the necessities of life is inflation?

There has been much written about the boys who are fighting and dying overseas. But when one looks at the scene in Washington, with the bureaucrats holding down wages and Congress pushing up prices, we wonder what sort of a country they are coming back to. And we wonder what they'll think of us if we lack courage now to challenge the nonsense and stupidity, the passion and prejudice, that seems to have overwhelmed the men charged with the responsibility of keeping up the morale of the home front.

It has been charged that there are certain forces in Washington who, with the zeal of Fascists, are usihg the war emergency for an excuse to break down trade-unions precisely the way Hitler and Mussolini used emergencies in Germany and Italy to break up the trade-unions of those sad countries. And today the trend of events seems to support those charges. It would be a tragically terrible thing if, while our soldiers at a tremendous price defeat the Fascist enemies abroad, they return home and find them solidly entrenched in America.

It is well to remember, in these crucial times, that had the trade-union leaders of Germany and Italy possessed sufficient courage, neither Hitler nor Mussolini would have achieved their power. It may well be that the leaders in America today are being called upon for the supreme test.

Respectfully,

JAMES MCANDREW,
President, Port Jervis Local,
Shop Crafts Federation.

Posters Work for Victory

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. KENNEDY. Mr. Speaker, this is the time of year when all of us are thinking of patriotism, and particularly thinking of it in symbols. The Fourth of July itself is a symbolic reminder of our stirring national heritage and our independence. Our flag is a symbol, the dome of our Capitol is a symbol, and the very firecrackers that some little boy sets off are a symbol, too, whether he knows it or not. Our great patriotic painting and war posters, familiar as they are, and equally symbolic, deserve our special attention.

Probably there is not a single American, whether he be a citizen of this land by birth or by adoption, whether he hold degrees from a dozen colleges or be barely acquainted with the three R's, who has not at some time seen, and thrilled to the significance of, that famous historical painting The Spirit of '76. This is probably the best known picture produced by an American artist. In one form or another, it has been reproduced literally millions of times, and in every possible way. Color reproductions of it hang in millions of homes. It is constantly used in advertisements, calendars, posters, school histories, and even as a trade-mark. It appears over and over again in patriotic tableaux, and a Fourth of July parade would hardly be complete without the three familiar figures of the stern old drummer, the valiant and determined fifer, and the eager drummer boy. Archibald M. Willard painted this picture in 1876, just 100 years after the event which it commemorates. A large popular demand for colored reproductions immediately placed the picture within the reach of everyone.

In a very real sense, The Spirit of '76 was our first war poster. It was made, not during a war, but shortly after a long and bloody one, the struggle between the States, and it has remained for almost 70 years the best war poster which we have ever had.

Henry Kelsey Devereux, who posed for the drummer boy of the painting, says:

> The painting created little or no stir among the art critics and connoisseurs. It was not painted for such. The painting was a patriotic human document that reached the hearts of millions and will for centuries to come be an inspiration to further millions yet unborn.

Mr. J. F. Ryder, art dealer and patron of Archibald M. Willard when he was a struggling young artist, gives us the best contemporary account—and, incidentally, the best possible definition of a war poster:

> The idea of the artist in painting the picture was to concentrate all the determination and enthusiasm in a few figures. * * * Pictures have been painted by artists of great skill, possessing qualities of technique of method, valuable beyond the works of other artists; pictures which give pleasure to experts and connoisseurs. In the midst of such works "The Spirit of '76" stands. The eye wanders from these works of great technique, and is awed by the grandeur of the old man, by the force of the fervid and devoted group, by the spirit which invades the whole. Mr. Willard with his powerful but, perhaps, less finished, touch did more than please the eye of experts; he stirred the heart of a nation.

During the last war many of our finest artists turned to the production of posters as their contribution to national morale and the war effort. I am sure everyone remembers the Howard Chandler Christy drawing of the tall man in the top-hat, with his finger outstretched: "Uncle Sam wants you." Mr. Christy continues to make inspiring posters during the conflict of today. Particularly memorable is his picture of the Red Cross Nurse. His magnificent painting, on an heroic scale, of the Signing of the Constitution, now hangs in the main hall of the House of Representatives.

Probably, too, everyone is familiar with "The Four Freedoms", painted by Norman Rockwell and reproduced in recent issues of the Saturday Evening Post. These four stirring pictures of what we are fighting for have had wide distribution and equally wide acclaim. Another extremely familiar poster is one of the fine series put out by W. P. B.: "Men Working Together", which depicts a soldier, a sailor and a welder, all shoulder to shoulder and looking sturdily forward. War Department, O. W. I. and Treasury posters are everywhere—and they represent the best and most vigorous in American art.

This is not the art of the salon, of the critic and the connoisseur. It requires no mood, no studio atmosphere, no correct lighting, no proper background, no hushed voices and no beautifully printed catalog of explanatory notes. This art must succeed, if it succeeds at all, by immediate impact. It must be effective in any light and against any background—school room, barber shop, streetcar, restaurant. It must be strong enough to enlarge for a billboard or the side of the proverbial barn; it must be sharp enough to make a cut for a letterhead. It must be clear enough to stand reproduction on all kinds of paper, from the finest bond to the cheapest unbleached woodpulp. It must carry its caption boldly, if there be caption at all, so that the passenger on a swift overland train or the casual pedestrian who glances once at a handbill before discarding it instantly seizes and understands the message. It must constitute the graphic representation of the soul and sinews of a people at war. It is not studied, not posed; it is quick and vivid with colors forged in the furnaces of our effort.

The general and generous cooperation of the advertising industry in using the best of American art for patriotic purposes looms large in these difficult days. Few of us will ever forget "The kid in upper four." Almost all of our Nation-wide companies have been using outstanding pictures—and outstanding text. I know of one concrete example which, if it did not make history, certainly managed to collide with it. As part of their contribution to the war effort, a New York advertising firm engaged a full page of both the New York Times and the New York Herald Tribune on the day the second front in north Africa opened to reproduce a poem called Prayer to Jeanne of France, by Joseph Auslander. The poem was illustrated by a drawing of Jeanne d'Arc, made by an American artist, Adolph Treidler, for this occasion. The fact that the page appeared on the very day of the second front was a happy stroke that called double attention to the poem. The advertising firm, the author, and the artist received literally thousands of letters about the page. The whole page was eventually set up as a poster reprint and has been widely distributed.

The National War Agencies tell me that—

> Posters are divided into five categories: (1) Recruiting; (2) selling War bonds and stamps; (3) production, which now includes related subjects, particularly those designed to reduce absenteeism; (4) morale building, general patriotic themes; and (5) security or "Don't Talk" posters.

I am inclined to believe that the last two categories are the most important. Recruiting will come as inevitably as the draft; it is virtually a matter of getting a man into the niche best suited for him. War bonds and stamps will be bought, and bought in increasing numbers. Production, if only from a selfish motive of the individual who must be sure of his daily bread and butter, must and will go on. In all these fields posters help but especially in the matter of building morale and of keeping us from rumor mongering. Every one of us has a moment of despair or depression now and then, when we, almost in spite of ourselves, began wondering what is the use of it all. Every one of us, sooner or later, comes into possession of some isolated scrap of information which, if overheard by alien ears and pieced together with other seemingly unrelated scraps, can send a ship to the bottom or a squadron of brave men to their graves.

In these fields the national war agencies have done magnificent work. One particularly notable poster bears the caption "Strong in the strength of the Lord, we who fight in the people's cause will never stop until that cause is won," from one of Vice President WALLACE'S recent speeches. The picture is that of three resolute arms, one holding a monkey wrench, one a rifle, and one an S wrench. Two of the "don't-talk" posters remain fixed in my memory. One is a simple brown background, like the sands of the African desert, with a wooden cross and the pitiful heritage of a helmet and a cartridge belt hung over the arms. The title is, "A Careless

Word; Another Cross." The second depicts a drowned sailor washed up on the beach, his clothing and his fair hair still awash with the sea water. The caption "A careless word; a needless loss."

We learned to "Join the Navy and see the world" through a poster which has served well in peace and war. Now we learn to buy War bonds through the huge billboard on the lawn of the Treasury Building—one of the best strokes of outdoor advertising which has come to my attention.

Let us remember to give our war posters more than a casual glance. They are really worth while. And some of them may be tomorrow's famous paintings. The more simple and direct and vital they are, the more our heart's blood is set pounding. I want to take this opportunity to congratulate the national war agencies, the advertising industry, and the artists themselves upon this most useful and effective enterprise in helping to win our war.

Spies—Genuine, Grim, and Close

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York World-Telegram of July 1, 1943:

SPIES—GENUINE, GRIM, AND CLOSE

High credit is due the Federal Bureau of Investigation for its 3 months' work which resulted in the capture of the two Nazi spies on Staten Island—Lehmitz, the air raid warden and victory garden cultivator, whose invisible ink letters conveyed to his Nazi masters information about American troop and convoy movements; De Spretter, the highly trained engineer who, at secret meeting in a Staten Island wood, fed Lehmitz technical data on American war plants, etc., for transmission to Berlin.

Note that both Lehmitz and De Spretter, after arrest, promptly pleaded guilty. This is in line with reported Nazi instructions that when German spies are caught in this country and the case against them appears overwhelming, they must immediately confess guilt in the hope of heading off further prosecution and probing that might discover more accomplices and wider ramifications of espionage. The Federal Bureau of Investigation, of course, knows this and will be neither fooled nor halted.

Note also that these trained and efficient Nazi spies—they were no amateurs or dubs—compiled many of their reports from conversations heard in waterfront bars and restaurants and even on ferry boats. This should be sharp warning to easygoing Americans that expert spies are not all in storybooks and that careless talk may mean grim and heavy cost in American lives.

The Federal Bureau of Investigation has done a fine job. The public's job is to help, not with hysterical spy-hunts but by setting a guard on its lips and by keeping its eyes and ears open in sober realization that the spy danger is neither unreal nor remote.

Controlling Runaway Inflation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the Honorable JOHN MCCORMACK, of Massachusetts, majority leader of the House of Representatives, a radio address over a Nation-wide hook-up of the Columbia Broadcasting System, July 1, 1943:

My colleague, Hon. WRIGHT PATMAN, of Texas, over this network last week presented an able and frank discussion on the dangerous threats of inflation. Tonight I wish to express my sincere thanks to the Columbia Broadcasting System for extending its facilities to me so that this discussion might be continued. I wish to talk to you particularly about the necessity for controls of rising prices and your participation in these controls.

Congressman PATMAN said the threat of run-away inflation is growing stronger. I wholeheartedly agree. It cannot be overemphasized that it is a dangerous threat. Unless there is courageous and immediate and continuing action on the part of all of us, this threat may seriously impair our way of life.

The main influence that brings about inflation is a sudden and unusual increase in money among the people without any proportionate or corresponding increase in things that money can buy—or too much purchasing power in relation to the physical volume of business being done.

Business, of course, is booming. There never was a time in this country's history when there has been such a tremendous amount of business. Fifty-two million people each day are toiling on farms, in factories, on our great transportation system, in mines and smelters, in offices and stores—the largest working force ever assembled in our country.

It is assembled—first and foremost—to satisfy the enormous production demands of this tremendous and total war. It is assembled—secondly, and let us never forget that this must come second—to satisfy, on a democratic sharing basis, the essential civilian needs.

You and I, and your neighbor and my neighbor, collectively constitute the United States Government. You and I and our neighbors are the principal customers for all the war material we can buy. And we are spending billions and billions of dollars. For you and I and your neighbor and my neighbor have accepted the battle challenge of the Governments of slavery. The will of the free people the world over is for complete victory—victory that will destroy the tyrants' yok forever and lift it off the shoulders of the oppressed. And we shall not lay aside our tools until that day is here.

Uncontrolled prices caused by excessive spending for civilian goods can prolong that day. Uncontrolled prices can make the cost of war and the cost of our essential civilian supplies prohibitive. Our Government has taken vigorous steps to keep prices down. But in order for the Government to be successful we must realize how terrible runaway inflation can be and we must cooperate fully with your Government in preventing it. This means the exercise of clear judgment, courage, and determination to control human selfishness. This means the willingness on the part of all of us to make sacrifices. Otherwise everyone will suffer.

Let me be frank. The huge shift of our productive capacity to the war effort has converted a large part of our industry to war production. This has reduced the amount of goods and services for farmers, wage earners, salaried workers, and shareholders, who now have more purchasing power than ever before. This more-than-usual purchasing power set against an inadequate supply of civilian goods has thrown supply and demand out of balance. Therefore it is the increase in demand and reduction in supply of civilian goods, which creates the danger of an explosive rise in prices.

The national income is now estimated at about $140,000,000,000. Out of this total about $15,000,000,000 are now being deducted for taxes. This leaves $125,000,000,000 to compete for $80,000,000,000 in available goods. The excess $45,000,000,000, which is about two billion less than our total national income a decade ago, can exert such a terrific pressure as to cause prices to skyrocket.

When prices run away the poor, in particular, suffer, as well as the fixed-income white-collar worker and the widow, who has a little savings or preferred stock. Holders of bonds, both Government and private, would likewise suffer. Every business concern in the land would be faced with uncertainties. In other words, the resulting economic disorder would be incapable of calculation.

If, for example, one bed or a radio, or any other item you may think of, was available for five persons having the money to purchase it, what do you think would happen to the price of that bed or radio if open to competitive bidding? Use this simple illustration and apply it to our whole economic life and attempt to picture the situation. This will give you at least an idea of what conditions would be under run-away inflation.

Let us go back 25 years for a real example of how ruinous inflation can be. One dozen eggs retailed at four trillion marks during the runaway inflation period in Germany after the last war. If the equivalent had happened here 12 eggs would have cost us $400,000,000,000. This would have been four times as much as our Government is now spending in 1 year to carry on this war.

The German Government, as you may recall, did little to finance the last war by taxation. It relied to the greatest extent on war loans, the subscription quotas on which could be met only with the help of a steady expansion in the amount of money outstanding. In other words, money was printed recklessly.

After the war conditions deteriorated rapidly in defeated Germany. Its financial obligation was far greater because of reparations. Nevertheless, the German Government continued to neglect imposing sufficient taxation. Prices went out of control. Money became dirt cheap. The government finally resorted to hypo-inflation to take resources from a demoralized people, and it finally required the help of foreign capital to stabilize economic conditions.

Many keen students of finance are studying our economic treads and the threat of inflation. Among them are many who know in detail the history of other inflations. All are agreed that the only way to protect ourselves against inflation is to reduce our buying; to increase our taxes, and to increase our savings. Unless we do so, we not only make inflation possible, we make it inevitable.

It must be understood that the upward spiraling of prices caused by the downward spiraling of the dollar substitutes an uncertainty for every certainty in the economic system. It substitutes an item of instability for every stable item in economic relations. It thereby vastly increases the difficulties of

Government and business, for it makes difficult the planning of the war and the long-range planning necessary for the post-war period. It endangers existing savings and insurance and makes difficult the planning of those personal programs of security, thus striking directly at the community's sense of well-being.

While the upward spiraling prices confers temporary profits on a few, it cuts the standard of living for the many.

The dangerous consequences of rising prices are widely recognized. Nevertheless, the hope always persists among some groups of the population that the advantage they get will be greater than their share of the general damage done. Such an attitude is extremely shortsighted for so thoroughgoing are the consequences of inflation that none can escape them; and any advantage is certainly temporary.

We are going to win the war. And we most certainly can shorten it by all groups pulling together. The only way to hold down prices, to paraphrase President Roosevelt's recent remarks, is to stop trying to find reasons for not holding them down here and for not holding them down there.

Although the Government must be the center of any effective program for holding down prices and insuring economic stability, we must carry out our share of the program by doing the following:

Buy and hold as many War bonds as we can afford.

Pay willingly any taxes that our country needs.

Pay off our debts and avoid making new ones.

Provide for our own future and the future of our families with adequate life insurance and savings.

Pay no more than ceiling prices. Buy rationed goods only by exchanging stamps.

Buy only what we need.

Don't try to profit from the war.

The dangerous inflationary situation can be averted only by courageous action on the part of public officials, with your support. It is up to each one of us to realize that when our Government takes strong measures to prevent inflation they are necessary steps to the winning of the war.

I want to stress particularly that we must lift ourselves above our personal reactions to Government controls. The Government can and it has already provided methods to control this vicious economic disease. But unless you cooperate by making all necessary sacrifices and unless you appreciate the necessity for strong measures to control prices, the efforts of your Government will be in vain.

The choice is ours, yours and mine, and each of us.

The responsibility is ours.

It's not up to the man next door.

It's up to us, each and every one of us, to work for tomorrow, today.

American War Dads

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. STEWART. Mr. Speaker, since last December the fathers and mothers and other near relatives of men in the armed forces have been banding themselves together with common ties in an organization known as American War Dads, and this group of patriotic Americans have taken unto themselves the preservation of the cardinal principles of our forefathers in two respects, first in backing up our forces in battle and secondly a determined conviction of the peace to follow the war; they are 100 percent behind the American Legion in the program they have so faithfully sponsored since their organization.

Mr. Julius H. Almond, of Enid, Okla., and incidentally the president of Oklahoma Chapter, No. 5, at Enid, Okla., on June 22, 1943, delivered an address before the Oklahoma State organization of the W. C. T. U. and has ably set forth the tenets and activities of the War Dads organization. We think this patriotic and informative speech is worthy of a page in the CONGRESSIONAL RECORD. Mr. Almond is a native-born Oklahoman. He was a commissioned officer in World War No. 1 with many months in foreign service. He was in attendance at the then peace conference as a military officer, and today his son, his namesake, also a commissioned officer, is serving his country in the armed forces.

American War Dads are deeply concerned over the activities and administration of our Government and by their having organized no doubt much reform will result.

Mr. Almond's speech delivered before the Oklahoma W. C. T. U. organization is as follows:

Mrs. Atkinson, ladies, and members of the Woman's Christian Temperance Union, and gentlemen, I want to assure you that it is a privilege, an honor, and a pleasure to be with you this afternoon and speak to you on a subject in which I am vitally interested. Mrs. Atkinson, when she called me several days ago—and, incidentally, it was about the third time I had been asked to appear but bcause of other business was unable to do so—told me that I might choose my own subject. And when I tell you that I hadn't chosen it even after I walked in that door this afternoon, you may believe me. But I think you would all be interested in something that I have been thinking about, and that is, keeping faith. Keeping the faith for these boys and girls of ours who have gone out to fight the battle to preserve America for Americans, but before we get into that, I want to tell you frankly and candidly what I have learned about the Woman's Christian Temperance Union, your fine organization. For many years, as one of the laymen, so to speak, the rank and file, cross section of your Nation. I have heard of the Woman's Christian Temperance Union, and in each case it was always connected with something about temperance or the use of liquor. I want to tell you I have learned of your activities and that they have extended far beyond that one particular point. I observe that you have accomplished many things in your lines of endeavor; in fact that you are a distinct contribution to the community in many accomplished programs.

There are organizations of many kinds—civic clubs, fraternal organizations, organizations in the churches, different denominations, many of them—and they are good. Then we have, just recently, a new organization which has been titled the "American War Dads." Mrs. Atkinson gave it a new name, but I will accept it in reference to our organization, which is the national organization of the American War Dads. I happen to be president of the Enid Chapter, No. 5; we have nearly 500 members, one of the largest organizations in northwest Oklahoma; also State chairman of organization and extension, and recently they saw fit to make me a member of the national executive committee. I do not know why. We are a new organization. We started in December last year. After finding throughout the Nation many organizations, comprising fathers of boys in service and of sons in service, we set about to unify them and mold them into one known as the American War Dads. I mention that not as a glamour view, trying to promote the Americar War Dads, but merely to explain to you the facts about another organization coming into being, which will include the members of all organizations, I hope, throughout the Nation.

We have at this time many things confronting our Nation, too many things. To tell you or attempt to tell you what they are would be questioining your intelligence. I am sure you hear the radio and read the newspapers, perhaps not as I do, because I spend several hours a day with newspapers; like Will Rogers many times said, all he knew was what he read in the newspapers—and that just about fits me.

You know of the problems confronting not only our Nation, but the world, and your organization and other organizations are definitely doing something about it. The time has passed to talk so much about the terrible wrongs that are being done. The time has come to do something about them and we feel, in our organization, that we will be able to do something about them, definitely, before long. I might give you a word about the principles and reasons behind our organization, this all-inclusive organization. In the first place, the fathers of sons and daughters in the service—and we have something like eleven million of them, are rapidly banding themselves together throughout the Nation to back up and keep faith with our own flesh and blood in this conflict. To do that as quickly as possible to prove our numerical strength and unity. To assist in the early termination of this war in the right way, and that we may have a permanent and lasting peace. I might enumerate to you the four principles or basic objectives we have in our organization.

First. To assist, in any way we can, our boys and girls in camp or at the front.

Immediately comes to your mind a number of things that can be done in that regard. No. 1, I think, or uppermost, there would be the writing of frequent and cheerful letters to our boys and girls in the service. We know from having read the experiences in the letters of the boys, or those who have gone to visit them—Capt. Eddie Rickenbacker and others—that nothing uplifts their morale like a cheerful letter from home; they have told you they would rather have a letter from home than something to eat. They don't mind so much going without food or sleep but they do mind not getting a letter from home.

Second. The second objective is to further unify and promote the effort on the home front. Ladies and gentlemen, that is a big order. The home front. Not the least by any means, as a part of this war, is the home front. It is all important, and we can see the things to be done. As individuals we all try to do our share, but as groups such as your own fine group, you know you can do so much more banded together than as individuals, and it is with this thought that we, as American war dads, feel that by unity and strength, we will be able to accomplish so much more in the effort on the home front. We could talk about that for weeks, we are going to have to continue to talk about that and to really do something about that. We have a situation in our country today—strikes seriously interfering with the production so vitally necessary in the production of implements of war, transportation of foodstuff and supplies to our boys and girls in distant

lands. I need not dwell on that; it would probably concide with what you think about it, but you can all see the need for something to be done immediately to relieve that situation. That is a definite part of the war dad's program; we have something in mind and are beginning to take definite and effective action. I have assisted in banding together more than 6,000 war dads in northwest Oklahoma alone during the past 90 days. Our national objective in membership is for 2,000,000 dads by the end of the year.

Third. In which we hope to have a definite hand in the post-war planning and permanent peace terms. If I had the time, I might tell yo uwhy I know something about the wrong and right way for peace. A lasting peace. It was my good fortune to be associated with the American commission to negotiate peace in 1919, following the other war. I was associated with Mr. J. C. Grew, secretary of the Commission, with Mr. William C. Bullitt, member of the International Law Section of the Commission. Later on, Mr. Grew was Ambassador to Japan and Mr. Bullitt Ambassador to Russia and France. I was associated with those men and know them well. I could see what was going on around the peace table in Versailles, near Paris. I was one of the 500 there. I had occasion to be in London on June 15, 1919, only 13 days before the peace was signed. As I walked along Trafalgar Square, I was faced with a placard there. The newsboys had on the card, three large headlines—Wilson Courting Treason. As an American officer, you can imagine the feeling I had.

There were many mistakes made at the last peace table. If I had time to tell you, I could enumerate many of them. I should like to mention some of the things we must consider and do in order to have a permanent peace in the future. I would call your attention to only a few. First, everyone should know that it is just as important to prepare for peace as it is to prepare for war. The requirements of preparation for peace are more complicated than for war, secondly, at the next peace table, in my opinion, there we will see a woman for the first time in the history of the world, and that woman, I believe, will be Mme. Chiang Kai-shek. I hope she is there, she can write my terms of the peace. Then I think, too, we must not lose sight of the fact that the small nations, the nations overrun, that have been starved, such as Poland, Denmark, Norway, Belgium, Holland, and so forth, should be considered first, before any political subdivisions or boundaries are attempted, that those nations must be heard at the peace table and have full representation on the same basis as England, Russia, or America. Unless we give full consideration to all of them we will have World War No. 3, and if we have a World War No. 3, with the future advance of technological institutions, development of engineering and technology, we can understand it will be total oblivion, because if in the next 25 years we progress as we have seen progress during the period since the last war, in the air age, we can visualize that the next war will not last long, it will be annihiliation of civilization. So I think the considerations of the peace by every father and mother, every living person on the face of the globe, should be fully considered and weighed before the terms are finally written, and that is an all important factor for enduring peace. It is my opinion that it will probably take at least 5 years to work out a permanent and just peace. Now, you may be wondering why I am talking so much about peace. We were talking about peace when Pearl Harbor happened, ever since the first American Legion convention in 1919 the American Legion has been talking about peace, but about an armed peace. We must talk about peace, even when at war, and visualize the things absolutely necessary to end the war victoriously.

Then objective No. 4, ladies and gentlemen, would probably be No 1. were the conflicts over today, but it isn't over today by any means. We have only started. And that would be to assist in any way possible as an organization of war dads, in connection with the hospitalization, rehabilitation and reemployment of boys and girls when the conflict is over, briefly, to get them back into civilian life, so they could go ahead with their respective vocations and take up where they left off and continue to progress as Americans. That is a big order. Today they are already returning. The little town of Chickasha right now has the hospital filled with several hundred boys, already returned from World War No. 2. You know about that. That they are maimed, many of them helpless for life. Many of them can be rehabilitated and if the United States Government isn't going to do it, it is going to be the duty of the American War Dads to see that it is done. In the O'Reilly General Hospital in Springfield, Mo., I want to relate a recent incident. Mary, that is my good wife could not be here, so I brought Aunt Margaret Lewis, Mary was with me when I came through Springfield, we passed through a hospital filled with boys returned from World War No. 2, it was my occasion to visit with a man who had talked with some of the boys returned, he walked up to one with the colonel in charge, this was a young American boy of Italian parents, he had gone out in the southwest Pacific to fight for you and me. He had his right arm off at the shoulder, he was reading a book, with his left hand, incidentally the book was furnished by the local chapter of War Dads in Springfield. He was bright and cheerful, in response to queries. He was thanking him for the book made available by the War Dads. The colonel asked him if he might lift the sheet, the boy said, sure, the colonel lifted the sheet and revealed that the boy had no legs, right arm gone, both legs gone, the man said, "That's terrible, son, I am sorry." "Oh, that is all right," he replied, "I still have a good left arm left to give them hell." That is the spirit of America and of these 11,000,000 boys, the spirit of the dads and mothers throughout America, and the spirit that will carry this war to a successful and victorious conclusion. I could talk to you all day, I think my 20 minutes have gone to 30. I would say in closing what I mentioned in the beginning, we must keep faith with the boys and girls in whatever our endeavor, whether individuals or collectively, let's keep faith.

Resolution of the United States Selectee-Parents Legion

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Servicemen surviving mud, water, and air hazards in this the greatest war in history deserve the right to have most to say and do in fashioning post-war in the United States of America. Flesh and blood home folks of these men—parents, wives, sisters, and brothers—they, too, will have much to say and do in backing up the victors of this war when they aid authorized post-war planning and action. They will join their men and boys who fight to preserve our United States by maintaining sufficient nationalism in order to meet any excessive internationalism: Wherefore it is

Resolved by the United States Selectee-Parents Legion at national headquarters, Cincinnati, Ohio, That—

1. Just as does American Legion Post 20, Miami, Fla., so do we endorse Journalist Damon Runyon's suggestion that national legislation be enacted now making provisions for the veterans of this war;

2. As other organizations of the last World War have done, such as the Veterans of Foreign Wars and the Disabled American Veterans, so does the Parents Legion propose to help see the men of this gigantic war given all necessary protection toward forming their own organization, of their own conception, free of outside interference or attempts to absorb them in some kind of a vain hope they might lose their own governing strength;

3. The Parents Legion goes further to resolve that the Military Affairs Committee of the Congress of the United States should report out of committee H. R. 2193 as it is, or as it may be amended in form, so that now we can show some real indication of the appreciation most every one of us feels for the magnificent, often tragic, sacrifices our boys and our men in the service make 24 hours a day, every day of this war. Let us tell them now that among other considerations we have for their future welfare, we fully intend they shall have immediate income upon receiving an honorable discharge from any branch of the armed forces at the rate of $50 per month for every month they have served since the first Selective Service Act was passed. They must not return to see a civilian life of chaotic incompetence and complacent indifference—they deserve all we can do, now as well as later;

4. The Parents Legion goes further to resolve that when this war is done, those first in the service should be privileged to come home first; and

5. It is further resolved that copies of this resolution be sent to all Ohio Representatives in the Congress, with the recommendation that other chapters of the Parents Legion in other States do likewise, and that a copy of these resolutions be spread upon the minutes of this meeting.

Adopted in regular meeting, June 11, 1943, at Cincinnati national headquarters, in session at Memorial Hall Auditorium.

GEO. ALBERT SHIVES,
Chairman, National Policy Committee.
ANDREW F. SCHAFER, Jr.,
President.
Mrs. ANDREW OWENS,
Secretary.

The Repeal of the Chinese Exclusion Laws

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered over the Mutual Broadcasting System on July 1, 1943:

Some 60 years ago, because of the fear that cheap Chinese coolie labor would be flooding this country if not checked, Congress passed what is known as the Chinese exclusion law. Under that act no Chinese

were allowed to enter the United States except as merchants, or students, and since that time there has been no Chinese immigration into this country.

When the Immigration Act of 1921 was passed, commonly known as the quota law, and again in the Immigration Act of 1924, this exclusion of Chinese was continued and no Chinese were allowed to enter this country under our immigration quotas.

At the outbreak of the war, with the dastardly attack on Pearl Harbor by the Japanese, sentiment in this country was thoroughly aroused in favor of the Chinese people who, for so many years have valiantly resisted Japanese aggression. Even people who had not realized it before, now had to admit that China had been fighting a common enemy and that in keeping Japan occupied she had given us a chance to become better prepared. It is unfortunate that it took a national calamity to bring to public attention the debt which we owe to the brave people of China who for years, despite a poorly equipped army and only by sheer courage and will power, held the Japanese at bay.

When the United States joined China in the fight against Japanese aggression, the Japanese war lords immediately changed their tactics, and they started an intense propaganda program trying to convince the Chinese that they ought to throw in their lot with the Japanese in their fight for what they called a free Asia. They tried to convince them that the Japanese were their friends and that their so-called allies were only interested in broadening the sphere of influence of the white race. In this psychological warfare the Chinese Exclusion Act is one of the strongest weapons the Japanese have. They are using it as an example of the American's complex of white supremacy. They are using it to prove to the exhausted Chinese people that their allies treat them as inferior people who are not even welcomed in their country. Japanese broadcasts state, "While white people are free to live in China, the Chinese cannot live in the United States and every Chinese allowed to enter the States for a temporary visit is forced to undergo the most humiliating and disgraceful treatment." This propaganda has become such an important issue that it can no longer be disregarded.

Friends and admirers of the Chinese people began to voice their sentiments demanding that the discriminatory Exclusion Act be repealed. The Chinese are much too proud to ask for the repeal, but Americans, outstanding citizens of our country, decided that steps must be taken immediately to repeal this act in fairness to our great ally, China. Several bills were introduced in Congress and the list of witnesses who appeared in support of the bills to repeal the Chinese exclusion laws might have been taken from Who's Who in America. The Committee on Immigration and Naturalization, of which I have the honor to be chairman, held hearings for over 3 weeks and heard well-known men and women who represented a fine cross-section of public opinion in this country. People from all walks of life, businessmen, authors, missionaries, who had lived in China for years were most emphatic in urging the repeal of the Exclusion Act in justice to our own principles of democracy as well as in fairneses to a great and loyal ally. Congressman Judd, Pearl Buck, Reverend McGee, and scores of other people who have spent years in China all agree that the Chinese people have long been perturbed by this exclusion law. They all agree that it is very much resented by the Chinese people and that it may be one of the most important factors in determining our future relationship with China. As Bishop Yu Pin, of China, stated before the committee, "His people might understand that it is difficult to get much material help to them at the present time, but they cannot be expected to accept any excuses for the continuance of such a discriminatory act." Many witnesses who discussed this problem with people in China explained to the committee that the Chinese Government is finding it difficult to counteract Japanese propaganda because the Chinese know that there is an Exclusion Act against them. They feel that th Chinese people are entitled to know what the score is. They feel that as our allies they have a right to know whether they are going to be treated as equals or whether we are going to continue our discrimination against them.

The strongest blow we could strike at Japan is to take away the basis for their vicious attack upon us by the repeal of the Chinese exclusion laws. Admiral Yarnell, who spent most of his time in the service, in the Pacific, is one of the best qualified men in this country to discuss this problem. As he stated in his testimony before the committee, "the repeal of the Chinese Exclusion Act is most essential not only for the future peace but as a vital war measure. Our main attack on Japan must come from the Chinese mainland and China must be encouraged in every way possible to continue war until we can give real military assistance. One of the most effective methods of sustaining Chinese morale would be the repeal of this act not only as a simple matter of justice, but as a recognition of the heroic resistance of China against our common enemy." This statement coming from an authority like Admiral Yarnell should not leave any doubt in anyone's mind as the advisability of such repeal for the best interests of our country in this fierce struggle in the Pacific.

As to the post-war effect of this repeal, it is worth while observing that China has a population of some 450,000,000 people who are facing their great industrial revolution. China after this war can become one of the most important markets for American goods while we may profit from her vast resources of raw material. As the San Francisco Chamber of Commerce stated in their resolution calling upon Congress to repeal the Chinese exclusion laws. "Our unfortunate method of restrictions is being exploited by Japan in its approaches to China. China is conscious of the stigma our exclusion laws have placed upon her nationals. Not only for the war effort but for the post-war period of reconstruction and trade development, the exclusion laws will be a barrier to best possible United States-China relations."

China is an important member of the United Nations, in war as well as in peace, and deserves all the help we can give her. Of course, it is true that we have sent military supplies—but we have not sent enough. Unfortunately, until the Burma Road is reopened, our help as far as military equipment is concerned will be limited. Therefore, it is even more important to give them all the moral support we can. Japanese propaganda that the Chinese are being neglected by their allies and that they are being treated as inferiors is as potent as Jap guns. Now is the time to wipe out the insult of American immigration exclusion legislation. That act of decency and justice would not cost us anything. By putting China on a quota basis we would allow but 105 Chinese to enter this country annually and to become citizens like all other legally admitted aliens. It is preposterous to claim that the admission of 105 additional people per year could throw our economic structure out of balance. It would mean nothing to us and a great deal to the Chinese Government in counteracting the Japanese propaganda among their people. It would mean a great deal to the courageous Chinese people who are entitled to have our friendship in deeds as well as in words.

As chairman of the Immigration and Naturalization Committee I have, for the last few weeks, listened to many arguments on this important legislation before the committee. I have considered every possible angle and have come to the conclusion that it is imperative that our committee bring this legislation to the floor of the House at the earliest possible time. But the committee has, for the time being, withheld its approval of this bill.

This is a vitally important measure, and Congress, as the Representatives of the people of this country, should be given a chance to cast the deciding vote.

By allowing this limited Chinese immigration within our quota laws we shall have paid a debt of gratitude to the Chinese nation. China has the will and the manpower to fight Japan until final victory. By utilizing this Chinese will and manpower we shall save the lives of many of our boys, whom otherwise we shall be obliged to send into the Pacific to fight the menace of Japan. We have a ready-made Army eager to fight our common enemy, a courageous Army which we cannot supply with implements of war as well as we would like to until the Burma Road is reopened. Let us at least give the fighting Chinese our moral support. Let us show them that we are really their friends. I know that by repealing the Chinese exclusion law we shall make a wonderful gesture of friendship and goodwill, and we will make millions of friends and gain millions of fighting soldiers.

We owe this duty to our own fighting men and we owe this duty to the valiant Chinese people.

Failure of the O. P. A.

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 6, 1943

Mr. SIKES. Mr. Speaker, attempts to defend O. P. A. almost invariably contain the complaint that the agency is being hamstrung by appropriation cuts or congressional restrictions. This defense, inspired very probably by the agency or its friends, is a sorry excuse for O. P. A.'s failure. If the agency is being hamstrung, the reason is clear enough. Congress is trying to rid the Government of a lot of power-drunk theorists.

No sane person discounts the danger of inflation or denies the necessity for price control. But we are forced to admit that little has been accomplished by O. P. A. to prevent the one or to enforce the other. O. P. A. is noted chiefly for its 2,700 lawyers and its efforts to defer its Ginsburgs from military service. It has refused to deal sensibly with farm prices, thus encouraging and almost necessitating farmer dealings with black markets if cost of production is to be had.

The agency is run by people inherited from the Leon Henderson regime. It seems to be the rule rather than the exception that they possess little practical experience in the fields which they seek to control. Their far-fetched rulings are the despair of businessmen throughout the country. Stories of overstaffing of offices are common. I cannot see that efficiency and economy have been the watchwords of O. P. A.

Few will deny that the average family is encouraged by present rationing poli-

cies to buy more sugar, coffee, shoes, and other items than they actually require or would normally purchase. The hysteria of scarcity forces them to buy, regardless of real need, against the time when they may not be able to buy. I have heard this statement time and again: "I don't need this, but my coupons are about to run out, and I'm afraid not to use them."

Rationing and price control are a bad job at best. There are many fine people in O. P. A. who are doing the best they can, and most of them are heartily sick of the mess they are trying to clear up. They know the Henderson heritage has smeared O. P. A. almost beyond salvage.

Effective control methods do not depend upon manifold regulations or top-heavy office staffs for success. Real freezing of prices has not been attempted, but where that step might have worked, the system of compromise which was adopted has simply begged the question and postponed the show-down. In either case, common sense appeals for patriotic cooperation in reasonable buying can be infinitely more effective than elaborate and sometimes confusing enforcement formulas. Unfortunately the public has not been made a partner in rationing and in price control. Henderson tried to ram them down our throats, and the program has never got over that bad start. The specter of an American gestapo, waiting to crack down upon the unwary, is still fresh in the minds of the people.

Americans have no fear of sacrifice or of hardship. They will follow wise leadership. They will respond to appeals to reason. But 10 times 2,700 lawyers cannot drive them. From its start, Office of Price Administration violated these fundamental principles. That is why O. P. A.'s policies are not working today.

Safeguards of the Nation

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Joseph B. Ely, former Governor of Massachusetts:

[From the Boston Post of June 30, 1943]

ELY TELLS SAFEGUARDS OF NATION—BASIC RIGHTS SHOULD BE KEPT IN MIND IN THESE TIMES

"Citizens should not let themselves forget the fundamental safeguards which were written into the Constitution to protect the individual and minorities," Ex-Gov. Joseph B. Ely declared yesterday. "They should be kept in mind," he said, "when there is discussion of measures which have been enacted during the last 10 years."

ENGLISH SOCIALIST

The former Governor's statement follows:

"Harold Laski, in the foreword to Brogan's book entitled 'Government of the People,' wrote as follows:

"'The foreign observer can see without difficulty how the American Constitution could work without undue conflict in an epoch of remarkable growth. His problem is to understand whether the equilibrium it protects can be harmonized with the needs of an era in which, as in our own, the claims of property to a special position in the state are seriously challenged.'

"Brogan's book is used as a textbook in some of our most famous universities. Harold Laski is an English socialist. You can read his articles in American newspapers and magazines and you can hear his voice on occasion over your radio station.

"In the book itself Brogan writes:

"'The American Constitution is a specimen of a very rare historical achievement, the stopping of a revolution at the point most convenient for its original sponsors, the dream of all political innovators, the saying to the people, thus far and no farther, and the inducing of sobriety in the masses stirred out of their usual passivity, was achieved by the ingenious gentlemen whom President Harding called the founding fathers.'"

BOTH INFLUENTIAL HERE

"Had you ever heard that the people of this country were wildly revolutionary in their ideas of government and that it was necessary for Washington, Jefferson, Hamilton, Madison and John Adams to stop the progress of this wild demonstration by setting up the Government of the United States in constitutional form? I never did.

"My understanding of our historical development and the adoption of the Constitution of the United States was that as originally drafted it did not give proper protection to the States for the preservation of their own local governments; that it did not give proper protection to the home and that it did not protect them in the enjoyment of their freedom of worship, their freedom to hold property, and that, therefore, in order to secure its adoption by the States a promise had to be made that the first 10 amendments would be added to the original Constitution.

"I have quoted from Brogan and Laski's foreword to Brogan's book because both men have powerfully influenced the carefully planned movement of this Government away from the original moorings provided for it by the Constitution of the United States. Laski, the English Socialist and friend and confidant of some of the most powerful personalities in the government today, wrote in this same preface to the Brogan book as follows:

"'The Constitution he (Brogan) describes is one in which, behind the abstract formulae, can be discerned a clear effort to protect a certain view of property from invasion by the demands of the multitude. That such an attitude should so long have gone unquestioned is due, I think, above all to two things: It is due, in the first place, to the skill with which, behind the formal facade, the actual working of the Constitution has been adapted ceaselessly to new needs; and it has been due, in the second place, to the fact that America has genuinely been, to a degree unknown to Western Europe, the land of opportunity for the comparatively humble man.'"

WHAT MADISON SAID

"The two causes have, of course, been closely related; and they explain why, until quite recent times, it has been so largely unnecessary to ask in America those essential questions about the foundations of the state with which we in Europe have been largely concerned. They explain, for example, the curious absence from American political life of a socialist perspective to party action such as has been, with ourselves, one of the motivating forces of political policy.

"From this criticism, and that is what it really is, of our Government and the Constitution it might be interesting to take a look at some of the writings of James Madison for, after all, Madison was the real guiding genius of the Constitutional Convention. He gets back to the basis of government. Madison wrote:

"'As long as the reason of man continues fallible and he is at liberty to exercise it, different opinions will be formed. The diversity in the faculties of men from which the rights of property originate is not less an insuperable object to a uniformity of interests. The protection of these faculties is the first object of government. From the protection of different and unequal faculties of acquiring property, the possession of different degrees and kinds of property immediately results and from the influence of these on the sentiments and views of the respective proprietors arises a division of the society into different interest and parties.'

"These different interests and parties Madison calls factions. He says that there are two methods of curing the mischief of factions. 'The one by eliminating its causes, the other by controlling its effects.' From these quotations you will see that Madison figured that men were of unequal abilities and were acquisitive."

WHY PLANNING WON'T WORK

"Just in passing it might be of some interest to comment that when the boys in Washington make the rules those rules are obliged to enter into a contest with the individual and varying abilities of about 100,000,000 men and women, who from various viewpoints and various motives are seeking, each in his own individual way, to circumvent their operation and to turn them each to his own advantage.

"That is one very potent reason why they do not work any better than they do. That is one reason why it will be quite impossible to plan our economy until we are made a docile people or, in more elegant language as described by one Rexford Guy Tugwell, 'a disciplined democracy.'

"Returning now to Madison and his logic, he said: 'There are two methods of removing the causes of factions: the one by destroying the liberty which is essential to its existence; the other by giving to every citizen the same opinions, the same possessions, and the same interests.' In other words, you could get rid of man's inequality of ability and his desire to get ahead if you destroyed man's liberty or if you could bring all the citizens into one groove and make them as alike as two peas in a pod, and could give each one of them the same possessions and the same interests. To state it another way, you can get rid of factions if you could regiment the people."

STILL TRUE TODAY

"I will agree that this is a blueprint that would furnish us with security, provided the someone who has to run the show were wise enough to do the planning. Madison remarked, as all of us, at least you and I will agree, that security at the secrifice of liberty is worse than the evil. He further remarked that human nature being as it is and probably always will be, it is certainly impossible to bring all men to the same viewpoint.

"These are truths which to me seem self-evident. It is on the basis of these self-evident facts that we must start to reason when we consider what a government can do for society.

"Will you agree with me that 'the most common and durable force of factions has been the various and unequal distribution of property?' The quotations are again from James Madison. If you do agree with me that the unequal distribution of property is a source of factions and of constant dispute, then you will agree with Madison again that 'the regulation of these forms is the principal task of modern legislature.'

"What was true in Madison's day a century and a half ago is equally true of our times. It is doubtful if the world and the people who make it up have changed very much in the last 150 years, at least in this respect."

MINORITY PROTECTION

"Madison continued to write of factions and he said, 'When a majority is included in a faction, the form of popular government enables it to sacrifice to its ruling passions or interest both the public good and the rights of other citizens.'

"That is to say, in a pure democracy with no controls upon the majority, that government representing the majority without limitation, in its passion of the moment may well err in its direction, to the injury of the people and the government, to say nothing of depriving the citizens who represent the minority of what would otherwise be their rights. So, said Madison, 'from this view of the subject it may be concluded that a pure democracy can admit of no cure for the mischief of factions.'

"The purpose of the Constitution was to set up a Government to control the majority factions of society and to bring all factions into proper harmony, to their lasting and mutual advantage. For this purpose the Constitution was set up. It created a republican, as distinguished from a purely democratic form of government. It gave to the minority protection up to a certain point against the unbridled authority of a ruling faction, a majority faction."

THREE SEPARATE AGENCIES

"To restate that principle as Madison stated it in reference to the labors of the Constitutional Convention: 'To secure the public good and private rights against the danger of such a faction and at the same time to preserve the spirit and form of popular government is thus the great object to which our inquiries are directed.'

"What is the framework provided by the Constitution 'to secure the public good and private rights against the danger of factions and at the same time preserve the spirit and form of popular government'?

"The Constitution divides the responsibility of the Federal Government into three parts, each part exercising its authority, practically supreme in its own sphere. To the Congress was delegated the responsibility of legislation. The Congress was not given any authority to carry into execution these laws or to administer them in any way."

JEALOUSLY GUARDED

"To the President was given the Executive authority, the duty, and responsibility of seeing that the laws which Congress enacted were carried out. The Congress appropriated the money to run the Government, but the President spent the money in accordance with the plans which Congress made for him. These were two separate and distinct agencies of Government.

"The third agency was the courts. In framing the Constitution the founders sought to provide a judicial tribunal as impartial as could be humanly devised. To the courts was entrusted the responsibility of passing on the controversies that would arise between the state and its citizens, even to the point, in proper cases, of deciding whether or not either the Congress (the legislative authority) or the President (the Executive authority) had transgressed in its action against the Constitution.

"This segregation of authority in the three great branches of the Government was very jealously guarded as a means of preventing all the powers which protected the rights of the minority, or of the majority for that matter, from falling into the hands of one faction or of one individual.

"WICKED PROJECTS

"I believe that Madison felt it to be a very fortunate circumstance in the organization of our Federal Government that this was a federation of States, for he said:

"'A religious sect may degenerate into a political faction in a part of the confederacy; but the variety of sects dispersed over the entire face of it must secure the national council against any danger from that source. A rage for paper money, for an abolition of debts, for an equal division of property, or for any other improper or wicked project, will be less apt to pervade the whole body of the Union.'

"In passing it is interesting to note that Madison and his fellow workers looked upon a sharing of the wealth, the issuance of paper money and the abolition of debts as not only the best examples of improper governmental conduct but also as 'wicked projects.'

"Taking advantage of the existence of the States, the Federal Constitution was given specific powers which it was deemed necessary to give in order to afford dignity and the ability to enforce its councils upon the people, but all other powers not expressly granted to the Federal Government were reserved to the States."

FUNDAMENTAL SAFEGUARDS

"Here again the responsibility of government was divided and limitations were placed both upon the local government and the Federal Government in the exercise of authority to the end that the people might be protected in the enjoyment of their freedoms against the encroachment of a particular faction which had gained control of any particular branch of the Government. In the making of this national union the founders were very careful to provide that the representatives of the people in the legislature and in the executive chair should return periodically and ask for the approval of the people for what they had done.

"They further provided as to the legislative branch by dividing it into two separate houses, that not all of them went back to the people at the same time, in order that a further check might be given to the protection of the provisions provided by the Constitution to the rights of minorities and to the freedom of the individual. Each Congressman is elected every 2 years but only a third of the Senate is elected every 2 years.

"It would not seem to be necessary under any ordinary circumstances that the people of this country should be reminded of these very fundamental provisions in regard to their own government. But as all of my reasoning in this present crisis starts from an unwavering faith in the soundness of these provisions for the protection of liberty, I am fearful that whatever argument might be used in a discussion of special topics or measures which have been proposed and enacted during the last 10 years will not be understood or fully appreciated unless the reasoning starts with a good knowledge of the attributes of the Federal Constitution in the forefront of our minds—and furthermore no one else ever seems to make any reference to it."

The Home Front

EXTENSION OF REMARKS

OF

HON. H. H. CARSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. CARSON of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Martin Agronsky, staff correspondent, Blue Network, on Sunday, June 27, 1943:

As we near the end of our nineteenth month at war two major trends are visible in this country. One is our growing strength abroad on the war fronts. The other is critical internal disunion here on the home front. Here in the Nation's Capital, optimism as to the future course of the war among our commanders and leaders is deep, sure, and unwavering. Equally as prevalent among all observers is pessimism and uncertainty about our future on the home front.

One of the favorite remarks of most of those whose business it is to watch and evaluate the Washington scene is this—the President ought to call a peace conference for the home front. It is a remark that you hear repeated in every section of the Capital—in labor groups, in Capital groups, up in the legislative halls on Capitol Hill, in the myriad and teeming offices of the various Government agencies, among the men on the street, and, if you bother to ask visiting soldiers and sailors in the city's parks, as I did, you find they share the same impression. There is nothing obscure about why the impression of growing confusion and disorganization persists in the United States.

Our home front troubles come from the basic causes of rising prices, fixed wages, lack of a centralized food policy and lack of set policy to correct any one or all of these things. The coal strike stems essentially from the complaint of the coal miners that their present wages are insufficient to permit them to live decently in the face of the persistently increasing cost of living. No one defends the miners for striking and harming the war effort as they undoubtedly did by forcing some great steel works to bank their blast furnaces. However, taking an unbiased approach to the miners' attitude, there is a certain amount of right on the miners' side. Their living conditions are bad, the cost of living has risen—especially in food—to disproportionate heights. Their grievance seems understandable though nothing could justify their striking. What the miners were striking for, however, is what all labor groups in this country are disturbed about and that goes for all American workers too and for the section of the population known as the white-collar class. It is the same old story—that wages are not keeping pace with rising prices and that real economic privation threatens the great percentage of the American population. In time of war it is correct to argue that nothing should matter but the well-being of the men on the fighting front. That is true. It is also true that no American workers of any category—no matter what their living conditions—are enduring anything even comparable to what our soldiers and sailors and air force men are facing without complaint hourly.

The problem of inflation—of lack of a good and workable policy of food growing and distribution—are essentially Government problems, and what seems to be the trouble here at home is that government has not successfully met that problem. Today there is, for example, a real corn famine in the United States. We can't get the corn we need in the East to feed our livestock or even to produce corn meal for food purposes. Two large American corn meal mills have had to close down. It's not that we lack corn in the United States. There is just as much corn being produced today in the great middle-western Corn Belt as has ever been produced. The trouble is that the farmers are using the corn to fatten their pigs because they figure that the ceiling price on corn is so low they do better to fatten their livestock than sell it on the market. That's something that the Government must control. Another thing is the presence of ceilings in one part of an industry and lack of ceilings in another part of the same industry. The cattle industry provides a good example of that. We have

today a tremendous surplus of beef cattle in the United States. At the same time we have a growing shortage of beef throughout the country. Even for the armed forces who have always for good reasons been able to eat better than the rest of us, there was a dangerous shortage of beef. Steaks were becoming a rarity in our Army camps. The reason for this is clear enough. There is no ceiling placed on the amount of money a cattle grower may ask for his livestock from the meat packer. At the same time the Government has placed a ceiling on the price that the cattle packer may ask in selling his slaughtered meat on the market to distributors and butchers. Because of the cattle packer's ceiling he is unwilling to buy beef from the grower at a price which will not give him a profit in selling the meat to the distributor. The ceiling the packer has to meet is too low for him to offer the grower a price that the grower will accept. Hence the cattle grower keeps his beef unsold and we have beef starvation in the midst of beef plenty.

Again it's a business for the Government. It's up to the Government to work out a system which will satisfy both packer and grower and make beef available to the country again. The corn famine and the beef famine threaten to be duplicated by a milk famine—when we should have surpluses, not shortages of milk. At the same time we are facing a vegetable shortage because canners, uncertain of ceiling prices, hesitate to buy vegetables at existing prices. That means that the vegetables now ready for market may rot before they are bought. Well, behind the whole mess, seems to lie the absence of any fixed Government food policy. The fault here seems to be shared by both the President and Congress. The President has come out for subsidies. Congress has just knocked his plan on the head. At the moment, Congress also seems to be preparing to force through powers for Food Administrator Chester Davis that would make him food czar in fact as well as in name. The President has declared he is opposed to one man being in absolute control of our food policy. All along the line the President and Congress have tangled on matters of internal policy.

The conflict is not a hopeless one as some pessimists seem to think. It can be resolved by compromise and the feeling is growing here in the capital that it must be resolved and soon in order to hasten the end of the war. Powerful compromise forces are growing up though it is too early to name them. Observers here in both camps are not joking—they are in deadly earnest—when they say that what the President must do is call a peace conference in Washington for the home front.

Don't Forget

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lawrence (Mass.) Evening Tribune:

DON'T FORGET

The write-a-letter idea is just as important and imperative today as at any time since the first United States servicemen left the shores of this country.

This has been called to our attention by several letters that have recently arrived from boys in both the Atlantic and Pacific areas of war in which they say that if the folks back home would only keep writing it would make the task of serving in the Army, Navy, and Air Service much easier.

It is too bad that the folks back home have to be reminded of the importance of keeping up the line of correspondence. The correspondence line is almost as important as the convoy line and supply line and the lines of communication generally. It is highly important to the maintenance of a high standard of morale.

At the outset of our participation in the war much was said about writing to the boys in the camps and the boys who were leaving for foreign lands and waters to carry the torch of democracy and decency. Organizations started movements and propaganda was spread everywhere urging everybody to write to his boy or brother or to some lad from his neighborhood so that they might be among those receiving mail when it was passed around in camp. There seems, however, to have been some let-up in the letter-writing activity and some reminders of the importance of keeping it up will undoubtedly do some good.

Any let-up in the program of letter writing is certainly only due to thoughtlessness. If there was one campaign that met with 100-percent interest and cooperation it has been the write-a-letter campaign. Any little lag will undoubtedly be more than taken care of by just a few words of reminder. The love and the respect and the devotion of the folks at home for all those in the service is so great that there is one thing that will be kept up as a first and a must and that is the writing of letters to those who are away. There is no greater thrill than to be among those receiving letters when the mail is passed out and there is no greater disappointment than to be there waiting and to have no letter arrive.

Some people think that unless they write long letters the purpose is not accomplished. That is not so. The one in service would rather get one each day even though it is short than to have to wait a week or 10 days for a long one. There is nothing to make them feel better and to contribute to their happiness than news from home. News from the family circle comes first, news from the groups in which they moved comes second, and general community news comes next.

Keep up the write-a-letter program until the war is over.

National Resources Planning Board

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Illinois:

Whereas on March 10, 1943, there were presented to the Congress of the United States two plans devised by the National Resources Planning Board, which plans make proposals for fundamental changes in almost every phase of the American way of life; and

Whereas these plans have been transmitted to the Congress with the request that they be given consideration during the present session of the Congress; and

Whereas millions of American citizens who would be vitally affected if these plans were to be adopted into legislation are absent from their homes at this time as members of the Army, Navy, or Marine Corps or in associated services, and, during such absence, are unable effectively to express their views on this subject; and

Whereas it would be manifestly unfair to enact into law, during their absence, any plan designed to change that same system of government which our citizens in the armed forces are fighting to preserve; and

Whereas the task of winning all of the wars in which we are presently engaged is so gigantic that it requires the concentrated effort of every citizen; and

Whereas this is not the time for the people or the Congress to be distracted by the injection of controversial proposals concerning theoretical social gains from the single purpose of winning the war: Now, therefore, be it

Resolved by the Senate of the Sixty-third General Assembly of the State of Illinois (the House of Representatives concurring herein), That we hereby petition the Congress of the United States to refuse to enact any legislation which has for its purpose any change in the fundamental concept of the constitutional form of American Government, as expressed in the Constitution of the United States and amendments thereto, particularly those amendments known as the Bill of Rights, at least until such time as the members of our armed forces and associated services have been brought home, demobilized, and given an opportunity to express their views; and be it

Resolved further, That copies of this preamble and resolution be transmitted by the secretary of state to the presiding officers of both Houses of the Congress, and to each of the Senators and Representatives therein from the State of Illinois, and to the legislatures of all other States of the Union, that those of the same view may take similar action.

Adopted by the senate March 18, 1943.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Concurred in by the house of representatives June 17, 1943.

ELMER J. SCHNACKENBERG,
Speaker of the House of Representatives.
B. O. RANDOLPH,
Clerk of the House of Representatives.

Alabama Ordnance Works

EXTENSION OF REMARKS

OF

HON. JOE STARNES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. STARNES of Alabama. Mr. Speaker, the remarkable work being done at the Alabama Ordnance Works prompts me to call the attention of the House to it at this particular time. Last month, on May 11, to be exact, the Alabama Ordnance Works marked the second year from the date on which ground was broken for the project.

This plant is located on the banks of the Coosa River between Birmingham

and Montgomery, Ala. It was constructed ahead of schedule and at one time had a pay roll amounting to more than $1,000,000 a week. When construction was at the peak there were 28,000 employees. The majority of people who worked on the construction were from Alabama and the neighboring Southern States. There were, however, many skilled workmen from all parts of the country.

Houses sprung up all around the project. At one time there were over 700 trailers housing workmen and their families. It was estimated that over 1,000 automobiles left Birmingham every morning for Childersburg and returned every evening. Two railroads ran spur tracks into the grounds. Huge trestles were built across the numerous streams that run into the Coosa River. A 100-foot highway was built with two large bridges and an overpass that enabled workmen to come and go from the office building to the main highway. Several hotels were built on the highway to accommodate workmen and their families.

The Alabama Ordnance Works is now the largest combination powder and explosive plant in the United States. Many thousands of operators are employed there.

The plant consists of miles of buildings, huge pumping stations, power plants, igloos, and acres of warehouses. There are 35 miles of railway and 37 miles of highways running through the plant. There is a water storage capacity of 13,715,000 gallons, 96,247 feet of sewer lines, and 249,351 feet of electrical service lines.

The commanding officer and constructing quartermaster during the construction of the plant was Col. James D. McIntyre, Ordnance Department, United States Army. Although born at the West Point Military Academy, Colonel McIntyre is an Alabamian. Like his father, Maj. Gen. Frank McIntyre, United States Army, retired, Colonel McIntyre has been in the Army all of his life. Colonel McIntyre is from Montgomery, Ala., where his family has resided nearly 100 years.

During construction the Government staff consisted of about 19 officers and 500 civilian employees.

This is an example of splendid administrative work on the part of the Ordnance Department of the Army under the leadership of Maj. Gen. Levin H. Campbell, Jr., Chief of Ordnance. It is also a very splendid testimonial to the administrative ability of Colonel McIntyre who, as I have said, was the commanding officer and constructing quartermaster during the construction of the plant.

We in Alabama are proud of this achievement and appreciate very deeply the part we have been able to play in this great undertaking.

On behalf of all my constituents I want to congratulate the Ordnance Department, its gallant chief, and especially Colonel McIntyre for the great work he did while in command at Alabama Ordnance Works.

Col. Charles H. Traeger is now the commanding officer of this great establishment, and I tender to him also the congratulations and thanks of his Alabama neighbors.

Roosevelt Maintains His Lead in South

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. CELLER. Mr. Speaker, despite caustic criticisms bandied about by many Roosevelt baiters in and out of the House, it is interesting to note the recent Gallup Poll indicating the favor with which our President is still received, particularly in the South among Democrats. The following New York Times editorial is most illuminating:

ROOSEVELT MAINTAINS HIS LEAD IN SOUTH—IS STILL CHOICE DESPITE SOME LEADERS' CRITICISM

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., July 1.—Although President Roosevelt has been sharply criticized by many southern political leaders and writers, his standing among the rank and file of southern Democratic voters as a candidate for 1944 is virtually as high as among Democrats elsewhere.

In its latest periodic check-up of the popularity of various candidates who have been suggested for the Democratic nomination next year, the institute finds that Mr. Roosevelt is the choice of 80 percent of the Democratic voters of the South, as against 83 percent among Democrats throughout the country as a whole.

The vote of preference for him in the South is four times greater than the combined vote for six other men who have been discussed as possible Democratic standard bearers for next year.

The second choice of southern Democratic voters is one of their own native sons, James F. Byrnes, of South Carolina, the War Mobilzation Director. He outranks HENRY A. WALLACE in popularity with southern Democrats, although Mr. WALLACE is second to President Roosevelt in the choice of Democrats throughout the Nation.

In conducting its survey among Democratic voters the institute handed each respondent a list of seven men, including the President, who have been talked about recently as possible Democratic candidates for 1944. Each voter was asked:

"Which one of these men would you prefer as the Democratic candidate for President next year?"

The vote of southern democrats is as follows:

	Percent
Franklin D. Roosevelt	80
James F. Byrnes	8
Henry A. Wallace	6
James A. Farley	3
Paul V. McNutt	2
William O. Douglas	1
John G. Winant	(1)

[1] Less than 1 percent.

Chinese Immigration

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. JUDD. Mr. Speaker, recently the Committee on Immigration and Naturalization held hearings on the subject of extending to China the immigration quota principle, which has been the sound policy of our Government since 1924 in determining the number of immigrants to be admitted annually from various countries of the world. Under that formula the Chinese would be allowed an annual quota of 107 selected individuals. To extend them this quota would put them on a basis of equality with our other allies and remove for all time the one sore spot in our relations with China.

During the hearings the statement was made that this matter apparently was not considered of much importance by the Chinese, because practically all the requests came from Americans rather than from the Chinese. The basic reasons for the Chinese reticence is their own sense of dignity and pride. Their record for 5,000 years as well as for the last 6 years will stand without any need for them to advertise or argue it. They realize that our discrimination against them, while pretending to be their best friend, is a reflection more on us than on them.

However, to make the record clear that they do feel deeply on the subject, and that those among them who are America's best friends realize that such action by Congress would greatly strengthen their own position as they try to combat Japan's propaganda against us and to increase enthusiasm among the Chinese common people for the cause of the United Nations, I have asked permission to include in the RECORD a cablegram just received by the International Missionary Council, the Foreign Missions Conference, and the Federal Council of Churches, all with offices in New York.

The cablegram is signed by the General Secretary of the National Christian Council, which is an organization representing practically all of the thousands of Chinese Christian churches, as well as the Protestant mission boards carrying on religious, agricultural, educational, and medical work in China.

CHUNGKING.

Revised immigration laws would greatly enhance traditional friendship China and America, have incaculable good effect international relations.

Bishop W. Y. CHEN,
General Secretary, National Christian Council.

Peace Plans

EXTENSION OF REMARKS
OF
HON. STEPHEN A. DAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Department of Illinois, Veterans of Foreign Wars:

Whereas the United States is engaged in a horrible global war to preserve our national independence declared in 1776, to maintain our free economic system and our traditional American way of life; and

Whereas the proponents of world government in the United States, instead of directing their attention and energies to the winning of the war, continue to use the war in a mad drive for a commitment of our Government to a post-war new world order; and

Whereas the proponents of world government agree that if their scheme becomes a reality, the United States must surrender her sovereignty, must surrender her control of her defense forces, must surrender her right to enact tariff laws, must surrender her right to coin money and regulate the value thereof, must surrender her high living standards and accept for her citizens a lower standard of living and a greater tax burden; and

Whereas if we become a part of world government by thus surrendering our sovereignty we would be returning to the same condition of servitude in which we were prior to 1776 and the galling chains our Revolutionary forbears broke would again be forged around us; and

Whereas our founding fathers, whom the world has praised for their patiotism and wisdom, believed and hoped that the admirable system which they founded and bequeathed to us would serve us and endure for all time, but the proponents of world government maintain that the work of our founding fathers was but folly, that our constitutional and representative form of government is a failure and that the glories of the Republic of the United States have faded and have come to an end: Now, therefore, be it

Resolved by the Department of Illinois, Veterans of Foreign Wars of the United States, in annual encampment assembled this 24th day of June 1943, in Chicago, Ill., That we denounce the proponents of world government for their weakening of the war effort of our people and their breeding of disunity and confusion in attempting to use the war to bring about a surrender of our Republic to a new, supreme, sovereign, world government, that we call upon all persons interested in writing a lasting peace to postpone discussion of peace plans until after our fighting men have returned from the battle fronts of the world and can participate in discussions and decisions on plans and terms of the peace which they won, and that we request the officers of the Government of the United States to formulate plans for peace which will not imperil our American sovereignty, our American rights, our American independence, our American standard of living, and our American tradition, and without the commitment of our Government except as directed by the vote of our people.

Adopted June 25, 1943, by unanimous vote of the encampment.

The Food Problem

EXTENSION OF REMARKS
OF
HON. P. W. GRIFFITHS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. GRIFFITHS. Mr. Speaker, will it ever be possible for the one person who has the authority to get the different agencies dealing with the food program together and get busy with the idea of saving the food crops of this country and simplifying regulations?

Crops of vegetables have been canned and are being withheld from the market because there is disagreement in allowing increased labor costs the canners incurred in their processing being included in the price they will receive for their pack.

Let us have someone with a modicum of common sense in charge of the program and tell the canning industry to go ahead and do the job in a common sense practical manner.

The Secretary of the Ohio Canners Association, Mr. Roy Irons, writes me, in part, as follows:

No canner can do a first-class job when he is confused with a lot of rules and regulations that he does not understand. There are short cuts in the canning business and to travel a long red tape road now leads to more confusion and poorer results. Every canner today is afraid to go ahead in the manner his common sense and practical experience dictates is most advisable to get best results. It is this fear that is holding back the normal operations of food canning.

Now, Mr. Speaker, it appears to me that surely something should be done to see that we are not hungry this winter. I have had one canner tell me he was going to put up 50 percent of his crop at a loss as that was the amount the Army and Navy needed and his only son was in service and to h—— with the remainder.

We know the pea crop in Ohio is a failure and in Michigan it is much less than anticipated—but must it rot because of indecision awaiting the regimentation which they fear is the main purpose of our higher-ups, or is the belief gathered in Work Projects Administration days that the votes of the hungry are more easily corralled by a hand-out.

Look at the situation shown in the following copy of a letter which I am inserting here. Maybe the cherries are supposed to rot instead of being processed. Here it is July 1 and no reply to a request made on May 19.

CLYDE, OHIO, *June 26, 1943.*

MR. PRENTISS M. BROWN,
Chairman, Office of Price Administration, Washington, D. C.

DEAR SIR: Our red sour cherry crop will be ripe and ready for the market in 10 days, and up to this time we have not received authority from anyone in Washington as to what we shall pay the grower for these cherries. Without a price we cannot very well purchase them.

We are without any price from the Office of Price Administration on the sale of cherries or any reply to our request for increase in ceiling price of last year, caused by the necessary increased hourly wage of cannery workers in competition with the war plants and other Federal agencies in our immediate vicinity. We have approval of our schedule price from the War Labor Board, providing our increased costs are approved by the Office of Price Administration. Our request has been in since May 19 to attention of Mr. Carl A. Auerbach.

It is over 6 months since we have been trying to get something definite out of Washington, and we have but 10 days more in which to act, and unless something is done we will not be able to operate our cannery and pack the cherries this year, even for the Army which have demanded from us double the amount of cherries that we will be able to furnish caused by crop prospects of 15 to 20 percent of normal.

One would think that after 6 months of consideration that something could be done for the canning industry. If it were not for the penalty of a year in jail and heavy money penalties, we would take a chance on operating our plant and depending on the proper adjustment later and save this food which is so badly needed.

It is necessary for someone in Washington to act immediately, or these cherries will not be put into cans this year.

If there is anything you can do to help us save this fruit, please do it immediately and oblige.

Yours truly,

THE CLYDE KRAUT CO.,
W. W. WILDER,
President.

Meat Shortages

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. McGREGOR. Mr. Speaker, if the O. P. A. were doing as good a job as the farmers and livestock producers, we would have meat in our stores and on our tables. The Bureau of Agricultural Economics reported that there were 78,170,000 head of cattle on ranges and farms on January 1, 1943, an increase of approximately 3,000,000 head over the total on January 1, 1942. By January 1, 1944, it is expected that the cattle population will have risen to 82,400,000. The average cattle population of the country is approximately 67,000,000 head, so that by the end of this year, it will be about 15,400,000 larger than the prewar average for all heads of cattle. The same story is true in other livestock. The hog population was increased by more than 13,000,000 head during 1942. It is estimated that the 1943 pig crop will be 125,000,000 head, contrasted with last year's record of 105,000,000.

In view of these figures, my people ask "Why are small packing houses closing down when more animals await slaughter than ever before? Why do we have meat shortages in the midst of plenty?" The answer is apparent: Failure of the O. P. A. in its meat-control program, as well as numerous other programs, caused by confusion, red tape, and at times contradictory O. P. A. regulations, all of which are the results of too many attempted practices of theorists rather than the operations of practical, experienced personnel. What we need in O. P. A. is men who will issue regulations based on good common sense. We cannot afford to experiment any longer, especially when such experimentation is being done at the expense, and is a direct threat, to the livelihood of every American. We here in Congress want to put a stop to this bungling and confusion and I hope we can do it now.

Prohibition

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 2 (legislative day of Monday, May 24), 1943

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Prohibition," published in the May 20, 1943, edition of the Stars and Stripes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROHIBITION

They're at it again in America, and even as in the days of World War No. 1 we may yet hear that America is "dry."

Most of us in the United States armed forces could not be classed as violently opposed to liquor control, for most of us believe in moderation. On the other hand, there are few of us who could be included in the group of Americans who felt "the noble experiment" was a huge success.

It is with alarm, therefore, that we learn of the growing political strength of the anti-liquor crowd in the United States.

Taking advantage of wartime conditions and restrictions, the new prohibition group is working night and day for legislation which will give America prohibition, in fact if not in name. Using the tactics of the farm bloc, the antiliquor crowd is tacking on amendments to practically every military appropriations measure in a desperate effort to secure prohibition or the nearest thing to it they can force through Congress.

Rationing is playing into their hands and gives them a good excuse, and no opportunity is missed to use this excuse in their effort to limit the production and distribution of liquor of all types.

We can remember the days of prohibition, when moonshine whisky made quick fortunes for bootleggers, crooked politicians, and dishonest police officials. As a result, we claim we know what we want in the way of liquor legislation and feel those at home should wait until we return before initiating further legislation on liquor control.

Oil and Gasoline Rationing in Canada

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to Mr. Ralph K. Davies from the Oil Controller of Canada:

DEPARTMENT OF MUNITIONS AND SUPPLY,
OFFICE OF THE OIL CONTROLLER,
Toronto, Ontario, June 10, 1943.

RALPH K. DAVIES, Esq.,
Deputy Petroleum Administrator for War, New Department of Interior Building, Washington, D. C.

DEAR MR. DAVIES: I am advised by our representative to your office of the formation of a Conservation Committee consisting of members from your organization and other agencies, and the wish which has been expressed that at future meetings of this committee, both your Mr. Fred G. Jackson and our Mr. C. R. Brasier should attend in order to answer any questions that might be asked regarding our conservation measures, and which might be helpful to you in the consideration of your problems.

In the light of this request, I feel this might be an opportune time to write you regarding our activities along the line of conservation of all petroleum products. On March 31, we completed the first year of gasoline rationing under the coupon system, and I may say there were many pitfalls experience taught us to avoid in the preparation of the ration plan for the succeeding year. We found after considerable study that it is well-nigh impossible to identify the pleasure car as such; a wide check of individual cases was made and in a country such as ours—sparsely settled—and with urban transportation facilities quite inadequate, there is some emergency and essential driving in every car. Accordingly, we established a new basic category, known as the AA; our objective was to hold as many as possible down to this category, and you will see as you read further that we accomplished this.

The AA ration book contains 40 units, which at a value of 3 Imperial gallons per unit, allows each user 120 Imperial gallons (144 United States gallons) per year, or the equivalent of 2,160 miles per annum. This basic category is given to each registered passenger vehicle.

After the basic AA, we have created five categories, namely A, B, C, D, and E, which allow the following maximum additional mileages:

	Miles
Category A	3,240
Category B	6,480
Category C	9,720
Category D	12,960
Category E	16,200

It should be borne in mind that these are maximum allowables, and the mere fact that an individual can justify additional mileage over and above his AA, it does not follow that he will be granted the ceiling of the category within which he falls. For example, we tailor his book. If he can substantiate 9,000 miles of driving, we take into consideration the 2,160 miles he receives in his AA, and will grant him additional coupons to cover the difference, namely 6,840 miles.

Incidentally, the only drivers who can qualify for anything higher than category C are provincial police, some rural doctors, some rural veterinarians, certain service cars used in connection with war plants, a limited number of individuals engaged in the production of timber, and a few Government cars.

Our second ration plan has now been in effect for something over 2 months, and I am happy to state that of the total passenger vehicles registered in Canada, 68.8 percent receive nothing more than the basic AA category—we have eliminated from this percentage the forty-eight-thousand-seven-hundred-and-odd passenger vehicles which have no more than an AA, but are included in our wartime industrial-transit plan, which I will explain later. Further, of the special categories issued, 61.3 percent receive no more than an A category or a portion of an A, and 30.5 percent received B category, or a portion thereof. These percentages may alter somewhat for we are still receiving a few requests for higher categories. Incidentally our gasoline ration plan has been Nation-wide since its inception on April 1, 1942, and all Provinces are treated in a like manner.

In respect to commercial vehicles, all taxicabs and livery cars have been limited to 25,000 miles per year, and this restriction has been in effect since November 1, 1942. All commercial vehicles, with the exception of common carrier trucks, operating on scheduled routes to supplement our overburdened railroads, and a few others such as those engaged in logging operations, public-utility maintenance work, have been drastically rationed. Today no truck can exceed a 35-mile radius from its home base without a permit, and cross hauls have been eliminated. These restrictions have been worked out in conjunction with the transit controller and the administrator of services. I will not burden you with all the details relative to them, but I feel we can safely say that as a result of their restrictive orders, we are effecting a saving, in respect to the 230,000 trucks in operation in Canada, upward of 500,000,000 truck-miles per annum.

With respect to industrial workers, we have evolved a most interesting plan known as the wartime industrial transit plan. Under this plan, industrial workers who cannot get to work by regular means of transportation are eligible to be included in the plan, but they have to share their cars, and in this way we keep driving down to a minimum for any one plant. A transit officer appointed by the management of the plant keeps a very strict record of all cars used in transportation, and he, himself, distributes gasoline coupon books as needed. We have found this plan of inestimable value, for it has eliminated thousands of requests for special categories to enable individuals to get to work. The plan in respect to each plant is reviewed once a month and coupon books are issued on a monthly basis.

As regards motor boating, both inboard and outboard, the restrictions imposed in the last rationing year on pleasure boating were so severe that the total consumption in all Canada only amounted to approximately 189,000 gallons. The unit value at that time was for the greater portion of the summer season, 4 gallons. With our present unit value of 3 Imperial gallons, we can expect at least a 25-percent reduction this year. The allowances we have made for the present rationing year are as follows:

OUTBOARD MOTORS

The allowances below are designed to give approximately the same number of running time to engines in this classification.

Class	*Units*
1. 2 horsepower and under	1¼
2. Over 2 horsepower but not exceeding 6 horsepower	2
3. 6 horsepower but not exceeding 10 horsepower	2½
4. 10 horsepower	3

INBOARD MOTORS

The allowances below are designed to give approximately the same number of hours running time to engines in this classification.

Class:	*Units*
5. 10 horsepower and under	2
6. Over 10 horsepower but not exceeding 20 horsepower	3
7. Over 20 horsepower but not exceeding 30 horsepower	4
8. Over 30 horsepower but not exceeding 40 horsepower	5
9. Over 40 horsepower but not exceeding 50 horsepower	6
10. Over 50 horsepower but not exceeding 60 horsepower	7
11. Over 60 horsepower but not exceeding 70 horsepower	8
12. Over 70 horsepower but not exceeding 80 horsepower	10
13. Over 80 horsepower but not exceeding 90 horsepower	12
14. Over 90 horsepower but not exceeding 100 horsepower	14
15. Over 100 horsepower but not exceeding 125 horsepower	16
16. Over 125 horsepower	18

The allowances are so small with respect to inboard motors that owners of these boats are not putting them into service.

The conservation of fuel oil has been, and is, a very live subject with us. As a matter of fact, we commenced to restrict the consumption of fuel oil in 1940. In September of that year our Order 002 was issued prohibiting the installation of all types of oil-burning equipment where the consumption would exceed 4,000 imperial gallons (114 barrels) of fuel oil annually. In June 1941 we decided to go still further and our Order 004 prohibiting the installation of all types of oil-burning equipment except by special permit was issued, and thereafter no permits were granted for heating installations or other purposes not connected with the war effort.

In August 1941, and again in November of the same year, all commercial and industrial users of fuel oil in Canada were warned to immediately consider the best plans for converting heating plants from oil to some alternate fuel. As we found this voluntary approach inadequate, we decided to make it mandatory for all commercial heating plants to convert their oil heating equipment. Accordingly, in May 1942, all commercial and industrial users were advised that the use of fuel oil for heating or the production of steam or hot water would be prohibited after July 31, 1942, and that some steps should be taken to convert such plants to the use of other fuels. This requirement was made mandatory by our order 004A of August 31, 1942, and covered all types of buildings, factories (including plants on war production), warehouses, office buildings, schools, churches, hospitals, institutions, apartment buildings, boarding houses, Provincial and Federal Government buildings, Army cantonments, barracks, administrative offices, etc., etc.

To further ease the fuel-oil situation, and knowing full well that a barrel of asphalt is the equivalent of a barrel of fuel oil, on June 1, 1942, regulations were introduced to drastically reduce the use of asphalt. With a view to increasing the available supply of fuel oil in order to care for our rapidly mounting war effort, Canadian refiners were directed in June 1942 to change their refinery runs so as to reduce gasoline production to as low a figure as possible. The cooperation was wholehearted and I am happy to say that refinery runs were drastically altered and these changes have been maintained.

The records of our office indicate that the consumption of fuel oil for all purposes up to May 31, 1942, was at the annual rate of 35,236,000 barrels—this was our peak consumption. As our order making it mandatory to change over from fuel oil to a substitute fuel became effective August 31, 1942, it will not be possible to make a full year's comparison until August 31, 1943. However, as of April 30, 1943, our annual rate of consumption was down to 32,981,000 barrels, or a drop in the annual consumption rate of 2,255,000 barrels.

The foregoing saving was effected despite our soaring war effort and the increase in our Navy from 13 vessels with a permanent strength of less than 1,800 men in September 1939, to over 500 vessels manned my 44,000 men as of today. The majority of these units are fueled in our own waters. Increases in our production of war materials ranging as high as 1,000 percent were achieved in 1942 in comparison with 1941. I give below a few of these comparisons:

	Percent increase 1942 over 1941
Ships	185
Aircraft	158
Mechanical transport	95
Guns and small arms	981
Shells and bombs	143
Chemicals and explosives	102
Tanks and armored vehicles	857
Small arms ammunition	206
Instruments and communication equipment	1,083

I believe the foregoing gives you a comprehensive picture of what we are doing in the matter of conservation, and with your kind permission, I am sending a copy of this letter to our Washington representative, Mr. C. R. Brasier.

Yours very truly,

G. R. COTTRELLE,
Oil Controller.

Scarcity of Meat

REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. HOPE. Mr. Speaker, the gentleman from New York [Mr. CELLER] and other Members from city districts have complained frequently about the shortage of meat, and particularly beef. That situation is not peculiar to the large cities or to the eastern seaboard. It prevails over the entire country. Kansas is one of the leading cattle-producing States. According to the Bureau of Agricultural Economics, there were in Kansas last January 1 almost 4,000,000 cattle and calves; to be exact, 3,889,000. Over 3,000,000 of these were beef cattle. There are more cattle in Kansas today than there have been any year since 1904. Yet Kansas people cannot buy beef. They cannot buy all they want of other meats. Here is a letter typical of many which I have received from Kansas. It is from Mr. J. R. Bushell, who operates a grocery and meat market at Dodge City, Kans., in the heart of a great cattle-producing area. This is what Mr. Bushell says:

Wheat harvesttime has arrived and my meat market is bare. I haven't been able to buy any kind of beef for 5 weeks. I can get pork and cured meats, but at harvesttime you know that a harvest hand who works in the hot sun wants a little beef.

Our local packing plant, Lochman & Co., will not sell beef or pork at packing-house wholesale ceilings. Mr. Lochman operates a cutting department and is catering mostly to hotel, restaurant, and retailers who are willing to pay the allowed cutting cost.

I cannot operate my meat market on the frozen ceiling prices and also pay the additional premium and hold my trade. The chains are getting my meat business. I have been in business in Dodge City for a long time and my trade is principally ranchers and farmers.

I have appealed to the Office of Price Administration, the Food and Drug Administration, the United States Department of Agriculture war boards, and all the alphabetic organizations known to me. We have appealed to our association secretary, Mr. C. M. Sandstrom, at Kansas City, Kans. He writes that so far the whole food situation needs overhauling, so I am appealing to you for some sort of relief.

The gentleman from New York [Mr. CELLER] and others talk about the Government commandeering cattle. Such talk is silly. Farmers are not deliberately holding cattle off the market. The trouble is the restrictions imposed by the O. P. A. and the War Food Administration are such that dealers and packers cannot buy cattle. There is more beef on the hoof in the country today than ever before in our history. Except for the utterly unjustified restrictions which have been placed upon distribution, there would be more beef in the markets today than ever before in our history. What the gentleman from New York and others similarly situated should do is to help us get these hampering restrictions removed so that their people can secure the beef which farmers have already produced and which they want to sell if they have the opportunity.

The Coal Act—A Pattern for Post-War Planning

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks, I include the following testimony before the Ways and Means Committee on the pending bills to continue the Bituminous Coal Act:

FURTHER STATEMENT OF JAMES A. EMERY, GENERAL COUNSEL, NATIONAL ASSOCIATION OF MANUFACTURERS

Mr. ROBERTSON. Judge Emery, on yesterday and the day before, considerable testimony was presented to us concerning the effect of this act upon the consumer, our attention being called to the fact that the minimum price in docket No. 15 was 18 cents above what it should have been, and in docket No. 21 it was 38 cents above what it should have been, and that a representative of a large

consuming group in New York complained bitterly of how the act had affected the consumers, not only in New York but throughout the Nation, who have been forced to pay millions of dollars, and we do not know the exact amount more because of the act than they would otherwise have paid.

I feel that we have been fortunate in having the discussion that you brought to us today on the broader aspects of the problem dealing with the underlying philosophy of this legislation.

You have called our attention to the emergency acts adopted by the Congress during a grave depression, designed primarily to relieve unemployment, but most of which have been continued into the war effort.

For instance, the 40-hour week, which was a depression measure designed to spread employment and to implement the policy by a 50-percent overtime payment, which was thought to be so heavy the average employer could not afford to work a man more than 40 hours in 1 week, and would have to spread the employment.

Even Mr. Henderson, who was one of the chief witnesses who testified before the joint meetings of the labor committees of the House and Senate on behalf of the 40-hour week stated to our committee that when we had full employment the 40-hour week should be relaxed, and of course everybody knows that we not only have full employment but an acute labor shortage, and yet it is not relaxed.

So in a word you have called to our attention that we are at the crossroads with respect to legislation that will affect the post-war era, at a time war spending will be ended, and the need for employment will again arise.

I believe that you will agree with me that there will be only two ways by which that employment can be furnished, first by private industry and second by the Government.

Mr. EMERY. Or by the two in cooperation.

Mr. ROBERTSON. There are certain post-war planners who believe that our system of private enterprise has failed, that private employment will be unable to do the job in the post-war era, and they are therefore drawing up grand plans for public employment on a scale never before witnessed in this or any other country that was not under a dictatorial form of government.

What was the basis that you told us on which competitive business in this country had always rested?

Mr. EMERY. Do you refer to a quotation offered from James Madison?

Mr. ROBERTSON. I think that that is substantially what it was.

Mr. EMERY. He said the economic foundation of the United States depended upon the unequal and varying capacity of men to employ property.

Mr. ROBERTSON. And then you went on beyond that and mentioned a basis on which you said that competitive business had always rested?

Mr. EMERY. I said it rested on its capacity to efficiently serve the consumer by undertaking so far as it could by continuous development and technological progress and improvement of management and skill and organization and the use of materials and the management of business and the general improvement of industry to better serve by increasing its volume and serving its customer by giving him a better article at a less price.

Mr. ROBERTSON. Does the National Association of Manufacturers believe in a system of private enterprise?

Mr. EMERY. Believe in it?

Mr. ROBERTSON. Yes.

Mr. EMERY. Yes, sir, it does. It believes it is essential not only to the economic future of the country but it expresses in the economic field the fundamental principles of liberty under law that lies at the foundation of our governmental structure.

Mr. ROBERTSON. Can a system of private enterprise compete with Government in the industrial field?

Mr. EMERY. Well, no; in the sense that if the Government competes with its own citizens, it has many advantages, obviously, over the citizen, and it pays no taxes and it carries no insurance and it does not necessarily have to sell or recover the cost of its operation. It suffers capital losses and replaces these by capital appropriations, and in many cases it is in a position to recover through taxation the losses that it would suffer.

But it, nevertheless, would be compelled to meet the same problem that the business manager must meet, as Mr. Justice Holmes once said in one of his great moments. He said, "The hated capitalist is, after all, only the mediator—the prophet who has to undertake to prophesy the future trend of human desires."

Mr. ROBERTSON. Do the members of the National Association of Manufacturers engaged in private enterprise believe that the private enterprise system will successfully function in the post-war period if given a chance to do so free from Government competition?

Mr. EMERY. Given the chance to do so, yes, sir.

Mr. ROBERTSON. In the post-war era does the National Association of Manufacturers favor having the Government fix minimum prices of all products moving in interstate commerce?

Mr. EMERY. I do not think so.

Mr. ROBERTSON. Does it favor fixing such prices for any product that moves in interstate commerce?

Mr. EMERY. Of course, you are not referring now to public utilities.

Mr. ROBERTSON. Oh, no.

Mr. EMERY. You mean privately produced goods and commodities.

Mr. ROBERTSON. That is right.

Mr. EMERY. That is right, we do not.

Mr. ROBERTSON. Is there any product that moves in interstate commerce that will not in some way be affected by the Government's fixing of prices of bituminous coal?

Mr. EMERY. I do not get that last.

(The pending question was read by the reporter.)

Mr. EMERY. Well, yes, I think, as a matter of personal opinion, that all goods relate themselves in a complex interdependent economic structure like ours so that all costs of operation, of every kind and character, are reflected in the price of goods and services, as a very famous physicist once said, however, delicate the relation may be, he said, a man does not flick the ashes from his cigar nor drop a stone from his hand to the ground, that the stars do not react under the law of gravity.

Mr. ROBERTSON. That undoubtedly is true, and the reaction to coal prices is a little quicker and sometimes a little more violent than the stars' reaction to the ashes from my cigar.

You might say to me, how does the price of coal affect the apple business in the Shenandoah Valley of Virginia? Well, we cannot operate a packing shed and a grading machine and a washing machine without electric power. If the power for that comes from coal the price of coal affects it. When that apple starts to market we load it on one of our splendid Virginia railways, the Norfolk & Western, or the Chesapeake & Ohio, and they have got to buy their coal to haul those apples.

Coal is a key to steel; two tons of bituminous coal make one ton of steel through the use of coke and the blast furnaces.

Steel enters into nearly every field of production, does it not?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. So any law that arbitrarily fixed the price of a commodity like coal extends much further than the effect upon a little householder who burns 10, 15 or 20 tons of coal a year; it affects the entire industrial system of the nation.

Certain witnesses have asked us to believe that the reason this law was passed for the coal industry was that it of all industries was in the most precarious condition and therefore faced utter ruin or chaos unless it had a law of this kind, but did you tell us this morning that in 1932, 1933, and 1934, of 508,000 corporations, only 16.25 percent had any net income at all?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. So that the coal industry——

Mr. EMERY (interposing). That is in 1932, Mr. Robertson.

Mr. ROBERTSON. I understood your figures were for 1932, 1933, and 1934.

Mr. EMERY. No; not for the 3 years. I said that those were 3 desperate years in which the number of corporations with net income was exceedingly low, but in 1932 it reached the lowest level of 16.25. I said that in those three years that the corporate deficit was very great, and I could give you the exact figures if you cared to have them.

Mr. ROBERTSON. Well, so far as my immediate objective is concerned, it is not necessary.

In 1933, 1934, and 1935 we commenced the process of enacting emergency legislation with a view to relieving the intensity of the depression and one of the first was called the relief and recovery act, which combined N. R. A. with $700,000,000, I believe, which looked mighty big in those days but has since been dwarfed by comparison, to be spent on certain relief projects.

Under N. R. A., industry committees were set up which adopted codes relating to prices and to sales practices, is that not true?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. And we had a code of that kind for the bituminous coal industry, is that correct?

Mr. EMERY. I assume so, yes, sir; all industries had one.

Mr. ROBERTSON. In 1935, in the Schechter case, the Supreme Court declared N. R. A. to be invalid and unconstitutional. Was it not then that Mr. John L. Lewis rolled this pink pill for pale plants and forced the coal operators to swallow it?

Mr. EMERY. I do not remember just when the movement began, sir.

Mr. ROBERTSON. Well, it was in 1935, and it was at the instance of Mr. John L. Lewis, and I thought that you called that a pink pill for pale plants, is that right?

Mr. EMERY. That is right.

Mr. ROBERTSON. Did you go on to say that that pill was so indigestible that it did not take effect for 2 years and 4 months?

Mr. EMERY. The first bill of 1935 was of course held invalid, and the second bill of 1937 became effective on passage, and then there was a transfer of administration from a commission to an administrative division in the Interior Department, and during the period of the Commission's life there was no determination of minimum prices, I believe, but that was effected after the administrative reorganization which put the act under the direction of the Bituminous Coal Division.

Mr. ROBERTSON. But the only substantial change and we will discuss that later, was the labor provision which the Supreme Court threw out in the Carter Coal Co. case.

Mr. EMERY. That is the first act; yes, sir.

Mr. ROBERTSON. And the 1937 act, you said, did not take effect for 2 years and 4 months, with respect to announcing the sustaining part of it which was a minimum price level.

In the meantime had not Congress, in furtherance first of the defense effort, and then of the war effort, rolled a different kind of pill that we might call private production for public projects?

Mr. EMERY. You refer to the development of the defense appropriations?

Mr. ROBERTSON. Yes, sir; what we call war spending?

Mr. EMERY. That substantially began in 1940. Of course, the European war breaking out on September 8, 1939, had an immediate effect on our economy, because the nations attacked immediately came into our market.

Mr. ROBERTSON. Foreign war buying was not the major cause of our recovery. Under the Neutrality Act we required them to lay the money on the barrel head and haul it home in their own ships.

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. You remember that?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. So that the first point that you made about the bill was that the coal business was not the only sick business during the depression, the second was that it recovered by forces other than those that were set in motion by the enactment of the Bituminous Coal Act?

Mr. EMERY. I think so.

Mr. ROBERTSON. You did mention it.

Mr. EMERY. I offered some proof of that this morning, I believe, from the income-tax statistics of 1940.

Mr. ROBERTSON. Well, Mr. Lamb went into that quite fully and showed that even for the year 1940 the coal industry had been lifted out of the red and was about $16,000,000 to the good, on the favorable side of the ledger. You did not mention it this morning, but I believe that you will agree with me, since 1940 war spending has stepped up from $25,000,000 approximately in 1940 to a rate slightly in excess of $100,000,000,000 in 1943, that the same forces that lifted the bituminous coal industry out of the slough of despondency will keep it lifted and carry it to still higher levels unless the Office of Price Administration checks it, as long as the war lasts.

Mr. EMERY. I should hope so.

Mr. ROBERTSON. And that there will be no need for any minimum prices during that war period?

Mr. EMERY. Well, it seems to me that there is substantially little evidence of sales at minimum prices, from what I have heard.

Mr. ROBERTSON. If I correctly understood the essence of your testimony to us, it was that you see no necessity for the continuation of this law at all but that if the Congress decides to continue it you had some suggestion to make that would do the job without carrying forward everything that is now in the act and that would confer upon the Solid Fuels Coordinator for War, the power to fix minimum prices and maximum prices if he wanted to do it.

Mr. EMERY. I suggested in the outline that I thought that the President's Executive order of April 19, 1943, authorized the Solid Fuels Administrator for War, in conjunction with the Price Administrator, to provide for the upward or downward adjustment of prices in the bituminous or other coal fields for the period of the war.

Mr. ROBERTSON. As a lawyer you think that he has that power now?

Mr. EMERY. I am impressed with that, that is in conjunction with the Price Administrator, because he is the adviser of the Price Administrator in this field and the Price Administrator is not authorized to act without previous consultation with him in the adjustment of those prices, and in the light of the purpose for which those powers are given it seems to me that whether you call it minimum or maximum or other adjusted prices, that it is entirely within the power of the Solid Fuel Administrator or the Price Administrator in cooperation with him, to make those adjustments, and that is required by the nature of his office, in order to secure the amount, quality, and movement of coal that is indispensable to the war effort.

Mr. ROBERTSON. So, according to your testimony, we have got two facts that stand out like a lighthouse in the fog:

1, The Bituminous Coal Act did not lift this industry out of the depression but war expenditures did; and

2, We do not need the act as long as the war lasts.

They are two well-established facts, according to your testimony.

Mr. EMERY. I think so.

Mr. ROBERTSON. Therefore, you reach this conclusion, that if we vote now to continue this act we will be setting the pattern for post-war operations of the Government in business.

Mr. EMERY. That is the matter upon which we are most deeply concerned.

Mr. ROBERTSON. Now, let us analyze your testimony on what that pattern was and is and will be.

You tell us that the general counsel of the Congress of Industrial Organizations, who drafted the act passed in 1395, incorporated in it certain essential provisions of the Wagner Labor Relations Act?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. Not the provision with respect to collective bargaining. We did not need the Wagner Labor Relations Act to establish that. It was a fundamental right that nobody that I have ever heard contested, that was put in the Wagner Labor Relations Act, but many things beside that went in along with it.

The general counsel of the Congress of Industrial Organizations put into this act certain provisions of the Walsh-Healey Act; is that not correct?

Mr. EMERY. I do not know whether it was the general counsel of the Congress of Industrial Organizations, sir, but I know the provisions were put in there.

Mr. ROBERTSON. Then they were in there; somebody put it in there.

Then the drafters of this act in 1935 put in the new theory in our Government that the Government could use its taxing powers as a deliberate penalty to compel compliance with a so-called social reform.

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. Then the drafters of this act put in the provision in keeping with what Ben Cohen and Tommy Corcoran deliberately put in the draft of the so-called Fair Labor Standards Act, better known as the 40-hour week, a provision that what the Supreme Court had said in the Coronado Coal Co. case was not interstate commerce, was interstate commerce, and broke down to that extent the distinction previously existing between interstate commerce and intrastate commerce.

You gave some references as to how the constitutional provision that the power of Congress to regulate interstate commerce and actions impeding or obstructing interstate commerce had been extended. Have you kept up with the regulations and the decisions of the agency in the Department of Labor that administers the 40-hour week?

Mr. EMERY. I have tried to.

Mr. ROBERTSON. Then you have known that they have ruled that if a country sawmill in the mountains saws a plank that is put on a bridge on a little mountain road, and an automobile from New York rolls over that bridge, that plank is then in interstate commerce, and the sawmill has got to conform to the standards of the 40-hour week.

You are probably aware of the fact that they have ruled that if there is a two-story office building in my home town, and an insurance agent representing a New York insurance company has an office in that building, and the roof leaks and the owner of the building puts a shingle on the leak, the presence of that insurance agent in that building makes that shingle in interstate commerce and, therefore, the man who produced the shingle had to conform to the 40-hour week.

I could sit here for quite a period, because I have been harassed world without end about these various interpretations, on how the 40-hour week has been used to destroy every concept that we have ever had of the just and proper distinction between interstate commerce, which was the proper field of the Federal Government, and intrastate commerce which we thought under the Constitution had been reserved to the States.

Now, that principle is carried into this act.

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. All right.

Then we had a labor principle carried into this act that so far as I know was not directly involved in any of the other depression acts that I have mentioned or can think of, and that is this:

That when a majority of the producers in a given industry agree upon a wage scale, everybody else in that industry has got to pay the same scale. That was put in here.

Mr. EMERY. That refers to the operation of the so-called district committees.

Mr. ROBERTSON. So far as you can recall or so far as you have told us, of all of these various devices that we have adopted in the past 10 years in the name of democracy and freedom and liberality, that is the only one that is not in this act today that we are asked to endorse as a pattern for post-war operations.

Now, let us see how this legislation was implemented to make it even more effective.

In 1933, did not we have a strike in the bituminous coal industry to compel the unionization of all coal mines?

Mr. EMERY. I do not recall the year, sir.

Mr. ROBERTSON. I think that we did, and I think that through that strike and the help that was given by the late Hugh Johnson, then head of the National Recovery Administration, and of certain high-placed officials, that objective was reached and the mines were unionized, so that no one could work in the bituminous coal field who did not belong to the union and the union could not work when the leaders said, "The contract offered us by the operators is not satisfactory."

Was not that done?

Mr. EMERY. I did not think that the unionization was completed until the ruling of the Mediation Board in the captive mine case a year ago. I thought that that completed it.

Mr. ROBERTSON. Now, the next move in line with the 40-hour week, which was held not to go far enough for this industry, was the 35-hour week secured through collective bargaining and written into a 3-year contract after a strike; is that not true?

Mr. EMERY. I did not get that last.

(The reporter read the pending question.)

Mr. EMERY. I believe that that is right.

The CHAIRMAN. We will be back in 30 minutes. We will take a short recess.

(Recess.)

The CHAIRMAN. We will proceed.

Mr. ROBERTSON. The next move, Judge Emery, as I recall it, was in 1939, when there was a strike over the closed shop and exclusive representation which, as you said, completed the program of unionization. I will not dwell on that but we will proceed to the most disastrous strike in my opinion that has occurred during the war period—namely, the one that commenced in May of 1941 and lasted for 4 weeks.

You will recall that the Conciliation Service of the Department of Labor finally compelled the operators to agree to the demands of uniform pay after Mr. O'Neill, representing the northern operators, had agreed to an increase of $1 a day, and the Appalachian operators in districts 7 and 8 were hiked up $1.40 a day and in the Alabama fields the hike as I recall was more than $2 per day.

Do you remember that strike?

Mr. EMERY. I remember the strike, sir, but I do not remember the details that you state.

Mr. ROBERTSON. That is the way it was settled, according to my recollection, and in line with the labor provision inserted in the act of 1935, which, from the standpoint of the general counsel of the Congress of Industrial Organizations, who was the moving figure in framing that bill, was the essential portion of the bill, namely, that when 60 percent agreed to a certain wage, they all had to pay it, or when just a majority agreed they all had to pay it.

Mr. EMERY. You mean in the act?

Mr. ROBERTSON. Yes, sir.

Mr. EMERY. In 1935 my recollection is that the act provided that where the majority of the employees and the operators agreed upon a wage, that that became the prevailing wage of the industry. That was in 1935.

Mr. ROBERTSON. Now, they accomplished that purpose under this act, but in a different way, by the strike that commenced shortly after we agreed to continue the act in 1941, or, the positive assurance that the continuation of the act would prevent a strike.

Now, there is just one more move in that same direction, which was made, as I recall, in the fall of 1941, when Mr. Lewis decided that he would bring the captive mines into line and they would not agree voluntarily to come into line, and he called another general strike when all of the bituminous coal operators other than the captive mines were just innocent bystanders, so to speak, but he shut them down, and in doing so did he not rely upon the provisions of this Coal Act, that whatever happened anywhere in the coal business affected it all, and therefore he had a right to shut down all of the privately owned and operated mines in order to compel the steel companies and certain other companies that had what they call captive mines to fall into line with the closed shop and over-all wage plan?

Did he not rely on the provisions of this act, I say, in calling that general strike and shutting down the mines of everybody?

Mr. EMERY. I think the fundamental trouble, Mr. ROBERTSON, was that in the endeavor to protect the right of organization, of association, and of collective bargaining, the parties here engaged, that great power was given to the organizations without any corresponding responsibility for its exercise, so that the employers were left in an utterly hopeless position.

Mr. ROBERTSON. And that is the reason that I voted against the Wagner Labor Relations Act. I was not opposed to collective bargaining, but I thought it was one-sided, and it certainly has been one-sided in its administration since its adoption.

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. And I voted against the Walsh-Healey Act and I voted against the 40-Hour Act, all three of which you say are rolled up into this act with some more besides.

Now, I have outlined to you the labor provisions put in the 1935 act, and the way that objective has been reached through a series of strikes, and I ask you how can anyone stand before us and say that the enactment of this act had nothing to do with wages.

Can you tell me?

Mr. EMERY. Not I, sir.

Mr. ROBERTSON. Why, it was the essence of the whole movement, to be implemented, of course, by a price-fixing scheme under which and by which the operators would be enabled to pay these increased wages and pass the increased cost of production on to the consumer.

And so we find ourselves passing an act that permits the organization of district boards and we have got 23 of them and they can act separately and apart or in unison. They can propose to the Bituminous Coal Division a price and that price can be put into effect, but you said that when the oil company was in distress, and some of the operators got together not to fix prices and not to engage in any cut-throat competition and not to do anything to affect the price of gasoline, they were indicted by the same Government that sponsors this otherwise violation of the Sherman Antitrust law, is that true?

Mr. EMERY. I said that the court there held that when they undertook to remove distressed gasoline from the market at the request and with the acquiescence or as the court said, when the administrative authority winked at it, that the court there held that the endeavor to remove this distress gasoline which otherwise would have come on the market and reduced the general price of oil or gasoline that that agreement—that that action, not agreement, because of its effect on the market price of the goods, violated the antitrust act because it affected the price.

Mr. ROBERTSON. And did you also tell us that the lower court instructed the jury that if these defendants had contributed in any degree to an increase in the price of gasoline they could be found guilty and should be found guilty?

Mr. EMERY. The lower court substantially instructed the jury in the Socony-Vacuum case that they should find the defendant guilty if their action had contributed in any degree to an increase in the price of gasoline.

Mr. ROBERTSON. That was the holding of the Court in the oil company case, and we passed a law that if, due to increased wages or any other factor, the costs of the production of a ton goes up as much as 2 cents, then we must make a change in the price and hike it up.

Now, that act, you tell us, went to the Supreme Court in what you call the Sunshine case.

Mr. EMERY. Yes, sir; the act of 1937.

Mr. ROBERTSON. A beautiful and euphonious name for a remarkable decision that was handed down.

I understood you to say that in that Sunshine case the Court virtually overruled the decision of Chief Justice Marshall in McCulloch against Maryland, in which he handed down the famous statement that the power to tax is the power to destroy, and he restrained the State of Maryland from exercising that power in a detrimental way against a bank which was then the property of the United States Government.

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. But in the Sunshine case, you tell us that the Court held that not only in collecting revenue could the Government destroy, if necessary, but it could destroy deliberately, purposely, as a penalty for nonconformity, and upheld the 19½-percent tax carried in this bill, to crush any operator who did not become a code member; was that not the holding in that case?

Mr. EMERY. I think that there is this distinction, Mr. ROBERTSON, that in the McCulloch case, the bank was an instrumentality of the United States and they held the State could not tax the instrumentality because that carried with it the power to destroy.

In the Sunshine Anthracite case they held that the—the court held that in regulating interstate commerce, that the Congress could use any power which it possessed to sanction the otherwise valid exercise of its power by using the taxing power as well as any other police power as a sanction.

Mr. ROBERTSON. Then there were some communities that got a little sick and tired of having Jehovah's Witnesses ringing their doorbells at 2 and 3 o'clock in the morning, and when you say who is down there they would holler out, "I am Jehovah's witness," and they put a tax on the distribution of the literature of Jehovah's Witnesses, so high that it made it difficult and at least expensive for them to witness, and that case went to the Supreme Court, did it not?

Mr. EMERY. Well, of course, that tax could not be said to be levied expressly but it was levied on the circulation of any pamphlet, and the Court held that since in the exercise of religious freedom men were entitled to express their religious views through the circulation of pamphlets, that the power to tax when applied under these circumstances could be used oppressively to such an extent that it would destroy the religious freedom expressed in the circulation of the pamphlet.

So that they did hold there that the power to tax was the power to destroy or could be used for that.

They did not hold that it had been in this case, but it could be.

Mr. ROBERTSON. The Court had to take two bites at that cherry, did it not?

Mr. EMERY. Yes, sir; that is the case in which Mr. Frankfurter said that in dissenting with that—I am recalling his previous statement—he said that it was now settled that a tax can be a means for raising revenue or a device for regulating conduct or both; that was now a settled doctrine; and I tried to point out this morning that that had not been the doctrine of the Court over a century and a quarter.

Mr. ROBERTSON. Well, the point I am trying to develop, if I understood your testimony, was this: The decision in the Sunshine case was in essence against the decision in *McCulloch* v. *Maryland*, and the Court got out on a limb and came back again on the ground of religious freedom in the final decision made in the case of Jehovah's Witnesses; is that not true?

In other words, there had been no continuity of policy on this subject of the power to tax.

We thought for years that the decision in the McCulloch case was the established law and then the Court very erratically departed from what we thought was established law in the Sunshine case, attempted to follow that latter ruling in the first decision in the case of Jehovah's Witnesses, reheard the case and reversed itself; is that not correct?

Mr. EMERY. Yes, sir.

Mr. ROBERTSON. So I ask you this question: When we consider all of the regulations and court decisions, under the Fair Labor Standards Act, that has changed every conception that we have had of the meaning of interstate commerce, of the decisions under the Wagner Labor Relations Act, where it was held that the Court had no power at all over the actions of labor unions that might wreck and destroy the plant of their employer, and the decisions of the Court on the subject of taxation that we have just discussed, using the taxing power as a sanction or penalty to compel compliance with so-called social reforms, when we consider all of that program and speak of stabilizing industry, do you know of any better way that Congress could contribute to the stabilization of industry, and especially with respect to the important problems that will confront us in the post-war era, than to stabilize the laws, the rules, and the regulations under which industry must work and operate during the war and in the post-war era?

Mr. EMERY. It would be one of the greatest contributions that could be made, sir, because we are in a fog today, very must like the man who would try to operate under a famous Kentucky statute which provided that any person who discharged a firearm on a public road would be guilty of a misdemeanor whether it was loaded or not, and nobody has ever been able to determine whether that phrase applied to the man with the weapon or the weapon itself.

Mr. ROBERTSON. Thank you very much.

Independence Day

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me:

On the eve of July 4, in the year 1826, the father of our Declaration of Independence, wasted with his last illness, sat up in bed, went through the motions of a man writing, and muttered some disconnected phrases about the Revolutionary Committee of Safety. He seemed to be making a supreme effort to live until the Fourth. He never said so in so many words, but once or twice, as the shadows deepened before the dawn over the oaks of Monticello, he roused himself to inquire anxiously if it was yet the Fourth. When finally informed that the morning of the Fourth of July had dawned, his anxiety left him. At 1 o'clock in the afternoon of that day, Thomas Jefferson breathed his last.

So, on the very day on which, 50 years before, the birth certificate of our Nation was signed, the man, whose faith and fortitude were chiefly responsible for it, died. God moves in mysterious ways, indeed, His wonders to perform.

As Thomas Jefferson looked back from the fullness of a long life dedicated without reservation to the service of his country and his fellow-men, his mind must have reviewed the events, the struggle, the battles and soul-searing vicissitudes that preceded the final victory.

What a sense of peace and satisfaction must have been his as he remembered those ringing affirmations of his faith, so triumphantly, so abundantly vindicated—his faith in the rights of man; his faith "that all men are created equal, that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed * * *."

His faith in a free press: "The only security of all is in a free press. The forces of public opinion cannot be resisted. * * * It is necessary to keep the waters pure * * *."

His faith in religious liberty: "Almighty God hath created the mind free and manifested His supreme will that free it shall remain by making it altogether insusceptible of restraints; that our civil rights have no dependence on our religious opinions any more than our opinions in physics or geometry; that the opinions of men are not the object of civil government nor under its jurisdiction; and, finally, that truth is great and will prevail if left to herself, and has nothing to fear from the conflict unless disarmed of her natural weapons, free argument, and debate; errors ceasing to be dangerous when it is permitted freely to contradict them."

His faith in free public education: "The most effectual means of preventing tyranny would be to illuminate, as far as practical, the minds of the people at large, and more especially to give them knowledge of those facts, which history exhibiteth, that, possessed thereby of the experience of other ages and countries, they may be enabled to know ambition under all its shapes, and prompt to exert their natural powers to defeat all its purposes * * * whence it becomes expedient for promoting the public happiness that those persons, whom nature hath endowed with genius and virtue, should be rendered by liberal education worthy to receive, and able to guard, the sacred deposit of the rights and liberties of their fellow citizens, and that they should be called to that charge without regard to wealth, birth, or other accidental condition or circumstance."

And, finally, his faith in that eternal vigilance and resolute valor which furnish the bulwark and strength of our liberties: "We most solemnly, before God and the world, declare that, exerting the utmost energy of those powers which our beneficent Creator hath graciously bestowed upon us, the arms we have been compelled by our enemies to assume, we will, in defiance of every hazard, with unabating firmness and perseverance, employ for the preservation of our liberties; being with one mind resolved to die free men rather than to live slaves."

On the proud and solemn anniversary of the birth of our Nation and the death of the great American who brought that Nation to birth, let us this day take renewed faith and fortitude from Jefferson's unshakable faith and fortitude; let us, with sober rejoicing, take stock and inventory of our spiritual heritage and our spiritual resources; let us take to heart the profound and imperishable wisdom and truth of that American scripture which Jefferson bequeathed to us—that legacy of loyalty and sacrifice and devotion to the principles of the American credo which, today as never before in our history, are beset from within and menaced from without, distorted, confounded and encompassed with perils. Let us with a full realization of its import in our appointment with destiny, carry on high, as an invincible banner, the noblest instrumentality ever devised by man, under Providence, for the good of man—the Declaration of Independence.

Superior, Wis., Pays Tribute to War Effort, the Greatest Family in the World, and to a Great Shipbuilder

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 1, 1943

Mr. O'KONSKI. Mr. Speaker, some time ago I had the pleasure and honor of attending a launching of the Quint Fleet at the city of Superior. At that time the city of Superior played host to the Dionne quintuplets, to Naval officials from Canada and the United States, and to thousands of people from the United States and Canada. It was an event that would have thrilled the heart of any Member of this Congress had they been there. I wish at this time to insert in the RECORD several articles and speeches pertaining to that event because it will undoubtedly go down in history as perhaps the greatest launching ever to occur in the history of the world:

ADDRESS OF ROBERT BUTLER

Distinguished guests, friends from Canada and the United States, ladies and gentlemen, and the good men of production here in our own yard, all of us in the Walter Butler Shipbuilders organization are thrilled at the privilege that has been extended to us today, in playing host to the world's most famous children and their parents. We are happy, too, in being honored by having as our guests today, men and women who have achieved national and international recognition in their service to their countries. Their names and their deeds are synonymous with the mighty war effort of the United Nations. We are not unmindful of the honor that is paid us today in their being here and what their presence is doing to further the now existing good relations between our country and great neighbor of Canada.

Significant, indeed, is the launching here today on the Great Lakes of these five ships, not only that they form a small part of the production genius of America, but more potently, they signify the "sting" that American workmen can deliver, from one end of this great Nation to the other. Long hours, day in, day out, will not deter the workmen on the home front.

Today, more than ever, these stalwart men of production realize the importance and seriousness of their work. From countless numbers of their homes they have even been given the sorrowful news of "missing in action" or "killed at the front"; yes, the home front realizes its task, it will not let false issues, demagogic leaders or Axis propagandists influence the big pull ahead.

It gives me deep satisfaction in welcoming you, to be able to point out that this occasion is, in no small way, made possible through the cooperation we of management have had from the American Federation of Labor unions in our yard. The work of our labor-management war production drive committee has proved conclusively that labor and management can pull together and has contributed in large measure to the outstanding production achievement which we are celebrating here today. Labor-management cooperation is launching the ships of freedom now and it must and will continue after the war in building a world of freedom. Stimulating to us engaged in shipbuilding, inspiring to the tens of thousands of workers in this yard and throughout the nations, is in the magnificent leadership that has been given the shipbuilding program, by the United States Maritime Commission.

Admiral Land, your untiring energies, your boundless enthusiasm to get the job done, your undying patriotism and loyalty stands out today as symbolic of what can be done on the home front. Speaking for our men in the yard for this Great Lakes region engaged in ship production, permit me to thank you for being with us today. We feel greatly honored by your appearance here, honored to have you participate in this international event and know that what you say to us will remain long after the program has ended.

Distinguished guests, ladies and gentlemen, it is my privilege to introduce Admiral Emory S. Land, chairman of the United States Maritime Commission. Admiral Land.

ADDRESS OF ADMIRAL EMORY S. LAND

This is a grand sight out here today, five ships ready to be launched, five such charming, young sponsors as the Dionne Quintuplets; but if I said all the things that impressed me, I'd be taking up all the radio time. One of the things I'm going to say is this: People used to say the Middle West wasn't interested in the merchant marine. Oh, yes; it is. And the launchings that bring us here are just a symbol of the fact that the whole United States has gone to sea. One of the things seen here that has aroused my feelings most is the part this great Middle West is playing in waging this war. From here one

can see a huge grain elevator. I'm told it's the largest in the world. It stands as testimony that the midwestern farmer is producing his share of the food to feed the United Nations. One can see the smoke of railroads bringing ore from the earth of the Midwest. I have seen—can't see them from here—an endless string of ore boats—a moving bridge from mine to mill. Here one sees five vessels—the product of midwestern suppliers and factories, of midwestern brains and labors. I'm sure there are millions of Americans, particularly from our seaboards, who don't realize the tremendous load the Midwest is shouldering in this war—nor do they realize, even from the maps, the vast amount of waterborne transportation in this part of the country, nor the mighty part the interior of this country, far from both oceans, is taking in our great shipbuilding program.

Certainly if American's don't realize it, Hitler doesn't. Not yet. If he did, he'd realize as we all do today, what a slim chance he has of standing up for long against the resources, the industry, the shipping, of the Midwest. Then add to that what all the rest of the country is doing for the full development of American striking power, add the spirit and fighting power of United Nations and Hitler doesn't stand a snowball's chance, even though he has robbed the wealth of Europe and dragooned its millions of people to build the Nazi war machine. As an evidence of the common cause we share with the United Nations, we are building these ships under the lend-lease program for our British allies to operate. As one looks at these ships now in the last few minutes before they take their virgin bath, we see them as a total, not merely of five hulls, of so many tons of steel, of so many man-hours of labor, but a sum of many hands, many skills, hearts, hopes. Tired bodies are in them, weary brains, but a total beyond any total on a machine. These ships, built by Americans, christened by Canadians, to be manned by the British, we wish them well as they go out to sail the seas carrying cargoes of victory. Wherever they may go in their work I hope there is one special trip they will make be it soon or later. I hope they will sail into the seaports of Japan with supplies for our garrison in Tokyo.

ADDRESS OF ADMIRAL VICKERY

Because of limitations in the dimensions of ships which can be taken from the Lakes to the sea, Great Lakes shipyards have been assigned different types of ships to build than those which make up the bulk of deliveries from seacoast yards. But these types are just as sorely needed in the winning of the war. This shipyard, and its sister yards here and across the river, and elsewhere on the Lakes, have a most essential job to do. With every ship which sails from these yards, the men and women who built it help bring closer the day of final victory for the United Nations. American merchant shipyards today are building ships at the most staggering rate in history. In April they delivered into service 157 vessels, totaling more than 1,600,000 tons deadweight—carrying capacity equal to a freight train over 300 miles from locomotive to caboose. A train stretching from here almost to Milkaukee. In terms of tonnage, for every four seagoing ships in all the world at the time of Pearl Harbor, the men and women in American merchant shipyards have built an additional ship. And by the end of this year they will have built still another one. There is no brighter picture in the battle of production. You know, and I know, that the proper place to fight and end this war is on the enemies' soil. Our fighting forces and those of our allies are doing their part. And as the arsenal of democracy, America is working day and night. But we can train soldiers, manufacture munitions, and raise crops, until we're blue in the face—it still takes ships to put the "over" in "over there."

SUPERIOR HAS EQUIPMENT TO AID WAR EFFORT—ORE, GRAIN, COAL, AND OIL FACILITIES HERE ARE LEADING IN NATION'S INDUSTRIAL MACHINERY

(By Clough Gates)

That the world's most famous little ladies should choose Superior as the city to be the scene of their first act of international significance is not only a happy choice to the people of this section of the country, it is also the most logical of acts.

The first journey of the renowned quintuplets to their country's sister nation, especially on an errand of public importance, would for the time center the minds of the people of two great countries on the scene of their visit. They are coming in the midst of a world war in which the fate of these and many other nations depends on ultimate supremacy on the high seas.

Although as yet only an inland port Superior is equipped to make a most vital contribution to the cause of North American maritime supremacy—perhaps the greatest single contribution that can be made by any one port on the North American Continent.

Even the people of Superior have been slow to realize the full importance of their city to the war effort of the Allied Nations. The news of the quint launching here on May 9 will doubtless be the vehicle which will impress this fact for the first time on the minds of millions of their countrymen and of the people of all countries where the press, radio, and movie news reels permeate. For the quints of Callander are known to every household that these agencies reach. Their every experience since babyhood has been eagerly and widely chronicled, but in their nearly 9 years there has been no such experience, no such adventure as this thousand-mile journey west to Superior to sponsor five merchant vessels built in an allied land in aid of their mother country.

HISTORIC

The event must have significance. Only so would the Canadian Government officials have planned with the State Department at Washington to give the occasion the sanction of two great governments.

A historic event in a historic spot. Why this honor for Superior? That is the question that will be asked all over the country. It is the opportunity to drive home some facts not too well known even in neighboring States.

In the days when railroad building was just making some of the keener minds appreciate what transportation could do for a land of such vast extent and resource, Lake Superior seemed to point like the finger of destiny to the expansive Northwest country. One of the great eastern editors declared that one day there was destined to be a great city at the most westerly point on the great inland waterway.

The Soo River, coursing over a barrier of granite between Lakes Superior and Huron, shut the greatest of the Great Lakes out from important commercial intercourse with the rest of the chain. Only by expensive portage could cargoes be transferred from one to the other.

SOO LOCKS OPENED

In 1855 the first Soo lock was opened by the American Government and the large vessels of that day began to ply between Superior and Buffalo and points between. That fact seemed important to residents of the Lake Superior country of that day. Already small iron deposits had been discovered and worked in upper Michigan. And there were forests to be cut and fish from the deepest and coldest of the Lakes to be shipped to the eastern market. Supplies, including a little coal, came back.

But a busy season's traffic of the pioneer days would be but a trickle to what this watercourse sees today. With total tonnage, which in 1942 ran way beyond the 100,000,000-ton mark, the Soo Canal has long since taken position as the scene of the world's greatest concentration of water-borne traffic. The famed Suez Canal in the center of Eurasia and Africa and the wonderful Panama Canal of the Western Hemisphere, these two together make only a fair rival to the storybook accomplishments of the boats of Lake Superior. In all the history of the world there has been nothing of such magnitude developed by man's activity in commerce.

SUPERIOR IS LEADER

Superior is the greatest single factor contributing to make up this stupendous total of traffic. Situated at the focal point of origin of the greatest single item of this traffic, iron ore, this port alone pours into the commercial stream more than one-third of that tonnage supplied by all Lake Superior ports. Together with its twin port of Duluth, total shipments of iron ore crowd close to 60 percent of the Soo's volume. In 1942 the United States Government asked for 90,000,000 tons of Lake Superior ore and got over 92,000,000. Of this, more than 31,500,000 tons went from Superior's five big ore docks and the Duluth shipments came next with over 23,000,000 tons.

The Great Northern Railroad is the big shipper from Superior, handling ore from the Mesabi Range. The Northern Pacific and Soo handle at Superior all the ore produced by the smaller Cuyuna Range. Duluth docks handle ore from the Duluth, Missabe, & Iron Range Road.

HEAVY ORE TRAFFIC

In time of war attention centers on iron ore. In other years the volume of other products, while usually lighter than that of ore, at times surpasses it. Coal and grain are the closest rivals. Here again Superior's facilities serve the Nation with remarkable efficiency. Superior and Duluth constitute one of the greatest primary grain receiving centers of the country.

The magnitude of this traffic is illustrated by the huge elevators located here. The Twin Ports have storage capacity for nearly 60,000,000 bushels, of which about 55 percent is in Superior and 45 percent is in Duluth. Similarly, great coal docks line the water front with acres of space capable of storing some 12,000,000 tons of coal from the Pennsylvania, Kentucky, and West Virginia mines. Again Superior docks afford about 55 percent of the coal-handling capacity. This city is also an important oil and gasoline storage and shipping point with tanks that hold over 77,000,000 gallons.

Superior's matchless railroad facilities are ably equipped to take care of the land end of this fabulous stream of traffic. Extensive yards are devoted to the handling of incoming ore and grain. No transportation center in the entire country has as many miles of trackage in its railroad yards. When the late fall marks the closing of lake navigation ore ceases to flow and grain slows down, these extensive yards are available to transfer almost any volume of outgoing coal that the exigencies of winter in the Northwest may require. The facilities are made complete by almost unlimited power in mammoth engines and carrying capacity in modern ore and freight cars.

ST. LAWRENCE SEAWAY

All this development has happened here without benefit of direct access to the commerce of the world. Contemplation of the vast extent of the traffic of the port of Superior as an inland port gives an inkling of what will be when the St. Lawrence River rapids are bypassed with channels capable of accommodating ocean vessels. More than 50 years ago agitation for the deep waterway improvement began but only in recent years has the project reached the stage where surveys and official estimates have been made under authority from the Canadian and United States Governments. It is expected that this will be one of the principal items on the Nations' post-war list if indeed it is not actually started sooner.

Yes, the quintuplets have chosen well for the scene of their historic gesture of international good will. They come to the very source of that power on which the forces of civilization rely in their supreme effort.

The Cattle Situation

EXTENSION OF REMARKS

OF

HON. JIM McCORD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. McCORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Rodney Crowther appearing in the Baltimore Evening Sun of June 29 relative to the cattle situation in the United States:

CATTLEMEN LAY BLAME FOR BEEF SHORTAGE ON WASHINGTON

(By Rodney Crowther)

WASHINGTON, June 29.—With more cattle roving the ranges of America than ever before in history why should this Nation be confronted with a beef famine?

Department of Agriculture experts estimate there will be 82,500,000 head of cattle on the farms and ranges of the country by the end of the year. Practical cattlemen—and one of them is Congressman KLEBERG, of the great King Ranch, of Kingsville, Tex.—today said there are already that many cattle on the farms. By January 1 there will be close to 85,000,000 head, KLEBERG claims.

SUPPLIES SHRINKING

Why, then, should the Nation's supply of dressed meats be shrinking toward the vanishing point, butcher shops by the thousands closing down in the Middle West as well as in the East, and armed forces even in the cattle country finding it difficult to fill their beef needs?

Spokesmen for the livestock and packing industry say the answer to these questions can be summed up in three words: Confusion in Washington.

This confusion, they say, is compounded of three parts—the quota system, which limits the slaughter of livestock for civilian consumption; Office of Price Administration ceiling prices on beef, and the fight between the administration and Congress over price rollbacks and subsidies.

WHY KEEP TO QUOTAS?

What is this quota system? Why was it ever imposed in the first place? Why doesn't the War Food Administration abandon it at once and thus set the livestock moving from the farms to the slaughter pens?

The writer asked those questions today at the Office of Price Administration, at the Department of Agriculture, and at the War Food Administration.

Spokesmen for these agencies assert that if the quotas were abandoned the chaos would be even worse than it is now.

BEGAN UNDER HENDERSON

The quota system originated in the Office of Price Administration when Leon Henderson was running that organization. Meat-restriction order No. 1 of October 1, 1942, imposed quotas on civilian deliveries of beef.

The percentages have been changed from time to time, but in the main the figure has been around 70 percent of the 1941 delivery.

Subsequently the Food Administration, which had been a joint affair between the Office of Price Administration and the Department of Agriculture, was lodged solely in the hands of the Secretary of Agriculture, and the quota system became a prerogative of Mr. Wickard. Later, when the War Food Administration was set up, with Chester C. Davis as its head—a post he quit yesterday—the quota system moved over to War Food Administration.

TO MAKE SUPPLIES AVAILABLE

Why was the quota system inaugurated in the first place? What was its purpose?

"To bring the beef business under control so that it would be possible to obtain the meat needed by armed forces and lend-lease," a Government spokesman explained.

The limitation was not imposed on federally inspected plants, but only on slaughterers not engaged in interstate trade.

SLAUGHTER TO CAPACITY

In other words, the federally inspected plants have always been able to slaughter to capacity, if they desired. But they were required to supply the armed forces and lend-lease ahead of any civilian requirements.

Under the law the Army, the Navy, lend-lease and other Federal agencies can only buy beef from federally inspected plants. These plants account for abqut 70 percent of the entire slaughter of beef in the country.

The other 30 percent are those which kill only for distribution within State boundaries and for the most part are engaged in sales to the civilian population.

CUT TO 70 PERCENT

These are limited in the cattle they can kill—limited to 70 percent of the kill of the year 1941.

"Why were these local slaughterers put under this quota system?" a Food Administration spokesman was asked.

"Simply because this was necessary in order to assure an adequate supply of beef for the armed services and for lend-lease," he answered.

"How did the quota system achieve this result?"

SETTING ASIDE 35 PERCENT

"Simply by saying that the total slaughter in plants not subject to Federal inspection must be limited, and that of the unlimited slaughter in inspected plants 35 percent had to be set aside for Government use," the Food Administration spokesman answered.

Recently the requirement was raised to 45 percent. This does not mean, it was explained 45 percent, of all cattle killed, but only 45 percent of steer and heifer grade of certain army weights. Actually it amounts to about 20 percent of the grand total of all cattle of every description killed in the country, a department of agriculture official asserted.

NOT SATISFACTORY ANSWER

"But none of this yet explains why you have to put noninspected killers in a strait jacket, why in the face of a virtual nation-wide beef famine you can't just lift the restrictions and let local killers fill the demand," the writer said to the Food Administration spokesman.

"We had to impose the quota in the start to get beef for the Government; and we have to keep it on now to continue getting it," was the reply.

WOULD HAVE TAKEN ALL

"Everybody likes a good piece of beef. And with the workers of the nation stuffed with money, they would have quickly gobbled up all the beef in sight and the Army and the Navy and lend-lease would have had none.

"If you didn't have restrictions, you'd have no control. And with no control, you'd have no beef for the services. Necessity compelled us to inaugurate the quotas. Necessity comples us to keep them."

WHY NOT LIFT RULES?

"What necessity?" the writer asked. "If the cattle are jammed on the farms, the deliveries to Chicago, New York-New Jersey pens, Omaha, Pittsburgh, Baltimore, and other cattle pens near the vanishing point, and the butcher shops of the big cities closing down, why not lift the restrictions and say to the local slaughterers: 'Go to it and kill all you can get.' "

"Because the small civilian plants would quickly gobble up every beef in the land and the services would get none," the food spokesman retorted.

PREFER CIVILIAN MARKET

"They are not particularly interested in selling to the Government. They would prefer to serve their own customers, in their own communities. And with the pockets of the workers everywhere bulging with money, it wouldn't be long before they would get all the beef and the boys in the Army and Navy would get none."

But the cattlemen, the packers, and spokesmen for them today pointedly denounced the quota system.

SIRED BLACK MARKET

"It sired the black market," was the comment of Congressman KLEBERG. "The black market is patently the outgrowth of Government regulation."

In this assertion the Texas Congressman was backed strongly by Judge J. G. Montague, counsel for the Texas and Southwestern Cattle Raisers' Association, who was visiting him at the Capitol.

"You must remember that there was no beef problem in this country," said Congressman KLEBERG, "until the Government inaugurated its quota system and imposed its ceiling prices. Before this there had been no visible evidence of an over-the-counter shortage."

BOTTLENECK'S CAUSE?

Why are the feeding ranges and farms of the Nation glutted with cattle? Why are the shipments to the big packing centers at the moment less than half of a year ago?

These questions were put to the spokesman for the Department of Agriculture.

"For one reason, because the farmers are holding the cattle and expecting higher prices. For another, because of the immediate unsettlement resulting from the subsidy controversy."

"CONFUSION" BLAMED

The same question put to Congressman KLEBERG and Judge Montague at the Capitol today brought this reply:

"One word will explain everything—confusion," said the two Texans who are outstanding cattle experts.

"If you were in the business you'd no more know where to turn than the cattle growers throughout the Nation. Already clamped down by mistaken Government policy," they are subjected to this new confusion over roll-backs and subsidies. The cattle growers don't know whether they are going to be the victims. The killers don't know where they stand."

NO LIMIT ON SOME

But a Department of Agriculture spokesman when pressed for a specific statement as to why cattle should not be arriving at the Chicago and other pens, contented himself with the observation that "the federally inspected slaughterers can slaughter all they want to; there is no limit on them."

The War Food Administration here has been advised by the American Meat Institute that last week's output by major packers was only about 50 percent of normal. The number of cattle slaughtered at federally inspected plants dropped to 150,000, compared with 173,000 for the preceding week and 273,000 for the corresponding week last year. Indications are that the drop will be even sharper this week.

ONLY 25 PERCENT LEFT

After supplies are earmarked for the armed forces less than 25 percent of the restricted output is available for civilians, it was stated. Authorities here insist that a great many slaughterers in the noninspected areas paid little or no attention to the quotas, used up all their quotas within a month or two earlier this year, and now can kill no more without violating the quotas.

In fact, in some areas of the country, they say, slaughtering has been in excess of quotas, and many killers face suspension of their permits.

The writer pressed various authorities here to state just "why the farmers and cattle growers appear to be on a strike."

The situation can be summed up in a few words: Packing house cattle buyers generally have lowered their offering prices and the buyers, on their part, have refused to pay the prices the farmers are asking. The packers say they are already losing money on beef and, what's more, they are not at all certain they will receive the subsidy payments promised them to compensate for losses under the roll-back.

MARKET SETS THE PRICE

"The farmer can ask all right," said Congressman FULMER, chairman of the House Agriculture Committee, "but if nobody will pay him what he asks then he is stuck with his cattle. And that's that. Farmers don't set the price; the market sets the price—even if it means a loss, the farmer has to take it or leave it alone."

Some authorities here say that because of the general air of confusion and uncertainty the growers for the most part are just waiting. But there have been some suggestions that a great many cattle are finding their way into black markets.

The American Meat Institute states that one of the best indications of the magnitude of the black market is the increased volume of country hides moving into the market. In the 6 months to the end of April this volume was 41 percent higher than a year previous, despite the fact that country slaughterers mainly are under quotas.

The War Meat Board, now in session in Chicago, is trying to find a solution for the beef muddle, particularly hoping it can find a way to stem supplies reaching the black market, and machinery for assuring a continuous flow from the farms to the pens.

THROW OUT QUOTA SYSTEM

Congressman KLEBERG declares there is only one answer to the muddle: "Throw away the ridiculous figure of 70 percent of the 1941 kill, and stimulate the slaughter of about 6,000,000 extra head of cattle to fill up the gaping holes in the Nation's refrigerators."

"How ridiculous to operate a program of shortage in the midst of plenty," he said to Congress in a recent statement on the cattle situation.

"The present course not only promotes famine but fans inflation," he commented today.

Tin

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 2, 1943

Mr. THOMAS of Texas. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from American Metal Markets, dated June 30, 1943:

TIN—MEMBERS OF METAL INDUSTRY WILLING TO BACK RECONSTRUCTION FINANCE CORPORATION RATHER THAN BOARD OF ECONOMIC WARFARE—VICE PRESIDENT WALLACE NOTWITHSTANDING

NEW YORK, June 29.—Vice President WALLACE, in accusing Secretary of Commerce Jesse Jones of carrying out obstructionist tactics in his dealings with the Board of Economic Warfare, and of failing, when the responsibility was his, to create sufficient stock piles of critical materials and drugs, has brought into public view the differences which have long been known to have existed between the Board of Economic Warfare and the Reconstruction Finance Corporation organizations, particularly the Metals Reserve Company. This report is not the place to discuss the respective merits or demerits of the Board of Economic Warfare's activities since it was given complete control of all public purchase import operations, but it can be said that the opinion definitely prevails in metal-trade circles that the job which was very efficiently handled by Metals Reserve during the time when it had the responsibility and the power to purchase strategic metals abroad, had better have been left in its hands.

Mr. WALLACE says that the Board of Economic Warfare has tried for over a year to do its job in spite of the obstruction which Mr. Jones has employed from time to time, but it is to be wondered whether the Vice President is able to distinguish between what he describes as "obstruction" and the expert opinions of those who know whereof they speak. It is to be wondered whether the Board of Economic Warfare has in its organization any who have a knowledge of such things as tin, tungsten, manganese, copper, and zinc to compare with that possessed by the men who have directed the policies and the activities of the Metals Reserve Company. Certainly it can be said that Metals Reserve does not have in its whole organization any such crass ignorance as has been displayed by some Board of Economic Warfare "experts."

We should all have reason to be thankful that Metals Reserve Company was in the saddle when the movement to accumulate tin in a large way was undertaken about 3 years ago. Its accomplishments were such that the tin situation has been and still is comfortable despite the fact that we are entirely dependent upon foreign sources for our supplies.

Conditions in Coal Mining

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address regarding the coal situation, which was delivered by Hon. Harold L. Ickes, Secretary of the Interior, and Solid Fuels Administrator for War. The address was broadcast over the Blue Network from station WMAL on June 30, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have come to this microphone tonight to talk about coal—and to talk about it straight from the shoulder. The time has passed for oratorial shadow-boxing on this subject. The time has also passed, in my opinion, for mere high-powered emotional appeals to any man or to any group of men to be patriotic. The man who tonight or tomorrow or the next day does not carry his full share in this country's fight either does not understand the immediate crisis that we face or he deliberately sabotages in that fight in the hope that our enemies may win.

Right at the beginning I want to go on record as insisting that the men in the mines are not saboteurs. The men in the mines are not deliberately tossing their picks into the coal production cogs to help the enemy. I say this without qualification. I do not offer it as pap—or as a sop to the men who mine coal. I believe it even though what these men have done recently has interfered seriously with the smooth operation of our war-making machinery.

It is my belief that the men who mine coal are in the category of those who have not yet understood or felt the urgency of the real crisis that we face here at home and, consequently, the crisis that our armed forces face abroad. And, I may add, these men are not alone in that ignorance, nor is it confined to a single group in our society.

But tonight I want to stick to coal. This is a subject about which there is a great deal of confused thinking and diverse opinion.

I don't think many listeners will disagree with such a statement. But I don't want you to take my word alone. Let me give you a few simple illustrations. Let me quote from a few letters picked at random from a single day's mail coming to my office.

Here is a man who writes from the East. He says: "My solution is, why in the name of common decency, to say nothing of common hog sense, don't you take the mines away from the operators?"

Here is another proposed solution—this time from just across the border in Canada. This fellow is just as intense, but he takes what you might call the opposite slant. He says: "Why don't you end the strike by freezing all union funds and arresting Lewis and other union leaders for treason?"

A man writes from the South to say: "I would like to make a suggestion on how to break the coal strike. Secure enough war prisoners and put them to work operating the mines."

Another letter comes from a miner's daughter. She lives out in the Midwest. She says: "Yes; I agree wholeheartedly that the miners should not strike, and they also

feel that way, but they, too, know that if they want to make a decent living for their families, they must receive better pay."

And here is one from a soldier in the Air Force who says that he was the champion coal loader of his mine before he joined the Army. He writes: "* * * I am for the miners, though I do not want them to strike. I would like to hear that the Government raised their wages for them. Mining is tough work, and I would still rather load coal than enjoy myself in the Army, because I feel as if I haven't done anything for my country yet, and I'll do anything my country calls me to do."

Those are a few of hundreds of suggestions and comments that I get every day. They represent, in total, every possible shade of opinion on this important subject. But they also represent a good deal of confusion, when unity is what we need, when a single idea must prevail supported by everyone everywhere—the idea that we must mine coal to win this war, and anything, anything at all, which interferes with mining that coal, makes victory harder and could make victory impossible.

This would seem to say that I favor the mining of coal whether there is or is not a contract between the coal-mine owners and the miners. I meant to say just that.

It would also seem to say that I favor mining coal whether miners do or do not get a raise in wages. I meant to say that, too.

It would also seem to say that I favor mining coal whether miners are paid for portal-to-portal time. I also meant to say that.

I say these things simply because coal must be mined in great quantities if we are to win this war. Nothing is more important than victory. No one listening to me tonight would deny this statement. Every American knows it to be true. And no American can fail to understand why, if he reflects on the consequences to himself and his country of defeat by the Nazis and the Japanese.

I also say these things with full knowledge that definite hardships exist so far as the miners are concerned. I know full well that they have honest complaints. But I also know that some day the cause of those complaints will be removed. It may be no comfort to the miners to know that others, too, are serving their country under economic disabilities, but this is the fact. All of us must continue to serve until the need passes, disability or no disability economically.

Notwithstanding, we have come a long way in recent years toward greater economic justice for the mass of citizens of this country. We have a long road ahead. The major obstacle on that road is the enemy that we are now fighting—the enemy we must destroy before we can resume our march toward the better things for which this country stands. Consequently, anything which impedes this major effort becomes a delaying action, a drag on our military effort and a threat to victory.

Let us face the realities of this situation squarely. As I have suggested, it is not the miners alone who have grievances. Here in Washington not a day goes by but what some group of citizens exercises the historic right to petition. Every one of these groups has a complaint—many of them just ones. Manufacturers complain that they can't make enough profits if the Army and Navy renegotiate their contracts to bring their prices down. Farmers' representatives want higher prices for their farm products. Packers want Office of Price Administration price ceilings removed so that they can make more money. Labor groups want their wages increased to meet the rising cost of living. And so it goes—and goes every day.

It seems to me that each of these special groups tends to overlook the major issue—the winning of the war—for the immediate interest of the particular group. This is natural. It is human. Ordinarily, I could not complain very vigorously about it. But today—on the eve of the greatest military campaign of history, when every muscle, every sinew, every ounce of blood, and all of the guts that we have, must be pledged to a single purpose—the complaints of no man or group of men can be placed above our military goal. Is there anyone who doubts this? Is there anyone, who taking thought of the awful consequences of defeat, could disagree? Or are there those among us who are not yet convinced that this is not a game that we are playing, that it is not a weakling against whom we have matched our arms? If there be such among us, let me warn him now that the day is at hand when stark proof will be had of the magnitude of the struggle that will be convincing even to those few of little faith who still may doubt.

We could go back tonight over the history of the present coal controversy if there were any profit in that. However, I think that we should try to look at the history we hope to make, rather than moan over the dreary months of stalling, bickering, backbiting and oral bludgeoning through which we have just passed with the mine owners and the mine union.

Behind us are 23,000,000 tons of coal that we did not produce in May and June because of this dispute. Ahead of us is the necessity for the greatest production that we have ever attempted. The goal is 600,000,000 tons of bituminous coal and 65,000,000 tons of anthracite this year and half of the year is already behind us. Yet more than half that total production is still below ground. But the miners, somehow, can actually make up for this loss. They will produce prodigiously as they have in the past when we called upon them for extraordinary production. They will be inspired by the thought that out of the cold and dark bowels of the earth itself they will dig us the victory that will spell for them and their children peace and security.

These goals were not set without much study and expert calculations of our war needs. They were known to the coal industry and to the United Mine Workers long before the expiration of their contract on April 1. Everyone with more than a little knowledge of coal mining realized that it would take an enormous and continuing effort to achieve them. Even so, there was resistance on the part of some operators to working a 6-day week. There were complaints, too many of which proved to be well founded, that operators were trying to chisel out of their contractual agreement to pay time and one-half for the sixth day of work. There were also well-founded complaints that absenteeism was too high among the miners to give us assurance of meeting our goals. Yes; here were some people placing their own interests ahead of those of their country—people failing to comprehend the importance of their action in its relation to the gigantic task of winning this war and winning it as speedily as possible.

These things that I mention happened many weeks ago. Time has passed. We have taken north Africa in the meantime. We have conquered some of the Mediterranean islands on our way to Italy. We are face to face with the invasion of the Continent of Europe. And that, you all must know, will bring us finally face to face with the full strength of our Germany enemy.

In the shadow of this campaign, can any man's private, individual problems amount to more than a pin prick on the hide of an elephant as compared with the great public and collective problem confronting every American and every citizen of the nations with which we are allied? It is truly a collective effort that we must make, submerging beneath a single purpose many of the private interests that we can properly protect in happier times.

Specifically, what would a lack of victory mean to all of us—miners included? It would mean, in concrete terms, a lower standard of living than has prevailed in this great Nation for many years. It would mean less to eat, less to wear, less to spend.

It would mean less of everything for miners and operators alike. It would mean less of everything for the butcher, the baker, the candlestick maker. There would not be, nor could there be, as much as we have had for the doctor, the lawyer, the merchant, or even the thief. This is war—total, all-enveloping war—from whose effects no one can escape. And if we are to win, everyone must contribute his full share, and that means sacrifice in the true sense of the word. Come to think of it, what small measure of sacrifice, if, indeed, any at all, have we made here at home since this war began? None, save those whose beloved ones have fallen in the conflict, has yet given more than a minimum to this fight.

There is no intention on my part to expect a greater contribution from the miners than from any other group. On the other hand, so long as I am charged with the responsibility of operating the Nation's coal mines, I cannot expect that their contribution shall be less, and that goes for the operators of the mines as well.

On May 2 President Roosevelt said: "I believe now, as I have all my life, in the right of workers to join unions and to protect their unions. I want to make it absolutely clear that this Government is not going to do anything now to weaken those rights in the coal fields." I share this view of the President's. I also believe in the right of a man to private property and in honest private enterprise. I, therefore, have no intention of snatching the mines from their rightful owners. However, the Government has had to assume supervision of the Nation's coal mines in this protracted dispute. That has become necessary because—and I repeat and emphasize it once more—we must have every ton of coal that we can dig just as fast as we can dig it out of the ground. It is perhaps difficult to visualize clearly what stoppage of coal production for a single day can mean in this fight to which millions have already pledged their lives and for which thousands have already died.

We normally produce about 2,000,000 tons of coal each day that the mines are worked. That gives us enough bituminous coal to make the steel required to build 324 Liberty ships—the ships that carry the stuff to the men who are fighting our war around the world.

It provides us with enough bituminous coal to provide the power to haul 1,275 freight trains of 100 cars each from New York to San Francisco, trains loaded with the ammunition and supplies needed by our fighting men in the Pacific.

That 1 day's supply gives us enough anthracite coal to heat 33,718 family dwellings, or a city of 100,000 persons—and heat those homes all winter.

There is another point that the miners in particular should not overlook in these hard days when the cost of living pressed their pocketbooks. For every day the mines are not worked, the miners lose $3,500,000 in wages—and I don't think that any of us can afford that extravagance, especially if we have families to support.

But I am sure from what I have seen and heard recently that many thousands of miners are realizing their responsibilities to their country as well as to their sons and brothers in the armed forces, and because of that realization they are eager to pursue the tough job of digging coal. I have had letters from such men. I have had telegrams from various fields all telling this story. But I have had others telling of a small minority

here and there who still attempt to persuade the majority that they are being sold down the river by anyone whose name can be used conveniently.

I also hear that these men, seeking to prevent fellow miners from digging coal, urge them not to trespass on mining property. To all miners, I want to say this: The coal mines today are in the custody of the people of the United States Government. Miners are citizens of the United States. They are not trespassing when they go into the mines to dig the coal that their country needs, particularly when the coal mines are in the custody of the Government of the United States—their Government. If there is any trespass, the guilty men are those few who urge that this coal be not mined.

I can assure the men who mine coal, and all others, that their Government does not sell the citizens of this country down any river at any time. For superior reasons of national policy, it must frequently say to its citizens: "This you shall not do"—or even: "This you may not get at this time regardless of how right your demands may be." So far as my job in the coal industry is concerned, mine workers and mine owners shall enjoy no advantage one above the other. Each has his job to do, and it is my responsibility to supervise their doing of that job.

It was with that thought in mind that I talked with the president of the United Mine Workers on the three occasions that I have seen him since this dispute began. It was with the same thought in mind that I have talked with the mine owners singly and in groups. There have been no deals, no off-the-record agreements, nor any private commitments, made either to John L. Lewis, the United Mine Workers, the operators' organizations, or to any single operator. And it is not my intention to make any deals with either group now or in the future. It is my hope that a firm understanding can soon be reached between the miners and the operators. Such an understanding, within the existing law and the policies of the Government is of primary public importance. It would be of extreme benefit to the success of the war that we fight, and incidentally a token of the good will that has not been conspicuous in the negotiations thus far. There must be an agreement eventually and the sensible thing to do is to reach one as quickly as possible. To do so would also be an evidence of mutual good will and good faith.

The lack of good will; the failure on both sides to proceed directly and promptly to an agreement has done great damage to the coal industry. Such actions as have been entered upon the public record in recent months have inflamed public sentiment to an extent that is dangerous in time of war. They have inflamed the Congress, which felt compelled to pass a most stringent law designed to prevent, or to outlaw strikes in enterprises taken over by the Government. It is, in my opinion, most unlikely that the coal difficulties can be abolished by the stroke of a pen—any pen. Whether that be possible, we shall see. But, possible or impossible, it should not have been necessary.

There should be that quality of leadership in labor's councils, which adjusts its grievances with management, without resort to extremes which embarrass production for war at such perilous times as these. Indeed, we have already seen examples of the kind of leadership to which I refer. We have seen instances of labor statesmanship in this war of which labor's rank and file may be proud. We have seen groups hard pressed economically submit to majority opinion, despite their very definite feeling that their cause was just. By going back to work on practically the same terms as prevailed under their last contract (which has been continued in full force and effect by the Government) the miners have entered into a competition in generosity of which they are entitled to be proud.

Only in a spirit of cooperation—between the miners, operators, and the public—can we achieve the kind of unified effort within our home-front ranks that is so necessary to the success of the intense phase of the war that we are now entering. It is expected of us by our allies. It is of vital importance to them and absolutely essential to ourselves. We will fail neither our allies nor ourselves. Least of all will we betray the high ideals of liberty that we serve.

Those are not mere words. They are facts; the facts that we face. They are inescapable and failure to meet them head-on points to disaster. Surely the coal industry, owners and miners, are aware of all of them as are all of the rest of us. Consequently, it is expected that they will act accordingly, which means in such a way that they will do their full share, carry their full burden of this greater task—the greatest that this Nation has ever attempted. It is upon coal that success depends—coal for heat, coal for power, coal for medicine, coal for chemicals, coal for oil, coal for coke, and coke for steel, and steel for ships and guns and tanks and planes.

Those are more facts, cold facts. They are some of the hard facts of war.

It is coal that we need. We need it urgently. And, pray God, it is coal that we will get.

One Hundred and Sixty-seventh Anniversary of the Declaration of Independence—Thomas Jefferson's 16 Points of Good Government

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. RANKIN. Mr. Speaker, tomorrow will be the one hundred and sixty-seventh anniversary of the Declaration of Independence, written by Thomas Jefferson, the great political philosopher of all time.

In his first inaugural address Jefferson laid down in 16 points what he calls the sum of good government. I will read from that address, and will take the liberty to number those 16 points and set them out by paragraphs. In that, the most historic address of the nineteenth century, Mr. Jefferson said:

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper that you should understand what I deem the essential principles of our Government, and consequently those which ought to shape its administration. I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations.

He then lays down the following 16 points:

First. Equal and exact justice to all men, of whatever state or persuasion, religious or political.

Second. Peace, commerce, and honest friendship with all nations—entangling alliances with none.

Third. The support of the State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-Republican tendencies.

Fourth. The preservation of the General Government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad.

Fifth. A jealous care of the right of election by the people—a mild and safe corrective of abuses which are lopped by the sword of the revolution where peaceable remedies are unprovided.

Sixth. Absolute acquiescence in the decisions of the majority—the vital principle of republics from which there is no appeal but to force—the vital principle and immediate parent of despotism.

Seventh. A well-disciplined militia—our best reliance in peace and for the first moments of war till Regulars may relieve them.

Eighth. The supremacy of the civil over the military authority.

Ninth. Economy in the public expense that labor may be lightly burdened.

Tenth. The honest payment of our debts and sacred preservation of the public faith.

Eleventh. Encouragement of agriculture and of commerce as its handmaid.

Twelfth. The diffusion of information and the arraignment of all abuses at the bar of public reason.

Thirteenth. Freedom of religion.

Fourteenth. Freedom of the press.

Fifteenth. Freedom of person under the protection of habeas corpus.

Sixteenth. Trial by juries impartially selected.

These principles, he says, form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation. The wisdom of our sages and the blood of our heroes have been devoted to their attainment. They should be the creed of our political faith, the text of civil instruction, the touchstone by which to try the services of those we trust; and should we wander from them in moments of terror or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

Nation Faces Severe Food Shortage

REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. LANDIS. Mr. Speaker, when the President turned down the program of giving Chester Davis full control over the Nation's food supply and vetoed the antisubsidy legislation he closed the door of opportunity for an abundant food production. He did this against the advice of farm organizations, food processors, distributors, and every American citizen

that feels it his duty to pay his own grocery bill. These farm groups, composed of practical men, know how to obtain maximum food production which will provide protection against starvation and incidentally against inflation.

This administration, under the leadership and guidance of Frankfurter, Hopkins, Cohen, and company, must assume the responsibility for the lack of food due to their impractical approach to the food problem of our Nation.

It is regrettable that the President is surrounded with so many men who know little or nothing about the food problem. It makes no difference who is the nominal Food Administrator. We have had three of them in the past 4 months. None of them has had a chance to do a real job because the real power has been in the hands of this group of New Deal theorists headed by Frankfurter, Hopkins, Cohen, and company. This group in Washington appears to be more interested in remaking the American way of life than in getting food production.

All food authorities agree that America faces a severe food shortage. We cannot win the war and the peace without food. Food is just as important as tanks, planes, guns, and ships. This administration has failed to develop a definite and well-planned food program.

The chief factors which are causing the food shortage are lack of experienced farm help, too much regulation from Washington, misunderstanding of the farm problem in Washington, need for profit-insuring prices, lack of farm machinery, lack of wooden containers, early frosts, spring floods, the wage-freeze order, the lack of transportation facilities, and the administration's lack of confidence in producers, processors, and distributors. Of course, weather conditions will have a great bearing upon the final results of the 1943 crop.

In this land of plenty, where present food rationing provides a plentiful supply so that no one needs to go hungry, we had better start tightening our belts a little tighter, as there are more serious times ahead of us. Present supplies will look like a surplus compared with what we may have to face.

In the past the public has been led to believe that there were vast quantities of food and that the farmer was a profiteer. Our producers, the farmers, did break all records in food production last year. However, it is not a question of helping the farmers but how to get food at this late hour to win the war.

There has been too much confusion between the Office of Price Administration, the War Labor Board, and the Agriculture Department. There has been too much red tape and delay. This bungling by the O. P. A. has already caused a shortage in the 1943 vegetable pack. Canners and processors have made several trips to Washington this year in order to get something done about canning the food which will be harvested this year. They have been given the run-around by the O. P. A. officials.

The canners made their final plea to the O. P. A. and Members of Congress last month. From recent studies of the Republican Food Study Committee, we have found the chief objection of the O. P. A. to be: Its lack of confidence in American businessmen; a poor fundamental policy; complexity of the program; and a personnel with little experience about the practical problems involved. We also discovered that America needs a food administrator with complete authority to handle the food program from the farmer to the consumer. He should have authority on production, distribution, rationing, and price fixing of food products.

Unless the present system is changed immediately we will have a critical shortage in vegetables, canned goods, protein feeds, meat, and dairy products next year. The O. P. A. has been too slow in determining price ceilings. Many acres have not been planted in vegetables due to this delay. Some price ceilings set by the O. P. A. are too low to cover the cost of production. The ceiling prices which have been applied to certain fruits and vegetables have caused a tremendous amount of confusion and actual chaos at the shipping point and in the receiving markets. In the case of certain commodities, such as potatoes, there has resulted the development and operation of the worst black market in history. Thousands of business places have closed this year because potatoes, poultry, vegetables, and other food products have entered the black markets. It is common knowledge among the wholesalers and retailers in most of the larger cities that the consumers are finding it necessary to purchase their supplies of potatoes and certain other commodities from these black markets at almost prohibitive prices from which the producer benefits very little, if any.

People who live in the cities and those engaged in war work and other factories should be more concerned about getting food enough to eat rather than the price. If prices are too low the food will not be produced or processed. It would be much better to be able to get a can of corn or tomatoes next year at 15 cents per can than to find no corn or tomatoes on the market at 14 cents per can. The canners want an adjustment of maximum prices which will reflect the increased cost of labor in event that regional labor rate increases are granted by the War Labor Board. The average increase for raw products and labor would be 1 cent per can. On the present basis of rationing the increase would amount to 36 cents per year. Unless they are substantially increased the result will be financial loss or bankruptcy for many canners.

America is demanding a program of abundance rather than one of scarcity. It is very difficult for the New Deal to change from a scarcity program to one of plenty. This year America lost the production of 500,000,000 bushels of corn because the dairy farmers went along with the A. A. A. program and only raised 8 acres of corn instead of 20 acres. They were required to follow the A. A. A. program in order to receive the loan benefits and avoid being considered a slacker. As a result, we have a corn shortage in the dairy and poultry sections. We have an acute situation in the distribution and marketing of corn caused by the bungling efforts of the O. P. A. to control food prices. Corn is primarily a livestock feed. Normally, only a small portion of the corn crop is used for human food or for industrial purposes. However, in the past 2 years there has been an additional demand for cornstarch in war production, an increased use of corn sirup as sugar substitutes and an expansion of the use of corn for alcohol.

It is a well-known fact that a large portion of our dairy, livestock, and poultry production is outside of the corn-producing area. Unless steps can be taken at once to make corn or other grain available to these outside areas, the production of such vital food products as milk, butter, eggs, poultry, and meat will be seriously curtailed.

The situation is also serious for the industrial users of corn. Many plants have been closed down and many others will close unless supplies are made available. Reserves are now being used up and corn shipments have dwindled to practically nothing.

One of the main reasons for this condition is price fixing by the O. P. A. They placed a ceiling price on corn at $1.07 per bushel, Chicago basis. That means a farm price of somewhere between 90 cents and $1 in the Corn Belt. Farmers will not sell corn for that price when they can make 40 cents a bushel more by selling it as pork. The hog and corn ratio prices are not in balance with a corn ceiling at $1.07 with a floor price on hogs at $13.75 per hundred pounds.

Many farmers in the Midwest are holding their corn for next years' feeding on account of the doubtful outlook of this years' crop due to floods and the late planting of corn. Last year the farmers were urged to raise more hogs and fatten them to heavier weights. Now these hogs will eat up the corn which is needed in the dairy cattle and poulty areas. The result will be a serious feed shortage for livestock and poultry next year.

Our only remedy to this situation is for the O. P. A. to raise the price ceiling on corn so the farmers will release part of their corn.

Every day brings new evidence of the serious dislocations caused by the O. P. A.'s bungling efforts to control prices. Today, there is a critical emergency confronting the livestock-producing and feeding industry. The industry's existence is not only threatened but also the Nation's meat supply is dwindling daily.

Due to the continued failure of the Office of Price Administration and other Federal agencies to work out a price structure which will cover the cost of production of beef, the Nation faces an increasing beef shortage, despite the fact that the total number of cattle on hoof is the greatest on record.

Prices of food are out of control and the Price Administrator appealed to our people to assist him in enforcing the price-control law. Black markets are increasing by leaps and bounds. No wonder the consumer is discouraged over high prices. No wonder we hear the cry of inflation.

In order to conceal the black markets the administration wants to adopt subsidies and a roll-back in prices. Subsidies are unsound and vicious. They lead to regimentation and political control. They retard the economic processes by which the balance of supply and demand would become better adapted. Subsidies are unfair because they are paid from the borrowings at the expense of future generations. These roll-backs are introduced at a time when the consumer is more able to pay. Subsidies lead to inflation because they increase available purchasing power, increase Federal expenditures, and contribute to a loss of confidence in the financial stability of the Government. The only way to avert inflation is through increased production. An abundant production is our best guaranty against inflation.

The proposed roll-backs of food prices, even though subsidized, will not effectively stimulate food production. Greater emphasis must be placed upon food production if our armed forces, civilians, and allies are to eat. The subsidy program is a complete admission on the part of the O. P. A. that it is unable to control prices and must resort to hidden inflation rather than orderly wartime price adjustments.

Only a star-gazer can believe that subsidies reduce the cost of living or prevents inflation. In paying taxes to provide funds for subsidies the people are in effect paying higher prices for food.

In conclusion, some of the things that are desirable to solve the food shortage are: First, a single Food Administrator should have authority over production, price fixing, rationing, and distribution; second, stop trying to regiment the American farmer; third, hire competent people in the O. P. A. and Agriculture Department who have practical knowledge of food production and distribution; fourth, real recognition of agriculture as a war industry by giving it adequate allocation of machinery and manpower; fifth, simplification of the over-all food program; sixth, make every possible use of the experience and ability of those persons familiar with the normal methods of marketing and distribution.

The Cost of Subsidies

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

THE COST OF SUBSIDIES

In the long, confused, and extraordinary veto message that the President sent to Congress on the Commodity Credit Corporation subsidy bill, the charge that probably did most to secure the vote sustaining the veto was this: "By this measure the Congress will compel every housewife to pay 5 cents a pound more for every piece of butter that goes on her table, and to pay higher prices for every pork chop, every ounce of beef, every slice of ham or bacon which goes to feed her family."

This argument would have been equally good—even much better—if the administration had begun subsidies twice as great or four times as great on butter and meats and if the subsidies extended to every important item on the dinner table. What limit does the President put on the subsidy policy? Where does it begin and end? How many billions will it take to carry it out? Where will these billions come from? The President's argument talks of reducing the cost of living. But there is not a line in his whole veto message which points out that every penny of subsidies must ultimately be paid out of increased taxes.

The Coal Strike

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Minneapolis Tribune of June 27, 1943:

LETTER TELLS TROOP WRATH AT COAL ROW—STRIKE CALLED BLOW TO MORALE

News of the mine workers' strike had a more disturbing effect on American soldiers on at least one battle front than any major engagement with the enemy, according to a letter from a Minneapolis soldier to his father-in-law here.

The letter from the north African front obviously referred to the trouble with the mine workers before the first truce was declared. It was dated April 30.

"The mails do not permit me to repeat the adjectives used by the boys to describe how they feel about this deplorable condition of the home front," Sgt. Richard Hollister wrote C. F. Ashton, 2439 Bryant Avenue South.

The strike was the last news they heard the night he wrote the letter and it "hurt the boys terribly," he said.

"It was after dark and the boys gathered to hear the news from London," the letter began. "We knew how we were doing, but hoped to find out how the war is going as a whole. All went well until near the end.

"'The mine workers are going out on strike.'"

That sentence hurt. The boys squirmed in their fox holes. They became taut and what they were thinking of the miners wasn't anything pleasant, according to the tone of the letter.

The letter went on:

"Remember us? We left home February 10, 1941. We went to camp at 21 bucks a month. We left our sweethearts, wives, classrooms and jobs. Our country asked, we gave. We were the first American expeditionary force. We have been overseas 15 months.

"Many men have children they have never seen. A few days ago we buried five of our boys in one grave. We couldn't identify them. We hoped they wouldn't mind. It's warmer sleeping together.

"We haven't had the simple pleasures such as baths, fresh food, clean clothes or entertainment. We sleep with sand fleas, lice, mosquitoes, snakes, and anything that crawls, too numerous to mention. Stew gets tiresome after a few months. Then the ever-present thought, 'Will I make it home or is my number on the list?'

"I could write for hours on the things the boys have given up or gone without * * * Do we want sympathy? Hell, no! We want cooperation. This news of strikes—it hurts * * * We believe that men who strike are traitors * * * What if soldiers on the front lines should strike?

"We need coal. The lack of it holds up industry. We need planes, tanks, guns. Without them we die. Two hundred and forty thousand traitors! Is that what we fight for?

"I'm not a writer. It's hard to concentrate in a fox hole. Don't let these traitors spoil our America."

The Vote on the President's Veto

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. VURSELL. Mr. Speaker, it is my opinion that in the future, events will show that the 228 Congressmen who stood up to the last round and voted to override the President's veto to prevent the Government from embarking on a Nation-wide program of subsidies, that the names of these Congressmen will deserve a place on the honor roll of the Nation.

For these men opposed the President's policy to reach into the Federal Treasury for billions of dollars at this time when wages are the highest that were ever known, with which to pay a part of the grocery bills for all of the people of the Nation in a time of their greatest prosperity.

They refused to be a party to the President's inflationary policy of adding billions of dollars to the national debt for the soldiers and their families to help to pay when they get home, this future debt voted upon them to help pay our grocery bills while they were away fighting to preserve this country on the battle fronts of the world.

Congress has taken the position that "the least we can do is to pay our own grocery bills." The President has taken his usual position of "eat, drink, and be merry; don't worry about the future; spend with a lavish hand; others must pay the bills."

It is unfortunate that to pass a measure over the President's veto requires a two-thirds vote. By this provision a majority of the House yesterday, which cast 228 votes, was defeated by the small minority of 154 votes, many doubtless voting politically to sustain their political leader.

Mr. Speaker, it is a pity that the founders of our Government did not

provide for a secret vote on overriding a Presidential veto. A secret vote yesterday would have overridden the veto by a large majority. If all Members of Congress would have followed their conscience, the results would have been different, and the Nation's future would have been more hopeful and secure.

The greatest pity is that the founders of our Government failed to write into the Constitution a prohibition against more than two terms for a President. If they had, there would be more hope today for the continuance of this Republic they founded as a land of freedom and opportunity to carry out their high ideals.

Those who joined with the President yesterday will now have to take the blame and the consequences which will follow in the course of their decision.

You have disregarded the urgent plea of every farm organization, every processor of foods and dairy products in the Nation. You have turned your back on them and the best business brains of the country, all of whom opposed national subsidies.

You have opened up the floodgates of the National Treasury for more spending, extravagance, and waste. You have become a party to this thing that will hold down production and cause people to go hungry in this land of plenty.

You have followed the President's promise of more manna from heaven in a speech read to you yesterday that sounded more like a last-hour campaign speech for votes than a veto message, an incessant jumble of many words in an effort to dodge the facts. A refusal to courageously meet the issues when patriotic people are demanding courageous and true leadership to save the economy of the Nation and to win the war.

You who followed his advice yesterday in his veto message, which was unique in its lack of logic and facts, its abundance of fog and confusion, will have to share the consequences of your decision and votes.

The O. P. A. and Inflation

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks, I include herein the remarks which I made last evening over radio station WRC and the National Broadcasting Co.:

I am very grateful for the opportunity to participate in this program with Congressman PATMAN. I consider him an outstanding authority on fiscal matters, especially in the field of finance and economics.

Although we have at times differed in methods, in recent conversations we have concluded that we have a common purpose in respect to the all-absorbing question of inflation.

I believe everyone who listens to the radio or reads the newspapers has a clear understanding of what is meant by inflation. It is reflected in a depreciation of the value of our money and results in our having to use more money for the purchase of any stated amount of goods. Any abnormal increase in purchasing power at the same time that there is not sufficient available consumer goods to meet the demand attending the increase in purchasing power, causes the value of our money to go down, and prices, in terms of dollars, to go up. The increase in purchasing power at the present time is due largely to the tremendously large expenditures by the Government.

The Government gets its money for these expenditures by issuing bonds. These bonds are sold to the public; the insurance companies, investment houses, and commercial banks. If the general public bought Government bonds in the same proportion as the national income is increased, then there would be no danger of inflation, because there would be such a siphoning off of purchasing power through the purchase of bonds by private investors as to reduce the amount of money left with which to purchase goods. Unfortunately, however, a large part of these bonds find their way into commercial banks and are used as security for new issues of currency and credit. In this manner the volume of our currency has increased in a few years from about $5,000,000,000 to about $16,000,000,000.

Because there is this close affiliation between the national debt and the circulation of currency and credit any expenditure by the Federal Government, in addition to taxes collected, therefore increases the volume and velocity of our currency and credits, thereby decreasing the value of our money, which of course results in increased prices. There are many other practices which influence inflation in addition to the use of Government bonds as security for currency issues, such as our gold and silver programs, which we will not take the time to discuss at present.

Congress has spent a great deal of time in attempts to solve this problem, and much has been said about the part which the Office of Price Administration has in stabilizing and controlling prices. When the Price Control Acts were passed no one contended that they were the cure-all for inflation, but everyone admitted that they were desirable contributions to keeping down the cost of living. They gave authority to the Price Administrator to stabilize and control prices.

That the attempts of the Administrator in these respects have failed is not the fault of the acts. The fault lies clearly in the administration of the acts. Prices will never be stabilized so long as the Administrator neglects to establish and enforce maximum prices. All necessary authority was given to the President and the Price Administrator in the Price Control Acts to keep down prices. No additional authority is necessary if the acts are administered and enforced according to their terms and in accordance with the clear intent of Congress.

Under the acts the President is authorized to stabilize and control all elements of the price of living, prices, wages, salaries, and rents, not only the cost to the consumer but all of the production costs of any and all of the thousands of commodities which people necessarily buy. The dissatisfaction with the administration of this law has resulted in frequent demands being made for various so-called solutions. These suggestions vary from transferring a portion of the Office of Price Administration functions to various other agencies to repeal of the acts in whole.

We must look at this problem realistically, and in doing so we must conclude that nothing would be accomplished by destroying the agency which Congress has set up to control and stabilize prices. Little could be accomplished by transferring the functions of the Office of Price Administration to any other agencies of the Government. The reason for this is that all of the agencies to which these functions could or would be transferred are now under the same administrative head and subject to the same restrictions as have hamstrung the Price Administrator in the performance of his statutory duties. There is no more reason why we should destroy the Office of Price Administration at a time when, if it functions properly, it is so necessary in any program to prevent inflation, than there would be to burn down the barn to get rid of the rats.

On several occasions lately, Congress has voiced its disapproval of the manner in which the Office of Price Administration is being administered, and when I say this I do not intend any reflection on the Price Administrator, the Honorable Prentiss M. Brown. He is functioning probably as well as anyone could under the circumstances. His hands are tied so tight that he can hardly issue an order without first consulting someone else in the Government; for example, he cannot set a food price without first getting the approval of the War Food Administrator; he cannot effectively regulate the price of hard fuels, gasoline, or oil without first consulting with Mr. Ickes; he cannot establish maximum rents in defense areas without first consulting and clearing his orders through the Federal Housing Agency, and, of course, he cannot do anything about prices of critical and strategic materials without the prior approval of the War Production Board.

In order to effectively control prices we must, as Congress intended, vest the power in a single office. The whole question of prices has become so complex and confusing that a reshuffling of agencies exercising control over prices should be made, with the result that all attempts to curb inflation by the control and stabilization of prices should be coordinated as was intended by Congress under the direct and untrammeled control of the Office of Price Administration. The pulling and hauling among the agencies of the Government in respect to prices has got to stop immediately if we are going to stop runaway inflation. This the people have a right to expect. The administration has ample power to correct all of the evils incident to rising prices without further action by the Congress. It can and should be done.

Roosevelt or Hitler—Which?

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Roosevelt or Hitler—Which?" from the Wichita Plain Dealer of June 26, 1943.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROOSEVELT OR HITLER—WHICH?

In a game of chess, whoever captures the king wins; in the game of war, the same rule

is observed. The United Nations are using every form of propaganda to incite the Germans and Italians to a rebellion against Hitler and Mussolini—and in like manner, Adolf Hitler is using every form of psychological warfare he can against Churchill and Franklin D. Roosevelt. Three times since the outbreak of hostilities between Great Britain and Germany, has Winston Churchill been called upon to defend his office against ouster from the House of Commons. In every instance Churchill won overwhelmingly, consequently Hitler ceased his efforts in that direction.

Ever since his declaration of war on America, Hitler has endeavored strenuously, through the employment of his two agencies, the German-American Bund and the America First Committee, to either overthrow Roosevelt's administration by force of arms or to render impossible the reelection of Roosevelt in 1944.

It is a well-known fact that the Nazi propaganda machine is the best in the world and today Adolf Hitler's only hope of victory is the crack-up of America's war effort. Tojo also shares this hope; Admiral Yamura voiced his belief in a broadcast to Berlin and Rome in which he stated: "It is not necessary to open any new offenses, all we need to do is to hold onto what we have—and time will break the democracies." About 10 weeks ago a prominent politician, who before Pearl Harbor went about the country at the expense of the America First Committee, declaring that "the Yanks are not coming," made this statement: "Before 1944 events will transpire both in Europe and in the United States that will render impossible the reelection of Franklin D. Roosevelt." Shortly afterward, the first coal strike happened. Then we had a second and now a third walkout in an industry vital to the success of our war production. Of course, it must not be assumed this prophecy had anything to do with John L. Lewis' conduct; nevertheless, it is a strange coincidence.

After the first coal strike Adolf Hitler stated that "John L. Lewis was acting properly because in America the dollar is the only thing that counts." Again, the June 4 issue of Hitler's own newspaper, the Volkischer Beobachter, gave editorial orchids to John L. Lewis. And the Wall Street Journal recently called attention to the close similarity of tactics of Adolf Hitler and John L. Lewis in which it said: "Hitler rode to power as the friend of the poor man when in reality he was the instrument of the German bankers and the industrial tycoons and that John L. Lewis was receiving strong support from similar sources in this country."

Everyone can remember in the fall of 1941 when the America First Committee was staging meetings throughout the Nation that John L. Lewis gave the movement his wholehearted support. Hitler knew that Franklin D. Roosevelt's popularity was chiefly among the working classes, he therefore calculated that if Roosevelt was deprived of this power, he would easily be defeated in the election. Consequently, John L. Lewis was selected as the man to perform this task. On account of the coal strike the Smith-Connally antistrike bill was passed by Congress. Immediately organized labor appealed to President Roosevelt to veto the bill.

Now, the strategy of Adolf Hitler in this movement is really worthy of mention. If the President complies with the request of organized labor, the German-American Bund and the America First Committee will proclaim that the American farmer and businessman are being sacrificed on the altar; if he signs the bill they will cry out that the American laborer is being crucified. Consequently, no matter how soon or how satisfactorily the coal strike is settled, Hitler will have achieved his goal by successfully antagonizing one group of Americans against another. This is exactly what that astute politician meant when he said: "Events will transpire in the United States that would render the re-election of President Roosevelt an impossibility."

However, this is war, so the American electorate will have to decide who they desire to be captured, Hitler or Roosevelt. Naturally Adolf's nominee will be financed by the German-American Bund and the America First Committee, well camouflaged with such words as Isolationist, Nationalist, Non-Interventionist and Constitutionalist. Only time will tell if we are smart or stupid.—A Fighter's Father.

Subsidies Are Inflationary

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks I include as follows the remarks which I made last evening over radio station WOL and the Mutual Broadcasting System:

On June 25 over this station some very interesting statements were made by a group of Congressmen who styled themselves the "40 fighting Congressmen."

What they were fighting for may have seemed nebulous, but in substance they were and still are fighting for a share of public moneys out of the pockets of the taxpayers to pay a part of their grocery bills for the duration of the war.

They advocated subsidies by the Treasury to pay a part of our living costs at a time when the Government seems justified in impressing upon us the feasibility of paying as much of the cost of this war as is possible as we go along. These subsidies can only be paid by moneys received from the sale of bonds. The interest and carrying charges on these bonds are about 4 percent per annum. The national debt cannot be retired for at least 25 years. Therefore, for every dollar which the Treasury pays in subsidies $2 must be raised in taxes to retire the increase in the debt resulting from their payment.

Those of us who oppose subsidies do so as a partial solution of certain fundamental harassing problems which must be solved if the American form of government is to be preserved.

The terms "subsidies to pay our grocery bill" and "inflation" are synonymous. Inflation is next in importance to the winning of the war. Such subsidies constitute the basic threat of inflation today. Their payment by the Treasury increases the purchasing power of the Nation. They are directly contrary to the announced policy of the President and the Secretary of the Treasury that to curb inflation we must siphon off as much of the excess purchasing power as possible by increasing taxes or otherwise.

Subsidies do not reduce prices to consumers. Take the typical example of butter. The price of butter has been rolled back 5 cents a pound—from 46 cents to 41 cents. Do you pay 46 cents for the pound of butter you were allowed to buy in June? Of course you do. You pay the grocer 41 cents and the Treasury of the United States will deduct 5 cents from your pay envelope to make up the difference. The Treasury will then turn about and pay your grocer the 5 cents after it has run the gantlet through half a dozen Government agencies of expensive red tape.

If you don't pay it, then your son or daughter will pay it, and I don't believe there is an American today, other than those who do it for political expediency, who would want our returned soldiers and sailors to pay our grocery bills in addition to fighting our country's battles. We can better afford to pay for our food now than could any of our people at any time in the history of our country. As a witness to this fact, I present no less an authority than the United States Government itself, which, speaking through its Bureau of Agricultural Economics of the United States Department of Agriculture, in analyzing food costs and consumer income for all the years 1913 to 1943, has this to say: "The total cost to consumers of fixed quantities of foods making up a typical consumer's food basket was smaller in relation to average consumer income in recent months than at any other time on record," and presents official charts to that effect.

Consumer subsidies are objectionable:

1. Because they constitute the basic reason for the threat of inflation by increasing surplus spending power.

2. Because we merely postpone the day when we will have to pay our food bill, and then twice over.

3. Because the wage earner of this generation and following generations will have to pay a disproportionate share of that part of the national debt which results from the payment of subsidies.

4. Because it is economically wrong to pass on to our sons and daughters any part of the war debt which we can possibly pay ourselves. And it is morally wrong to obligate our sons and daughters to pay for years to come for the food which we are eating today.

Monthly Payments to Dependents of Enlisted Men

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a schedule of monthly payments to dependents of enlisted men, as prepared by the War Department.

There being no objection, the schedule was ordered to be printed in the RECORD, as follows:

Monthly payments to dependents of enlisted men under Public Law 625, 77th Cong. (Family Allowance Act)

	Enlisted man's share	Government's share	Total
Wife but no child	$22	$28	$50
Wife and 1 child	22	40	62
Wife and 2 children	22	50	72
Wife and 3 children	22	60	82
Wife and 4 children	22	70	92
Wife and 5 children	22	80	102
No wife but 1 child	22	20	42
No wife but 2 children	22	30	52
No wife but 3 children	22	40	62
No wife but 4 children	22	50	72
No wife but 5 children	22	60	82
Divorced wife	22	20	42
1 parent	22	15	37
1 parent and 1 sister, brother, or grandchild	22	20	42
1 parent and 2 sisters, brothers, or grandchildren	22	25	47
1 parent and 3 sisters, brothers, or grandchildren	22	30	52
1 parent and 4 sisters, brothers, or grandchildren	22	35	57

Monthly payments to dependents of enlisted men under Public Law 625, 77th Cong. (Family Allowance Act)—Continued

	Enlisted man's share	Government's share	Total
1 parent and 5 sisters, brothers, or grandchildren	$22	$40	$62
1 parent and 6 sisters, brothers, or grandchildren	22	45	67
2 parents	22	25	47
2 parents and 1 sister, brother, or grandchild	22	30	52
2 parents and 2 sisters, brothers, or grandchildren	22	35	57
2 parents and 3 sisters, brothers, or grandchildren	22	40	62
2 parents and 4 sisters, brothers, or grandchildren	22	45	67
2 parents and 5 sisters, brothers, or grandchildren	22	50	72
No parent but 1 sister, brother, or grandchild	22	5	27
No parent but 2 sisters, brothers, or grandchildren	22	10	32
No parent but 3 sisters, brothers, or grandchildren	22	15	37
No parent but 4 sisters, brothers, or grandchildren	22	20	42
No parent but 5 sisters, brothers, or grandchildren	22	25	47
Wife but no child and 1 parent	27	43	70
Wife but no child and 2 parents	27	53	80
Wife, 1 child, and 1 parent	27	55	82
Wife, 2 children, and 1 parent	27	65	92
Wife, 3 children, and 1 parent	27	75	102
Wife, 4 children, and 1 parent	27	85	112

Tribute to the Late Thomas S. Smith, Collector of Internal Revenue for Connecticut

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have just received from Assistant Secretary of the Treasury Herbert E. Gaston. The letter comments upon the death of Thomas S. Smith, collector of internal revenue for Connecticut, who died on June 15. I also ask unanimous consent that immediately following the letter there be printed editorials from the Hartford Times and the Hartford Courant.

Mr. Smith served as collector of internal revenue for several years. In addition to the duties of that office, he undertook much additional work made necessary by the war. He has been, over the years, a leader in raising funds for the noble undertaking at Warm Springs, Ga., and for those stricken with infantile paralysis who live in other sections of the country. Those who knew Mr. Smith feel that as a result of his untiring efforts and his devotion to the extra activities of the Government and to the welfare of unfortunate people he exhausted his strength and his death was hastened.

Mr. Smith was highly regarded by the people of our State and all others who knew him. He commanded the love and respect of his associates and those with whom he came in contact, and among these are those connected with the Bureau of Internal Revenue and the Treasury Department. Mr. Gaston, Assistant Secretary of the Treasury, has written to me on the death of Mr. Smith. His letter is a tribute to a good man, as are the editorials to which I have referred.

On behalf of the people of Connecticut who knew Mr. Smith or knew about him, and on behalf of the Members of the Connecticut delegation in the Congress, I want to pay this modest additional tribute to his memory. That is why I ask unanimous consent that Mr. Gaston's letter and the editorials be printed in the RECORD.

There being no objection, the letter and editorials were ordered to be printed in the RECORD, as follows:

TREASURY DEPARTMENT,
Washington, June 29, 1943.

The Honorable FRANCIS MALONEY,
United States Senate.

MY DEAR SENATOR MALONEY: In the absence of Secretary Morgenthau I am acknowledging receipt of your letter of June 26, speaking of the death of Internal Revenue Collector Thoma S. Smith, of Hartford, on June 15, and enclosing copies of news articles and editorials from Hartford newspapers.

The death of Tom Smith was, of course, a shock and a source of grief to all of us in the Treasury who knew him. He had been not only an extremely active and efficient collector of internal revenue, but the extra patriotic service he rendered as War Savings Administrator for the State of Connecticut constituted a war service beyond praise. He had succeeded in building one of the very best War Savings organizations in the country and undoubtedly in his devotion to this task drove himself beyond the point of his physical capacity to endure the strain. His death certainly constitutes a direct war sacrifice, but one which he made cheerfully and willingly.

Sincerely yours,

HERBERT E. GASTON,
Assistant Secretary of the Treasury.

[From the Hartford (Conn.) Courant of June 17, 1943]

THOMAS S. SMITH

In the death of Thomas S. Smith, United States collector of internal revenue for the district of Connecticut, this community loses a sympathetically understanding official, a public-spirited citizen, and an abettor of good causes. For the past 8 years he has been chairman of the Hartford County committee to raise funds for combating infantile paralysis, and his interest in that work was unflagging. That he thus helped materially to bring health and joy in living to many handicapped children was no doubt his supreme satisfaction.

This ending of "Tom" Smith's career in his middle fifties will come as a distinct blow to many different elements in Hartford, from the employees in his large office to his own wide circle of warm personal friends. As Kipling wrote of his brother-in-law, Wolcott Balestier:

"He had no need to doff his pride or slough
the dross of earth,
E'en as he trod that day to God, so walked
he from his birth
In simpleness, and gentleness, and honor,
and clean mirth."

[From the Hartford (Conn.) Times of June 16, 1943]

A GOOD AND FRIENDLY MAN

Many things could be said in praise of Thomas S. Smith, whose death yesterday caused widespread regret throughout the community and the State and beyond. He had a multitude of friends, which included practically everyone who knew him at all.

His character was sound, his instincts of the finest, his abilities excellent. Loyalty, sincerity, and trustworthiness were fundamental in his make-up, accompanied by a zeal in the numerous worthy causes he undertook to help which probably had considerable to do with his early and untimely passing. He threw himself so earnestly into a number of things besides his duties as collector of internal revenue, war savings, the annual infantile paralysis campaign, and other activities—that his friends long ago became concerned lest he wear himself out. He was always willing, always indefatigable and effective.

Outstanding was his friendliness. Mr. Smith did not have to agree with a person to have a friendly attitude toward him and a desire to be helpful. This was not merely a pose, for he was genuine and sincere in his relationships and he withheld no good turn it was in his power to do. Active in politics and in social and civic affairs he was self-respecting, a believer in honor and decency, completely loyal to those with whom he was associated.

As a young man and city alderman he won a wide popularity which he retained to the end. His multitude of friends were glad to see him win the collectorship and rejoiced at the excellent way the office was conducted under his direction. Taxpayers and others having business with the office found him eager to serve and accommodate them, as well as zealous as to his obligations to the Government. His life was a relatively short one, but it was a full one, and it must have had many satisfactions in its pleasant relationships.

Inflation and War Bonds

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. HILL. Mr. President, I have before me an open letter addressed to the distinguished senior Senator from Illinois [Mr. LUCAS], written by Robert P. Vanderpoel, financial editor of the Chicago Herald-American. The letter is captioned "Inflation injures 50,000,000 patriots." In his letter Mr. Vanderpoel calls attention to the fact that 50,000,000 loyal, patriotic Americans are today buying War bonds to carry on our war effort, and that if inflation is permitted to run rampant these bonds will become very poor investments; that the persons who are buying these bonds and have paid for them with a dollar of one value will, if inflation occurs, be paid back in an entirely different and a much depreciated dollar.

I ask unanimous consent that the letter may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INFLATION INJURES 50,000,000 PATRIOTS

(By Robert P. Vanderpoel, Financial Editor)

An open letter to Hon. SCOTT W. LUCAS, Senator from Illinois:

"DEAR SENATOR LUCAS: As you know, there are more than 50,000,000 people in the

United States buying War bonds. Almost every household has at least one War-bond buyer.

"These bonds are good investments only as long as inflation is avoided. If inflation is to be encouraged or permitted to run rampant, the bonds become poor investments.

"I have full confidence in the integrity of the American Government, and I have never had any doubt but that these bonds will be paid in full at maturity. But if the American Government is to play fair with the people, payment must be made in dollars of approximately the same purchasing power as prevailed when the dollars were saved. Otherwise the investment principle of the bonds became a farce."

MAY BE RESULT

"I am very sure that the American Congress has no desire to play fast and loose with the faith of 50,000,000 American people. Recent developments, however, have left me unconvinced that this may not be the consequence of politics not intended to produce such results.

"The administration had a policy to prevent excessive inflation. This involved, first, a hold-the-line program for prices, stabilization of wages, limitation of profits. Another and very important weapon recognized by administration leaders has been increased taxes. The third weapon has been increased savings, either through voluntary purchases of bonds, or forced saving."

A BETTER PLAN?

"Some parts of the administration's program have been poorly administered, while numerous mistakes have been made and some policies have been of a highly controversial nature. It has been my opinion, however, that unless one had something better to offer he should not assume the responsibility for knocking the props out from under a considered program.

"Recently, it seems to me, Congress has been doing exactly that. Certain elements among the farmers, among organized labor, among business interests, and in Congress itself, have acted very much as though they favored uncontrolled inflation. Obviously no sane, intelligent man could do that, yet plenty of sane, intelligent men are allowing their hopes for personal gain for the interests they represent to outweigh their better judgment."

TAX PROGRAM INADEQUATE

"On the matter of taxes, too, both Congress and the administration have failed to show the courage and leadership necessary to prevent inflation. The administration has stubbornly refused the sales tax which it probably could get and which would be helpful in combating inflation and making people tax conscious.

"Congress fought at great length over the Ruml forgiveness scheme, but refused to adopt personal-income taxes sufficiently stiff to check the inflation danger."

PROVE CYNICS WRONG

"Senator LUCAS, in the name of the 50,000,000 loyal Americans who are investing in War bonds, I beseech you to use your great influence to awaken Congress to the dangers now besetting the country.

"There are people who refuse to buy bonds because they say Congress has not the courage to levy the taxes and enforce price and wage stabilization.

"In the name of those Americans who love their country more than the almighty dollar, I beg you and your fellow Members in the Senate and the House of Representatives to prove these cynics wrong.

"Sincerely yours,

"ROBERT P. VANDERPOEL."

What the Armed Forces Wonder

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, July 3 (legislative day of Monday, May 24), 1943

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What the Armed Forces Wonder," from the Toronto Daily Star of May 20, 1943. It is in fact a report by Archbishop Derwyn T. Owen, who visited the troops in England for a period of 7 or 8 weeks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT THE ARMED FORCES WONDER

Back from spending 7 weeks in England, most of the time with the troops, Archbishop Derwyn T. Owen has been telling the Toronto synod of the Anglican Church about the questions with which the fighting men are most concerned. And first among these questions is speculation as to the conditions which they will encounter in Canada on their return home. Are they going to wander the country over, looking for work, as many did after the Great War? What does Canada think of the Beveridge report? What provision is Canada making for the social security of its people?

Archbishop Owen quotes them as saying: "We are not fighting for the old things that broke down. We are not fighting for the return of the days of old peace and the old boom and the old depression. They are not worth fighting for. We are not fighting for the poorhouse." Asked how the ills of the past could be avoided in the future, the men invariably replied, in effect, that "if there are brains enough to organize for war, there must be brains enough to organize for peace." And with respect to financing: "Never again are we going to be deceived about money, and put off with the statement that there is no money to organize another state of things, to give work, etc. If there is money enough to finance a war, there is money enough to finance the peace."

The archbishop approaches the problem humbly. He does not pretend to be an authority on money; he wonders whether anybody really understands it. What he does understand is that men have a peace duty as well as a war duty, and that the peace problems will be as difficult, and at the same time as vital, as the war problems. "I do plead," he says, "that this peacetime phase will require the same kind of sacrifice, of effort, of concentration—the consecrating spirit of a great crusade—which the war requires. The great danger will be the danger of exhaustion, of going to the opposite of effort, and letting go, seeking distraction and pleasure in the throes of a great reaction. Let us now realize these things, prepare, so far as possible, for these things, and be ready to take our full part in making a better Canada for our sons and daughters."

There will be foes of a peace victory as there are foes of a war victory. "What lions are on that road? Money interests? Vested interests? The selfishness of the human heart which will not carry over into peacetimes the unselfishness of wartimes? These are questions to be faced. These are problems to be solved, and the church must have something to say concerning the application of the Christian ideals to these problems, though she has little to say as to the details, but much to say as to principles."

Archbishop Owen strikes at the root of the matter when he asks whether "the selfishness of the human heart" will stand in the way of the kind of new order to which Canada's men overseas look forward on their return. That is the great danger. The new order will involve not only the provision of employment, but the provision of social security during unemployment, sickness, disability, and old age. Both provisions will cost the state money. The money will have to be raised by taxation. Profits will have to be taxed and incomes taxed to provide it. Taxation that is tolerated in war will be resented by many in peace. There will be, as the archbishop points out, a reaction.

He is right when he says that the church, together with other agencies, can play a great part in "carrying into the establishment of peace conditions something of the spirit of war conditions." After all, what agency should be better fitted for the task, since what is required is "the application of Christian principles to social reconstruction?"

At His Worst

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday July 3, 1943

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

AT HIS WORST

Mr. Roosevelt was at his petulant worst yesterday when reporters at his press conference attempted to get information from him concerning the feuds between Washington officials and the startling break-down of administrative efficiency as revealed by the resignation of Chester Davis. In asking for answers to such matters as the Vice President's terrific indictment of Jesse Jones, the reporters were merely acting as representatives of the people as a whole, who most decidedly are interested in ending the dissension, confusion, and conflict in Washington.

Instead of throwing light on the situation, the President countered with an attack on the press, accusing the newspapers of encouraging quarrels among officials. When it was pointed out that Mr. WALLACE'S statement before the Senate Appropriations Committee, in which he charged Secretary Jones with hamstringing the war effort, had not been solicited by the reporters, but was initiated by WALLACE, the President could only answer that he was taken by surprise, too.

Nor could the newspapers have had anything to do with the resignation of Chester Davis. The inside story of that, as published in the Post-Dispatch, is an almost incredible tale of administrative inefficiency which drove Davis to despair and resignation. Here was a man of the highest type, who accepted only a few months ago the exacting task of Food Administrator, being left in ignorance of all kinds of governmental moves concerning food. He was not even informed of

the order setting up Director Byrnes as Director of the O. W. M.

Davis on June 16 laid his cards on the table at a meeting with Byrnes, Vinson, and Brown, pointing out that in accepting great responsibility, he would also have to be vested with commensurate authority. He asked that there be no more surprise price-fixing orders from the Office of Price Administration and that he be given a voice in policy councils. When it was evident his pleas were of no avail, he sent his resignation to the White House. It appears, also, that although the Executive order which appointed Davis made him directly responsible to the President, about the only way he could get the President's ear was to quit his job.

The newspapers have plenty of faults, but they did not inspire the WALLACE denunciation of Jones; they did not produce the administrative chaos from which Davis escaped; they did not manhandle the controversy with Lewis so as to produce three separate coal strikes; they are not responsible for such controversies as have occurred between Rubber Administrator Jeffers and other public officials. All these symptoms of Washington fumbling and dissension, of course, have been reported by the newspapers, but the person responsible for the administrative muddle is the President himself.

The President has shown something less than genius in his handling of the Washington front. He has a very bad weakness for not wanting to fire anyone, no matter how bad or futile the appointee's record may be. He has kept Frances Perkins in her job as Secretary of Labor at a time when that office should have a person of the highest caliber as a labor statesman; he has permitted Jesse Jones to wield enormous power long after Jones' record was discredited; when he appointed Chester Davis, he did not fire Wickard, who had failed on the job. And these are only a few of the instances that could be cited.

When O. P. M. broke down, the President set up S. P. A. B.; then came the W. P. B., the O. E. S., and the O. W. M.—a dizzy succession of initials, and usually officials who had failed were reshuffled around and retained in positions of power and responsibility. One new face that was brought in was that of ex-Justice Byrnes, and only a short time ago it was announced, when he was made Director of O. W. M., that his job was to referee disputes between warring officials. Now comes the biggest dispute of all—the slugging match between WALLACE and Jones, which occurred before the referee ever got into the ring.

In addition to his reluctance to fire anyone, the President has shown a disinclination to relinquish authority and to delegate responsibility. Many able men—such as Byrnes—have made sacrifices to take war jobs in the interest of patriotism, only to find that they cannot act with firmness and decision because the main strings are all manipulated from the White House. Just how a President, in this universal war, can keep his finger in every pie and look after every major detail, both on the war and the domestic fronts, is something no person trained in administration can understand. It is precisely because the President tries to do this that Washington has become an administrative madhouse.

The President's acts of omission and commission of late, we feel sure, have alarmed and disturbed the country. It has been charged in some quarters that, by his veto of the Smith-Connally-Harness bill and his price policies, he is playing fourth-term politics to get the support of organized labor. Whether this be true or not, it shows public awareness that something is wrong and a consequent search to find the motives behind fumbling home-front leadership. Those who would ordinarily sympathize with the President's great burdens are asking why he deliberately overburdens himself instead of delegating part of his authority.

The time has come for the President to address himself to the conflict in Washington, to lop off inefficient heads, to straighten out the numerous snarls among high officials, and to give Director Byrnes a fair and full chance to function as the home-front czar he was advertised to be.

Personal Responsibilities Entailed by Higher Incomes Created by the War

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. PATMAN. Mr. Speaker, many of us today are enjoying higher incomes than ever before. It is a sobering thought, however, to remember why we have higher incomes.

The reason is the war—the same war which, started by the Axis, has cost thousands of American lives and which will cost thousands more—the same war which has caused death and untold suffering for millions throughout the world.

This Axis-created war has caused the greatest demand for American food and materials in history—a demand which could be met only by more of us working than ever before, and by all of us working harder and longer.

More people working harder and longer—a scarcity of labor which helped bring about wage increases—has meant more money in the pockets of civilians than ever before. The great and growing demand also has meant higher prices for businessmen and farmers so that our income is the greatest in history.

There are less goods to buy and more money to buy them with.

This fact, which is the simplest possible statement of the problem of rising prices, places great responsibility on the American people. We can do one of two things about it.

First, we can use all of our higher incomes to scramble to get what goods are available. This will start a price rise which can go so high as to endanger the war effort, create hardship for many people, and eventually rob all of us of the benefits of peace to come. High prices will not increase the supply of goods today.

Second, or we can put our higher incomes to work at speeding victory. We can do this by buying and holding all the War bonds we can afford, by willingly paying and supporting higher taxes, and by saving for the future rather than spending and bidding up prices now.

The choice is ours—the responsibility ours. It is up to us.

The Crew of the "Booker T. Washington" Urges Action Against the Instigators of Anti-Negro Riots in Detroit

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herewith a letter from the entire crew of the United States Liberty ship *Booker T. Washington*. While there are those in America who seek to destroy national unity by inciting anti-Negro riots in several sections of the country, it is gratifying to know that the 39 officers and men of this ship, Negro and white, are daily risking their lives to deliver the goods to our boys overseas, who need these weapons of war to defeat Hitler. This letter is not only a symbol of the kind of teamwork America needs for victory, but it is as well a rebuke to those evil forces which promote anti-Negro riots and to the ineffectual policies of those in the Federal Government who refuse firmly and effectively to stamp out these riots as a danger to our war effort.

ABOARD THE
STEAMSHIP "BOOKER T. WASHINGTON,"
June 25, 1943.

HON. VITO MARCANTONIO,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MARCANTONIO: The crew of the United States Liberty ship, *Booker T. Washington*, addresses you with the most earnest request that you read this communication on the floor of Congress and so bring it to the attention of the American people.

While on the high seas, sailing homeward to pick up another cargo of war materials to follow that which we had just put into the hands of our armed forces in north Africa, we heard over the radio with mingled rage and disgust of the Fascist attack on the Negro people of Detroit. Our captain, Hugh Mulzac, is a Negro. We are what is called a mixed crew—about evenly divided as to color between whites and Negroes—though we do not feel ourselves divided in any respect, but are as the fingers of one fist in our resolve to crush the enemies of our country and of humanity. The news of this barbarous massacre of Negro Americans in Detroit, paralleling Hitler's brutalities against the Jews of Europe, aroused us to the stark realization that fascism is at work behind our own home front, that the Nazi summer offensive has been launched by Hitler's fifth column in the very heart of America. We must admit that this realization impels us to take stock and to wonder why we should daily risk our lives in carrying guns, planes, tanks, munitions, and other war materials thousands of miles across the seas to fight foreign fascism when the foe has so clearly revealed himself with the steel poised to strike us in the back at home.

We are not fooled by the distortion of the Detroit massacre into a race riot. We know that the home Fascists prepared for this bloody day over many long months—months marked by such rehearsals for slaughter as

the Sojourner Truth housing riot, provoked and executed by native Fascist storm troopers mobilized for the occasion from all over the Detroit metropolitan area. We know also the wave of master-race strikes recently pulled off by Fascist agitators in Detroit war plants as a result of the introduction of Negro workers into these plants—strikes designed to impede war production and to sow the seeds of hatred and distrust which have just ripened into mass murder.

We can't be fooled by the Fascist-minded propagandists who would have the American people believe that the peaceable Negroes were responsible for causing their own deaths, or that the affair was some sort of spontaneous combustion resulting from uncontrollable antagonism between the races. We can't be fooled because we know that it is a normal condition for whites and Negroes to live and work together in harmony. Trouble between the races is the product of deliberate, systematic agitation and of what must be called, in time of war, treasonable conspiracy.

For 9 months now we—a fairly average group of Negroes and whites from the deep South, as well as the North, East, and West—have been sailing together on the steamship *Booker T. Washington* under circumstances which have compelled the most intimate contact. If there were any real antagonism between the races, surely it would have burst forth again and again aboard. Even in peacetime a ship like the *Booker T. Washington* is a much smaller place than Detroit, but in wartime—due to the black-out—the space actually occupied by the crew most of the time is smaller than the smallest drug store in Detroit, and yet some would have us believe that the vast metropolis of Detroit—extending over 250 square miles—isn't big enough for the two races to live in, side by side, without bitter discord. No; nothing can make us believe that fantastic and contemptible lie. Our own experience has demonstrated to each of us that the contrary is true—that harmony and fellowship are the natural relations for Americans of both races, who share the traditional American democratic faith and unite to bring about its triumph over the dark, competing lack of faith which is fascism.

During the 9 months that we have lived and worked together on this ship—and manned the guns together when under attack from planes and submarines—we have not known the slightest racial tension, discord, or instance of animosity between white and colored. All observers of the conditions aboard our vessel will verify this assertion, which we make unequivocally. Among such observers have been officers of the Navy, Army, and Coast Guard, as well as officers of the armed forces of the Allied Nations and officials of the War Shipping Administration, Maritime Commission, and other agencies. We attach hereto an unsolicited letter from the United States naval armed guard commanding officer who has served aboard our ship and, for periods of many months, has lived in our midst and seen at first hand the relationships which prevail.

We know what sinister and disruptive forces really plotted and carried into action the Detroit massacre. We know, further, that unless these traitors are brought to justice the Detroit slaughter is but the beginning of a Nation-wide drive on the part of home Fascists to disrupt the war effort, paralyze the Allied drive against Hitlerism just as victory is within our grasp, and so ultimately to divide the American people that fascism can seize power in the United States in the classic manner adopted by Hitler in Germany. We urge you, therefore, to take every opportunity offered on the floor of Congress—and off—to demand a fearless, searching investigation of the Detroit massacre, this to be followed by prosecution of the guilty parties—including the higher-ups who instigated the massacre as well as the mobsters who did the killing—to the full extent of the laws against murder, arson, sabotage, and treason in time of war.

Very sincerely yours,

The crew of the steamship *Booker T. Washington;* Capt. H. Mulzac; First Officer Folks; Chief Engineer J. A. Smith; First Assistant Engineer Leroy King; Second Assistant Engineer A. S. Treskin; C. Lastie, second mate; John Beecher, ship's clerk; William K. Hart; H. E. Duport; Fred Deckard, Jr.; Willie King; Guy D. Morand; B. Hammadeng; Michael R. Vavick; Anthony W. Catshall; Nicholas J. Arrindel; Allister Mulzac; Alexander Hossu; T. Watchi; Herbert M. Lang; William B. Shepard; Robert C. Bacon; D. Lee; Louis Burton; Joseph B. Williams; Frederick A. Reed; George A. Cheney; H. Alexander; Segundo Rodriguez; Lawrence P. Burke; Wilbur Williams; Fernando Cruz; Chas. Miller; Clair L. Gossart; Cecil H. Blackman; J. Carapiet; James C. Keegan; Antonio Bianco; Manuel A. Diaz.

ABOARD STEAMSHIP
"BOOKER T. WASHINGTON,"
June 9, 1943.

To the EDITOR OF GENERAL ALARM (ship's newspaper):

It has come to the attention of the undersigned that aboard many other armed merchant ships are numerous instances of friction between merchant and Navy crews.

These disputes often range from the captain of the ship on down the line, but not one single instance has been found where the argument was not of petty origin, certainly not meriting attention of intelligent people engaged in important wartime enterprise.

How fortunate are you men of the *Booker T. Washington* for your splendid attitude. Each man aboard this ship seems so well to recognize his responsibility. You are, each of you, obviously determined to win this war. You are engaged in a hazardous task with a bold, aggressive attitude. You make evident to others the fact that harmony is necessary to success. Do not the petty differences, permitted on board some ships to become violent disputes, really act as an aid to our enemies?

This is a time for each of us to present to the Axis the bold front, the cool American determination and the unbroken force of power that will result in the crushing of those bestial fiends so frantically trying to destroy our country, our loved ones, and our property.

You who have been long aboard this ship do not realize how well you are accomplishing a splendid purpose. For your attitude of cooperation with naval personnel aboard it is my desire to say "Thank you."

With those ships operating without harmony we are all a bit disgusted; are we not? How fortunate to be able to deliver the goods and to "keep 'em crash diving" on your *Booker T. Washington.*

Please accept my promise of complete cooperation with you at any time, day or night, and permit me to extend congratulations for a job well done. From effort such as yours will spring a glorious victory for us and upon the brow of our enemy the scalding humiliation of defeat.

Your gunnery officer,

CHARLES V. ELLIOTT,
Lieutenant (junior grade), United States Navy.

Overlapping Governmental Agencies

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions of the eighth district convention of the Department of Arkansas, American Legion:

Whereas there exists in the public mind great confusion about the authority, scope, and activity of governmental agencies which is seriously hampering our war-production program; and

Whereas this is directly caused, in part, by jealousy of bureaucrats, lust for power by department heads, and overlapping authority of different departments. An example of such overlapping of which is to be found in the agency handling labor or some other phase of it, which are—

1. War Labor Board.
2. Conciliation Service.
3. Labor Relations Board.
4. Wages and Hours Division (controls lower wages and salaries and hours).
5. Internal Revenue (controls changes in higher salaries).
6. Labor Relation Division in the War Production Board.
7. Labor Relation Division in Army.
8. Labor Relation Division in Navy.
9. Labor Relation Division in Maritime.
10. Labor Relation Division in War Shipping.
11. Labor Relation Division in Federal Works.
12. Labor Relation in Farm Security.
13. Labor Relation Division in Office of Price Administration, and many others, which are reported to be more than 20 agencies.

The same overlapping of authority and division of responsibility is to be found in many other different branches of the service. This permits "buck passing," produces red tape, delay, and confusion; and

Whereas united action, intelligent dynamic leadership, are just as essential behind the lines as at the front, because this is a war of peoples in which the armed forces are only a part: Now, therefore, be it

Resolved, That our Commander in Chief, Franklin D. Roosevelt, the Congress, and all persons to authority be urged to—

(a) Eliminate jurisdictional conflicts between governmental departments.

(b) To have one responsible head in each department.

(c) Whenever a governmental official, whether head of a department or otherwise, is more interested in gaining power or money for his department, or more interested in smearing some other department or official, or is more interested in seeing his own name in the headlines of the newspaper than he is in carrying out our war program, that such individual be dismissed at once regardless of his party affiliation. There can only be one standard to be used now in judging our governmental officials, that is: Is our war program being helped? Be it further

Resolved, That copies of this resolution be furnished the President of the United States, United States Senators of Arkansas, the Member of Congress from this district, and the press.

Whereas the civilian population of our country is constantly being asked to do more on less, whether it is gas or groceries, coffee or canned goods, minerals or manpower; and

Whereas the civilian population is constantly being urged to economize in its expenditures for the purpose of counteracting inflation and increasing the sale of War bonds; and

Whereas we recognize that only by such sacrifice can our war effort succeed and we therefore wholeheartedly approve the same: Now, therefore, be it

Resolved, That we demand that all bureaus, departments, and branches of our Government not connected directly in the war program be required to follow the same economy and sacrifice demanded of the civilian population; be it further

Resolved, That Congress be urged to enact such measures that will assure the public that the Government in all of its nonwar activities is following the same pattern of sacrifice we are asked to follow before additional taxes are levied, because when our citizens are convinced that governmental waste is at a minimum there will be little objection to additional war levies.

Appointment of an Additional Assistant Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. SMITH of Ohio. Mr. Speaker, earlier in the afternoon a request was made by a Member for unanimous consent to consider H. R. 2801, to provide for the appointment of an additional Assistant Secretary of the Interior.

I objected to this request, and, therefore, the bill failed of consideration by the House. I think when Members learn the facts about this measure they will agree that the objection raised by me was fully justified.

The explanation given by the Member who made the unanimous-consent request mentioned only that the bill provided for an additional assistant secretary of the Interior Department, and to a question I propounded as to what the salary would be he stated $9,000 per year.

The truth is this bill is much more than that. It is in reality more a pay raise bill than one providing merely for an additional Assistant Secretary. This is seen upon reading the following clause in it:

> The Assistant Secretaries of the Interior shall have salaries of $9,000 per annum.

Upon inquiry I learned from the Department of the Interior that Assistant Secretaries of that Department receive, some $8,000, others $8,500, and still others $9,000 per annum.

The effect of the language above quoted, therefore, would have been to raise the lower salaries to $9,000.

I am convinced the Member who brought this bill up and asked unanimous consent for its consideration was unaware of the effect of this provision.

However, I want to condemn this sort of procedure. If the head of any Government department feels any of his employees are entitled to an increase in pay he should bring a forthright request and justification to the Congress for such raise. He should not attempt to do this by subterfuge, as it appears has been done in this case.

F. C. C. Balks Security Move

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. DOMENGEAUX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star:

FEDERAL COMMUNICATIONS COMMISSION BALKS SECURITY MOVE

(By David Lawrence)

An amazing and sensational document has been made public by a special House committee investigating the Federal Communications Commission. It reveals that since February of this year there has been on the desk of President Roosevelt, unacted upon, the draft of a proposed Executive order requested by the Joint Chiefs of Staff of the Army and Navy and deemed by them essential to the security of the United States.

Up to now it has been supposed that the President saw eye to eye with his military and naval chiefs and that when they felt a step should be taken in the interests of military security, he acted promptly. The evidence produced at the hearing shows that instead the wishes of the civilian Chairman of the Federal Communications Commission apparently have prevailed and that the judgment of the Chief of Staff of the Army and the Commander in Chief of the United States Fleet, as well as that of the Secretary of War and the Secretary of the Navy, apparently have not been persuasive.

CONTROL SOUGHT

The request of the Joint Chiefs of Staff referred to a desire to control the handling of military intelligence as it relates to radio. Secretaries Stimson and Knox, in their letter dated February 8, 1943, say:

"The Secretary of the Navy, on September 11, 1942, requested the Joint Chiefs of Staff to study the problem of responsibility and security of radio intelligence. The Joint Chiefs of Staff have made a thorough and comprehensive study, and their response, based on that study, is attached hereto. They, as well as the responsible military commanders in the field, are of the belief that radio intelligence, the location of clandestine stations, the supervision of military communications security and related activities must, in their very nature, be under the sole control of the military forces. Enclosed is a copy of a letter from Admiral Leahy, recommending this action."

The letter from Admiral Leahy is dated February 1, 1943, and was signed in behalf of the Joint Chiefs of Staff of the United States Army and Navy. The letter states that the Federal Communications Commission is constantly expanding its activities and that this is a "substantial drain on available material and personnel." The statement is made that the information obtained by the Federal Communications Commission "through its own radio-intelligence activities is not, in the military sense, secure, due to inherent tendencies toward publicity of Federal Communications Commission activities, use of nonsecure methods of reporting and correlation and the necessarily close relationship of the Federal Communications Commission military-intelligence activity with other phases of the agency's work."

ENDANGERS EFFECTIVENESS

The letter then makes this startling accusation:

"Because of the essential differences between military and Federal Communications Commission standards and methods, it has not been possible to integrate their information, with the result that the attempted duplication by the Federal Communications Commission to work that is being effectively done by the military has in fact endangered the effectiveness and security of military radio intelligence.

"In view of the foregoing it is concluded that the better prosecution of the war will be served by terminating all military and quasi military intelligence activities of the Federal Communications Commission and confining such activities to the Army and Navy."

No explanation has been forthcoming as to why this request from the responsible heads of the Army and Navy has been sidetracked. An effort is to be made by the House investigating committee to get at the reasons. It will be recalled that division of responsibility over communications led to an unsatisfactory situation at Hawaii, out of which the Japanese agents were able to transmit information about Pearl Harbor before the attack came on December 7, 1941, which cost the lives of nearly 3,000 American soldiers and sailors.

EXPLANATION NEEDED

Is there now a drifting on the same sort of problem—conflict of jurisdiction?

There must be some explanation for the long delay in failing to issue an order requested by our Joint Chiefs of Staff.

Certainly it is a subject in which there ought to be light shed, lest the impression develop that Washington and bureaucratic friendships are preventing the military and navy men from getting the necessary authority from the President to conduct the war effectively.

Keeping Inflation Under Control

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 28, 1943

Mr. PATMAN. Mr. Speaker, although activities of government must be the focal point of any effective program for holding down prices and wages and insuring economic stability, civilians must carry out their share of the program by doing the following:

First. Buy and hold as many War bonds as you can afford.

Second. Pay willingly any taxes—increased taxes—that your country needs. They are the cheapest way of paying for the war, of buying victory and protection for the American way of life.

Third. Pay off your debts and avoid making new ones.

Fourth. Provide for your own and your family's future with adequate life insurance and savings.

Fifth. Pay no more than ceiling prices. Buy rationed goods only by exchanging stamps.

Rationing is your protection that you will get enough of scarce essential goods.

Ceiling prices are your protection against serious and unwarranted price increases—one of your main guaranties of economic stability.

Sixth. Buy only what you need. Make the articles you have last longer by proper care and avoidance of waste.

Eat it all, wear it out; make it do, or do without.

Seventh. Do not try to profit from the war. Do not ask higher prices than you absolutely need if you are a businessman or farmer. Do not ask for higher wages or salaries than you need, and always ask for them through established Government channels.

Eighth of Nine Sons Inducted

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Providence (R. I.) Evening Bulletin of June 17, 1943:

EIGHTH OF NINE SONS INDUCTED—LAST MALE HEIR LEFT IN FAMILY OF OAKLAND COUPLE EXPECTS TO BE CALLED SOON

Since Pearl Harbor, Mr. and Mrs. Joseph Couture, of Oakland, have given eight of their nine sons to the armed forces.

Their youngest, Paul Bernard Couture, 19, who will not graduate from high school until next Thursday, was inducted into the Navy yesterday afternoon.

The ninth son, who is married, expects to be called soon for induction.

Mrs. Couture, white-haired mother of 11 children, who only recently underwent 4 major operations in Woonsocket Hospital, sat resignedly in her rocking chair this morning, trying both to be pleasant and to hold back tears.

"WHY SO MANY"

"What can I do about it? What can anyone do about it," she asked wearily. "I know they have to go, but why do they take so many from one family?"

Mr. Couture, a carpenter, feels that if he keeps busy he will not be so lonely for his boys, but all the mother can do is sit and wait and pray for their safety, explained a daughter; Lucille, 15, who remains at home. An older daughter is married.

"The house sure does seem empty since the boys left," said Lucille, speaking for her mother, who feels more sure of her French than she does of English. "It is as quiet as a church around here. We miss them something awful. Of course, we hear from them pretty nearly every week, even those who are overseas. It helps to cheer us up a little, but not like their being here."

REPORTS NEXT WEEK

Paul, a senior at Burrillville High School, will be graduated next Thursday evening and will report for active duty with the Navy the following day. He participated in baseball, football, and hockey at the high school, being selected on the all-State hockey team for 2 years running. Prior to attending Burrillville High School he attended Our Lady of Good Help grammar school in Oakland.

SEVEN WHO PRECEDED

The other brothers are Pvt. (1st cl.) Wilfred, 33, with the military police in Oklahoma; Pvt. Norman, 29, an infantryman in North Carolina; Seaman (2d cl.) Henry, 28, serving in Alaska; Pvt. Edgar, 25, with the Medical Corps somewhere in the South Pacific; Corpl. Gerard, 24, with a Field Artillery unit in north Africa; Lt. Robert, 23, in the Air Corps in Arizona; and Corpl. Gilbert, 21, with the Quartermaster Corps, somewhere in the South Pacific.

The remaining son, Oscar, is 27 and he expects his call to service any day.

Boykin Committee Selects North Dakota-Minnesota To Produce Sponge Iron From Local Resources

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. HAGEN. Mr. Speaker, I wish to report on a joint meeting held on June 25 here in Washington of delegates representing the States of North Dakota and Minnesota, in session with the Boykin steel shortage investigating committee.

The matter under discussion was the methods by which the mineral resources of those two States can be most expeditiously employed in furtherance of war production.

Those present at the meeting included:

Members of the Boykin steel shortage investigation committee of the House, and staff.

Gov. Edward J. Thye, of Minnesota.

Lt. Gov. Henry Holt, of North Dakota.

Hon. GERALD P. NYE, United States Senator of North Dakota.

Hon. HAROLD C. HAGEN, Member of Congress, Ninth District of Minnesota.

C. F. Ramseyer and H. A. Brassert, engineers for the iron and steel industries, New York N. Y.

Fred A. Cina, Range Municipalities and Civic Association, Virginia, Minn.

Dr. L. H. Reyerson, Northwest Research Institute, University of Minnesota, Minneapolis, Minn.

R. E. Wilson, commissioner, Minnesota Iron Range Resources Board, State Office Building, St. Paul, Minn.

Alex C. Burr, Industrial Commission of North Dakota.

Fred J. Fredrickson, North Dakota Resources Board.

The joint meeting made the following declarations and recommendations in regard to utilizing the sum which the Boykin committee has recommended to be included in the Bureau of Mines appropriation in the Department of the Interior annual appropriation bill:

1. Purpose: The underlying hope that inspires the two States in undertaking this venture is that of enabling these areas to participate more fully in war production, by putting their resources of nature and manpower on a 12 months' basis. For this it is necessary:

(a) To determine the essential engineering data needed for the erection of commercial-sized facilities for the production of hydrogen by the use of North Dakota lignite on a commercial basis.

(b) To determine the essential data needed for the designing of commercial-sized facilities for the beneficiation, semireduction, and complete reduction to metal iron of the various grades of Minnesota iron ores.

(c) Incidentally: To determine the economics and methods for efficient utilization of the various chemical byproducts that result from the aforementioned production of hydrogen from North Dakota lignites, including hydrogenization of lignite into liquid fuel.

2. Procedure: It is contemplated:

(a) That there be immediately erected two coordinate pilot plants, one to produce the hydrogen and the second to consume the hydrogen in the treatment of Minnesota iron ores.

(b) That these pilot plant facilities be designed by engineering firms which have an established national reputation for the erection of successful commercial hydrogen and iron and steel facilities, and are capable of presenting completed plans detailed for erection in 6 weeks from July 1, 1943.

(c) That an appropriate amount be expended by contracting for the designing and erection of a hydrogen pilot plant. Another amount for the designing and erection of iron ore beneficiating with an ore-reducing or iron-metal-producing unit. The sum remaining is to be available for operating expenses.

(d) That nonessential and Federal salaries be kept at a minimum, and that the limited funds allowed be expended in close cooperation with the respective States through the joint cooperating committee.

3. Control: The project to be erected and operated under the authority of the United States Bureau of Mines, but in close cooperation with the respective States through a "Joint Minnesota-North Dakota Resources Development Commission," which commission is to consist of eight persons appointed by the two Governors, including themselves, and representative of the range municipalities and civic association, with a chairman appointed by the Bureau of Mines, for which responsibility the name of Dr. A. C. Fieldner is suggested.

4. Location: The site of the pilot plant project is to be in North Dakota, in the low sulphur lignite area, at a point determined on technical grounds by the joint commission.

I wish at this time to commend the Boykin committee for the thoroughgoing manner in which it has gone into the steel shortage situation, and for its pledge that it will vigorously pursue its activities during the present year, and for its further pledge that it will diligently undertake to see to it that the intent of the Congress is fully accomplished in the subsurface exploratory work provided for in the Bureau of Mines appropriation. I also want to express the appreciation of all of us to Representative WILLIAM PITTENGER of the Eighth District of Minnesota for his support of the Boykin committee's efforts and its

present activities in trying to utilize low-grade iron ores for the benefit of northern Minnesota and the entire Nation. Many other members of the North Dakota and Minnesota delegations in Congress have shown their itnerest and given cooperation in these efforts.

One Hundred and Sixty-seventh Anniversary of the Declaration of Independence

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. GOSSETT. Mr. Speaker, tomorrow is the one hundred and sixty-seventh birthday of the American Republic. Today we celebrate the birth of democracy as convinced by the men who wrote the Declaration of Independence and the Constitution of the United States.

In preparing a speech for the Fourth of July, 1940, I picked up the magazine section of the New York Times. On its front cover was the Statue of Liberty and the following part of the preamble of the Declaration of Independence, such part being of necessity the basis for any essay, sermon, oration, or discussion of the Fourth of July. Let us begin then by quoting this part of the Declaration of Independence:

> We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness—that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.

In my Fourth of July speech of 3 years ago I made mention of two articles appearing in the aforesaid magazine section. The first article was entitled "World Fires Illuminate our Fourth," and the heading of the second article gave expression to grave and current thoughts then uppermost in the minds of the American people, "Could It Happen to Us?" At this time we all know the answer to that question. The fires then burning half way around the world now engulf the entire globe—it did happen to us.

Fourths of July should ever be days of taking American inventory. Days of remembering should have a peculiar significance in the lives of a people who would be great. Beware of that individual in whose heart there lives no images of heroism. Beware of that nation that does not on occasion stand before some altar of national sacrifice or some memorial of national rejoicing and who does not stand there with uncovered head, standing not alone in adoration but also in resolution. Today more than ever before we should take inventory of our national resources and responsibilities both physical and spiritual. We should ask ourselves from whence we came and whither are we going?

For this purpose, let us briefly compare what now seems to be the most significant Fourths of July in the history of our country. Of course, we have that first Fourth on which the Declaration of Independence was born, born as a result of the struggles of a great people for freedom.

But the first great crisis in the life of our new country, founded upon a new philosophy, and dedicated to new ideals, came in 1787. Following the successful termination of the American Revolution, the Colonies found themselves to be 13 separate conflicting States. Strife and bitterness and lack of unity for a time threatened to destroy the new freedom for which they had fought together. Democracy as conceived by the Pilgrim Fathers must chart a new course, must set up machinery to effectuate new ideals. This difficult task was accomplished with miraculous success in the year 1787. The celebration of an eleventh birthday gave unmistakable evidence of divine benediction and of the growing strength and power of a new republic builded in a new land, upon a new philosophy of individual liberty.

The third Fourth of July requiring mention and the second real crisis in the life of the new Republic was in 1863. Our country had come upon evil days. Internal problems with which the people seemed unable to deal threatened to destroy the American Republic. As sad hearts celebrated July 4, 1863, word came of the fall of Vicksburg and of the defeat of the Army of Virginia on the bloody field at Gettysburg. The flag which we today display with pride came near being destroyed by those who loved it. Surely, Divine Providence must have intervened because Old Glory was assaulted at Gettysburg under the command of the ablest general and the grandest gentleman ever to fight in behalf of a lost cause. Seventeen hundred and eighty-seven and eighteen hundred and sixty-three are both significant dates in American history. Both represent triumphs of democracy over itself. In both cases we were saved from internal forces that almost destroyed the Union.

Today is the third most significant Fourth of July since 1776. Eighty years following that fateful July 4 of 1863 we again pause to survey the horizon. We find our country assaulted from without and we find our country troubled from within. We are now active participants in a war that we did not want, that we did not make, and that we did little to prevent. In its very beginning we saw one of the world's oldest democracies crumble into dust with little or no resistance. In its very beginning we saw two distinct philosophies of life fighting for predominance, if not survival. Those philosophies have stood and now stand in clear outline and in bold relief. They represent two distinct and opposed schools of thought, two philosophies of government. One is totalitarian, the other is democratic. One is symbolized and proclaimed by Adolf Hitler and those who support Axis regimes. The other is represented, generally speaking, by the English-speaking peoples of the world, notably American. Totalitarian government seeks to completely regiment the social, economic, political, and religious life of all persons. On the other hand, democracy as expressed in the American Declaration of Independence and the American Constitution, proclaims the dignity of man and his predominance over the state. Democracy exists in order to protect the liberties of the individual, to stimulate individual initiative, to promote individual genius, to permit individual happiness. In the eyes of the dictators, liberty, freedom, and all of the rights proclaimed in our Declaration of Independence, and guaranteed in our Constitution, are sins against the state. In democracies the suppression of these things by the state is a crime against the individual, the individual for whom the state exists. In one philosophy all power comes from above, in the other philosophy all power comes from below. In one, man is a creature of the state; in the other, the state is the creature of man. There are those who contend that two such repugnant and different philosophies of life cannot exist in the same world.

On this Fourth of July, as we take inventory of ourselves and as we review history, we are convinced that totalitarian ideals and philosophy cannot possibly win over democratic ideals and philosophy. At least, totalitarian ideals cannot win of their own strength. Barbarian aggression never conquered of its own might but rather because of the weakness of its opponents. Democracy is in danger only when its champions decay and become faithless to its ideals. The Old World democracies, defeated and near-defeated in the beginning of this world conflict, suffered from their own internal weakness more than from the external strength of their foes. While the French fought over the 40-hour week, over gains for selfish interest groups, their ancient enemies plotted their ruin. France was not only weak in arms but weaker still in spirit. Her soldiers did not go into battle singing the Marseillaise and with the glory of French traditions and the preservation of the Tricolor spurring them on to courageous action.

Across the channel, the English people made equally grave mistakes. But for the fortuitous circumstances of geographical position, they, too, would doubtless have suffered the fate of the French people.

On this Fourth of July, as we survey the heroic accomplishments of our armed forces on the battle fronts of the world, we have every reason for pride in their remarkable achievements. On the home front we cannot feel quite so proud of our conduct. True, we have made amazing strides in industrial production. We like to brag that our scientific, economic, and industrial resources are vastly superior to those of any combination of our enemies, that we possess over one-half of the world's radios, over two-thirds

of the world's telephones, over three-fourths of the world's automobiles, and that our weapons of war are superior to those of our enemies. We like to recall that we, in fact, invented airplanes and tanks and radar, radar by which a ship can be spotted and destroyed through 25 miles of darkness. But when we are reminded that one of our most implacable foes, the Japanese, started their war with less than 200,000 motor vehicles, we must admit that strength does not lie in physical possessions alone. This Fourth of July, as every Fourth of July, is an appeal to the heart and the spirit of the American people.

On our first birthday our life was endangered by foreign foes. On that important birthday of 1863 our life was endangered by internal strife. On this birthday our life is endangered from both sources. To cope with these foes, to solve economic and political problems, may endanger for a time at least American standards of living. The life of this Republic and the preservation of this democracy is more important, however, than our standards of living. No organized group in this country whether in industry, in labor, or in politics, should be permitted for 1 minute to obstruct a program of complete mental and physical mobilization for total war and total victory. Better to have lower standards of living than to have no standards of living. Better to be free in poverty if necessary than to be secure in slavery.

We must never forget or neglect to teach each generation of American youth devotion to the noble traditions in which our country was born. Discipline and devotion are essential to a strong and a courageous people. We must see in the flag a symbol of Valley Forge, of Gettysburg, of St. Mihiel and the Argonne, of Bataan, Guadalcanal, and Midway. We must see in it the character of Washington, the philosophy of Jefferson, the ideals of Wilson, the courage of Roosevelt.

On magazine covers throughout America this week is displayed in a variety of gorgeous hues the America flag. Today of all days we should remember that the Star-Spangled Banner is not a flag of conquest, is not a flag of aggression, is not the flag of militarism. We take just pride in the fact that it was the first flag to fly the oceans, that it was the first flag to be planted at the two poles of the earth; but we should take greater pride in its being the first flag to stand for individual and personal liberty, freedom, and opportunity.

The boys who fight America's battles today are adding many glorious chapters to American history. Recently I met Commander Charles Kirkpatrick, of San Angelo, Tex., now attached to the staff of the Naval Secretary, Frank Knox. At the time of Pearl Harbor he commanded a submarine. Under his command 11 Japanese ships have been sunk. During the battle of Midway he was returning to Pearl Harbor. When radioed, "Do you have any torpedoes left?" he replied, "Hell, no; if I had any torpedoes, I would not be coming home."

To John Paul Jones' battle cry, "We have just begun to fight," to Captain Lawrence's dying request, "Don't give up the ship," to Admiral Perry's cryptic report, "We have met the enemy and they are ours," can now be added many other slogans of naval lore. There is Captain Moran, of the U. S. S. *Boise*. When his lone vessel sighted six Japanese warships he immediately gave the order, "Pick out the biggest one and start firing." Then there is the last order of the wounded Commander Gilmore as he lay on the deck of his surfaced submarine. Feeling that there might not be time to take him inside the submarine upon its being attacked, he gave the order, "Take her down, boys." Then we remember Major Devereaux's last communique from tiny Wake Island, "The enemy has landed but the issue is still in doubt." The issue, of course, was not in doubt, except in the minds of those dauntless defenders of Wake.

These things on this Fourth of July should have a solemn and sobering effect on those of us who remain on the home front.

In fact, on this Fourth of July our domestic leaders and our home-front soldiers might utter this prayer to the goddess of liberty: "Oh, liberty, liberty—notwithstanding the many mistakes and some crimes we have committed in thy name, we beseech thee to continue to make this, our country, thy dwelling place. Because of thy many benedictions and because of the innocent and heroic blood our sons have spilled, and are spilling, upon thine altar, give us the wisdom and character to be worthy of thy habitation."

Victory Gardens in Alhambra, Calif.

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. VOORHIS of California. Mr. Speaker, so successful has been the work of the people of Alhambra, Calif., in their Victory garden work that I am asking consent to include with my remarks the following 14 steps of a successful Victory garden program prepared by Mr. Paulsen Visel, Secretary-Manager of the Alhambra Chamber of Commerce:

THD 14 STEPS INVOLVED IN SETTING UP A CITY OR COMMUNITY VICTORY GARDEN ORGANIZATION

(By Paulsen Visel, secretary-manager, Alhambra (Calif.) Chamber of Commerce)

1. Lease, for the duration and 1 year thereafter, all vacant property, without cost, within the city limits.

2. Develop through the water supplier suitable reduced water rate for Victory garden use.

3. Promote through publicity all famillies to put in a home Victory garden, or if the back yard is not suitable because of shade, soil, or space, to lease (without cost) a lot, or part of a lot, from the vacant-lot pool of free leases.

4. Set up mechanical facilities for the first tillage—plowing, harrowing, and smooth dragging. This to be done at the expense of the Victory garden grower.

5. Set up a city- or community-wide Victory garden educational program to cover all phases of Victory garden operation.

6. Set up gangs of boys (men are not available) in groups of three forming Victory garden commandos, who will spade, hoe, and rake areas too small for power equipment. These boys work at a flat price (about a cent a square foot). The commandos take care of the old, infirm, and lazy.

7. Set up a model garden and have a well-qualified adviser on Victory garden problems available to all for advice and demonstration.

8. Set up through some service club the installation and maintenance of a Victory garden for each indigent and helpless shut-in.

9. Set up the Girl Scouts Victory Garden Sales Commandos who will pick up on Saturday morning and one afternoon during the week all Victory gardens' surplus produce—sell it—and retain 33 percent for troop funds.

10. Promote Victory garden products exhibit contest once a month.

11. Promote contest to determine the finest Victory garden every 90 days (in southern California our gardens grow the year around).

12. Constant promotion, publicity, and the urge for replanting is essential at all times.

13. Promote conservation of Victory garden products, such as canning, drying, and dehydration.

14. Use your Victory garden set-up to promote neighborliness, parties, and fun.

A Victory garden kettle party that works very well in these days of rationing and costs but 3 red points or less is successfully promoted as follows:

Obtain a good-sized stew pot into which each guest donates one-half pound of meat and a pound of fresh, well-cleaned Victory garden vegetables. Use one pint of boiling water to each pot donation. Save a little of the vegetable donations for salad. This leaves you with a menu of wonderful deep South pot liquor, Victory garden kettle stew, seagoing salad, dessert, and coffee (as you will).

We Must Face the Facts About Russia

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 1 (legislative day of Monday, May 24), 1943

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Max Eastman entitled "To Collaborate Successfully We Must Face the Facts About Russia," published in the July 1943 issue of the Reader's Digest.

Mr. President, I have been informed that the article which I asked unanimous consent to have printed in the Appendix of the RECORD will exceed two pages of the RECORD, allowed under the rule, by two-fifths of a page. I have procured an estimate of the cost of printing the article, which is $108. I renew my request for unanimous consent

that the article by Mr. Eastman may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO COLLABORATE SUCCESSFULLY WE MUST FACE THE FACTS ABOUT RUSSIA

(By Max Eastman)

Few great events in history command more admiration than the heroic fight of the Russian armies and people against Adolf Hitler's military machine. There is a mixture of pride in our admiration, too, because the Russians are fighting on our side—and gratitude, because their incomparable feat of arms gave us our chance to prepare.

Russia's stand has, moreover, taught many Americans who did not know it before that the Soviet Union is a going concern with which it will be our task to colaborate after the war. If any iron-jointed reactionaries are still blind to this fact, their brains are buried in the past. Collaboration with a powerful Russia will be a main preoccupation of living Americans for a long time to come.

If this collaboration is to be successful, however, it will have to be based on facts and not on propaganda. Elementary prudence demands that our people understand Russia's position in the global conflict, know the attitude of her ruler toward the Anglo-Saxon nations, and assess without any intervening pipe dreams the true character of her regime. It is absolutely vital to our own national self-interest that we discard wishful thinking and base our policy on unclouded fact.

Let us remember that the stubborn resistance of the Russians no more justifies communism than the stupendous assault of the Germans justifies nazi-ism.

That simple and obvious fact must be held steadfastly in mind if our policy toward Russia is to have force. And if our policy does not have force, you may be sure it will not command the respect of Stalin. The Russian leader is not a mollycoddle who can be soft-soaped into doing what cold calculation does not recommend. The only sound way to do business with Stalin is to let him know we thoroughly understand his set-up as well as our own. The speech that weighs with Stalin must be firm, brief in courtesy, bluntly concerned with the real issues at stake. If we want the Russians to respect us, we must let them know that we are not dupes.

RUSSIANS AND AMERICANS

It is natural, since she fights so brilliantly beside us, to be a little undiscriminating in our praise of the Soviet Union. Americans who go there are especially prone to this fallacy, because Russians, as Wendell Willkie observed, are so much like Americans. They are like us in their bold good humor, generosity, and taste for doing things in a big way. They are like us also in their disposition to revolt against tyranny. It has always required a huge police machine to hold the Russians down, and the present one is the biggest the world has ever seen.

Nevertheless, there is a deep difference between Russians and Americans. Their revolts never got anywhere; ours did; that is the difference. They came into modern history as serfs and humbled subjects of a semi-oriental despotism. We came in as westward pioneers exploring beyond the reach of any government, each of us enforcing his own laws with his own musket. And even before we started for the frontier, we had behind us the long-victorious struggle of the Anglo-Saxon common man for rights which no government could touch. The Russians had no victory behind them, and no rights which their ruler could not crash through like a man on horseback through a paper hoop.

The revolution which overthrew the Czar was an attempt to attain our western principles of liberty. But that could not be done in eight months; and within eight months, Lenin, with his tightly organized small group of Marxian cruders, had seized power and laid the foundations for a new despotism which was to become, after his death and the rise of Stalin as Vozhd,[1] infinitely more ruthless that the Czar's.

Lenin invented—with millennial freedom for the masses as his goal—the system of totalitarian one-party tyranny which stamps out all actual freedom completely. Mussolini and Hitler borrowed Lenin's technique and applied it in their own countries. Stalin—who despises the masses and fears freedom—perfected it on the home grounds, extinguishing in Russia the last surviving trace of the democratic concept of the rights of man. His great purge, in which an estimated 300,000 people were shot or imprisoned, was a purge of all who might conceivably oppose his despotic power. That Stalin is an absolute dictator is the simple truth. And it is so important a truth that I am not going to leave it in my own words.

"The Soviet Union, as everybody knows that has the courage to face the fact, is a dictatorship as absolute as any other dictatorship in the world."

That statement, made by Franklin D. Roosevelt, February 11, 1940, is as true today as it was then.

THOSE WHO FAWN ON STALIN

Such being the case, what should be, in sober political wisdom, our attitude toward Russia since Hitler forced her into the democratic camp? Exactly this: give all possible military help; offer unbounded praise to the heroism of her people and her soldier; extend every courtesy to her government. But if we believe in democracy, be dignified and intelligent—not muddled and mawkish. To those in the Kremlin, American gullibility is only one more evidence of bourgeois decadence.

Instead of that an astonishing number of our influential men and magazines and newspapers are fawning on Russia. You would think Stalin was some stern Deity who held the destiny of the whole planet in his hands. "Don't say a word against Stalin or he won't accept our tanks" seems to be the attitude of some of those who are now giving away the national treasure so avidly.

This is an attitude of spirit which I find diplomatically foolhardy, morally disgraceful, and dangerous to the survival of democratic institutions within this country.

Discovering virtues in Stalin's tyrannous regime has become a main preoccupation for many intellectuals and public officials. President Roosevelt led off when he remarked, perhaps with a smile, that the Russian Constitution guarantees religious freedom. The Russian Constitution guarantees no freedom. It guarantees the dictatorship of the Russian Communist Party, naming it specifically, and asserting that it shall "form the directing nucleus of all organizations of the toilers—that is, the citizens" (ch. X, art. 126).

No constitution which names a small, disciplined organization of zealots as absolute sovereign can possibly guarantee any freedom to any person or institution except that organization and its Vozhd. To inscribe the principles of free speech, free religion, free elections in a Constitution which contains this joker is to rob those principles of any meaning whatsoever. Our self-deluding leftists love to describe this totalitarian document as at least an aspiration toward democracy. It is no more an aspiration than Hitler's phony plebiscites were. It is a tried and perfected instrument for fooling all the people all the time. But there is no good reason why we should let it fool us.

Vice President WALLACE became another apologist for communism when, in his speech at a Soviet friendship rally, he said:

"Some in the United States believe that we have overemphasized what may be called political or Bill of Rights democracy. * * * Russia, perceiving some of the abuses of excessive political democracy, has placed strong emphasis on economic democracy. This, carried to an extreme, demands that all power be centered in one man and his bureaucratic helpers. Somewhere there is a practical balance between economic and political democracy."

That sounds like poised judgment, but it is emotional adulation. It is lowering America's banner of democratic principles in an act of homage to a system that permits not one whit more economic than political democracy. What, indeed, does the word "democracy" mean if "when carried to an extreme," it "demands that all power be centered in one man and his bureaucratic helpers"? It means dictatorship. And that is what they have in Russia—economic as well as political dictatorship.

Mr. WALLACE went on to say that "in Russia differences in income are almost, but not quite, as great as in the United States"—which is accurately true. But he added that "in Russia it is almost impossible to live on income-producing property"—which is not true at all. The income-producing property belongs to the state. And the one boss and his foremen (some 200,000 feudal lords raised above the enslaved masses), who control the state, live as they choose on that income-producing property. They form a new exploiting class. Some 10,000,000 more enjoy a certain security, about as it was in the old Russia.

To call present conditions in Russia economic democracy is pure gush. There is no equality in the factories, no liberty, no right to form independent unions, no right to strike, no right even to change jobs. The workers are chained to the machines and lashed to the wage scale as in no other country in the world, Nazi Germany included. The wage scale is lower in relation to prices than it was under the czars.[2] And the whole system is enforced by an army of secret police which would stir envy in the breast of the Pharaohs of Egypt or of Heinrich Himmler himself.

Many Americans feel obliged to maintain a polite silence about such abhorrent aspects of the Soviet regime. More than that, they invent fantastic casuistries to make the Russian dictatorship palatable to humane Democrats. We produce a steady stream of pro-Soviet plays and pro-Soviet magazines and books. High officials of our Government have taken part in celebrations of November 7—the day when the Bolsheviks overthrew the only democratic government Russia ever knew. Even Christian ministers go all out to convince America that Russia enjoys religious freedom, although religious instruction for Russian children under 18 is rigidly prohibited.

This is, of course, the very opposite of what the Russians are doing. Soviet spokesmen make no attempt to sell America's way of life to their people, or to reinterpret our system of free enterprise to make it more palatable. They set up no organizations of friends of the United States. They do not celebrate our national holidays, or make films to glorify our ideology, or call mass meetings to extol our victories in Guadalcanal and north Africa. Until rebuked by Admiral Standley—a notable event—they were glum

[1] Russian for the Leader; equivalent to Fuehrer or Duce.

[2] According to official Soviet statistics. See Manya Gordon's Workers Before and After Lenin.

and sullen even about the aid we send them. They publish no books explaining the American system. They do not permit agents of American democracy to propagate the overthrow of the Communist society. And their newsstands and book shops, meanwhile, are filled to overflowing with denunciations of the supposed misery and degradation of our way of life.

Yet this does not prevent the American Communists from denouncing as an attempt to drive a wedge between the Allies, or a service to Hitler, or even as fascism, any word spoken by any American in honest criticism of life under the Russian dictatorship. They will so denounce the present article and the Reader's Digest for printing it. A plain speaking of minds, however, is the sole basis for a lasting collaboration between these two great countries. It cannot be achieved while Russians attack our civilization hammer and tongs—and we meekly exclaim, as our Vice President recently did, that we must not double-cross Russia. As though shipping arms and provisions free of charge to a whole planet in its fight for the principles of civilized life were a sin that should make us hang our heads in silence.

COMMUNIST PROPAGANDA FROM HOLLYWOOD

The kind of logic that has brought our leftists into this state of morbid apologetics toward Russia is well illustrated by former Ambassador Joseph E. Davies. Mr. Davies was in Russia during the notorious Moscow trials, in which the foremost leaders of the old Bolshevik party "confessed" that they had been treasonably plotting with foreign secret agents (German and Japanese or French and British, according to the momentary shifts of Stalin's foreign policy). Those mysteriously unanimous confessions were but a public window dressing behind which the bloody purge of Stalin's critics was accomplished. While in Moscow Mr. Davis, shocked by this purge, wrote the State Department:

"The terror here is a horrifying fact. There is a fear that reaches down into, and haunts, all sections of the community. No household, however humble, apparently but that lives in constant fear of a nocturnal raid by the secret police. * * * Once the person is taken away, nothing of him is known for months—and many times, never—thereafter."

Horrified also by the mock trials, Mr. Davies described them in a letter to Arthur Krock of the New York Times, January 26, 1937:

"If any demonstration of the wisdom and desirability of the principles of Anglo-Saxon jurisprudence for the protection of the accused by the presumption of innocense, the right of counsel, the right of refusal to testify against oneself, and the soundness of Anglo-Saxon law were required, it would be found in this proceeding."

There is no sane reason why Hitler's attack on Russia, or Russia's heroic resistance, should have destroyed Mr. Davies' pride in Anglo-Saxon institutions. Yet the fact is that he is currently recommending those trials, and the barbaric and inhuman slaughter of antitotalitarians for which they formed a screen, as an example for "other liberty-loving nations" to ponder. Mr. Davies' performance only points up by extreme example the epidemic of hysterical adulation of a tyrant state which is sweeping so many influential Americans off their feet.

When Mr. Davies' book, Mission to Moscow, was made into a movie by Warner Brothers, those well-known friends of Soviet Russia, Erskine Caldwell and Jay Leyda, were employed in its preparation. Every item of the current Communist propaganda was inserted in the film, to the distortion not only of historical fact, but even of the peculiar interpretation in Mr. Davies' own book. If this film had been made in Moscow, or in the office of the American Communist Party, it could be no more adept an instrument of foreign propaganda. It is a compendium of what the Soviet Government wants the American public to believe. And yet it is put over on Americans as having the official sanction of their own Government by the ingeniously handled appearance of an actor impersonating President Roosevelt, and by an opening in which the title of the film is drawn with Mr. Davies' book out of an official diplomatic pouch of the United States.

John Dewey, America's best-known educator and philosopher, and Suzanne LaFollette, formerly editor of the Freeman, wrote jointly in the New York Times of May 9 a long statement citing in detail the flagrant inaccuracies of the picture. They concluded:

"The film, Mission to Moscow, is the first instance in our country of totalitarian propaganda which falsifies history through distortion, omission, or pure invention of facts, and whose effect can only be to confuse the public. Even in a fictional film this method would be disturbing. It becomes alarming in a film presented as factual.

The whole effort is to represent the Soviet dictatorship as an advanced democracy. Such gross misrepresentation can only contribute to confusion in our relations with the Soviet Union.

The film is anti-British, anti-Congress, anti-democratic, and anti-truth. It deepens the crisis in morals which is the fundamental issue in the modern world."

And this is the film which the Communist Daily Worker now boasts Warner Brothers are spending $500,000 to advertise throughout our country—$200,000 more, the party journal adds proudly, than has ever been spent on the promotion of any other American film.

To me it is bewildering that American State officials and public champions of democracy should wish to whitewash or ignore the judicial murders, mass deportations, and State-planned famines by which Soviet totalitarianism has been established and maintained. The danger to our foreign policy involved in ignoring the Kremlin's real purposes is a small thing compared to such corruption of our own democratic habits of thought.

Democracy is primarily, as Mr. Roosevelt has constantly reminded us, a way of life. It has its existence in the habit of mind and action of the whole people. In issuing books and films condoning the totalitarian tyranny, you strike the most deadly blow conceivable against this way of life.

Either we believe in demoracy, and that is what we are fighting for, or we don't and it isn't. While our boys are dying on foreign battlefields in the cause of democracy is no time for us to be spreading the totalitarian corruption on the home front.

MR. WILLKIE REPORTS ON RUSSIA

If ever strong, hard-minded patriots of democracy were needed in our public life, it is now. The mushheads and the muddleheads are doing us in. We turn naturally to Wendell Willkie, whose professions of democratic idealism have been eloquent. Mr. Willkie, one hopes, will stand up against the national inferiority complex, and give us the straight dope about Russia. He has gone there to see what things are like with his own eyes. But we open his book—which is both wise and charming on many other subjects—and what do we learn on the first page? That to show him through Soviet Russia and make sure he got an "unbiased" view of it, he chose Joseph Barnes, a man who, whatever his ability may be, is universally regarded by those critical of Stalin's regime as the slickest apologist for the Soviet Union in the United States. Mr. Willkie might at least have chosen an escort who was known neither as a skilled apologist nor a confirmed critic of the dictatorship he was to look at so briefly. He owed that both to himself, it seems to me, and to his constituents.

In Russia Mr. Willkie saw barbed-wire-enclosed concentration camps in various towns and spoke of them in his article in the Reader's Digest. This reference to the camps, however, had somehow dropped out of the article by the time it appeared as chapter 5 of his book. Did his "perfect traveling companion," Joe Barnes, who was "most helpful and generous in the preparation" of the book, perhaps have a hand in revising the proofs? Or did Mr. Willkie himself decide to let us forget this bit of vital information?

How vital it is may be understood if we bear in mind that there are, according to the estimates of those best qualified to judge,[2] at least 10,000,000 people living, or rather dying, at hard labor in concentration camps in the Soviet Union. Ten million ill-fed, ill-housed, ill-clothed, despised and suffering slaves—that is the bottom layer upon which the whole edifice of so-called economic democracy rests.

The evil is that many Americans who do not believe in communism are acting as if they did. They are fooling with it, just to be on the "left," fooling with death, destruction, devastation—civil war to establish, not to abolish, slavery.

Whoever actually set down the words, Mr. Willkie's chapters on Russia certainly read as if they were written by two minds—one anxious to recite only the Communist catechism, the other shrewdly, if naively, observing the facts. On page 53, we read that "there is hardly a resident of Russia today whose lot is not as good or better than his parents' lot was prior to the revolution." That sounds like a fellow traveler reciting the catechism. It could not be Mr. Willkie observing the facts, for Mr. Willkie never saw Russia before the revolution; and what he saw on his trip was, in his own words, this: "Clothing nearly gone. * * * Women and children gathering wood from 50 miles around to make a little warmth against the coming cold. * * * Many vital medical supplies just did not exist. * * * Children work, in many of the shops, the full 66-hour week worked by adults. * * * The only food that could be bought in the markets was black bread and potatoes, at exorhibtant prices. * * *" These are findings which agree with the observation of Ralph Ingersoll, a friendly visitor to Moscow before Russia entered the war: "A dishwasher in an American hash-house would not trade his life for that of the average Soviet workman."

People who do not instinctively distinguish between what is true about Russia, and what Communists and their fellow travelers want us to believe about Russia, are not to be relied on in this day of democratic crisis.

THE REAL STALIN

It is well known—to all who want to know—that Stalin has two foreign policies; one conducted by his diplomatic corps, the other by his secret agents who sit in the directing committee of every foreign Communist party. The former is essentially a facade; in the latter Stalin talks his own language of "world revolution," "revolt of the colonies," "doom of finance capital," overthrow of "imperialism" (by which he means, primarily, Eng-

[2] Examples: Alexander Barmine, former brigadier general in the Red Army, estimates that the number is above 12,000,000. Anton Ciliga, Jugoslav Communist intellectual who spent years of imprisonment in the camps, gives their total population as 10,000,000. Boris Souvarine, French historian of Bolshevism, estimates 15,000,000. Russians, as I said, do things in a big way.

land and the United States), and other projects which bear the same relation to the Atlantic Charter that a mine full of TNT does to an advancing soldier.

Stalin talks this language also in his books and in keynote speeches made at every general meeting of the Russian Communist Party. But our molders of opinion, in their eagerness to love Stalin and to believe that Stalin loves democracy, are evidently avoiding those books and speeches. They are making the same kind of mistake former Prime Minister Chamberlain did. Hitler explained to Chamberlain in Mein Kampf exactly what he intended to do, but Chamberlain found it such painful reading that he preferred to muddle along on guesses.

Stalin's Problems of Leninism is just as explicit as Mein Kampf. The victory of his regime in Russia, he there explains, is not "self-sufficient," but is a prelude to similar victories in all other countries. The revolution presided over by him in Russia is "a prerequisite of world revolution." This book (revised up to 1939) has been issued to the number of 4,000,000 copies in Russia. All young people have to study it, every Communist must know it thoroughly. It has been translated into all important languages for the guidance of Communist parties everywhere. It is for sale today in the Daily Worker bookship in New York. Its promises have been rigidly adhered to in every piece of territory that Stalin has invaded.

In Poland, for instance, in order to hasten the victory there the invading Communists killed or imprisoned all the democratic and social-democratic leaders of labor,[4] and shipped away 1,500,000 to 200,000,000 of the civilian population to concentration camps in Siberia. Of these, 400,000 have since perished from hunger and exposure.

I take these figures from the official announcement, three times repeated, of the Polish Premier Sikorski, and from the statement of Bishop Josef Gawlina issued through the National Catholic Welfare Conference.

This means that, in order to establish a Communist dictatorship Stalin has to remove or exterminate approximately one-sixth of the population. All those people—workers, farmers, teachers, ministers, businessmen, officers, leaders of all walks of life—are briefly labeled "bourgeoisie" or "kulaks" and liquidated. They are not merely Polish patriots. They are everyone who has any objections to a general confiscation of property under the dictatorship of a totalitarian party.

This explains why the Polish Government in exile insists on talking about 10,000 murdered officers and hundreds of thousands of dying civilians. It explains why Finland persists in her sit-down war on the Russian border. It explains why General Mikhailovitch will not dicker with the Communist-led partisans in Yugoslavia. It is another fact which those who guide our policies in the post-war world ought to hold clearly in mind unless they like being taken in.

The tough, brutish realism of Soviet foreign policy stands out so flagrantly that one wonders why any diplomat should want to meet it with mouthwash. The Kremlin shows no regard even for its own supporters in foreign countries, unless they produce results. Russia made close pacts with Turkey at the very moment when Kemal Pasha was killing off Turkish Communists wholesale. Although Mussolini climbed to his pinnacle over the corpses of Italian Communists, Stalin went right on supplying him with oil for "the rape of Ethiopia," notwithstanding League of Nations sanctions. Under the same hard-boiled code comes Stalin's joint invasion of Poland with Hitler; his seizure of Latvia, Estonia, and Lithuania when the ink was hardly dry on treaties of nonaggression with those countries; his unprovoked invasion of Finland; and the Kremlin's recent announcement that it considers the territories seized during the period of collaboration with Nazi Germany as permanently its own.

[4] Two of these leaders, Henryk Ehrlich and Victor Alter, were men of international repute. When it became known that they were in prison in Moscow, liberals all over the world addressed pleas to Stalin for their release. For 15 months no word was uttered in answer to the pleas. Finally, Soviet Ambassador Litvinov informed William Green, president of the American Federation of Labor, that the two men had been shot in December 1941.

COMMUNIST WORLD REVOLUTION

United Nations officials needed to be reminded, it seems, at the time of the Casablanca Conference, that Russia is our ally only against European enemies. Stalin could not go to Casablanca, even by proxy, because his country still has friendly dealings with Japan. Both nations have emphasized their unspoiled relations on the basis of the friendship pact signed in Moscow, with Hitler's blessing, a few weeks before the Germans invaded Russia. That pact, of course, freed Japan to attack the United States at Pearl Harbor, just as the pact with Germany freed Hitler to unleash the war in the west.

An explanation of both pacts may perhaps be found in the principle laid down by Stalin long ago; that the "mightiest ally" of Communist Russia is "strife, conflicts, and wars" among "capitalist nations." (Pravda, January 30, 1925.)

Stalin has never retracted these words. Every one of his keynote speeches on world politics has been based on them. All Communists clearly understand that they are still in force. The molders of our foreign policy should study Stalin's acts and read his books and his speeches to the inside crowd, instead of swallowing like starved pickerel every glittering propaganda lure the Communists throw out.

This becomes more important every day, because there is little doubt that Stalin will soon move closer to the United Nations now that their final victory seems sure. There is no doubt at all that such a move will be heralded by the fellow travelers as proof of the Kremlin's sublime devotion to democracy. I would like to give warning that the closer we work with Russia the more vital it is, both to our national self-interest and the interest of world democracy, that we qut kidding ourselves and face the facts.

In this connection, it should be stressed that the much-advertised "dissolution" of the Comintern—self-styled "General Staff of the World Revolution"—was not such a move toward closer collaboration. There is plenty of evidence that the mere "dissolution" of a Soviet organization does not mean anything. The Cheka was "dissolved" when its name became infamous, and the GPU took over; the GPU was "dissolved" when it became infamous, and the NKVD took over; yet the same regime of police terror continued unchanged. Why should we expect a sudden end to the world Communist conspiracy just because the bosses of the Comintern have ostentatiously burned their letterheads? No powers have been surrendered, no principles revoked, no pledges given. That the American Communist conspirators who look with such obsequious fervor to Moscow for guidance will continue to get guidance is not subject to intelligent doubt.

We forget that Stalin once before pledged noninterference in American affairs—in 1933 when our Government officially recognized his regime. Earl Browder himself, chief of the American Communists, in his official statement on the "dissolution," said that it is of "no immediate concern" to his followers. He pointed out that his party resigned from the Comintern 3 years ago—and we need only add that, since then, as before, his party has followed the Moscow party line as deftly as the thread follows the needle.

There is one way to make the dissolution of the Comintern helpful both to democracy's survival and to our collaboration with Russia. That is to accept it as carte blanche from our ally to take effective action against the Communist conspiracy at home, Switzerland, the oldest and most steadfast democracy in the world, has set the example. She has recognized that totalitarian parties of all kinds—Nazi, Fascist, and Communist—are a conspiracy against the democratic state. She has outlawed her Communist Party with the others, and taken rigorous measures to prevent its revival under any camouflages or false labels. Our Attorney General, Francis Biddle, recently stated in an official opinion that "the Communist Party of the United States teaches the violent overthrow of existing governments, including that of the United States."

If we heed Mr. Biddle's words, and follow the Swiss example, quickly and in direct response to Stalin's act, we will both block his long-time schemes and compel his respect. But if we sing hosannas to Stalin for delivering us from the Comintern, he will laugh in his sleeve. And he will laugh last.

Those eager to be fooled about Russia make eloquent pleas for Stalin's "good faith." But Bolsheviks do not believe even theoretically in good faith. They believe that moral principles are a reflection of class interests, and that Communists are right merely because they represent the interests of the "advanced class." Stalin conceives himself as playing a role in a world-historical drama in which those who fawn on him are inexorably cast for the role of dupes. There is only one way to evade this role—this is to study Stalin's ideas and become as subtle in defending democracy as he is engineering its overthrow.

Winston Churchill showed some of this subtletry in 1937 when he wrote:

"Communism is not only a creed, it is a plan of campaign. A Communist is not only the holder of certain opinions, he is the pledged adept of a well-thought-out means of enforcing them. The anatomy of discontent and revolution has been studied in every phase and aspect, and a veritable drill book prepared in a scientific spirit for subverting all existing institutions.

"No faith need be, indeed may be, kept with non-Communists. Every act of good will, of tolerance, of conciliation, of mercy, of magnanimity on the part of governments or statesmen is to be utilized for their ruin. Then, when the time is ripe and the moment opportune, every form of lethal violence, from revolt to private assassination, must be used without stint or compunction. The citadel will be stormed under the banners of liberty and democracy; and once the apparatus of power is in the hands of the brotherhood, all opposition, all contrary opinions, must be extinguished by death. Democracy is but a tool to be used and afterward broken."[5]

It is a mistake to imagine that this drive against world democracy so vividly described by the British Prime Minister has been abandoned by Stalin or can be abandoned so long as he remains dictator. He knows as well as we do that liberty is contagious, that free business enterprise is an irresistible temptation. He knows that his revolution, like Hitler's, must be international. And this, too, he made unmistakably clear in his book when he wrote:

"What is the meaning of the impossibility of complete and final victory of socialism in a single country without the victory of the revolution in other countries? It means the impossibility of having full guaranties against intervention, and hence against the

[5] Great Contemporaries, pp. 168–169.

restoration of the bourgeois order. * * * To deny this indisputable fact is to abandon Leninism. 'We are living,' Lenin writes, 'not merely in a state, but in a system of states; and it is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialist states. Ultimately one or the other must conquer.' "

Is that not clear enough? Is there any reason why we represent Stalin to ourselves as a "man of mystery" whose aims are "inscrutable," except that we want to hide from ourselves the fact that he is a man of inflexible and brutal will whose aim is to overthrow, by any and every means available, the governmental, economic, and social system in which we live?

CAN WE SAVE DEMOCRACY?

If there were any military reason for hushing all these facts, I should be the last to bring them up. If there were a public opinion in Russia which might, if we coddled it, sway Stalin to lend us a base in the Pacific, I should be still. But there is no opinion except state opinion in Russia on any vital question; and not one word either of our praise or blame ever reaches the Russian people unless by special provision of the ruler.

As for that ruler himself, bred and educated in principled contempt for the statesmen of "bourgeois democracies," he finds only confirmation of contempt in their praise of him before their peoples while he sits cynically silent before his. If you want anything from Stalin, that is the way not to get it. There is no diplomatic or military reason why we should fawn on Russia and there is every moral, political, and patriotic reason why we should not.

Mr. Willkie says that he never has understood "why it should be assumed that in any possible contact between communism and democracy, democracy should go down." I agree with him there. The level of life in every respect is higher under democracy, and I believe it can continue so. I agree also, as I have said, that the Soviet Union is an "effective society" with which we must cooperate. I endorse his conclusion, "Learn all about them and let them learn about us."

But I submit that, if we confuse learning all about Russia with learning the propaganda slogans fed to us by those who, in blind worship of Russia, are plotting to destroy democracy, democracy will go down. If we respond to their brutal disavowel of moral principles with mushy pleas to believe in their good faith, democracy will go down. If, while they teach their people to sneer at democracy, we obsequiously hush-hush every bold word about the purges, the prison camps, the police army of 2,000,000 and the 10,000,000 galley slaves upon which their sneering rests, democracy will go down. If, while every Communist carries an inflexible purpose to destroy democracy built into the conceptual framework with which he apprehends the world, Democrats carry no purpose but to appease communism and kid themselves about its democratic war aims and the democratic rights guaranteed by its totalitarian constitution, democracy will go down. If, while Communists suppress by police terror and execution without trial every murmur in favor of democracy, we passively allow our schools, newspapers, radios, book and magazine publishing houses, cinema studios, Offices of War Information—any and every one of our centers of education, information and publicity—to be permeated with the agents and apologists of communism, democracy will go down.

Democracy is at a disadvantage in contact with communism because it is more civilized. It believes in tolerance, in free discussion, in popular enlightenment, in the value of life and the dignity of the individual, in honor and truth-telling and the principles of morality. Each of these virtues of the democratic way of life is a weakness in its struggle against the unscrupulous power drive of a conspiratorial party which replaces education with indoctrination, holds truth secondary to experience, and regards moral principles as old-fashioned prejudices.

It is the essence of democracy to be vulnerable to such an assault. One thing, one thing only, can save it, and that is clear and bold understanding. Democracy must have from its leaders incisive and uncompromising exposures of the barbaric nature of the Communist society and the devious method of the Communist attack. The closer our military and economic cooperation must be, the more pitiless must these exposures be. You cannot save democracy by shutting your eyes to the horrors of dictatorship. You cannot stop night from falling by turning the lamps down. Our sole weapon against their darkness is our light.

A Vote That Was Heard 'Round the World

EXTENSION OF REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. JENNINGS. Mr. Speaker, on June 25 of this year the President vetoed the War Labor Disputes Act.

At 3:13 p. m. o'clock the President's veto message was read in the Senate. Thereupon Senator CONNALLY, of Texas, a Democrat and a consistent supporter of President Roosevelt, then made the following statement:

Mr. President, I am sorely disappointed. The Senate is sorely disappointed. The House, I am sure, is sorely disappointed. The people of the United States in overwhelming majority are sorely disappointed. Every soldier and sailor on the seas and on the land and in the air is sorely disappointed. The sections of the bill about which the President complains were contained in the bill as it passed the House. They are not vital provisions in the bill. They are merely incidental. The President has the right, under the Constitution, to veto a bill, and the Senate has the right to pass a bill over the President's veto. I hope the Senate will exercise its high constitutional privilege.

The Senate passed the measure over the President's veto by a vote of 56 to 25.

In the House action came at 4:50. The veto message was read and the roll call began. By 5:28 p. m. o'clock the antistrike bill was law. Immediately before the veto message was read in the House, Representative WOODRUM of Virginia, a Democrat and a consistent supporter of the President, made the following statement:

Mr. Chairman, we are at a critical hour in the history of this world conflict. Our armies in the field are winning glorious victories. Today in the minds of many American citizens, we are about to lose an important battle on the home front. * * *

Every man is entitled to his own individual opinion, and he must take his own responsibility. The President can take his. He is amply qualified to do it. I want to take mine. I do not want to put it off. I want to say to the people that I represent, and I want to send a message to the boys in the fox holes and on the battle fronts, that those of us here at home are going to do our part. I hope very much it will be the pleasure of the House to take immediate action upon this important matter, and not let it simmer here and work into a festering sore. We should unhesitatingly pass this bill over the veto.

The House of Representatives passed the measure over his veto by a vote of 244 to 108.

The action of the Congress in overriding the President's veto was the swiftest and most emphatic action ever taken on such a question in the history of the country.

The President, in his veto message, approved the act and stated that he would have signed it but for the cooling-off provisions that it contained and its inhibition against contributions by unions to be used in Presidential and congressional elections.

His objection to the provision of the law that gives the members of a union the right to vote on the question of whether or not they will strike during the war and requiring a cooling-off period of 30 days before such strike can go into effect, and which also forbids an employer to close down his plant and be guilty of a lock-out without giving a 30 days' notice of his intention so to do, are hard to understand. The cooling-off period provision has worked well in the Railroad Relations Act.

The President's opposition to the no-campaign contributions by unions provisions of the act can be better understood. In 1936, he was the beneficiary of a half million dollar contribution from John L. Lewis. If Mr. Lewis could call back that $500,000 gift, he would doubtless gladly do so. He and the President no longer love each other.

This provision against campaign contributions by unions is a wise provision of the law. The members of unions do not pay dues for the purpose of financing political campaigns. Those who make up the unions are members of both the Republican and Democratic Parties. If the head of a union, therefore, is permitted to take $500,000 of the union's funds and give it to a candidate of his choice he will be using money contributed by Democrats to aid a Republican, or money contributed by Republicans to aid a Democrat. To permit such use of the union's funds cannot be justified on any ground, legal or moral.

The six provisions of the law are these:

First. Persons who coerce, instigate, induce, conspire with or encourage any person to interfere by lock-out, strike, slow-down, or other interruption with the operations of plants in possession of the Government, or who direct such interruption or provide funds for them, shall be subject to a fine of not more than $5,000 or to imprisonment for not more than 1 year, or both.

Second. Employees of war contractors must notify the Secretary of Labor, the War Labor Board, and the National Labor Relations Board of any dispute which threatens to interrupt production, and the N. L. R. B. is required, after the passage of 30 days, to take a secret ballot as to whether they will strike.

Third. The President receives authority to seize plants, mines, or other production facilities affected by labor disputes.

Fourth. Wages and other working conditions in effect in a seized plant or mine shall be maintained as they were before seizure, unless the W. L. B. consents to a change.

Fifth. The W. L. B. receives power to subpena the parties to labor disputes, but a W. L. B. member is forbidden to participate in any decision in which the member has a direct interest—as an officer, employee, or representative of any party to the dispute.

Sixth. Labor organizations, banks, and corporations organized under Federal law are forbidden to make political contributions in any election involving officials of the Federal Government.

The law provides a legal method of settling industrial disputes during the war and for 6 months thereafter. What has been the procedure heretofore? The President, without sanction of law, has been seizing plants and using the armed forces of the country to supervise their operation. He seized the coal mines of the country, and took them out of the hands of their owners in the absence of any law specifically authorizing him to take such action. And, after placing them in the hands of Secretary Ickes, he authorized Ickes to use the Army, if necessary, in his effort to produce coal.

As an alternative to the measure which he vetoed the President then said:

> There should be no misunderstanding—I intend to use the powers of Government to prevent the interruption of war production by strikes. I shall approve legislation that will truly strengthen the hands of Government in dealing with such strikes, and will prevent the defiance of the National War Labor Board's decisions.

In other words, he proposed to the Congress and to the people of this country to use his unbridled will in the attempted settlement of industrial disputes and in the seizure and operation of the private property of citizens and to use the armed forces of the Nation in so doing, and thus substitute a Government of one man for a Government of law. He then made the following recommendation:

> I recommend that the Selective Service Act be amended so that persons may be inducted into noncombat military service up to the age of 65 years. This will enable us to induct into military service all persons who engage in strikes or stoppages or other interruptions of work in plants in the possession of the United States.
>
> This direct approach is necessary to insure the continuity of war work. The only alternative would be to extend the principle of selective service and make it universal in character.

Such a proposal and such a law are without precedent in all the history of this country. It was objected to by the boys in the Army and the Navy on the ground that it proposed to make service in the Army a punishment and the uniform of the soldier the garb of one guilty of violating the law. It was well nigh universally objected to as a form of slave labor. The President thus actually proposed to draft every man in the country up to 65 years of age and force him to work at any task assigned him.

It is, therefore, seen that the President endorsed seven sections of the Connally-Smith Act and sponsored a work-or-be drafted law for strikers.

The President, in his veto message, well said:

> Laws are often necessary to make a very small minority of people live up to the standards that the great majority of people follow.

This is the expression of a self-evident truth. On the statute books of every State in the Union, murder, theft, arson, and many other offenses against society are denounced as crimes. These laws constitute no reflection upon people who do not violate them. They are on the books for the protection of the many who do not commit such crimes, and they are aimed against the few who do. Is there anyone who would wish to repeal them?

The President wished to limit action to John L. Lewis and his miners. Congress made the law apply to everyone who undertakes to slow up our war effort.

The issue is simple. The issue is clear. The boys in uniform, on the battle fronts, all over the world, on the land, on the sea, and in the air, are "striking" against Germany, Italy, and Japan. The American people are determined that no one shall "strike" against these boys here at home. And be it said, to the credit of our people, but few have done so. Industry, management, and labor have performed miracles in the production of war materials.

Up to this good hour no American boy facing the enemy has turned his back and ran. They have gone into battle with traditional American courage, and have written in their blood glorious chapters in American valor and sacrifice.

As Senator HARRY BYRD, of Virginia, said:

> The veto was not the act of the Commander in Chief of a great Nation at war. Rather it seemed the act of the politician who is a candidate for a fourth term.

Let him who will show the white feather and run here at home when he ought to stand, but let it be remembered that on the battle front our boys have stood, and are standing, with an unflinching courage that puts to shame those who have run out on them here at home.

Address of Hon. Forest A. Harness at the Ceremonies Observing the First Anniversary of the United States Naval Air Station, Bunker Hill, Ind., Friday, July 2, 1943

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. HARNESS of Indiana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered at the ceremonies observing the first anniversary of the United States Naval Air Station, Bunker Hill, Ind., on July 2, 1943:

There is for me a real thrill of pride and satisfaction in being here with you today for the observance of the first anniversary of the establishment of the Bunker Hill Naval Air Station. In fact, I never miss an opportunity to visit the station, for I am absorbed in the tremendous job you men of the Navy are doing here. Your accomplishments here have aroused in me a feeling of profound admiration and respect, and your station complement, from your commandant right down to the newest fledgling I have met, are gentlemen I consider it a privilege to know personally. Believe me, then, this visit would be a real pleasure even though this were just another routine work day.

But this day, closing the first year's activities at the station, is indeed a significant occasion. It deserves to be marked as a milestone in our inexorable march to victory. For what has happened here in the 12 short months in which this quiet countryside has been converted from the ways of peace to the hard, grim business of war, amazing as it seems in retrospect, is, after all, quite typical of our total national achievement. This is the transformation of a nation, sadly unprepared and desperately fighting on the defensive, into the toughest fighting power in the world, which from this point forward will definitely call all the important turns until our enemies are utterly crushed and destroyed.

This record of achievement seems all the more amazing and unreal when it is measured against our background as a peace-loving people. America tried through all the years of world unrest to avoid war. We went to such lengths to remain at peace, in fact, that the dictators fatally misjudged us as a soft, indolent people who would not, or could not, defend ourselves. None of us wanted to undertake this hard conversion of war. Navy men and civilians alike, we would have much preferred to leave this fertile area to its productive peacetime pursuits. We all fervently wish we had not been forced by brutal aggressors to tear our civilian economy out by the roots to make way for the machinery of war.

But with war thrust upon us, we in this community, like good Americans everywhere, willingly made our sacrifices; and are proud that we have been able to contribute in the creation of this important naval operation.

Very few Americans can realize quite as fully as you men of the Navy just how far we have come during these past 12 months, for none of us as civilians could possibly know, as many of you men of the service know from your own bitter experiences, just how desperate our situation actually was in the opening months of the war. Now that the first critical dangers have passed, we at home are beginning to learn bit by bit just how tremendous were the odds we faced. But even when the full history is written, we can never know, as many of you do, what it meant to face odds of 5, 10, yes even 100 to 1; and still to gamble audaciously; and to fight and die bravely against those overwhelming odds for that precious interval of time on which our very national life depended.

Nowhere in all the bright pages of our history is there one to surpass that which our fighting forces wrote in the early stages of this war. Nowhere in the glorious record of the United States Navy is there anything to surpass the magnificent achievements against insuperable difficulties which your comrades and you won in those dark days following Pearl Harbor.

To you, Commander Seligman, and to others of you in this gallant service who have met the enemy, and have added luster to our naval traditions, this milestone must hold for you a deep satisfaction which compensates largely for those weeks and months of heartbreaking trials and struggles through which nothing but your own indomitable

courage and unquenchable spirit could have carried you. I know it must mean more to you than words can describe to look back over the road we have traveled, to appraise the progress we have made, and to know with increasing certainty that total, final victory will surely come, no matter how desperately our enemies may fight.

To you young men who are on your way to join that constantly growing band of heroes carrying the war to our enemies through every sky in the world, I know the record your comrades have already written will inspire you in your own time to add more shining chapters to the glorious history of the United States Navy.

Certain though the ultimate victory is, we all fully recognize that there is still much tough going ahead. Our confidence, therefore, shall not lull us into a sense of complacency or false security. You men of the Navy, above all others, will, I am certain, carry on with the same grim determination which has enabled you to accomplish the amazing results which show on the first year's record at this station. I hope I shall have the good fortune to visit you again frequently, and to rejoice with you in the tremendous contribution you have made, and will continue to make, toward victory.

Veto of the Commodity Credit Corporation Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. VOORHIS of California. Mr. Speaker, the editorial from the Washington News, which I ask consent to include with my remarks herewith, expresses very clearly my own general point of view on the whole problem involved in the Presidential veto of the Commodity Credit Corporation bill. I voted to sustain the veto, and for the same basic reasons that the News presents in the first two paragraphs of the editorial.

It is also my very strong opinion that the News is right when it says "Congress owes it to the country to develop a program much more adequate than this device." I expressed myself to that effect in the House yesterday.

Most important of all, however, is the last paragraph of the editorial. "Inflation" and "increases in the cost of living" are not the same thing. Increases in living costs are a result of inflation. So are increased farm prices and increased wages. The cause lies in a surplus of active buying power over the volume of consumer goods to be bought with it. And this in turn has been due basically to the fact that we do not have a compulsory savings program to insure a distribution of Government bond ownership among the whole population nor an adequate tax program to pay a larger share of war costs currently. As a result billions upon billions of dollars of brand new money in the form of demand deposits have been created by the private banks of the country including the Federal Reserve banks for the sole purpose of buying Government bonds. This, plus the decline in the supply of consumer goods due to war production is the cause of inflation and of the almost irresistible pressure on prices. Only taxes and compulsory savings can end any inflationary danger that may exist. Until definite action is taken on these matters and from this point of view we shall have a serious and dangerous situation. We ought not to be selling a single bond to a bank for money that bank creates.

Indeed, the basic reason we have the O. P. A. with all the difficulties connected with it is because of the lack of action along the lines of the last paragraph in the News editorial.

I have repeatedly spoken to this effect and did so the first time when the original Price Control Act was passed.

The editorial follows:

UNFINISHED BUSINESS FOR CONGRESS

Congress acted sensibly when it sustained the President's veto of the Commodity Credit Corporation bill. This was a slam-bang piece of legislation, slapped together in anger. And it was wholly destructive in effect, for while it undertook to outlaw the administration's price roll-back subsidies it offered no substitute program to check the rise in living costs.

In our opinion, the President's subsidy plan is a makeshift, unlikely to do more than temporarily slow down the rise in living costs, unless other and drastic steps are taken. But it is an integral part of the only stabilization program now being pushed in Washington; it complements the administration's policy of freezing wages on the Little Steel formula, and, in the circumstances, if it were abandoned, the inevitable result would be to speed the upward spiral of prices, wages, and living costs to the even greater distress of all the people.

The Government is already committed to subsidies for meat, butter, and coffee. Failure to pay them would create chaotic conditions in the food industries, and their cost probably is not too extravagant a price to pay for an experiment to find out whether the roll-back will work.

Meanwhile, Congress owes it to the country to develop a program much more adequate than this device of charging a small part of each family's grocery bill against the credit of future taxpayers. One suggestion, well worth considering, is that offered by Senator AIKEN, of Vermont. Mr. AIKEN would revive the food-stamp plan, the effect of which would be to subsidize the grocery bills of only those in the lower-income brackets whose spending power has not increased. Certainly that is better than the President's plan, which undertakes to help pay for the food of everybody, including millionaires, war contractors, war-industry workers who are making two or three times as much money as ever before in their lives, and well-stuffed bureaucrats who haven't known a moment of insecurity in their 10 years on the New Deal pay roll.

But most important, and essential to the success of any program to keep down living costs, whether it be the President's roll-back plan or Senator AIKEN'S food-stamp plan, is the development of realistic Government taxation and borrowing policies. Prices are being pushed upward for the simple reason that there is more money to buy things with than there are things to buy. And the only way to drain off this excess spending money is through fiscal policies which will bring home to all people the realization that this war is no gravy train; which will recognize the truth Mr. Roosevelt uttered many months ago—"our standard of living will have to come down."

Mr. President, It's Your Next Move

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 30, 1943

Mr. BENDER. Mr. Speaker, little is gained by governmental denunciation of John L. Lewis or the coal operators. The damage has been done, and it will go on being done until our Washington officials have adopted an intelligent program which ties wages to prices. So long as price rises are permitted, the demand for wage increases to meet the rising cost of living is inevitable. In many communities it has been demonstrated by simple calculation that the price of food, clothing, and recreation essential to good work has gone up far higher than the 15-percent increase which has been so widely publicized as the Little Steel formula.

Whenever this occurs it is impossible to prevent the recurrence of vigorous demands for pay raises. The question of wage levels cannot be divorced from purchasing power, and if a seemingly good pay envelope of $40 can purchase only what $35 bought a year ago, both labor and capital must cooperate in the effort to achieve an intelligent formula to meet the issue. This is the underlying basis of the coal controversy from the viewpoint of objective-minded observers. We are not interested in the overweening personal ambitions of men or groups. We are interested in achieving a fair solution in keeping with the American desire to maintain the living standards for which our men are fighting overseas. Our Government so far has registered a signal failure on this basic, underlying issue.

Four Freedoms Flag

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. BUTLER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include a copy of the resolution adopted by the Board of Managers of the Sons of the Revolution in the State of New York at a special meeting on June 28, 1943:

Whereas it appears from statements in the public press that a Four Freedoms Flag is projected, symbolic of the United Nations, to supplement the flag of the United States of America in ceremonies overseas. According to the United Press account, "the two-flag system was arranged in unofficial discussions between Chairman Brooks Harding, of the Four Freedoms Committee and representatives of all the United Nations. In ceremonies overseas the United States will be represented in a Four Freedoms Flag flown beside

the standard of the Nation in which the event will be held"; and

Whereas the flag of our country was chosen by Congress on June 14, 1777, and was carried by our ancestors in the Revolutionary War, sustained in the War of 1812, the Mexican War, and the other conflicts in which our country has been engaged; and

Whereas it is the emblem of freedom and the symbol of the unity of our country, for which our ancestors died and our sons are fighting and is a token of all that has made America great and for which there can be no substitute: Therefore be it

Resolved, That the Sons of the Revolution in the State of New York, with unyielding conviction, protests and condemns the flagrantly unpatriotic and spiritually destructive proposal to have the United States represented in ceremonies overseas by a Four Freedoms Flag flown beside the standard of the nation in which the event is to be held, and demands that no flag other than the Stars and Stripes, adopted by Congress on June 14, 1777, shall officially or unofficially represent the United States directly or indirectly, nor may the Stars and Stripes be merged, amalgamated, symbolized, or in any manner be abridged or be included in any composite of flags.

I heartily concur in the above resolution, and I think the patriotic citizens of our country should be aroused in defense of their flag and all it represents.

Governor of Wisconsin Threatens Arrest of O. P. A. Probers

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. MURRAY of Wisconsin. Mr. Speaker, it appears from the following news article from the Antonio Journal that the O. P. A. is going to be required to follow the laws of the State of Wisconsin. The time to stop this assumption of power is when it begins. These bureaucrats should be forced to follow the law as well as the citizens are. The farmers are doing a mighty good job in spite of the senseless rulings of this O. P. A. outfit, and the citizens will make approved civilian contributions to the war effort more fully if "little men" in big places do not overestimate their importance. The article is as follows:

GOVERNOR'S OFFICE THREATENS ARREST OF OFFICE OF PRICE ADMINISTRATION PROBERS—DEMANDS STATE OFFICE LEAVE DRIVERS ALONE

MADISON, WIS.—Advisers to Acting Governor Walter S. Goodland, who protested yesterday against an Office of Price Administration plan to stop and search cars in Wisconsin for gas-rationing violations, said today they had been advised by Regional Director Raymond McKeough, of Chicago, that the drive had been called off.

The Governor's executive secretary, Roy L. Brecke, and his former secretary, James J. Kerwin, now district attorney of Milwaukee County, contacted McKeough by telephone and said they were assured there would be no unlawful search of automobiles or seizures of gas coupons.

The drive had been planned for the July 4 week end by John C. Reinhart, Office of Price Administration director for the Green Bay area, who had announced his investigators would keep sharp watch on northeastern Wisconsin highways to detect rationing violators and users of black-market gas.

MADISON, WIS.—A spokesman for the Governor's office, who declined to permit use of his name, declared today that any Office of Price Administration investigators stopping motorists in Wisconsin "illegally" to search for gas-ration violations would be subject to arrest by State and county highway enforcement officials.

The executive office was awaiting a reply today from John C. Reinhart, Office of Price Administration director for the Green Bay area, to a demand from Acting Gov. Walter S. Goodland that he abandon plans to stop and search automobiles over the July 4 week end.

The Governor told Reinhart in a telegram yesterday that the Federal and State constitutions forbid unlawful searches and seizures and warned the director that "I shall not tolerate any interference with the due process of law.

"Unless we hear from Office of Price Administration sources by 2 p. m. today and are advised that there will be no illegal searching of cars, Hugh Jones, head of the State motor vehicle department, and his enforcement officer, Homer G. Bell, will be summoned to the executive office for instructions.

"They will be told to take into custody any person who illegally or unlawfully stops a motorist on the highways and searches him or demands that he give up any personal effects."

SHERIFFS ADVISED

The informant said these instructions would go directly to members of the State highway patrol and that similar advice would be sent by telegram to the sheriffs of the State's 71 counties.

Goodland's telegram to Reinhart declared that the Office of Price Administration official did not "have the right to indiscriminately indulge your suspicions against the citizens of this State or other States traveling in this State as to the possible illegal use of gasoline coupons."

Reinhart had announced that Office of Price Administration investigators would keep a sharp watch on northeastern Wisconsin highways during the July 4 holiday to detect illegal use of gas-rationing coupons and users of black-market gas.

The Office of Price Administration director said he had not received the Governor's telegram last night and would not comment on it until he had read it. Earlier yesterday Reinhart declared that the Office of Price Administration would go ahead with its check-up as scheduled, despite the fact that police officials of Green Bay and Manitowoc said they would not stop motorists suspected of gas ration violations.

NO HELP FROM POLICE

City Attorney Thomas Dwyer, of Green Bay, told Police Chief Thomas E. Hawley his officers had no authority to stop motorists suspected of violations. Reinhart had asked police assistance in the check-up.

Police Chief James J. Kuplic, of Manitowoc, declared his officers would not stop motorists to check their coupons, adding that if they did so they might be overstepping legal bounds.

Governor Goodland declared his wire to Reinhart stated:

"I have observed an article in the press, relative to a wholesale check-up announced by you, in which you state that every investigator will be employed throughout the week end to deal with motorists unable to account for gasoline or coupons in their possession and that this proposed action is based upon your assumption that people traveling in this State will be doing so illegally insofar as Office of Price Administration regulations with respect to gasoline are concerned.

"I cannot condone the illegal use of gasoline coupons by either citizens of this State or vacation guests traveling in our State as I am unalterably opposed to the waste of gasoline or rubber in this critical period.

"But I vigorously protest the right of Office of Price Administration investigators under your directions to interfere with people lawfully upon the highways of the State and insist that you do not have the right to indiscriminately indulge your suspicions against the citizens of this State or other States traveling in this State as to the possible illegal use of gasoline coupons.

"I shall instruct proper law enforcement agencies of the State of Wisconsin to see to it that the rights of people are not invaded by you unless you have good grounds to stop and search. The Constitutions of the United States and of the State of Wisconsin alike guarantee the citizens of this State against unlawful searches and seizures, and I warn you that I shall not tolerate any interference with the due process of law.

"I am informed by reliable sources that the action you propose is not taking place in any neighboring State. The publication of your statement in the press has given most unfavorable publicity to Wisconsin. Would like an immediate reply from you."

Informed of the Governor's telegram, Raymond S. McKeough, regional Office of Price Administration administrator, said at his Chicago office the Office of Price Administration would continue to insist on strict adherence to gasoline rationing regulations.

"Unlawful search and seizure in connection with the enforcement of Office of Price Administration regulations have not been employed and will not be countenanced by this office," McKeough said.

He added that gasoline rationing is no longer important solely to save rubber but that conservation of gasoline and automobiles also has become vitally important to the successful prosecution of the war.

"The use of gasoline for vacation travel is not of itself illegal," McKeough continued. "If the motorist saves his A coupons for his vacation trip and foregoes the use of his car in the anticipation of that trip the regulations do not preclude the use of gasoline for that purpose. On the other hand, the use of gasoline which has been allotted for business purposes and defense purposes is illegal if used for vacation trips."

Post-War Plans—Proposed International Monetary Conference

EXTENSION OF REMARKS

OF

HON. CHARLES S. DEWEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. DEWEY. Mr. Speaker, this Congress after 6 months of constant consideration of subjects which involved every phase of our war effort as well as our battle on the home front to maintain our economy on a sound basis is about to recess. It is probably well that we go home for a space of time. We have been so constantly away from the good

people we represent I sometimes wonder how well we know what they are thinking. Are we ahead of them in our thinking, or, as many believe, are they far ahead of us?

But while we are absent from the Nation's Capital other departments of the Government will be hard at work interpreting by their efforts the various laws we have enacted. Not only this, but they will be making studies and holding meetings with other interested parties with a view of asking for further power and authority.

It has become increasingly evident that much thought is being given to post-war problems, national and international. The former are so close to us all, and so much a part of the districts we represent, that no matter whether at home or in Washington we are pretty closely in touch with them. The international post-war problems, however, are doubly complicated for the reason that they not only touch our own domestic economy but that of each nation with the representative of which our Government may be having conversations looking to future agreements. These conversations by their very nature are not given general publicity.

As one Member of the Congress, I am willing to go on record as to my deep interest and sense of obligation to take a constructive part in the post-war international problem. However, I also wish to go on record to the effect that America's participation should be on the basis of enlightened self-interest. Further, the citizens of our great country should be fully informed, in advance, what will be their future responsibilities. This knowledge can only be disseminated if the Congress is itself kept informed as to what plans and policies are being developed.

Within the past several weeks a plan looking to the stabilizing of values of international currencies in the post-war period has been published by the Treasury Department. On June 3, the Treasury issued regulations calling for a census of foreign assets of all types and descriptions owned by persons subject to the jurisdiction of the United States. This census, I understand, is required in connection with the proposed Treasury currency stabilization plan.

I further understand that there have been a number of informal meeting in the Treasury between our officials and Treasury representatives of foreign governments, at which many plans and projects for international monetary and credit cooperation have been discussed. These meetings, I am told, are the forerunner of an official International Monetary and Credit Conference that will take place here in Washington during the summer months when Congress will probably be in recess.

Mr. Speaker, I believe many of my fellow Members are as desirous as am I to accept our share in post-war rehabilitation, but like myself will want to keep fully informed as to what may be our country's responsibilities. Congress in the last instance will legislate on these points, and our information should be current in order that agreements that should be only tentative do not become so formal, that if the Congress should in final analysis find itself in opposition to some phase of the proposed agreement and so legislate, embarrassment will not ensue.

Mr. Speaker, I respectfully offer the suggestion that the Chair appoint a small committee of Members who will make it their business to be present in Washington at the time of the monetary conferences I have mentioned, and that they be authorized to attend all such meetings as observers, and from time to time furnish the Speaker, the majority leader, and the minority leader with reports of proceedings.

"Civilian Defense Is a People's Movement Which Offers a Greater Variety of Opportunities for Self-Expression in the War Effort Than Any Other"—Gov. Earl Warren, of California

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. GEARHART. Mr. Speaker, because of its timely interest and the unusual importance of that which he then had to say, I offer for inclusion in the CONGRESSIONAL RECORD the text of an address which was delivered at Columbus, Ohio, on June 21, 1943, by the Honorable Earl Warren, Governor of the State of California, at the thirty-fifth annual meeting of the Governors' Conference:

It has been almost 3 years since the fall of France and the evacuation at Dunkerque—and therefore 3 years since we first thought seriously of the question of civilian defense.

Prior to that time we stood in "splendid isolation," unprepared for any war and relying upon two great oceans to protect us from the forces and design of totalitarianism.

Overnight the size of those oceans diminished in our minds until we could clearly see the specter of Nazi and Fascist aggression approaching our shores. This was the birth of civilian defense in America.

In August of that year the Federal-State conference on problems of defense was held at the Hall of Justice in Washington, D. C. As a result of that conference a plan for organization on the State and local levels was submitted to the Nation with varied results. Some States became extremely active, others gave lip service to the cause, and others ignored the entire situation as being too remote for concern.

The Office of Civilian Defense was created but not really activated.

Then came Pearl Harbor, accompanied by intense public interest, considerable hysteria, and resulting confusion. In this period, however, much was done. Most of the States set up councils of defense, thousands of cities organized for the same purpose, and millions of citizens volunteered under the banner of civilian defense. We then remembered the sabotage and other fifth-column activities in France and the lowland countries. Our people, and government at all levels, were willing to do anything to protect us from aggression. The Office of Civilian Defense was soon restaffed, activated, and the movement grew to monumental size in a remarkably short period of time. A sincere effort was made to protect the system throughout the country. Volunteers became active and a sizable percentage of them have retained their enthusiasm and have continued to serve patriotically and efficiently ever since.

On the whole, however, I believe it is a fair observation to say that insofar as the general public is concerned, interest has been geared very largely to the day-to-day news of the war. When the news is bad the interest is high. When it is good, interest wanes.

Our present concern is that in many places we are in the latter state of mind. I say this without criticism of any particular community because I believe it is the tendency of most of us. It is another indication of our willingness to ride with the tide. I have wondered if perhaps there isn't something in the name of civilian defense that contributes to the condition.

In 1940, when we first started thinking of it, it was civilian defense in the strict sense of the word. We were concerned with the thought that we too might be attacked. We were attacked, viciously, and as treacherously as our worst fears. But the attack came a long way from the States. We did not see the destruction and bloodshed. It left no burning picture lingering in our memories. It was like the fall of France—separated from us by more than 2,000 miles. But it did change our national position from that of defense to war—all-out war.

Unfortunately, neither the name "Civilian defense" nor the approach to it changed sufficiently to represent our actual change in position. And as the war has progressed civilian defense has fluctuated in the public mind and on the whole borne too close a relationship to the current fortunes of our armed forces. This must be rectified.

Civilian defense, so-called, must become a militant and integrated part of total war. It must represent offensive mindedness. It must constitute the active mobilization of all civilian forces of America for participation with our allies in a life and death struggle to preserve our freedom and to determine the entire course of civilization. It is no longer defense. It is offense. I would start, therefor, by calling it what it is—home-front mobilization or some other term of like connotation.

I am one of those who believes that, at best, we are in for a long war and that the war news from day to day has no more bearing on the necessity for home-front mobilization than has the daily number of fires throughout the country upon the wisdom of carrying insurance policies on our homes. I believe we are not only in a war—we are in two wars. We are now bearing down on the European war with most satisfying results but we should never lose sight of the fact that when we finish there we still have to deal with an enemy that has no equal for mendacity, a foe who has planned for this world situation daily for a quarter of a century—a foe more ruthless and more desperate than any we have yet dealt with. We must remember that we will still be at war in an area that dwarfs the size of Europe in comparison. We will be opposing the combined resources of the West Pacific which are being marshalled day by day for our destruction. This indeed will be total war.

I trust this observation will not be considered simply a western viewpoint, although most thoughtful people in the West share it. It may be that the danger is more apparent to us than it is in some parts of the country, just as the danger to our civilians from the European Axis is more understood in Boston and New York than it could possibly be in the mountains of Nevada or California.

There is something about standing on the shores of California and seeing Jap submarines sink our coastwise ships or fire at shore installations that has a sobering influence. There is something about locating enemy incendiary bombs in the vast forests of Oregon that sharpens the imagination of those who know something about western forest fires.

Yes; and there is something about the thousands of boys who are invalided home from the Pacific front to our military hospitals—something about the stores of their experiences—that convinces one that we are in a war different from any the occidental mind has ever before even conjured with.

In passing let me say that there are in this country over 150,000 potential aiders and abettors of this kind of warfare. They are, or at least were until recently, in relocation centers in various parts of the country. Large numbers of them are reservists in the Jap military forces. Others have been taught the art of sabotage preparatory to this struggle. All have been indoctrinated with the imperial designs and have had them coupled with Shintoism—the religion of the race.

Recently we have read of the social experiments in these relocation centers and the movement within our Government to release the most of them as harmless to the security of our home front. But please don't be deceived. No more dangerous step could be taken. Nothing more destructive to our civilian defense could be perpetrated upon the country than the release of these potential fifth columnists upon the American public.

Some months ago we became terribly alarmed over the landing of six German fifth columnists in this country. They had been trained for sabotage in Germany and equipped with money to perfect their plans here. We recognized them as a national menace. We promptly tried, convicted and executed them and severely punished those who had aided and abetted them. But by comparison with the thousands of Japs now in relocation centers, who could and would do the same as these Germans, the whole incident was but a tempest in a tea pot.

This is not a personal view. Have you ever heard an Army or Navy man advocate release of these Japs? Have you ever heard anyone connected with the Federal Bureau of Investigation indicate such action would be consistent with the national security? What do State and local law-enforcement officers believe? I can tell you. They believe they cannot long be responsible for the safety of their communities if these people are released and scattered throughout the country.

If the Japs are released no one will be able to tell a saboteur from any other Jap. We are now producing approximately half of the ships and airplanes of the country on the Pacific coast. To cripple these industries or the facilities that serve them would be a body blow to the war effort. We don't want to have a second Pearl Harbor in California. We don't propose to have the Japs back in California during this war if there is any lawful means of preventing it. And, we believe, that what would be bad for us would also be bad for you.

We believe that one of the most vital necessities of civilian defense is to keep the Japs in relocation centers where they can do no damage to any part of the war effort. And further than that we would have them placed under the jurisdiction of the Army or the Federal Bureau of Investigation which are charged with the security of our Nation. There we will have unlimited faith that the interest of all Americans, both on the field of battle and here at home will be protected. This isn't an appeal to race hatred. It is an appeal for safety.

Civilian defense is a people's movement. It offers a greater variety of opportunities for self-expression in the war effort than any other. It enables us to rub shoulders with neighbors in a patriotic spirit of fellowship and common understanding. Properly organized and led, it can be the greatest morale builder we have. It is one of the few war activities in which States and local communities have been left to their own devices and their own judgment, based upon their own conscience, to do an important job in the prosecution of the war. It is one of the few Federal agencies that has recognized the necessity of a partnership between the three levels of government as well as between the three coordinate branches of government.

This agency, charged with the problem of activating 15,000,000 citizens for war activities, has been satisfied to make the pattern, declare the policies, and leave the execution where it belongs—with the States and their subdivisions.

In the West we have had an equal partnership with the Office of Civilian Defense and I believe this is due largely to the views of Director Landis, who declared:

"Government under our system is a resultant of the three sources of Federal, State, and local power. It is the sum total of these forces operating upon the individual that defines his rights and obligations with reference to his community, his State, and his Nation. Nowhere is that more true today than in the field of civilian defense, for civilian defense, either in terms of protection or in its promotion of the essential civilian war services, requires the interaction of all these forces."

These three sources of governmental power must be closely knit together in both peace and war. This is essential to our combined war effort and is essential to our peacetime efficiency. To say that such a welding together of the sources of governmental power is impossible is to deny what has been proved in the West by our experiences with the Office of Civilian Defense.

I wish that the other Federal agencies could also be made to see that Federal, State, and local governments must work together as a team; that all thinking, planning, and execution cannot be done in Washington to the exclusion of States and cities; that mass participation in the war can only be obtained by delegating responsibility to the other levels of government and that real national unity comes from the grass roots of the 48 States, rather than from the directives of innumerable bureaus in Washington, D. C.

For this reason alone, if for none other, it behooves us to make the most of civilian defense; not just from the selfish motive of protecting our own homes and property, but from the vastly broader viewpoint of enabling us to participate fully in all manner of related war services.

If we can remain constant in our loyalty to this cause, we can prove that State and local responsibility can be relied upon. To others who believe only in the centralization of power, it can be an object lesson and a goad to their conscience as we experience bureaucratic break-downs in the future.

In a short address of this character it would not be worth while to attempt to outline approved forms of organization for civilian defense. That has been done by Office of Civilian Defense, by many of the States and numerous counties in a far more comprehensive manner than could be done here. This much only I would say:

The day of defense has passed. The time for affirmative offensive action is here. Likewise, the Advisory Council of Defense belongs in the past. What we now need is a war council with power to initiate action and expand it into every National, State, and community service necessitated by the war and with extraordinary powers vested in it or the chief executives for use in times of great emergency.

Through such organization, with the leadership that can be given to it by the 48 wartime Governors of the United States, civilian defense cannot fail.

New England Shipbuilding Corporation

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. HALE. Mr. Speaker, on March 22 I took occasion to tell the House of the very gratifying construction record that had been made by the South Portland Shipbuilding Corporation—now the New England Shipbuilding Corporation—in the 60-day period next preceding. I did this because this company had previously been a laggard and had been most severely criticized on that account. Indeed, there had been a recommendation for the cancelation of its contracts with the Maritime Commission.

I now take particular pleasure in announcing that the company is to receive next month an award of the Maritime M. In the period from January 20 to and including June 30, 1943, 39 ships were completed and delivered, 3 in the last 10 days in January, 6 each in February and March, and 8 in each succeeding month.

Actual deliveries of ships are now averaging a little better than one every 4 days. If account be taken of progress on ships under construction, as well as those which have been actually completed and delivered, work under the Maritime Commission's contracts with New England Shipbuilding Corporation is now rather more than a month ahead of schedule.

I am certain that the House will share my satisfaction at this record.

The Butter Shortage

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. McKENZIE. Mr. Speaker, apropos of my remarks on the floor of this House yesterday dealing with the butter shortage in this Nation and the silly rationing regulations of the Office of Price Administration, I now insert a letter from the Honorable Prentiss M.

Brown, Administrator, Office of Price Administration, to which I referred:

OFFICE OF PRICE ADMINISTRATION,
Washington, D. C. July 3, 1943.
The Honorable CHARLES E. MCKENZIE,
House of Representatives.

MY DEAR CONGRESSMAN: In compliance with your request over the telephone this morning, I am giving below a brief digest of the rationing regulations which concern farmers and home producers of rationed foods. Two copies of the applicable ration order, Ration Order No. 16, together with sets of amendments, and two copies of the applicable form, Office of Price Administration Form R-1609, have already been sent under separate cover.

The ration regulation covers the sale of most meats (except poultry), butter, fats, and oils, American and certain other cheeses. All persons who sell any of these rationed items must do so in compliance with the ration order, no matter how small their scale of operations.

The requirements imposed by the order on small farm and home producers are extremely simple. They are not permitted to sell any rationed items unless they receive in return the proper number of red points. Also, they must report periodically to their local Office of Price Administration war price and rationing board. The farmer may report either once a month, once every 4 weeks, or by using a system of 12 reporting periods a year of 4 or 5 weeks each. He may choose the one of these alternatives which is most convenient to him. Within 15 days after the close of each reporting period the farmer must file a copy of R-1609 with his local war price and rationing board, and include with it the points which he has collected during the rationing period. The report may be filed by mail.

You will note that all the form requires, in addition to the name and address of the farmer, is the number of pounds of each rationed article which he has sold during the period, and the number of points which he has collected from the sale of rationed articles, and which he has submitted with the report.

There is one type of point-free transaction in which the farmer may engage under the regulations. He may lend up to 25 pounds of butter and cheese a year without taking up ration points. However, if he receives any payment for making the loan, it is not considered to be a loan and the points must be collected. Meat may also be loaned, up to a limit of 400 pounds of beef and veal and 150 pounds of other meats.

If you require any further information in regard to these regulations, we shall be glad to provide you with it.

Sincerely yours,
PRENTISS M. BROWN,
Administrator.

First I want to call your attention to the fact that while information was given to me on the telephone yesterday, July 2, 1943, and I made reference to it on the floor of the House on that same day and the letter itself makes reference to "your request over the telephone this morning"—the letter carries the date of today—July 3, 1943. Is this evidence of the fact that O. P. A. does not even know the day of the month?

The letter states, "the requirements imposed by the order on small farm and home producers are extremely simple." Then it goes on to say that all the farmer or housewife has to do is to collect the "proper number of red points" and then make a return to the O. P. A. War Price and Rationing Board either once a month or once every 4 weeks or in 12 reporting periods of 4 or 5 weeks each. Within 15 days after the close of each reporting period he "must file a copy of R-1609 with his local war price rationing board and include with it the points which he has collected during the rationing period." He must show the number of pounds he has sold and the number of ration points he has collected during the period, and he must not make a mistake. Great guns. What is simple about that? He must stop milking his cows, feeding his chickens and livestock. He must take time from cultivating his crops—producing vital food for the war effort. What for? To make a silly, foolish report to the O. P. A. And if he does not have time or choose to do this he must either go to jail, pay a fine, or not sell or give away his butter. Hitler could demand no more. Mr. Speaker, I ask you, is this an effort to boost the food production and distribution, or is it an effort to create a planned confusion, resulting in a shortage of food and a consequential regimentation of the American people?

And do not overlook the paragraph about the lending of butter, cheese, beef, and veal, and other meats. You can lend them but you cannot give them away or sell them. Mr. Speaker, does that make sense? Does that help the food situation? Is it not confusing? And then O. P. A. squalls and bawls because the Congress cut $35,000,000 from its appropriation. If they would cut out this sort of foolishness they would not need the $35,000,000.

Local Officials Cooperating Effectively in Fuel Crisis

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 2, 1943

Mr. CLASON. Mr. Speaker, the people of western Massachusetts, and in fact of the entire East, are greatly concerned about the supplies of fuel which will be available for civilian use during the coming winter. Each week we are advised that supplies of petroleum products are not accumulating to the extent that will be necessary to provide adequately for our requirements. Articles in trade journals show that less anthracite coal has been coming into Massachusetts in 1943 than in the similar period of 1942. The present strikes in the anthracite fields necessarily add to this problem. We have long since learned from Government officials that there are plenty of petroleum products in the United States but that our shortage is due to transportation facilities. Unfortunately additional facilities have not yet been made available which will permit the actual requirements to reach the East. Every Senator and every Congressman from the East has personally, and as a member of the New England or eastern blocs, urged the heads of the several agencies in control of the supply and distribution of petroleum products to act promptly in securing additional transportation facilities for the East. Several methods for bringing in supplies have been brought to the attention of the officials. Unfortunately they have not acted promptly or efficiently in many cases. On the other hand, the officials have charged lack of cooperation by local agencies and the people of the East generally in the use of fuel oil and gasoline. Previously I have brought to the attention of the House incidents where local boards have acted for the advantage of their communities and of the entire country.

I am pleased to cite another instance in point, and I quote the two following paragraphs from a letter which I have recently received from a constituent:

> In view of the fact that you are aware of the importance that oil in its various grades plays in this war, we feel that the accomplishment of the Springfield War Price and Rationing Board in saving 250,000 gallons of range oil would interest you. It has been possible to make this saving by a direct method of reviewing space-heating facilities. This is accomplished by means of a personal interview with the applicant and a questionnaire appended to the application. This questionnaire has been set up by our fuel-oil panel and has aided very materially in effecting this saving.
>
> The Springfield district Office of Price Administration and Mr. Murray, of the Washington Office of Price Administration, both complimented the Springfield War Price and Rationing Board very highly for this method and procedure and have recommended both the questionnaire and the method to the majority of boards under the supervision of the Springfield district.

This letter shows that not only our local officials, but the people of the East generally, are taking every means possible to conserve the supplies of fuel oil and gasoline which are coming in. It also shows that the officials who are acting on local boards—many of them devoting long hours without pay to the service of their country at this time—are giving close thought to the problems which come before them. They are seeking solutions for these problems and are advancing methods which will contribute to the welfare of the public.

It is to be hoped that sufficient supplies of range and fuel oils will reach the East this winter to prevent any suffering among the people of our area. The health, physical endurance, and the n orale of millions of workers in war industries depend upon the efficient handling of fuel for the East during the next 9 months.

Wisconsin Republicans for International Cooperation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 3, 1943

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks,

I submit herewith an editorial appearing in the Milwaukee Journal of July 2, 1943:

NOT ISOLATIONISM, SAY REPUBLICANS

The Republican off-year conference at Appleton, though it had previously voted to leave international relations out of its resolutions, realized that the people of the country everywhere are concerned about what the post-war world is to be.

So there had to be a resolution, and what is adopted is good—so far as it goes. It is one more indication that Republicans generally are against isolation. Though the Nation has been devoted to neutrality in foreign wars, the resolution says, and during each of two great wars has tried to follow this policy, it has become involved in both wars, and "it is now obvious that our previous policies of neutrality and minimum armaments have failed." The resolution continues:

"The United States must cooperate actively with all other like-minded nations in an effort to preserve world peace. The Republican Party of Wisconsin believes that world peace can be best assured only when sovereign States, while preserving their own full sovereignty and their own essential interests, find common ground on which to work together.

"The Republican Party of Wisconsin believes this common ground can and must be found and an international reign of law and order developed."

To this much a conference of conservative Republicans was ready to commit itself on June 27, 1943. Taken at its face value it means a pledge, so far as this conference could pledge its party, not to run out on the world after hostilities cease.

Loopholes are left, of course. It would be impossible to write a paper now saying exactly what any group will support or reject when the time comes for action. The smooth tricks played by Henry Cabot Lodge and his group in 1918 to defeat cooperation could conceivably be repeated—if there were enough Lodge-minded thinkers left in Congress and the country.

However, the animating spirit is more important than the words used. It is the conviction of these men and women that the United States shall take part actively in "an international reign of law and order." This is the conviction reported today wherever Republicans or Democrats or men of no one party meet to consider what is to be done after the war.

Renegotiation

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks I include here a copy of a statement made by Mr. Francis Callery, vice president of Consolidated-Vultee Aircraft Corporation, before the House Committee on Naval Affairs, on the subject of contract renegotiation in the aircraft industry. I include it here for what value the opinions and information may be to Members of the House.

The statement follows:

The opportunity to appear before your committee is very much appreciated. I am glad to be able to tell you some of the problems of the aircraft industry and how they are affected by the present renegotiation law. At the outset, I want to make it clear that the aircraft industry, as a whole, and every single member of it that I have any knowledge of, is opposed to making undue profits out of the war. I believe it would be fair to say that we feel as strongly on this point as anyone in the Army and Navy and in Congress. There is a clear distinction, however, between profits and profiteering, and in the course of my testimony, I am anxious to explain this distinction.

The aircraft industry has enlisted for the duration. Its business must be judged over this period and the transition period which inevitably will follow. Renegotiation adjusts the yearly profits of the aircraft companies as they appear on their books. These profits in a dollar sense may appear large but in fact they are mere bookkeeping profits. They are not the kind of profits that stick to your ribs. Stockholders do not get their hands on them. They do not represent undue enrichment to anyone. As far as I know there are no wartime aircraft millionaires in the making. The profits of the industry which we have been allowed to retain and a great deal more in the way of reserves are needed in order to permit the survival of this great industry which is doing such a magnificent job toward winning the war. Entirely aside from the perfectly natural wishes of all of us to survive, it is obviously a matter of national interest that the aircraft industry should survive in a healthy condition.

Before coming specifically to the subject of renegotiation, I would like to bring out a few very general facts to support the statement I have made that the stockholders of the aircraft companies have not profited from the war. In fact, they are not as well off now as they were a year or so before Pearl Harbor. I do not contend that they should be better off. I am merely pointing out that they aren't. I have had some figures made up for six large airframe manufacturers: Boeing, Consolidated Vultee, Douglas, Lockheed, Martin, and North American. In 1939 the average price of the shares of these six companies ranged between $41.70 high and $22.81 low. In 1940, the high was $42.97 and the low $25.72. In 1943, the range so far has been $29.97 high and $21.91 low. The present average price is approximately $24.90. It is clear that stockholders have not made any profit through any increased market value of their shares.

The average dividend of the six companies was $1.06 per share in 1939; $1.96 in 1940; $2.79 in 1941; and down to $1.96 again in 1942. Present dividend payments are no higher than in 1940 and, as stated above, no market profits. Dividends and increase in values of stocks are the only two ways I know of by which stockholders can benefit. The aircraft stockholders have not had the advantage of either of these benefits.

I wish to point out, however, that earnings on the average have gone up during this period from $1.83 per share in 1939 to $5 in 1940, to $9.61 in 1941, and $12.18 in 1942. This seems like a fantastic increase. It is, but as pointed out before the profits as shown are merely bookkeeping figures. Apparently aircraft-company stockholders and investors in general do not consider, and rightfully so, wartime earnings as real earnings but more the nature of reserves and highly inadequate reserves for the transition period after the war. So much for the figures on the aircraft industry.

Now, if I may, I would like to state briefly a few suggestions as to the changes in the renegotiation law which we think are necessary for the protection of the aircraft industry. We are not asking for rewards. We don't think anyone in industry is entitled to a reward for his contribution to the war effort. We don't want rewards, we only ask that we be left enough in the way of reserves out of the war to continue in business. This, in my opinion, is not asking too much and I believe this would be voted for by the overwhelming majority of our people.

I have had a great deal of experience with the Price Adjustment Board of the Navy. I have had many meetings with them. I have gotten to know the members of the Board well. Without exception, they are able, experienced, sincere, and patriotic men. In my many meetings they have invariably dealt with me with courtesy and with patience. Naturally, we have had many differences of opinion. We still have, on general policy matters, but we have a mutual respect for the other's point of view. We have about reached a settlement with the Board for the year 1942. It is the opinion of our directors that it is good business policy for us to accept the offer of the Price Adjustment Board rather than to continue with further prolonged renegotiations.

We are not opposed to the objective of renegotiation in preventing excessive profits. We think that the law should be amended or the regulations revised wherever possible, or both, so that:

1. Renegotiation would be based on net profits after taxes and net profits not exceeding 3 percent, or whatever rate the committee might determine, would be exempt from renegotiation.

2. Provision should be made in the revenue bill to allow necessary reserves for the post-war transition and these reserves should be exempt from renegotiation. In the aircraft industry, as I hope to be able to convince you, these reserves are desperately needed.

3. The provision for the termination of contracts should be changed so as to give adequate protection to contractors.

With your permission, I would like to comment briefly on the three points I have just mentioned and I will be very glad indeed, after this statement has been completed, which I assure you will be soon, to have you ask any questions you might care to ask.

1. RENEGOTIATIONS AFTER TAXES

At my early meetings with the Price Adjustment Board a very considerable amount of discussion had to do with whether we should consider profits before or after taxes. I then took the position that profits after taxes were the only real profits. I still take that position. Profits before taxes are stage money. You know the stand of the Price Adjustment Board on this subject and the reasons given, so I will not go into their side of the case. In a memorandum which I prepared on May 13, 1942, a year ago, just after the law was passed, I pointed out that, in my opinion, the word "profit" or "excessive profit" as stated in the law could only mean profit after taxes. Webster defines profit as advantage, benefit, the excess of returns over expenditures in a given transaction or series of transactions. God knows the old adage is true today that there is nothing more inevitable than death and taxes. Taxes are an unavoidable cost no matter how you may reduce expenses by efficient operation of a business. Taxes loom as the one item of cost that is proof against efficiency. It is a fixed element of cost. It is the one irreducible element of cost. The law says that excessive profits are to be recaptured through renegotiation. The law does not say profits before taxes but the price-adjustment boards renegotiate before taxes. In my opinion, it makes just as much sense to compute profit before pay rolls, or cost of raw materials, as it does to figure profit before taxes. How can a profit be identified as an excessive one until the profit itself is known and how can a profit be determined until the taxes are known?

The thing that should matter is what the United States Government pays for what it

buys. The Government is both the buyer and the collector of taxes. The taxes paid, from an over-all cost standpoint, should be considered a net reduction in the price paid by the Government. To illustrate, let us assume that an identical type of airplane is sold to the Government by each of two manufacturers at a price of $150,000. Let us also assume arbitrarily that this price of $150,000 is after all renegotiation adjustments and the Price Adjustment Board allows each company a profit of 10 percent before taxes. Let us further assume that one manufacturer is an aircraft company which designed, developed, and spent its own money on the airplant. This aircraft company naturally has a small tax base and its profits are taxed at the 80-percent over-all limitation. The other manufacturer, an automobile company perhaps, would be building the plane to the aircraft company's designs and specifications and would be benefiting by the know-how of the aircraft company. This manufacturer, we will say, has a favorable tax base and is taxed at an over-all rate of 50 percent, as compared with 80 percent for the aircraft company. Now, the profit before taxes for each company would be 10 percent of $150,000, or $15,000. The aircraft company would pay a tax of 80 percent, leaving 20 percent, or $3,000 for its net profit. The other manufacturer would pay a tax of 50 percent of the $15,000 profit, leaving a net profit after taxes of $7,500. If the price is $150,000 and the profit before taxes $15,000, the manufacturer's cost of the airplane would be $135,000. The net cost to the Government, however, washing out taxes as in one pocket and out the other, would be the manufacturer's cost plus the net profit to the manufacturer after taxes. In the case of the aircraft manufacturer this would be $135,000, plus $3,000, or $138,000. In the case of the other manufacturer the cost to the Government would be $135,000, plus $7,500, or $142,500. In this hypothetical case, which is probably paralleled throughout industry in general, the Government would be paying $4,500 more for the same product from one manufacturer than from the other, and one company would be making $4,500 more profit in wartime for the same service. In effect, this is a subsidy to hold up the earnings during the war of companies that were profitable before the war.

The aircraft companies are selling airplanes which they have created and sweat blood over. It is their only business. They have nothing to look to except airplanes after the war. It is not a stop-gap business for them. Because of low tax bases they end up with less profit than companies which are filling in on war work and will have huge market demands for their own products after the war.

I imagine that a number of examples have been brought out before your committee on how net profits are affected by varying tax bases. The extreme example under present tax rates would be a comparison between two companies, one with the highest tax base and the other with the lowest base, assuming both companies are allowed a profit by the renegotiators of 10 percent before taxes on adjusted sales. The company with the high base would pay a tax of 40 percent, leaving him a net profit of 6 percent after taxes. The other manufacturer with the low tax base—and the aircraft industry generally is in this class—would pay a tax of 80 percent, leaving him a profit of 2 percent after taxes. In this illustration it is 6 percent net after taxes compared with 2 percent net. The old company with a good background of earnings and probably large capital reserves makes 3 times as much net profit as a manufacturer with a small tax base. In 9 cases out of 10 the low-profit company needs the additional profit much more urgently than the high-profit company.

I have heard it said that the job of renegotiating the thousands of war contracts would be materially reduced by exempting companies doing an annual renegotiable business of $500,000 or less. This, I understand, would screen out a large number of contractors, some making very high profits perhaps, and others small profits. We think a fairer method of screening would be to exempt companies on the basis of profits made rather than on the basis of the size of their business. The suggestion made earlier that profits of 3 percent or under after taxes, or some other appropriate rate, be exempted from renegotiation would, in our opinion, be an effective method of screening. Under this method, the companies exempted would not be making, by and large, inordinate profits out of the war.

I do not by any means wish to convey the idea that companies are entitled to 3 percent after taxes and that this profit rate must be allowed by the procurement agency. I think it is the job of the procurement officers to buy as cheaply as they can but, if, through efficient operation, a company can end up with a profit of, say, 3 percent after taxes, this profit should be his and not subject to recapture through renegotiation.

It has been said that the computation of profits after taxes is highly inflationary and requires a high price in order to allow a company to end up with such-and-such a profit after taxes. I do not agree with this contention at all. If the Government agencies, the Treasury, and the procurement authorities are considered on an over-all basis, it amounts to merely a matter of "in one pocket and out of the other."

2. RESERVES FOR POST-WAR TRANSITION

This we think is the most important single problem confronting the aircraft industry. The problems of the industry can be well illustrated by using the figures of Consolidated Aircraft with which I am familiar. Our business has expanded from sales of $3,600,000 in 1939, $9,300,000 in 1940, $94,800,000 in 11 months of 1941 and $304,000,000 for the year to November 30, 1942. The sales of Consolidated Vultee Aircraft Corporation for the year to November 30, 1943, are estimated at over $650,000,000. This company represents the merger of Consolidated and Vultee which became effective on March 18, 1943. The combined sales of the two companies for the 1942 fiscal year amounted to approximately $400,000,000. The net working capital after suggested renegotiation settlements, as of November 30, 1942, amounted to approximately $9,000,000. This is only about 2.25 percent of sales in 1942 and less than 1.5 percent of our estimated sales for the current year. I hope you will keep this figure of $9,000,000 in mind. It is our entire working capital and it is equal to about 2 weeks' pay roll.

On November 30, 1942, Consolidated alone had liabilities and commitments of $546,000,000 against which we had cash, receivables, and inventories and Government supply contracts covering our commitments to subcontractors and suppliers. In addition, we had our own working capital of $9,000,000. It is easy to see that this meager margin of capital to risk is a real problem. If we were not devoting all our efforts to getting out more airplanes at the lowest possible cost, this would be enough to give us nightmares. I say to you with the utmost sincerity that our stockholders are risking every penny of their capital, up to the hilt, in the war effort. The general belief is that we have been benefited by the immense volume of business which has been entrusted to us. This is far from being the case. Our stockholders and the stockholders of all companies in the aircraft industry would be far better off if their businesses had not been expanded to these wartime fantastic levels. I have contended in my dealings with the Price Adjustment Board that the profits we asked for were not real profits in any sense but merely an effort, and an inadequate one at that, to cushion the shock of shrinkage which is bound to occur. Even the most ardent aviation enthusiast—and I am one of them over the long range—cannot foresee anything but a shrinkage of business in the period immediately following the war to a fraction of what it is now. We have been raised to the sky from humble origins. We are going to be cut back to our size. Make no mistake about that.

Assuming that we would survive the post-war transition, the aircraft industry would then need capital to develop peacetime products. The airplanes of today are not commercial types. Entirely new designs or major modifications of existing designs must be made. It costs real money to build a new, big airplane, and this money—"seed money" it has been called—must be available in the hands of the aircraft manufacturers if they are to continue in the business. For example, the prototype—that means the first airplane—of a 100-passenger transport would cost around $4,000,000. The tooling to go into quantity production would cost an additional $10,000,000.

I know it is not the intention of Congress or of the Price Adjustment Board to take the aviation business away from those who have done so much to give us the best Air Force in the world and to deliver it to the automobile companies or other companies with adequate capital after the war. This may well happen and it can only be prevented by leaving the aircraft companies with enough resources to continue in business, to keep at least their pre-war organizations together and to continue applying toward aircraft development the engineering brains and skills that have made this country great in the air. I do not know how to emphasize this point strongly enough and, when this statement is completed in a very few minutes, I hope you will question me on it.

In the aircraft industry we are concerned not with wartime profits but with the survival of our businesses and any intimation that we are profiteering is bitterly resented.

To get back specifically to the question of reserves, I think it would be very helpful if Congress—either through the tax law or through amendment to the renegotiation law—could provide for the post-war transition period. I am sure that the Navy Department Price Adjustment Board is fully aware and sympathetic with this problem and I am sure that they would welcome instructions from Congress that would permit them to allow reserves. Members of the Price Adjustment Board are businessmen. They know what the aircraft industry has done for the war and what it will be up against when the war is over. They interpret the present renegotiation law as not permitting them to allow these reserves and congressional clarification appears necessary.

3. TERMINATION OF CONTRACTS

All of our present contracts with both the Army and Navy can be canceled at any time by the Government if the contracting officer determines that it is for the best interest of the Government. The present contracts in effect provide that expenditures up to the date of cancelation will be paid for, plus part of the profit. A final determination under these provisions, however, may well be a prolonged affair and expenditures made by the contractor in all good faith for the carrying out of the contract might not be allowed in the settlement. Assume even that all costs up to the date of cancelation are paid, the contracts do not give any protection to the contractor against his real problem; that is, operating expenses and losses after the termination date. We go on the theory—and perhaps it is wishful thinking—that our expenditures for Government account up to today are covered if a cancelation notice should be sent out to-

night. Tomorrow, however, is an entirely different matter. Our operating expenses could not possibly be cut off in time to prevent enormous losses. As I mentioned before, our net working capital is less than 2 weeks' pay roll and pay roll is only one element of expense. Frankly, I do not know what we could do. A drastic cut-off would be chaos in the commmunities in which we are doing business and, while we hope this method of termination will not be followed, it is possible under our contracts and we must be thinking of it as a possibility. We would like to see termination provisions written so that they will give the contractor some measure of protection against loss during the period following termination. I do not think this is asking too much.

CONCLUSION

The story is a long one and I have already taken up a considerable amount of time. I could bring in considerably more information, but, as it is, I think I have touched on at least the main points; namely, renegotiation after taxes, reserves for the post-war transition, and the termination of contracts.

Thank you for your attention.

Before closing, however, I would like to bring out the accomplishments of Consolidated Aircraft in the matter of price reductions. Early in 1942, before the renegotiation law was even discussed in Congress, it was decided by Consolidated's management that, due to reduced costs brought about by manufacturing efficiency, it would be proper to pass this saving along to the Government in the form of reduced prices. In April, before the renegotiation bill was introduced, Consolidated advised the contracting officers at Wright Field that it was planning to make certain voluntary reductions. In May, the price reductions were made. Further price reductions were made in July and again in September, with the net result that the Government for the fiscal year to November 30, 1942, benefited to the extent of $127,400,000. Of this amount, approximately $41,000,000 was refunded in cash and the balance through reduction in contract prices and waiver of escalator payments due. All of these returns to the Government were made voluntarily and this is proof of our willingness to return savings made possible through manufacturing efficiency. In addition, in the proposed settlement with the Renegotiation Board, Consolidated is planning to return something over $20,000,000 applicable to 1942 business. As this income has been reported for tax purposes, this latter refund may have to be made in the form of a net amount after taxes.

We Protest, Again

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. CASE. Mr. Speaker, when the hearings on the Military Establishment appropriation bill for 1944 were held before the subcommittee of the House Appropriations Committee considerable testimony was taken on the discharge of men for disability existing before induction. I urged that the War Department leave to the Veterans' Administration the determination of how physical disability was caused and not prejudice a veteran's case by the wording on the discharge given.

At that time I pointed out to General Magee a case had come to my attention where a man had 14 months of service and then was discharged on the basis of a preexisting disability.

The following excerpts from the hearings will be of general interest:

Mr. CASE. Why do you put in an allegation of the possibility of the man having contracted the disease prior to service? Can you not leave that open? If you leave it open, the Veterans' Administration could make its own determination.

General MAGEE. I think it is our responsibility. Take, for instance, the form of insanity known as dementia praecox. Some people have it and some do not. It is not an uncommon experience to bring a young man into the service who looks all right and who gets by pretty well. And it is possible if he had stayed in civil life he would not have had any trouble. But after he has been in the service 3 months he develops dementia praecox. There are certain forms of insanity that develop in the person himself. It is hardly possible that when he got into the Army he so changed his mentality, or his emotional content, so much as to its being the cause of the dementia praecox. So we have drawn an elaborate schedule. We used to have a 3-year limit; we assumed that if a man developed such a disease after 3 years of service it was in line of duty. In that we were out of step with the Veterans' Administration and the Navy and the most humanitarian thought in that direction. They put the time at 6 months. We changed ours. That is as effective as the 3 years, only it gives a man a break of 2½ years. Then somebody will say this thing happened to that man in 5 months and 2 weeks; why should he not be considered to be in line of duty?

Mr. CASE. Of course, the time in the service will have something to do with it. A man might go on for a year's time and not show any unfavorable mental condition, and then in another 6 weeks suffer from the adjustment under war conditions——

General MAGEE. Of course, those are intangibles.

Mr. CASE. In deciding that a soldier can be given an honorable discharge, an ordinary discharge, or a discharge without honor, all I am asking is why you cannot give him a medical discharge, which would be the same as an ordinary discharge, without prejudging the case, so far as the Veterans' Administration is concerned?

General MAGEE. I do not know that I can. It does not become entirely a mental problem with us, but an administrative problem that concerns finances. We would be perfectly willing, if the War Department saw fit to open up that field of inquiry, to give the information, but I think the decision would have to be between the Veterans' Administration and the War Department.

Mr. CASE. You can give a discharge where you can say it was because of disability incurred in line of duty, and a comparable discharge would be an honorable discharge, or you can give a discharge which would be simply a medical discharge, without comment.

General MAGEE. We do not do that.

Mr. CASE. But they do give an ordinary discharge to a soldier.

General MAGEE. If it is indicated as being in line of duty, a board of officers investigates.

General LULL. Cannot the Veterans' Administration determine whether a case is compensable?

Mr. CASE. They can, but when you have that in the record and you have said it is because of the possibility of preservice origin, you have set up an almost insuperable bar which is difficult to offset.

General LULL. The doctor's judgment at that time is better than it would be some months or years later, because the man is right there where he would have his history, and have the case fresh in mind. The Veterans' Administration does not know what the attitude toward this particular case is, and I should think they would want to take the judgment of the medical men who have treated the case and observed him under those conditions.

Mr. CASE. There is a clinical record and the medical history of the man which should give them that, but you should be able to draw a conclusion as to whether or not a man is compensable within the intent of Congress in the law.

General MAGEE. If a situation of that sort arises, where two governmental agencies can take the same conditions and come to divergent conclusions, and if they can get no further, Congress will, of course, have to say what the answer is.

Mr. CASE. Your purpose is different. You are passing upon whether this man is fit for service in the Army. The Veterans' Administration has to determine whether his medical condition is compensable in the terms of the act of Congress in providing compensation where there is direct injury, or contribution toward the cause. I am trying to see if it is not possible to get a decision so that case is not prejudiced in the minds of the Veterans' Administration.

Mr. ENGEL. I think we can all agree that the case of a man who has epilepsy, where it develops that he was in an institution before he got into the Army, he apparently did not give his history and got into the Army wrongfully. I had the case of a man at Fort Sheridan who saw a man drop in the rest room in a fit. If he had gotten into the Army there is no question about what would have happened to him. But Mr. CASE's case is one where there has been no prior history at all.

General MAGEE. I can see exactly how you feel, and it might be that a review of that case might bring another decision.

Mr. ENGEL. The difficulty is that you can have these cases where an injustice was being done, and they come before Congress and we pass a law which takes in that particular case, and then it makes it so broad as to take in some other cases which should not come into it.

General MAGEE. That is right.

Since that time some other outstanding cases have been brought to my attention.

One is that of a man who had been in the service for more than 2 years, during the course of which he went through the Pearl Harbor incident, and then was finally discharged with dementia praecox, as having existed prior to enlistment and not aggravated by military service.

Another was a case where a major was discharged after nearly 2 years of active service in the Tank Corps, with a notation that his heart disability preexisted his service and was not aggravated by military service, although, prior to his service, he had served in the Officers' Reserve Corps for about 20 years and had been frequently examined with no notation as to a heart disability.

Under leave to extend my remarks, I wish to submit herewith an editorial on

the subject appearing in the Disabled American Veterans' Semimonthly of June 25, 1943:

WE PROTEST AGAIN

Several weeks ago we registered a protest against the practice of certain officers of the armed forces in obtaining, under duress, the signatures of men to statements that the condition or conditions for which they were about to be discharged on a certificate of disability existed prior to enlistment.

We made no claim at that time that the practice was general or that it was in compliance with orders or that it was the accepted policy of the military. We just did not want to believe that such unethical, if not crude, methods had received the sanction and approval of America's outstanding military leaders. Frankly, we believed we would receive the assurance of those in command that such practices would stop.

But they haven't stopped. At the time of our original protest we had sufficient evidence in the form of specific cases which had been thoroughly investigated and which justified our protest. Now we are in possession of additional evidence of such volume and from such scattered sources that we demand that the continuance of this practice be stopped immediately.

This is no request that our sons and brothers and friends in the armed forces be babied and spoiled in training or in combat. It is a very definite demand, however, that the very un-American practice of bulldozing and threatening men who are admittedly sick in mind and body into signing false statements or statements against their interest be done away with.

Yes; it is our concern and we consider it very much our responsibility to do all in our power to correct a situation which is becoming odorous and which can be stopped with the stroke of a pen.

We may be criticized in being so frank. As a matter of fact we should be complimented by those in authority for our restraint in not publishing in detail the facts of specific cases which have aroused us and would certainly arouse, if not disgust, any fair-minded American.

We suspect the purpose, but what is the logic of educated medical officers in obtaining from sick and broken men or their grieving parents signed statements written in mysterious medical phraseology and relating to conditions the very cause and nature of which is often hidden from the vast majority of the medical profession itself? Indeed, the whole practice is absurd if it were not so often tragic.

The serviceman has the right to assume that the physical examination given him at the time of his acceptance into the service is complete and reliable. If this is not so it should be immediately corrected. If the medical authorities in the service counter this with the statement that the examiners are working under such pressure as to render this impossible, may we not then assume that the findings and conclusions of the medical officers, working under even greater stress and strain, are likewise fallible?

House Resolution 2703, now before Congress will, if enacted into law, render these false statements worthless and will direct the Veterans' Administration to disregard them. In the spirit of American fairness and as a long step toward the goal for which we are fighting House Resolution 2703 should become law.

We reiterate, the entire problem will be solved when the Army and the Government adopt the policy that when a man has been examined and accepted into the military service he is considered to be in sound mental and physical condition except for those conditions noted by the medical examiners and made of record at the time of his acceptance. It is the only equitable solution. It is the American way.

The Race Question

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. McKENZIE. Mr. Speaker, the following telegram from the Honorable E. D. Coleman, sheriff of Tensas Parish, La., speaks for itself and emphatically expresses the majority opinions of the people of Louisiana and the Southland:

JUNE 28, 1943.

Hon. CHARLES E. McKENZIE,
House of Representatives,
Washington, D. C.:

Racial situation tense, caused by attitude politicians in high places and inflammatory literature circulated throughout Nation especially Pittsburgh Courier and Chicago Defender papers. We have deep interest in welfare of our white and colored people, but cannot subscribe to teachings of such poisonous periodicals. Attempt to put teachings into practice can only end in disaster to our colored race and bring sorrow and lasting regrets to their friends of the South. Our relations have been cordial, friendly, and mutually advantageous for many years and especially should not be disturbed at time of great national peril. Results could be no different if agitators were in fact Axis agents. We do not want a repetition of the dark days of 1865–78, the beginning of the reconstruction period of Dixie after the Civil War. The shameful and dangerous position in which this Nation stands today with reference to the Congress of Industrial Organizations and its No. 1 traitorous leader, John L. Lewis, is an example of a tragic blunder by our President. We hope he and other misguided persons will change their attitude on the race question before it is too late.

E. D. COLEMAN,
President, Louisiana Sheriff's Association.

Empire Parliamentary Association

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Prime Minister of Canada in the Canadian House of Commons:

[House of Commons, Tuesday, June 29, 1943, Speaker: The Honorable James Allison Glen]

The house met at 3 o'clock.

EMPIRE PARLIAMENTARY ASSOCIATION—OTTAWA MEETINGS—DELEGATION FROM UNITED STATES CONGRESS

Right Hon. W. L. MACKENZIE KING (Prime Minister). Mr. Speaker, it would, I think, be in keeping with the wishes of honorable members were I to make a brief reference to the conference concluded today by the Empire Parliamentary Association. The meetings were attended by delegations from the parliaments of the United Kingdom, Australia, and New Zealand and from the legislative assembly of Bermuda, as well as by many honorable members of our own parliament. The proceedings throughout were of a high order and demonstrated the value of the free expression and interchange of ideas among the nations of the Commonwealth which the conference has been formed to promote.

The conference will be particularly memorable because of the attendance, yesterday and today, of a distinguished delegation of visitors from the two Houses of the Congress of the United States. The delegation, comprising Senators and Members of the House of Representatives, was appointed by a concurrent resolution of the Congress of the United States of America, accepting the invitation of the Canadian branch of the Empire Parliamentary Association. The resolution itself will, in time, become a historic document. It is a signal honor, paid to Canada and to the Empire Parliamentary Association, by the Congress of the United States. The resolution is also of historic significance, as adding another bond to those which already join the nations of the British commonwealth of nations and the United States in the common defense of free institutions.

The House will, I am confident, wish to record its appreciation of the visit, at a time of war, of our distinguished fellow parliamentarians from other nations of the commonwealth, and its satisfaction that Canada should have been the place of the meeting for the first time of a delegation from the United States Congress with the Empire Parliamentary Association. In this meeting we can see the development of the understanding, friendship, and good will on which even now is being laid the enduring foundations of a new world order.

Mr. GORDON GRAYDON (leader of the opposition). Mr. Speaker, I am glad at this point to associate myself and the members of the party which I have the honor to lead with the sentiments which have been voiced so eloquently by the Prime Minister. The meetings of the Empire Parliamentary Association which concluded today have been memorable in character. They have served a most useful purpose and in future will be looked upon as having been of great value, not only in relation to the problems which may arise during the war period through which we are passing, but also in relation to the tangled problems which the nations and Governments of the British Empire, the United States, and others will have to solve in the post-war period.

In my opinion the meeting of representatives of the people rather than the heads of government is an occasion of which we should take cognizance. If permanent peace is to come, the common man of each nation must learn to respect and to understand the common man of all the other nations. These meetings have brought forth a new feeling and have generated a new spirit which will be of great value in the days that lie ahead. I wish to echo the words of welcome extended by the Prime Minister to the delegates from the various parts of the British Commonwealth and also from the United States. We view with a great deal of interest the renewal of the acquaintanceship, friendship, and brotherhood among those who met together.

Mr. M. J. COLDWELL (Rosetown-Biggar). Mr. Speaker, on behalf of our party I should like to add an expression of appreciation that this conference has been held in Canada. To those of us who visited Great Britain some 18 months ago it was indeed a pleasure to welcome such a delegation to Canada. There is not much that one can say, except that conferences of this kind, participated in by what we might term the rank and file of our legislative bodies, including on this occasion Representatives of the Congress of the United States, can bring nothing but good to the United Nations and to the world. I hope that it will be the first of many such conferences.

Mr. J. H. BLACKMORE (Lethbridge). Mr. Speaker, the members of my party rejoice along with other Canadians in the fact that we have laid the foundation for the development of good will between the two great branches of the Anglo-Saxon race. The conferences which have just been held were epoch making in their significance. I do not believe I have ever attended meetings at which such frankness, candor, and good will were displayed. I am grateful indeed to those who arranged the conference and to those who have taken part in the meetings.

Dangers of Inflation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a radio address delivered by me last night over the Columbia Broadcasting System:

I am glad to be on this program with my good friend and colleague, who is one of the ablest and best informed men in the United States Congress, the Honorable JESSE WOLCOTT, of Michigan.

Probably within a few weeks our soldiers and sailors may be engaged in a mighty and bloody struggle on and along the shores of Europe and in the Far East. Withdrawn into their defenses, our enemies can only be crushed by the biggest offensive in history. We are confident in the fighting ability of our sons and our neighbors' sons. We are confident that they, with the aid of our allies, will be victorious. We must not let anything interfere with their plans of battle. We must give them their needed weapons. We must give them their needed food, gasoline, and other supplies. For weapons and supplies are their very life line.

But economic conditions at home are taking shape that may retard the flow of these guns and planes and tanks and ships. I am referring mainly to the dangerous threat of runaway inflation. Our purchasing power has now reached enormous proportions. It is out of balance with the war-curtailed supply of civilian goods. Unless we curb our spending for things other than the bare essentials of life we raise a specter of doubt as to our appreciation for the sacrifices of our fighting men.

The dollars we spend today for luxuries may boomerang tomorrow with terrifying force.

The more we spend today the higher will be the price of victory.

The more we spend today the closer we come to the dangerous brink of runaway inflation—a frightful economic disease that can prolong the war and cause untold suffering for us and our children.

The more we press our excess purchasing power the lower in value become our dollars.

With roughly $4 bidding for every $3 worth of goods, prices are bound to skyrocket. These price increases will not make more goods available. They will merely set off all of us bidding against one another, in a wild scramble for the scarce goods. And in the end we would not get any more goods; we would simply spend more money for the same goods.

Price ceilings are not easy to hold in the face of inflationary pressures. We must siphon off these pressures by converting our excess purchasing power to help win the war. Paying taxes, buying War bonds, paying off personal debts, increasing savings and the purchase of life insurance can stave off the evils of inflation. By taxing heavily now to draw off excess spending power we make it easier to finance the war, we fight rising living costs, and we help build a sounder peace. This is one time the people should be glad to pay taxes and increase their personal savings.

Self-discipline in spending contributes to victory in two important ways:

First, it lessens the inflationary pressures.

Second, it stretches our supply of available goods.

What is the outlook on the home front? Will we have enough food? Will we have enough clothes?

Although by the end of this year our living standards will be about 20 percent lower than last year, I have been officially advised that our essential requirements can be adequately met. We shall have enough food. We shall have enough clothing. No one will be forced to go hungry and no one will need to go ill-clothed. But conditions will call for ingenuity and resourcefulness in making the most of what we have.

There is nothing shrewd or farseeing about people in wartime who purchase more of things than are necessary for their immediate needs. The grasping instincts of hoarders will deprive others of badly needed commodities, aggravate artificial shortages, and, in general, hinder the progress of the war. Hoarding, by its short-sighted selfishness, betrays a dangerous lack of patriotism, and hurts everybody, including the hoarders. And such goes for the black markets—the sale of goods and supplies outside of established controls as a means of circumventing price regulation and equitable distribution of limited supply. Black markets, although made through illegal channels, have the effect of preventing a fair distribution, thereby injuring both the selfish and the unselfish. It is neither smart nor clever to grab off more than we expect and accept as our rightful share.

Through our rationing program we must share our available goods. Among the reasons why this program is so vital is that we must direct raw materials and manufacturing facilities to war production.

It is vital because of the heavy requirements of our armed forces and fighting allies.

It is vital so as to curb the demand of most of us who, because of higher incomes, want to buy more food and other goods than we formerly did.

It is vital so as to relieve the congestion of transportation and distribution difficulties which hinder the movement of essential goods from producing areas to the consumer.

It is vital because it is a guaranty to every one of us that we shall get all we need for the maintenance of personal health, welfare, and working ability.

Rationing does not mean abundance—but it does mean enough.

In order to be absolutely certain that we get enough, we must keep the lid clamped on hoarding and black markets and on excessive spending.

We must keep it clamped so that living costs will remain stable;

So that sacrifices of war will fall equitably upon all, rich and poor alike;

So that we can effectively complete the job of mobilizing ourselves and our resources to meet our production goals;

And, above all, so that we can win the war and the peace.

Your part in all this program is personal participation in supporting the necessary regulations and controls established by the Government for fair distribution and at fair prices.

And further than that to increase your savings by additional frugality and self-control in spending.

It is now my pleasure to introduce my colleague, the Honorable JESSE WOLCOTT, of Michigan.

Tribute to Mother

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a poem, Tribute to Mother, which was sent by V-Mail to Mrs. Doris Liddell of 193 Hancock Street, Everett, Mass., by her brother, Pvt. Andrew King, and composed by him while with the United States Army "somewhere in England." I am doing this at the request of a former popular page in this House, Mr. John B. Wells, of Massachusetts. The poem was first printed in the Boston Globe of May 10, 1943. The poem follows:

TRIBUTE TO MOTHER

(By Private Andrew King, of Everett, Mass.)

The sweetest name in all the world
To us: there is none other
Can take the place and do the things
As the sweetest name of "Mother."

From childhood days to adult years
We've caused her many a sorrow,
And yet in spite of all those things
Her love is the same tomorrow.

For, after all, who is the one,
Not sister, dad, or brother,
To whom we go with all our cares
But to the one called Mother.

Who is the one, when we were young,
Shed many a tear and wept
Before the throne of God in prayer
For us before she slept?

Yes; always thinking of our welfare
And the days that are to come.
Praying God to guide and lead us
Through each trial 'til it be won.

And now to us on earth who dwell
Remember, there is no other.
For when she's gone she can't return,
The one we call our Mother.

Professors and Business

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement taken from a speech I

delivered over the national network of the Mutual Broadcasting System, July 2, 1943:

For 10 years we have seen a steady concentration of power in Washington. The war extended an opportunity eagerly seized upon by those who believe that all business should be run from Washington. A multitude of new agencies has been set up to effect such a purpose. Some of these agencies have been necessary. Without entering into the question at this time as to whether or not the corner store should be operated by virtue of edicts and directives from Washington, and I do not for one moment concede it should, I wish to direct your attention to the fact that it cannot be operated successfully, in fact will be destroyed, if the regulators in Washington don't know anything about it. The House of Representatives took such a position on June 18 when it approved by an overwhelming vote an amendment submitted by Congressman EVERETT DIRKSEN, of Illinois, to require anyone who formulates an industry price policy to have at least 5 years of experience in that industry. The House was persuaded to take such action because at present the bureaucrats regulating American business, a great percentage of them, either do not believe in private enterprise or are ignorant as to its operations. This is not idle talk. It is based on personnel information in the hearings on the Office of Price Administration appropriation bill.

THE NEW BRAIN TRUST

Let's look at the record. The price executive over the Nonferrous Metals Branch is an economist, a professor, who has had no business experience whatever. The price executive over building materials is an oil economist. The price executive over iron and steel is a college professor without business experience. The price executive over the Industrial Metals Division is a professor without practical experience. The executive for the Paper Branch is a political science professor with no business experience. The price executive over the Machinery Branch is a professor without business experience. The price executive over the Restaurant Branch was a New York department store employee. The price executive over consumer durable goods is an editor. The price executive over solid fuels is a student not long out of college. The price executive over the Petroleum Branch was a deputy revenue collector and auto salesman. The head economist of the Economic Analysis Branch is an economist and professor. The director of the Textile, Leather, and Apparel Branch is a professor without business experience. The price executive for meat, fish, fats, and oils is a professor with no business experience. The director over the export-import price control office is a Harvard professor. The director of rent operations is a lawyer with no experience in rents except possibly paying that on his own apartment. These tax eaters infesting the body politic speak in strange, unknown, and confusing tongues to American business.

There is the record. Is it any wonder that the American people are faced with the prospect of hunger and cold and bankruptcy? These bureaucrats, many of them, are making more money regulating your business than you are, yet know nothing about it. Small businesses the country over are falling by the wayside. It is time we sent the professors back to the schoolroom where they are prepared to serve a useful purpose and turn the management of American industry over to those who know something about it, if indeed it needs to be turned over to anybody other than the owners. We need more business in government and less government in business.

In the Nation

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Arthur Krock which appeared in the New York Times of June 29, 1943:

IN THE NATION—MR. C. C. DAVIS BLAZES A USEFUL TRAIL

(By Arthur Krock)

WASHINGTON, June 28.—It required unusual courage and a true sense of responsibility to a people engaged in war for Chester C. Davis, the Food Administrator, to return his commission to the President. The food situation is so grave, its implications are so alarming, as the consequence of politics, misorganization, and mismanagement that candor was the obligation of a patriot to a country which is the victim.

If improvement shall be the result of Mr. Davis' candor—though the President's response and his appointment of the docile Marvin Jones as successor do not encourage that hope—the retiring Food Administrator will have doubly served the people. But even if the disorganized administrative mess shall remain as it is, Mr. Davis will have performed the great single service of making clear where the chief responsibility for it lies. Should his courageous example be followed by other war administrators whose assigned tasks are being ill-performed for the same basic reasons, a special badge of public service will be his due.

Fear of being stigmatized, or love of place, will probably prevent such a mass effort to compel the President to delegate necessary authority with responsibility and then stand behind his appointees. But Mr. Davis' resignation may induce Congress to achieve the result by statute.

CAUSES OF RESIGNATION

There were several reasons why Mr. Davis could not effectively deal with the grave problems for which he was given public responsibility by proclamation and by title.

1. The President at the outset made promises to Mr. Davis which he did not keep. It is reliably reported that when Mr. Davis, offered the assignment, said he did not see how he could do any better in the set-up than the Secretary of Agriculture, Claude Wickard, had done, the unkept promises were made. Mr. Davis was told he would be given all the authority he required and would deal directly with the President.

2. Mr. Roosevelt's food-price policies are linked with those of organized labor and are in direct conflict with incentives to production. The subsidized roll-back project was taken in pursuance of his political-economic alliance with labor; therefore it was devised for relief of the consumer—temporary, because eventually he must pay for subsidies in taxes—and not as a production incentive. Also, Mr. Davis was not informed that this was to be major policy on a broad scale until he read about it in the papers.

3. Instead of giving to Mr. Davis the authority he needed and was promised, the President set up the Office of War Mobilization under James F. Byrnes and included in it the semi-independent economic stability unit under Fred M. Vinson. Not only was Mr. Davis left off the Office of War Mobilization Board, but he soon discovered that both Mr. Byrnes and Mr. Vinson were established as layers between him and the President, which was also contrary to his clear understanding. He has seen Mr. Roosevelt alone only once since he became Food Administrator.

4. Mr. Vinson proceeded to make decisions in what had to be Mr. Davis' field of authority if food control was to be effective, once upsetting an agreement between the Food Administrator and the Office of Price Administration, which was also making price decisions in the agricultural field. A series of incidents over price ceilings arose which made it clear to Mr. Davis that food conditions would grow worse and that he, to whom the public had been told to look for help, could not correct them.

HOW NOT TO HITCH UP

Some 10 days ago he wrote his letter of resignation, which was lying on the President's desk at the very press conference in which Mr. Roosevelt was asked about the resignation and denied it. No word came to Mr. Davis until the President's letter of acceptance was suddenly issued today.

In the letter the President spoke of the necessity of "effective teamwork." It is a point in reverse. The team in which he had hitched Mr. Davis had the off horse facing the dashboard and the near horse looking the other way. There are several teams of that kind in the Washington war program, and, when they don't pull effectively, the blame is placed on the wrong horse or on the "complacency" of the American people.

OUTLOOK FOR THE FUTURE

Mr. Jones will be an uncomplaining member of a team like that, or even of a politically harnessed four-in-hand in which every horse is pulling in a different direction. But the food situation will go from very bad to intolerable unless Congress assumes statutory control of it by taking Herbert Hoover's advice and passing the Fulmer bill. The President has indicated once again that he cannot or will not do what must be done before the "inseparable functions of food production, distribution, prices, rationing, Government purchases, imports, and exports" (as Mr. Hoover describes them) are efficiently performed.

That which the President or Congress must do is to divorce the food program from group politics and give authority with responsibility to an able manager. If these things are not done, the entire war activity will be imperiled.

Proposed Constitutional Amendment Removing Two-thirds Requirement for Passing a Vetoed Bill and Also Amendment Making Members of Congress Ineligible for Appointment to Office During Term for Which Elected and 2 Years Afterward

REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. SUMNERS of Texas. Mr. Speaker, after matured consideration, over a long

time, I have today introduced two resolutions proposing amendments to the Constitution. One resolution proposes that in the event a bill which has passed both Houses is objected to by the President, is vetoed, the result of the second vote is to be determined by a majority exactly as the judgment of the two Houses is usually expressed. That would make effective section 1, article I, of the Constitution, which provides:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

It would get the executive branch of the Government back on its side of the fence and would remove a hurtful confusion in the allocation of governmental power, which allocation is violative of the nature of a representative government.

Whether those who drafted the Constitution foresaw the development of the use of this power is, of course, speculation. It is a fact, however, that from Washington to Lincoln, inclusive, there were only 52 bills vetoed by those 16 Presidents, covering a period of 76 years; whereas from March 1933 to June 26, 1943, inclusive, there have been 592 vetoes. This resolution, if adopted, would leave to the Executive the responsibility of examining bills after Congress shall have acted, pointing out objections, giving Congress and the country the benefit of his judgment, and so forth, as is now provided, which is a fine service. It would require a second and recorded vote as now, which is wise, before the bill becomes law. This proposed amendment changing the requirement from two-thirds to a majority vote would not only get the Executive back on its own side of the fence, where, by the nature of our sort of government, it belongs, but also would remove the irritating element of coercion and strengthen the persuasive force of the President's objections and place upon Congress the exclusive, inescapable, responsibility to the people for legislation which, by nature, it must bear if there is to be a chance to have the maximum of legislative efficiency.

An examination of the provision requiring a two-thirds vote shows that it puts the Executive where the Executive does not belong, and handicaps the legislative branch of the Government where it ought to have power not only to do its work, but also have the responsibility associated with that power which removes every excuse for not properly doing its work. Much of what I have said is illustrated by a vote recently taken in the House. On July 2 the President returned to Congress, with his objection, the bill to extend the Commodity Credit Corporation. That made it necessary for the House, in the first instance, to take a second vote on that bill, since the bill originated in the House. The vote was 228 for passing the bill, to 154 against passing the bill. There were 49 absentees, but if all the absentees had been present and voted to pass the bill, making a total of 277 to 154, the bill would have been defeated by 11 votes. This illustrates the Presidency's direct power in legislation, in effect as a part of Congress, resulting from this provision of the Constitution which requires a two-thirds majority of each House of Congress to overcome adverse votes of Members plus the opposition of the President. This power, as we all know, as compared with the power of a Member of the House or the Senate, is not merely the power which Members of the House may have limited to the House, and Members of the Senate may have limited to the Senate. It is the power of the Presidency in each of the Houses of Congress, because, if defeated in one House, this power moves over into the other House. If the bill originates in the Senate and is vetoed, the President moves out from the executive branch of the Government to the legislative branch into the Senate as effectively as if he were sitting in that body, casting as many votes in the Senate, assuming all Senators are present and voting, as 15 Senators. Think of that. He sits as 15 Senators for the purpose of that vote. In effect, he votes just the same as if his name was called and he should answer "I cast 15 votes for seven and one-half States."

If the bill should be defeated in the Senate none of the Senators could go over to the House, but, in effect, the President then moves over to the House of Representatives—two chances to beat the bill—and in the House he casts as many votes, in effect, as 72 Members, assuming all Members are present and voting. So in order to defeat any legislation which is contrary to the President's objection, it is required to have on his side only 33 Senators out of a total of 96; and if the President's views should lose in the Senate there would be no defeat, the contest merely shifts into the House of Representatives, and there, out of a membership of 435, assuming all are present and voting, only 146 votes supporting the President's position would defeat the bill. That is true notwithstanding article I, section 1, of the Constitution:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

That is not all, to be entirely candid about it. It is thoroughly understood by every Member of Congress seeking to acquire appointment to office, or hoping to be taken care of in the event of defeat, that his chances certainly are not hurt by voting according to the President's attitude. I wish to say in this connection that I have no desire to criticize. I am merely stating a well-known and important fact, important in this picture, that rests upon a very well understood characteristic of human nature.

So, I am introducing a second amendment proposing that Members of Congress shall be ineligible for appointment to office during the term for which they are elected and for 2 years after the expiration of that term. I do not mean to say that Members of Congress are influenced in their votes by the hope of appointment to office, but the hope of appointment to office by Members of Congress angling for such appointment, and the desire by the appointive power for votes to put through a project or sustain a position, puts a considerable nervous strain upon a Member of Congress hoping for such an appointment, which strain this proposed amendment would eliminate.

It seems to me that an examination of our constitutional set-up makes it very clear that the Congress must have the exclusive power to legislate. It must rest under inescapable responsibility to the people for legislation. In order that that shall be true, the Congress must be able to speak by the voice of the majority, as is recognized in Anglo-Saxon systems of government and recognized by people generally, otherwise it is the minority and not the majority which controls.

The present arrangement under which 33 Senators out of 96 and 146 Members of the House out of 435 may speak the legislative judgment of the Senate and of the House is, of course, an absurdity. It is not only hurtful for the reasons which I have tried to emphasize, but that arrangement subjects Members of Congress to temptation in situations to cast a vote deemed good politics at the moment, expecting to be protected against having to face its hurtful consequences, by the intervention of the veto power. As a matter of fact, this arrangement is unfair to the President, to the Congress, and dangerous to the public.

I am not criticizing. I am trying to analyze the situation and present the picture as I see it. In that general picture are the vast Executive powers originally possessed, which powers are constantly being increased as a result of and as an incident to our concentration of general governmental powers in the Federal organization and their shift to the bureaucratic organizations of which the Presidency is the head.

This is none too pleasant a job for me, but as one of the hired men of the people I am responsible for trying to give to them for whatever it may be worth this statement of what I see as one of their watchmen on the tower, and the conclusions which seem to me from my observation, experience, and thinking to be sound. I know this is important. Look at this picture from another viewpoint. Suppose all Senators are present when one of these votes is taken. Looking north from Washington we see that the legislative power of the President would be equal to the vote of the two Senators from Maryland, Pennsylvania, New Jersey, New York, Delaware, Connecticut, and Massachusetts, with one vote to spare. Think of that and talk about all legislative power being vested in the two Houses of Congress. Then, if defeated in the Senate the contest would move over into the House, and to all intents and purposes the President, or Presidency, would move over into the House and become a part of it, and would cast five more votes, looking South from Washington, than are cast by all the

Members of the House from the States of Virginia, North Carolina, South Carolina, Georgia, Mississippi, Alabama, Louisiana, and Florida. That is more power than any individual ought to possess in the legislative branch of a free government, ever. if he possessed no other governmental power. But when that power is associated with the other enormous powers of the Executive—greater than kings possess—with the President constituting the center around which is being builded as complete a bureaucracy as can be found anywhere in the history of the rise and fall of democracies, the importance of these suggested amendments, it seems to me, ought to be generally appreciated.

I do not suggest these resolutions should be taken up now. We will see how things develop. I do suggest that they ought to be considered by the people now and, if possible, incorporated in the Constitution substantially as drawn before the intelligent, patriotic, public interest, now active, shall have subsided, as such interest did subside following the World War.

Everything in the picture indicates that we are headed for another one of the great contests which have occurred in Anglo-Saxon governmental history when the people, recovering from periods of indifference and of man-worship have returned to neglected responsibility of self-government, and to the guidance of great fundamental natural laws, laws of God, which He has provided for the guidance in self-government of His creatures in whose souls He has implanted the aspiration to be free and self-governing.

It is my judgment, and I give it for whatever it may be worth, that as a necessary preparation to win that contest the people had better establish it exclusively within the power of their own chosen representatives in the Congress to make their laws and to determine their governmental policies, just as the people themselves would do in a pure democracy, if our democracy had not so outgrown itself so as to require that it function now through chosen representatives of the people.

I recommend further as is proposed by the second resolution that the people establish it in the Constitution that their chosen representatives, insofar as this amendment would control, shall be free from every allegiance and controlling influence except that incident to the relationship which they sustain to the people as their own representatives in the councils of the Government. Do not let anybody so deceive himself as to imagine that the possessors of these bureaucratic powers are going to send them back voluntarily to the States and back to the people, surrender these powers, and surrender their jobs.

The people are going to have to attend to that themselves. I believe they are getting ready to do it. Within my own vision, for at least 8 years, the people have been coming up from the low level of efficiency to which they sank during the reaction following the World War. They are perhaps fitter now to deal with the problems of a great democracy than at any time since the establishment of our Government. The power that renews a democracy does not go from the top downward. It must come up from the people because a democracy is a people's government. As with our own eyes we may see this renewing coming up from the people. President Wilson, as he examined history, saw the same phenomenon. That is what he said about it:

When I look back on the processes of history, when I survey the genesis of America, I see this written over every page: That the nations are renewed from the bottom, not from the top; that the genius which springs up from the ranks of unknown men is the genius which renews the youth and energy of the people. Everything I know about history, every bit of experience and observation that has contributed to my thought, has confirmed me in the conviction that the real wisdom of human life is compounded out of the experiences of ordinary men. The utility, the vitality, the fruitage of life does not come from the top to the bottom; it comes, like the natural growth of a great tree, from the soil, up through the trunk into the branches to the foliage and the fruit. The great struggling unknown masses of the men who are at the base of everything are the dynamic force that is lifting the levels of society. A nation is as great, and only as great, as her rank and file.

There is much to indicate that thing effectively is happening now in this country. If so, we can save this democracy. While strength to renew must come up from the people, their hired men in office, their representatives, must have no other allegiance—no other master—than the people whose representatives they are. Otherwise we shall have to have our own experience of bitter travail as nature drives us with the lash back to the discharge of neglected responsibility and neglected opportunity.

Shortage of Corn

REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. ARENDS. Mr. Speaker, it happens that I come from one of the greatest corn-producing areas in the United States. There are thousands and hundreds of thousands of bushels of corn in storage on the farms in my district. Much of this corn will, of course, go to market on hoof, while the balance will be sold to the elevators for outside uses.

At this very moment there is a great shortage of corn for feed and processing purposes all over this country. Something is wrong when we on one hand have a surplus of a certain commodity and on the other hand witness a shortage of this same commodity. Let me read one of the many telegrams which has come to my desk dealing with this shortage of corn. This telegram comes from the heart of my district, Bloomington, Ill., where we are, literally speaking, sitting on top of vast supplies of stored corn:

We insist on removing corn ceiling before Congress adjourns. McLean County feed stores are out of corn. You ask us to produce more chicks and we hatched 4,000,000. Very important action should be taken at once.

THE MILLER HATCHERY,
E. M. MILLER.

Like all other interested Members of Congress, I want something done about this ironical situation. We are facing a crisis and must act. I have this morning talked to the Honorable Marvin Jones, head of the War Food Administration, asking that this matter be dealt with immediately and that some workable solution be brought forth through his determination and with the cooperation of the O. P. A. The order issued last week stating to the farmer that he would, if he at once moved his corn into the market under present prices, be granted any price increase which might follow in the market between now and October 31, will not do the job. In truth, I feel it will slow up more than increase the flow of this previous grain into the regular channels of trade. That order, it seems to me, was ill-advised. It indicates a lack of clear thinking on the part of those issuing the order and emphasizes the "confusion extraordinary" that still exists in many of our departments.

I have recently discussed this problem with many other Members of Congress, suggesting that we do something about this situation before the recess. I hope we can call together all interested Members of this body to thoroughly discuss the dilemma before us and then present our best thoughts and ideas to the W. F. A. and O. P. A. Representatives of these agencies should meet with us and present their viewpoint and then cooperate with all concerned to the end that this serious problem be quickly adjusted.

Mr. HARNESS of Indiana. Will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Indiana.

Mr. HARNESS of Indiana. I wonder if the gentleman, coming from a corn area the same as I do, can tell me where a constituent of mine can get a carload of corn to feed 300 hogs for which he has no feed.

Who Wants To Be President?

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BURDICK. Mr. Speaker, to assume the duties of President in peacetimes is a strenuous job. Our Government is so complicated because of depression remedies that no one man can be familiar with more than a small part

of our huge set-up of governmental machinery. Any President must necessarily rely on many other people to help direct the business of administering this great field of activity.

In fairness to the President, it should be stated that when he came into office in 1933 our whole private business machine had broken down and was stalled. Those who had funds in banks could not draw out a cent, and the unemployment ranks were growing by leaps and bounds daily. This, indeed, was a serious situation charged with dynamite which might explode any minute.

This situation was not due to any legislation which could be said to interfere with private business. The Republicans had been in power since the election of Harding in 1920, and it is admitted that the Republican Party in those years was completely under the control of friends of private business.

The situation in March 1933 called for new action. The old action had ended not only in failure but had brought about a condition which put the Government on the verge of collapse. This situation was evident during the fall of 1932 while the Presidential campaign was in progress. The situation had been made worse by the treatment handed out to the veterans of the World War who assembled in Washington.

I do not believe this country was ever as close to outright disorder and chaos than it was when the Presidential campaign opened in 1932. President Hoover was blamed for everything. He was in distaste with the public, and there was not anything he could do then to change the public mind. He tried, but anything he said served only to arouse the people to a higher pitch of dissatisfaction.

Along came Franklin D. Roosevelt, the Democratic nominee for the Presidency. He reasoned with audiences in person and on the radio. Those who saw him saw a great big, good-looking, smiling man who promised the people a new deal. This was a slogan which meant that we would not continue in the way we were then going, but would try something new. Roosevelt literally smiled his way into the Presidency. The dragon of revolt, disorder, and chaos was averted by the election of Franklin D. Roosevelt.

The new administration first had to meet the banking situation by reorganizing all financial institutions and backing them up with a guarantee of deposits by the Government. This was the first New Deal action.

Unemployment was becoming rampant—millions out of work where thousands had been out of work before. A relief program had to be established, and established quickly. You cannot stall off hungry men. This was another New Deal enterprise, but the unemployed began to eat again. It does not matter what you call it, it was different from the old and it was new at the time.

This unemployment situation racked the larger cities more severely than the rural sections, but soon in the Northwest, which I have the honor to represent in part, a new unforeseen enemy appeared. In my particular section of the country, North Dakota, the north end of the Dust Bowl, we had drought and grasshoppers for 9 years, and the Federal Government was called on to furnish feed for livestock, seed for crops, and aid to families, both by W. P. A. grants and in direct grants. This situation continued so long that the first four terms of my service were devoted almost exclusively to relief.

This aid of the Federal Government brought the people through, and in 1941 and 1942 the crops were so good in North Dakota that many thousands of farmers who could see no hope through the dust in the Dust Bowl are now independent and have paid back their obligations to a considerate Government. This was a new venture in the work of the Federal Government, and because it was a new venture it was named a New Deal venture.

Besides this Dust Bowl disaster, the people also suffered from the devastating effects of the general depression that started in 1920 when the Federal Reserve Board demanded a pay-up policy in complete reverse of the encouraged loaning policy advocated by the Federal Reserve Board during 1917 and 1918. There was absolutely no reason for adopting this drastic policy, and the result was that it ruined the country. Eastern business kept afloat until 1929 on various schemes such as installment selling, but by 1930 business was as effectually broke as were the farmers in 1921 after the depression had been created by the Federal Reserve Board.

In carrying out relief to the victims of the general depression and the victims of the Dust Bowl—double victims—many new enterprises were necessarily created, all of which came under the head of the New Deal. Mistakes were made in the philosophy of what to do and in the doing of what was done. Forced scarcity of food was started in order to bring up the price instead of putting pay checks in the hands of consumers to buy what they normally needed. No greater blunder was ever made, but no such huge Federal undertaking could be expected to function on first trial and done quickly without planning. The New Deal, of course, had to shoulder all mistakes, but it also is entitled to all successes.

While we were beginning to emerge from the depression of 1920 which followed the last war, we were driven head-on into this war and we have appropriated so much money for the war effort that we have lost track of how many billions we are in debt. The last guess was two hundred seventy-four billion. Of course, we do not have the money to pay these appropriations. We cannot tax the people enough to make our business current. We have to supply the money in a different way.

In the Civil War Lincoln paid the soldiers in bills issued by the Treasury Department, and no interest was ever required or collected to finance these bills. Over $300,000,000 in the form of those greenbacks are still circulating and have been since 1862. We have forgotten that example in finance and now borrow the money by issuing bonds and selling them to those who, like the Government, have no money. The Government has no money, those to whom we sell the bonds have no money, but we get the money from those who do not have it. Does not that sound crazy? Well, it is crazy, but that is the way we do business.

The banks to whom we sell the bonds give us a deposit credit in their banks for, say, $2,000,000,000. We can draw on that fund, but before the bank is required to pay any cash, we accept from the bank our own bonds—which the bank does not own—as security, and then we issue new money to the bank, and, lo and behold, we have plenty of money. The only difference between this method and the Lincoln method is that we pay close to 3 percent interest on all of these bonds for the next 20, 30, 40, or 50 years. We, of course, collect the interest, and after having collected it we turn that over to the financing bank for their kindness in borrowing our own cash on our own bonds. You can see how simple it is. We shall, no doubt, owe $500,000,000,000 before we are in this war another 2 years—maybe 1 year—and the interest on that amount will be fifteen billion annually.

This plan of financing cannot be charged to the New Deal alone, because there are not three Republicans in the House of Representatives who would change to the Lincoln plan.

We are financing ourselves, sending men and munitions to every corner of the globe, feeding every country on earth except our enemies—and they get some of our food—and loaning billions and billions to other countries. When any foreign potentate appears before the Congress, the only question asked among Congressmen is: "How much does he want?" We have plastered South America with loans, but not a single man from South America has shown up on the battle fronts.

We are now in this World War in full blast, and we must go through with what we have and the allies we have. We cannot stop to inquire just what any ally thinks he must have out of the war; we must first win the war. Too much effort has been wasted on post-war activities, when we are a long way from the post-war period. This war can last 2 years or 12 years depending on whether we keep at the job of fighting or start orating around an imaginary peace table.

Since we are in this war, my philosophy is that every citizen, no matter who he is, should exert his utmost energy in winning the war. This should apply to Members of Congress as well as all others.

Maybe we are big enough and strong enough to do our part in this war in spite of all the confusion; with our officials charged with taking too much power, or not taking enough; with the President accused of wanting to be a dictator; with Members of Congress smeared in every investigation, especially those who tried to keep this country out of war; with the action of Congress in their attempt to save tax money by invariably taking it out of the food producers of the Nation at a time when we must have food and when we know food

will finally win the war; with Congress labeling every worker a criminal if he refuses to work, no matter what the reason; with members of the Cabinet in open disorder among themselves; with Congress raising a hue and cry against every administration head with the slogan, "Down with the bureaucrats," no matter how trivial the occasion may be; and with administrators ignoring Congress in retaliation. All this in the midst of war. That is the picture of how we are all putting forth our best efforts to win the war.

Hitler for once is right. He says, "I don't want to bomb Washington because it might clear up the confusion existing there."

The responsibilities of the President on the war front are supremely great. It was only because of his insistence that the Allies drive the enemy out of Africa that the job was done. This seems to rank with MacArthur's success in stopping the Japanese. These are the two bright spots in our success thus far.

Every Member of Congress should forget about politics and how to put the administration in the hole, and instead should try to make it just a little easier for the President to function. He is a great American, and so are Members of Congress, those heading the administration, and those actually conducting our forces on land, sea, and in the air. We are all trying to do one thing—defeat our enemies—and I, as one Member of Congress, am willing to put our war effort ahead of personal and party consideration. I am willing to eat "crow" and live on it if we can win this game we are in now.

Those in America who would like to be President should look at the situation we are in now and honestly ask himself, "Would you like to be President?"

This Congress has placed itself open to criticism. In the last few days we have legislated furiously—we have made more mistakes than we have in the past 9 years. Just at a time when we want the farmers to increase their acreage of wheat 15,000,000 acres, we repeal their insurance. Everyone in this Congress ought to know how essential food is—we want to increase that supply. We insure every one in the world, free of charge, but we withdraw from the farmer what little insurance he has. The principal reason why we are making all these fundamental blunders is that some want to adjourn. They say it is too hot, and for the last 4 days, it is too cold. We have not the stamina to stay on the job and give our actions due consideration. Suppose the soldiers on the front should say they wanted time off for 2 months and shot away their ammunition at random and pulled out for a rest. What would the Nation think of them? Are we in any better situation? Can we not stay here and logically think—when the soldiers have to stay in line to be shot up?

If we pack up now and leave behind this mass of ill-considered legislation, just because we want a rest, you can imagine the reception you will get at home. Those who are fanning these flames for an adjournment need not fear they will not get home—it may be possibly that they will have plenty of time to stay home after the next election. If we quit cold and leave our post are we supporting the President and the war effort? Who would want to be President with a Congress that has not courage enough to stay on the job?

America's Outstanding Governor Speaks Out for Private Enterprise

---

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Gov. Dwight Griswold, of Nebraska, delivered at the Governors' Conference held recently at Columbus, Ohio:

This conference of Governors, meeting in a war year, is very properly concerning itself largely with two matters. One has to do with finding new means of assisting with the winning of the war while the other relates to planning for the days of peace. My remarks have to do with the latter problem primarily.

In discussing planning I would like to quote a remark recently made by Mr. Charles F. Kettering, head of the research department of General Motors Corporation. He believes in planning but cautioned that much of what is now designated as "planning" is merely "wishing." He then went on to describe the difference between the two. "If," he said, "you are expecting human nature to change, that is merely wishing." I am one who agrees with him. I feel that the present is the time when we should be planning for the days to come, but I feel that this planning should be done by those in a position to know something of human nature, with all its strengths and with all its weaknesses.

I am also inclined to the belief that too much of our planning is restricted entirely to the post-war period. There is a tendency to proceed on the assumption that we can go on indefinitely as we are today and that suddenly there will be a declaration of peace—something like the coming of Christmas morning, when somebody turns on the lights and shouts, "Merry Christmas!" There seems to be a feeling that there will be a signal like that and then we will all bustle around and open up our packages of plans and begin living by them.

Actually, the facts are that this anticipated post-war era may be several years away and one of our great needs today is for better planning for what very well may be a long, drawn-out war. I think we should adjust our planning to be of immediate use in this current period—this period that begins now and continues until the day peace comes.

The young men who are fighting this war are anxious to finish their job so that they can return to the United States they love; the United States that offers them opportunities and all the hundreds of little freedoms and liberties they think of as a part of home in a peaceful democracy. But if we do not solve our manpower and inflation problems now, these young men will take off their uniforms and make the bitter discovery they have fought for a mirage.

I believe it is the first desire of our men in service, once this war is done, to return to a nation whose domestic life is founded upon individual effort, whose economic system is based upon the working premise that private industry is able and eager to supply men and women with the material things they need for enjoyable, constructive living. In other words, I cannot believe that our returning soldiers want a jingle-jangle-jingle existence fed by synthetic work on a governmentally glorified Work Projects Administration program.

As we look about us today, we see that the war is being won, not because our Government is doing a good job of handling our domestic economic problems, but because our boys are proving to be valiant and courageous fighters, and because private industry is producing the armament that is needed to win this kind of a war. In recent years no two groups have been so criticized and maligned as have been those engaged in business and as have been our young people, and yet during the past year and a half it is these two groups which have proven to be our country's real dependable source of strength. In spite of obstructions that have been placed in the path of business, our industrial leaders have gone ahead and done a splendid job, and today they are producing war goods at a peak above anything of which we ever dreamed.

But we need better planning for the financing of this war, with more of the necessary money raised by taxation and the balance raised by long-time bonds in the hands of individuals. Bonds, due virtually upon demand, can wreck our economy when the war is over, and bonds held by banks are directly inflationary.

We need to have demonstrated—as we have been told so often—that the people must sacrifice here at home. Up to date, our only financial sacrifices have been to pay back, in the form of taxes, a portion of the increased pay and increased profits that the war has brought to us. There are very few civilians whose standard of living has really been lowered because of the war.

We need to fight inflation with a holy hate. We need higher taxes, lowered incomes; we must learn that we can't fight a world war and a war against inflation—and both successfully—without straining both our economic and our philosophical resources. But if we do not win this war against inflation, this war on the home front, then the country to which our victorious fighting men return will be one of defeat and desolation.

We need better planning today for the fighting of this home-front war. Our leaders must act as statesmen, not as demagogues; they must preach a life of individual responsibility, not of ease—and if they do not so act, they will be faithless to the trust our fighting men have left in their hands.

But it is proper also that we are—and should be—thinking of the special problems that will face us when the men are mustered out and turn into the paths of peace. Perhaps the word "planning" is overused, but there are some facts we had better face realistically.

Never has man seen such a large portion of the world completely torn from its previous standards, as it has seen during the past few years. This very disruption of our way of living, and of our habit of thinking, forces us to do some planning for the future. Never before has there been a war which has caused such terrible physical destruction, but at the same time allowed science and technology to advance so rapidly. Peace will bring to the world the greatest problems of physical reconstruction in history, and just as mobilization for war here in our country has caused terrific readjustment, both of men and minds, so by the same token will a readjustment from war to peace bring other monstrous problems.

And we had better be realistic in our contemplation of this post-war future and recognize that deep as is the faith of the majority of our people in the doctrine of free enterprise, that sincere as is the desire of our young men for individual achievement, they will never again permit another period of terrific unemployment without demanding that the Government take control. Let us not blind ourselves, either, to the fact that a minority of our citizens already feels that socialism, or communism, or complete government control in some form, is better than a system of private enterprise, and that its members are working to see their beliefs inaugurated. Another serious depression would recruit millions for their ranks. In short, the free enterprise system, the mighty champion of our present struggle for survival, may be pounded to pieces before it has a chance to catch its breath, may be tumbled to ruin by the shock of post-war adjustment. At least, such a danger is evident to me.

I am sure that no system of government operation can produce goods and raise living standards as does a system of private industry, but the political situation is such that we who feel that way must see that private industry is prepared to furnish employment to people when this war is over. It requires some planning right now in order to make sure that the 10,000,000 men taking off their uniforms and the 20,000,000 men and women coming out of war plants shall have some place to go to work. I thank God that the leaders of American business are planning—planning now—to do this very thing. The Committee on Economic Development, the Manufacturers Association, the National Chamber of Commerce, and other groups are working constructively to meet readjustment problems that will arise.

Every element will be present in this country for a tremendous boom. New processes, new devices, new gadgets will be coming onto the market as a result of war developments; thrilling stories are even now coming to us from modern industrial laboratories. The development of new alloys, especially the light metals, the use of plastics, new synthetic products—all of these scientific changes—are going to bring onto the market new products, and they are going to bring into the market new demands. We will have available in our labor supply several million new mechanics, while people with money saved are going to be present with a large list of desires. They are going to want to buy new automobiles, airplanes, homes, home heating and cooling devices, tractors, farm machinery, jewelry, furniture, everything which they have been unable to buy during the war. One prominent banker told me a few weeks ago that he expected the 5 years following this war to be the biggest boom period this Nation has ever seen. He predicts, instead of unemployment, a period when it will be impossible to find people to do the work that will need to be done.

But if industry following this war is to have a chance to make good, then certainly industry must have proper laws under which it can function. It needs tax laws which are written before the taxing period starts. It needs tax laws which are intended to help, not punish, and which permit industry to make a profit and use some of it for new developments. Our statutes must be in accord with economic law if our Nation is to prosper.

And private industry must also observe economic law, it must steel itself to reject the soft way of life—that of depending on the Government. If anyone is about to go broke because of some new development which promises threatening competition, he should not rush to the Government to keep this new product off the market. If the buggy makers of this Nation had kept the automobile builders from ever developing their machine, they would have only held back the progress of the world. We need the constant development of new products, perhaps making other items worthless, but it is all part of the great competitive industrial system that makes us strong.

We all realize that we will be living in a changed world. We are not going back to the "good old days." In my judgment, we will have social-security laws, laws protecting the rights of employees—many kinds of Government regulations will be continued.

In connection with these regulatory laws, however, I call your attention to one matter—the importance of which is often overlooked. It is this—that the general attitude and desire of the person administering any law can be a tremendous influence. I have found that if a person wants to do a certain thing, he will easily find excuses why it should be done. If he wants to find excuses why it should not be done, they are just as easy to discover. My wife even says that the same rule applies when I talk about going on a hunting or fishing trip. Under certain conditions, I can always find that I am not particularly busy and that anyway I have some business in that section of the country. By the same token, the attitude of the agency administering regulatory law is tremendously important. We need those in charge who are trying to use these laws to assist private industry to function more effectively. We do not need those who are looking for reasons why private industry must fail.

I have said that we must plan to give industry a chance to operate. Our statutes should recognize that he who makes a profit can be a good citizen, that in fact a reinvested profit is the source of new employment.

If we are to care for, perhaps, a million disabled veterans, if we are to provide a social-security program and freedom from want for those who do not work, then it means that those who do work must carry that load of expense. We will need to stimulate new industry, new processes, and new inventions. We will want to urge the development of better equipment and better machinery. We will need to provide for the selling of more items at a more rapid and continuous pace than ever before. In other words, there will have to be more business and it will need to be more dependable. Our lawmakers will need to be friendly toward industry and our tax laws and other enactments must encourage and reward industrial growth.

Too many of the organizations now making plans for the post-war period are merely planning for the spending of wealth and there is not enough attention to the creation of new wealth for everyone to share.

By now it should be an accepted truth that you cannot have more to divide among people when less is being produced. I am told that the decade from 1930 to 1940 is the only 10-year period in our history when this Nation made no net gain in wealth. Scarcity and an increase in our standard of living do not go hand in hand.

Following a war it is natural that people should seek relaxation from its strain by desiring to return to the peaceful days they knew in the past. But if there be some in this country who expectantly look for a return to normalcy, to them I convey my condolence. The normalcy they thought they knew will not be back. Progress is a stairsteps of change, each step followed by a plane of new normalcy. The task we face is not one of return. It is rather to take from our past the things we feel certain will be most useful in the new normalcy ahead.

No statesman, and no political party, seeking added power should advocate a policy of merely being against what has been done or what is being done today. What the people want and must have is an opportunity for better days than they have ever known. To merely oppose what has been done has no appeal. It holds no hope for future years. It is too abundant in sterility.

Is it not time for a clear-cut pattern of domestic enterprise? The rush of war postponed a climax in the festering problem of governmental control of business and industry but let no one mistake, that problem is still with us. There is need for planning that has the courage to reach out and grip this issue—to take the firm position that private enterprise is not a whipping boy but is an asset vital to democracy and is to be treated as such. By now, certainly, it is evident that the American people expect their Government to insure them against acute want. It must also be made clear that the premiums for this insurance are to be treated as an expense to be paid out of the profits of private citizens. Business, and resulting profits, must be encouraged. We must meet this challenge, not by following a demagog, but boldly by refusing preferment to those who desire authority so that they may hamstring our system of free enterprise.

And what of the distorting affliction that has attached itself to the labor movement? Why must our planners accept the premise that to say "No" to the scowling demands of a minority in the ranks of labor constitutes a vicious attack upon labor any more than saying "No" to the bigoted insistence of a minority in the ranks of management constitutes a vicious attack upon our industrial system? There is a middle ground, a fair ground, and it must be found or the laborer will be knocked down the long flight of stairs he has climbed so painfully.

To speak of planning is to speak of advancement. It is impossible, of course, to step forward and stand still at the same time. But elementary as is this natural law, it is the first realization that we must obtain if we are to pilot the course to lasting achievement in the years ahead.

In contemplating this change it is vital that we carefully safeguard those elements essential to retention of democratic fundamentals. I believe that individual rights should head this priority list of American possessions.

No matter how academic we make it sound, we cannot escape the final conclusion that the essence of our way of living lies in our insistence that in this country the individual is the important entity. It is the individual who is to have the right to control his destiny so long as he acknowledges the same right for others.

If the time ever comes when, through change, we alter this basic conception, we will no longer have the democratic life that we are fighting to preserve. It is important, then, that we keep the individual in mind as we plan for the solution of the tremendously complex problems we face. I am not one to contend that regulation of the individual to some extent can be entirely avoided. Surely, we must admit that such great problems as transportation, the integration of labor and industry, marketing and price controls—to cite a few—can be successfully attacked without sweeping regulations. But I insist that the way in which the regulation is applied is highly important. Many of these problems are so extensive that States cannot cope with them alone, but it does not follow that we can successfully apply complete Federal regulation. The point is, we must take care lest the regulation rides roughshod over the individual, and the best way to insure against this is by keeping the controlling authority close to the people. What is needed is a plan whereby the Federal Government will be the general director and

the local levels of Government the administrators.

Let us never forget that much of this Nation's greatness springs from our insistence that the hundreds of little desires of the individual have an opportunity for expression. Trivial as some of these desires seem—the urge to boo the umpire, to go fishing, to "tell off" the boss, to write the editor—trivial as they seem, the satisfaction of them and the hundreds like them, is the ingredient that gives our American life its zest, its flavor, and its desirability.

Our need is for men who appreciate that democracy is not a mechanical vehicle to be streamlined with engineering proficiency to transport its people with the greatest possible speed to some coldly efficient never-never land where living is done by national rote.

We can well afford now to fully grasp the plea of the poet:

"God give us men: a time like this demands
Great hearts, strong minds, true faith and ready hands;
Men whom the lust of office cannot kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and will;
Men who love honor; men who will not lie."

Our planning must include the demand for leaders who recognize democracy as a thing of beauty, of local color, gracious and decent and understanding. For it is within democracy that can be found our firesides and our families. For it on every continent our men fight today; for its continuance, we here at home have the duty to plan, and work, and pray.

Comparison of Income-Tax Payments During the 2 Calendar Years 1942 and 1943 in the United States, the United Kingdom, and Canada

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement and tables that were prepared by the Honorable Randolph E. Paul, General Counsel of the United States Treasury Department. They are self-explanatory and as follows:

Table 1 shows the sum of income-tax payments during the 2 calendar years 1942 and 1943 in the United States, United Kingdom, and Canada. The United States data assume that the 1941 liability is paid in 1942 and that the full current liability, including net Victory tax, is paid during the calendar year 1943. The unforgiven portion of 1942 liability is payable in 1944 and 1945, and is therefore not included in this table.

The Canadian method of reaching a pay-as-you-go system calls for paying the unforgiven portion (one-half) of the 1942 tax during 1942 and 1943, in addition to the taxes which would otherwise be payable during those years. The Canadian tax shown in the table, therefore, represents 2½ years' liabilities.

NO PAY-AS-YOU-GO IN ENGLAND

British taxpayers are not on a pay-as-you-go basis. While there is a system of collection at source in Great Britain, such amounts are not applied in payment of the current liabilities. Further, the surtax in Great Britain is on behalf of the second prior year's liability. That is, tax payments in 1942 include income-tax liability for 1941 and surtax liability for 1940, and tax payments in 1943 include income-tax liability for 1942 and surtax liability for 1941.

Comparison of income-tax liability without regard to the year of payment is shown in table 2.

TABLE 1.—*Comparison of income-tax payments during the 2 calendar years 1942 and 1943 in the United States, United Kingdom, and Canada at selected levels of net income*

MARRIED PERSON—NO DEPENDENTS

Annual net income before personal exemptions [1]	Net income for the 2 years, 1942 and 1943	Income-tax payments during the 2-year period 1942 and 1943						Income-tax payments for 1942 and 1943 as a percent of net income for the 2 years					
		United States [2]		United Kingdom [3]		Canada [4]		United States		United Kingdom		Canada	
		Including New York	Federal only	Total	Refundable portion	Total	Refundable portion	Including New York	Federal only	Total	Refundable portion	Total	Refundable portion
								Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
$1,000	$2,000	$15	$15	$221	$121			7.5	7.5	11.1	6.1		
$5,000	10,000	1,351	1,269	3,709	453	$3,567	$750	13.5	12.7	37.1	4.5	35.7	7.5
$10,000	20,000	4,081	3,772	9,009	520	9,723	1,500	20.4	18.9	45.0	2.6	48.6	7.5

$100,000	69,422	68,584	84,080	260	76,247	1,000	69.4	68.6	84.1	.3	76.2	1.0

[1] Income assumed to be all salaries and wages.
[2] Includes net Victory tax. Victory tax based on Victory tax net income, which is assumed to be 1% of net income.

WHY PRICE CONTROL DIFFICULT

It will be noticed that the average income taxpayer in England or in Canada will pay from 200 to 300 percent more in taxes for the combined years 1942 and 1943 than the same taxpayer would pay in the United States for those 2 years. Price control is more difficult in our country because Congress has not siphoned off enough of the excess purchasing power. The citizen with $2 in his pocket can well afford to pay $1 in taxes in order to keep the remaining $1 a sound dollar and one that will purchase the normal amount of food and other essentials rather than keep both dollars and have their purchasing power reduced to a very small amount. This is one time that people should gladly pay taxes in order to protect the value of their wages and salaries.

The Attempt of the O. P. A. to Cover Up Its Own Sins

REMARKS

OF

HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. RIZLEY. Mr. Speaker, the newspapers this morning carry the headlines "Meat shortage worse yet."

Last night on Theodore Granik's American Forum of the Air Russ Nixon, a representative of the C. I. O. and who, I understand, is one of the official advisers of the O. P. A., charged in substance the American farmers as being responsible for the food crisis. He compared the American farmers and producers of meat with John L. Lewis, and further charged that the farmers and producers of meat are responsible for the shortage, and that they are now carrying on a meat strike comparable to the recent strike in the coal industry. His shameful performance in this respect demands his immediate elimination from any official capacity, advisory or otherwise with the O. P. A., or any other governmental position requiring integrity.

The distinguished gentleman from California [Mr. ROGERS], who was buddying with Mr. Nixon on the program, charges the Republicans with being responsible for the mess the O. P. A. has made in the food-distribution program, all of which reminds us of what the elderly practitioner said to the young lawyer who was just starting out in the law practice, "When the law is on your side, and the facts are against you, give the facts hell. When the facts are on your side and the law is against you, give the law hell. When you have neither the law nor the facts on your side and both are against you, give your opponent hell."

The subsidy insistence, of course, is a political gesture, designed to gather votes for the fourth term from the labor and industrial consumer sources to which the President's advisers look for sufficient backing to keep him in the White House for as long as he lives or wishes to stay.

The President's stooges are for the plan for political purposes. The labor and industrial consumer groups, which are practically identical, are for it because it means cheaper food, albeit at the expense of the general taxpayers. Otherwise there is consistent opposition to the plan. Practically all farm organizations oppose it. Food distributors oppose it. The individual farmers oppose it. Common sense opposes it. And the argument that only such subsidies—consumer subsidies, mind you, not producer subsidies—can prevent inflation is "bunk," pure "bunk." Borrowing money from all the taxpayers to make living cheaper for the highest wage groups cannot prevent inflation. It will help speed it.

But subsidies provide a measure of control over the farm producers, whereas the logical method to ease the food situation, by allowing fair prices to the producer at the market place, will give the farmer a degree of independence from the bureaucrats which he has not had for years under the New Deal.

Meat and Food Production

REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. MICHENER. Mr. Speaker, I am this day in receipt of a letter from Mr. William H. Schlicht, a substantial farmer of Manchester, Washtenaw County, Mich. The farmers in this community have for many years fed lambs for the market. The lambs are purchased from the rangers in the fall, fattened, and sold on the market. The wool is often clipped before the lambs are sold.

Mr. Schlicht is a typical lamb feeder in our community. He has written me a letter in his own way giving the details in connection with the purchase of 1,050 lambs last fall, their recent sale after shearing, and the amount of the wool clip now on hand. It all adds up to the fact that if Mr. Schlicht sells his wool under present conditions, he will sustain an actual loss of $4,140 on his annual lamb-feeding venture. This is most interesting in view of present discussion in reference to farm prices, subsidies, and so forth.

In short, Mr. Schlicht has an actual investment in this transaction of $18,202.17, less $7,702, the sale price of the lambs, and he has not included as a charge against the lambs his own labor and facilities in caring for them during the feeding process.

Mr. Schlicht cannot afford to take this loss of $4,140. Neither can the Government nor the consumer ask the farmers of the country to take such losses. Surely, if our farmers are not to be allowed at least the cost of production for the food which we consume, then those same farmers cannot be expected to produce. It is just plain arithmetic. It is just common sense. It is just financial necessity that the farmers be given consideration at this time.

Mr. Speaker, pursuant to the privilege granted to me, I include herein Mr. Schlicht's letter, together with the itemized statement in connection with the transaction of which he complains. Mr. Schlicht's statement is as follows:

MANCHESTER, MICH., *July 2, 1943.*

Hon. E. C. MICHENER, M. C.,

Washington, D. C.

DEAR SIR: I fed 1,050 lambs and I am sending you their return up to date as far as mutton is concerned. The lambs shore 9,500 pounds of wool.

I find difficulty in selling it. As I understand the law I must first get man No. 1 to handle it. He gets 1½ cents per pound, or $143. Then to grade it at 2½ cents costs $237. Then pay the freight to Cleveland, 1½ cents per pound, or $143. Then I must leave off 1⅛ cents per pound to the Credit Corporation Bank or $107, making a grand total of $630.

The ceiling price, I am told, is 44 cents after taking off 6½ cents, leaving a net price of 37½ cents. Now 9,500 pounds of wool at 37½ cents totals $3,456.25. These 1,043 fat lambs sold for a total of $10,500.

You will note the wool would have to sell at 80 cents per pound to break even.

If you can clarify my mess I am in I would be very grateful. Show this letter to some of the bosses and tell them I am not going to feed any more lambs under such conditions.

Yours very truly,

WILLIAM H. SCHLICHT.

Cost of lambs before sale

First cost of 1,050 feeding lambs	$10,956.58
Freight charges from Texas	523.30
For 10 pounds' shrink on 1,050 head at 14 cents	1,400.00
For feed in transit at Montgomery, Ill	48.00
For hay consumed in 4½ months' time	1,800.00
For grain consumed in 4½ months' time	2,000.00
For interest on loan of $11,480.48	180.00
For shearing whole flock at 22 cents each	231.12
For electric current for shearing machine	10.00
For extra labor for feeding and tying up wool	480.00
For trucking from railroad to farm 5 miles	44.00
For premium on $10,000 special insurance, 4½ months	30.00
For twine for fleeces	15.00
For lambs lost, 10 head	90.00
Total	17,808.00

Outgoing expense

Freight to Cleveland, 3 cars	101.46
Yardage at Cleveland	108.04
Hay at Cleveland yards	41.07
Commisison for selling 3 cars	66.00
157 lambs trucked to Detroit, 50 miles	32.00
Corn, yardage, and hay	45.60
Total	394.17
Grand total	18,202.17

$18,202.17 less $10,500 leaves $7,702. The wool stands me at 37½ cents per pound; the 9,500 pounds net me $3,562.50. Then $7,702 less $3,562.50 costs to me of wool leaves a loss of $4,140. This represents this lone farmer's reward for putting over 80,000 pounds of mutton on the market and enough wool to make 2,000 soldiers' uniforms.

I am going to quit feeding lambs. I don't want to do this but these rules, regulations, and unreasonable requirements are forcing me with many other small businessmen to the wall.

War Over There, Brawls Over Here

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio

broadcast by John Paschall, editor of the Journal, on the Views of the News period on station WSB, Wednesday evening:

I believe it was George Eliot who wrote "We are all islands shouting lies to each other across a sea of misunderstanding." That was a dramatic way of pointing out the difficulty of human beings in understanding each other. Speaking so often out of our prejudices instead of our minds, our words make more clamor than sense. The result is misunderstanding and even chaos. In a democracy it is essential that we make an effort to understand each other and to compose our differences. We need to look for points of agreement, rather than for something else to fall out about. Otherwise the democratic processes bog down in a sea of misunderstanding and a storm of words. After a year and a half of war which has brought us many victories and growing confidence in the final triumph of the United Nations, we suddenly find that we are not doing so well on the home front. Many sensible observers are becoming disturbed over this deterioration of domestic morale. As far back as May 28, one forthright editor, Mr. Virginius Dabney, of the Richmond Times-Dispatch, sensed this slump in home front morale and discussed it in a challenging editorial entitled: "Wanted: A Rededication for America."

Perhaps we can do no better than to make this fine editorial the subject of tonight's discussion.

"The fundamental reason why the war is going badly on the home front," said Editor Dabney, "the reason why the country is confronted by successive demands from grasping blocs of one sort or another, and inflation looms at a greater and greater threat, is to be found in the fact that the national attitude toward the crisis is wrong. We are trying to turn a fight for survival into a free-for-all grab for higher wages, higher prices, and higher profits.

"Did any country ever win a battle for existence in this way?" asks the editor. "Can the will to victory be forged from the greed of this group or that, each determined that its living standards shall not suffer, even in the greatest war history has seen?

"Some would be inclined to say that most of our difficulties stem from John L. Lewis and his effort to sandbag the country in this great emergency. That is not true. If there was not something radically wrong with our attitude toward the war, Lewis could never have got to the place where he can defy the Nation almost at will.

"Basic to all our troubles," thinks the Virginia editor, "would seem to be that too many of us are seeking to get something out of the war, instead of to put something into it. * * * That is not true of all of us, of course, but even a blind man can see that millions of others are trying to get rich on the war, or at least to improve their mode of living while it is in progress."

Some of the blame for this state of affairs Mr. Dabney places on the shoulders of the President, who, he says, has given lip service to the need for lower living standards for the duration, and then belied his words by his actions. He feels that the administration has encouraged the unions to demand more and more at a time when it ought to have been impressing upon them, and everybody else, the necessity of living on less and less. He quotes Bureau of Labor statistics to show that industrial wages were upon March 1, 1943, an average of 57.1 percent since January 1, 1941, while living costs were up only 21.4 percent. Hence there is no good reason, says he, why organized labor should be capitalizing on this emergency to force greater and greater concessions. On the contrary, there is every reason why the administration should be using its best efforts to persuade labor to cease its constant demands, and why it should employ stronger means than mere persuasion, if necessary.

"But it hasn't done it," continues Editor Dabney. "Whether a Republican administration would be more satisfactory in this regard is anybody's guess. Certainly the Republican record in Congress on several measures most vital to the winning of the war could hardly have been worse * * *. Both major political parties are evidently lacking in the determination to forge in this Nation the sort of spirit which held Leningrad for months in the face of the most tremendous onslaughts the German Wehrmacht could throw against it, and which saved Britain in 1940, when Goering's Luftwaffe rained death and terror from the skies for a hundred days and nights.

"Let it not be imagined," says the editor, "that organized labor is the only element of the American population which is derelict in this emergency. The average farmer, like the average laborer, is wholly patriotic, but the farm lobby in Washington is out to get what it can out of the situation. And are the farm and labor blocs the only sinners? Not at all. Every grasping manufacturer who puts profits above the public welfare is just as antisocial and unpatriotic as a striking union, or a farm group which tries to undermine the Government's program."

He then cites the report of the Truman Committee concerning the faking of steel by the Carnegie Steel Corporation, steel for use of the United States Navy and the United States Maritime shipyards and for lend-lease. He recalls the indictment of officials of the Anaconda Wire & Cable Co., of Marion, Ind., on charges of conspiracy to defraud the Government through the sale for military use of wire alleged to be defective; the indictment of officials of the National Bronze & Aluminum Foundry Co. at Cleveland, on charges of violating the sabotage law and conspiring to defraud the Government; the indictment of the Baker-Lockwood Manufacturing Co., of North Kansas City, and of four persons on a charge of conspiring on contracts involving more than $7,000,000 worth of aircraft accessories. He mentions the fines imposed in a New Jersey court on nine companies charged with conspiracy to fix prices on United States Navy orders for $50,000,000 worth of cable.

"Indictments are not convictions," says the editor in fairness, but "hundreds upon hundreds of cases involving alleged war frauds, from minor chiseling to conspiracies totaling high into millions of dollars, are in various stages of investigation and prosecution by the Federal authorities. It is obvious that many employers in this country are just as guilty of sabotaging the war effort as are striking labor unions."

"All of this signifies," concludes Mr. Dabney, "that a canker of selfishness and self-indulgence is eating away our integrity as a nation. We are treated to the spectacle of manufacturers deliberately turning out defective steel for our ships, labor unions recklessly defying recognized Government agencies in the hope of forcing wage increases, and farm organizations trying to high-pressure Congress into unwarranted concessions. It is all part of a pattern which has been woven from complacency and greed. It is not only hamstringing the production of guns and munitions at home, but it is undermining the morale of our boys on dozens of foreign fronts. * * * This effort to turn the war into a grab bag for the Nation is the only thing which can defeat us now. We are our own worst enemies. We need and we must have a rededication of American people in the spirit of George Washington and Robert E. Lee, of George Rogers Clark and Nathan Hale. Otherwise we are in danger of losing our battle for survival at home, even if somehow we manage to win it abroad."

We believe Editor Dabney has called the turn on what is basically the matter on the home front. We can't conscientiously dismiss this indictment by abuse of John L. Lewis, Congress, or the President.

The storm that has broken over Washington was brewed in the Nation. You and I are a part of it. Despite American casualties of 87,304 of which 15,000 were killed in action or died of wounds, our petty differences at home still consume much of our time and thought and inflame our passions and prejudices.

Writing from an American bomber station somewhere in England, John Steinbeck, famous novelist, now a war correspondent, brought Atlanta Journal readers the reactions of our soldiers to the antics of the people back home. "It seems to me," said the waist gunner of a bomber crew who was quoted by Mr. Steinbeck, "it seems to me that the folks at home are fighting one war and we're fighting another one. They've got theirs nearly won and we have just started on ours. I wish they'd get in the same war we're in. I wish they'd print the casualties and tell them what it's like. I think maybe that they'd like to get in the same war we're in if they could get it to do."

Isn't it about time we got into that war over there and stopped these brawls over here?

Post-War Settlements

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 5 (legislative day of Monday, May 24), 1943

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Raise a Question," published in the Chicago Daily Tribune of June 30, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE RAISE A QUESTION

The people who are aiming to destroy the American Republic have adopted a new strategy. They are trying to get Congress and the major parties to adopt pleasantly altruistic resolutions asserting America's devotion to peace and her willingness to cooperate with other nations in achieving it.

It's a neat trick. Everybody is for peace and almost everybody believes that our Government can contribute something to the prevention of war. Accordingly, when a resolution which vaguely expresses the common hope is presented, little opposition is encountered, if only because there is nothing to oppose.

You can't saw sawdust. These resolutions never say anything about what is to be done with Germany, Japan, or Italy; they offer no opinion about the Polish frontiers; and the one thing they avoid most sedulously is a description of the mechanism of international cooperation that is to be set up. All the difficult questions and all the controversial subjects are eliminated.

And so, more often than not, the resolutions are adopted with almost no opposition. The men who voted for them did so in the belief that they were committing themselves to nothing. The schemers sit back and smile. They realize that the vague phrases in due

time can be quoted as evidence that those who voted for them favored whatever scheme for subordinating our Government and destroying our institutions may be put forward at the peace table.

The plot is to foreclose opposition in future. The way to meet these subversive tactics today is to insist that the do-gooders drop all their pretenses and present a clear-cut plan of international cooperation that can be examined on its merits.

Before endorsing any plan for a post-war settlement, Americans want to know what sacrifices it may entail and what commitments in money and men it requires of us. Under what circumstances will we be bound to fight? What assumptions regarding American institutions and America's role in international affairs are implicit in it?

In the belief that candor now will avoid a good deal of trouble in the future we propose to ask a number of specific questions of those who are presenting the resolutions for adoption and we propose to keep on asking until the questions are answered. The Nation will readily recognize that a refusal to reply can mean only a purpose to evade and deceive.

The first question is this: Do you admit that the American Revolution was the greatest event in the history of human progress?

Subversise Activities—Race Trouble

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. RANKIN. Mr. Speaker, the only difference between me and the gentleman from Alabama [Mr. HOBBS] is that I believe when a man on the Federal pay roll is found to be subversive he ought to be removed from that pay roll at once.

I understand that Vice President WALLACE is going to Detroit to advise the people what to do about race troubles. I hope he does not go. I hope he follows the lead of Mrs. Roosevelt, who, I understand, has declined to go; because if he goes there he will find, if he investigates, that this race riot was promoted by the Communist Party.

He should leave that proposition to the people of Michigan to settle. Let them solve it themselves in their own way.

Do you think we want either Mrs. Roosevelt or Mr. WALLACE to come to Mobile, Ala., or to Centerville, Miss., or to Beaumont, Tex., to try to tell us how to solve the race problem? They would only make bad matters worse.

I can tell you now that these race troubles are being promoted right here in Washington, and all over the country, by the Communist Party.

Any man or any woman who has condoned the forcing of white women to work in Government departments under or beside of Negro men, when they knew it was offensive and dangerous to them, is not a proper person to send out to tell the rest of the country how to solve the race question.

I repeat what I have said before, that the only way for whites and blacks to get along is to have complete segregation of the two races.

Race Riots

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. HOFFMAN. Mr. Speaker, conceived by class hatred, nurtured by greed, selfishness, and ambition, the recent race riot in Detroit was but the reaping of the crop sown when the seed of intolerance, of disregard of personal and property rights was planted in the sit-down strikes of 1937 and subsequent years. Then violence, disregard for lawful authority were rampant, tacitly encouraged by at least one high official of Michigan and by the national administration.

The Secretary of Labor, Madam Perkins, referring to the ouster of employees from their usual places of employment, to the seizure and destruction of private property, to rioting, went so far as to say that no court had declared sit-down strikes illegal. She thus lent the stamp of Federal approval to the riots of that period.

The unbroken connection between those days of bloodshed and the more recent ones is so clearly pointed out in a letter from Detroit, printed in the United States News of July 9, that it is printed herewith:

ANOTHER LETTER FROM DETROIT

(By David Lawrence)

RACE RIOTS WILL NOT BE PREVENTED BY HUSHING UP THE FACTS ON THE CAUSES THAT UNDERLIE THESE UNFORTUNATE CLASHES—NEED FOR INTELLIGENT DISCUSSION BY MEMBERS OF RACES AFFECTED SO THAT ADJUSTMENT MAY BE ACHIEVED

There has been a tendency to hush up what happened in the race riots at Detroit. The tendency is derived from a belief that the less said about it, the better. But that's a way really to promote more rumor and more turmoil. For indignation and hate are easily syndicated throughout the Nation, especially where the potentialities of race friction exist.

It should, therefore, be helpful to begin to understand the background of Detroit's race conflict. Last week we received a letter from the Christian clergyman in Detroit whose comments on the strain in that city between management and labor appeared on this page last month. This second letter is also worth careful reading. It follows:

"The riots here are fevers of a city sick with hate. Right now we are looking for some group to take the rap. We should be doing some grade A repenting. It is always easier to throw stones at somebody else than to cast ashes on your own head. Perhaps we shall be able to make a case stick against that ever present fifth column. Or perhaps we shall drag some "screwball" Kluxers out for a big investigation with news reels and all. If we could only find a Japanese or two, the thing would be solved. The trouble with most of the Germans is that they are some of our best workmen in war plants. Some folks propose that it was the Jews who did it, but that does not quite stick, for it was the Jewish-owned stores that got the worst smashing. Now, if we would begin to admit a few faults of our own, we might get red faces—but it would be good for us.

"How did Detroit get to be the hate capital of the world? Simply because it is the demonstration city in class warfare. Here it was that systematic and effective attempts were made to get everybody to hating the capitalists. Amusingly enough, it is necessary now that we make everybody capitalists—by getting them to buy War bonds—in order to win the world war. Here it was that we were told that all the trouble was with nasty old Wall Street. Our banks were closed, and the biggest one has paid dollar for dollar despite the looting by every legal process. The employer was next the bogey man, plotting the ruin of the workers.

"The street corners were filled with shouters damning 'the bosses.' The employers, confused and badly led, sulked on overstuffed club chairs and damned Roosevelt.

"And so hate became our civic mood.

"People here forgot that intolerance is infectious. It is like a plague which strikes down rich and poor, black and white, native and foreigner.

"So the intolerance, which is simply hate in action, spread. Two tense situations developed, the one between Jew and Gentile, the other between white and Negro.

"As in every pestilence, there were the great numbers who tried in every way they could think of to prevent the spread. But there are those who, forgetting the laws of moral sanitation, spread the plague of hate. In the old days many believed that a good plague now and then was necessary for the health of a community. So today there are those who believe that a bit of rioting now and then 'will put them in their place.'

"You see, many people here not only thought the riots would come but they had no alternative. Men would make great speeches for tolerance and then privately tell you that some direct action would have to be used.

"That is what confused the police in those first 20 hours. The police did not know whether to treat this like a strike or like a riot. In a strike the police are merely referees. Their business is to see that the rumpus does not spill over too much. If they interfere to protect property or personal rights, they are taking sides in the game and bang goes their badge. Don't jump on the police about that. They were just citizens who were in a tough spot and who failed to get a clear lead from the top as to what to do. They did what they thought best, and that simply was not good enough.

"Then Governor Kelly came from Columbus. The great decision, when the Governor came, was that this was to be treated as a riot rather than as a strike.

"We have had worse troubles here in Detroit. But they were clashes between economic classes and not between color classes. Clashes between economic classes are accepted as 'democracy in action.' People get killed, stores are looted, neighborhood tensions are aggravated, but this is 'winning social gains.' Nor should the worker be blamed for that any more than the man whose body is full of strep germs should be blamed for running a fever. It all depends on whether you are going to look at hate and intolerance as a disease, no matter where it happens, or whether you are going to call hate and intolerance a democratic process when it gets going between people who are on opposite sides of the time clock and call it a riot when they are on opposite sides of the color line.

"Now what were some of the common people doing while the riots went on? The common man was a hero. Without much leadership and with little understanding of principles involved, thousands of ordinary citizens worked without sleep to care for the wounded and to drain off the pus of hate.

"One of my brother ministers, a Negro, knew that among 300 families in his area just 3 families were the active trouble-makers. He went into these homes time and again to cool off their tempers.

"One large union had tolerance pickets out. These went from store to store, to the gates of the plants, and on the busses. They

joined naturally in the conversations and 'shot the rumors dead on sight.' They said simple things in which they had been coached—'Great headlines in Berlin tomorrow.' 'Let's not be zoot-suiters,' 'Let's keep our mouths shut and our heads cool.'

"In one large plant, the union, together with representatives of various groups in the community, had recognized that there are carriers of hate just as there are carriers of typhoid. A quiet study was made, and in this plant a few dozen men and women were quietly interviewed. The things which had gone wrong in their own emotional set-ups were probed and at least partly cured.

"To isolate and treat carriers of hate is an act of moral sanitation. The time will come when we will see that hate is a disease, and we will treat the hawker of hate as we treat the peddler of diseased meats.

"Attempts were made to solve this problem by forcing the issue. To try to make the Negro and white love each other by legislating beyond the moral sense of both is to repeat the mistake of prohibition. If a parent had two children who were not getting along together, he would not try to make them like each other by banging their heads together. And yet this is precisely what was attempted here. To try to make people get along with each other by forcing them together is as sensible as trying to make teetotalers by taking away the bottle. There is another way and we should begin it now.

"We have been on an emotional binge since the last war. Let's admit it, face it, and be sorry for it. A big dose of repentance is the greatest single thing we could do to increase our war output. Just as a few people corrupt a community by peddling the germs of hate, so a few people purify a community by promoting the sulfa of personal realism. Tolerance is not the antidote for hate. Tolerance is the healthy tone of a well civic body. We shall never get tolerance by dabbing sick cities with iodine of nice gestures. Only personal repentance goes deep enough to kill hate."

There is need of self-examination among groups as well as individuals. We are too prone to think that the only way to solve human difficulties is by fighting and too prone to believe also that in race riots only the irresponsible are to blame—as if they alone lose their heads.

But there's a history back of every race riot. It's related to the conditions and circumstances in which peoples of different races live. The failure to recognize possible conflict and to assume it will solve itself is just as much evidence of irresponsible citizenship as letting each individual deal with situations of this kind when they become acute.

Many northern cities in recent years have felt the impact of immigration from the South. The economic condition of the Negro has vastly improved and will continue to improve as high war wages are paid in an era of scant manpower. But precisely because this introduces new sociological aspects is no reason to assume that the problem has not existed before.

There are intelligent persons in the white and Negro races who have dealt before with this challenge to human adjustment. Their advice should be sought. Committees, for instance, are meeting in Richmond, Va., in which members of both races are sitting down together to think out a solution. Americans know that race difficulties can, in time of war especially, produce a dangerous form of disunity. But the outbursts are not confined to wartime. The National Capital itself saw a shameful race riot a few months after the close of World War No. 1.

It is not by any means a problem that can be solved by mere conference. It requires a sympathetic approach, a frank assumption that color differences will remain and that it is not possible to change human nature suddenly. It is rather that we must deal with the difficulties realistically.

The issue is not one that can be resolved by suppression. It can be helped by an abandonment of the hate method and by dispassionate discussion among the civic-minded leadership of our communities.

Mr. Speaker, riots are not democracy in action, nor do they aid in winning social gains. The levying of tribute is still extortion though practiced by union racketeers.

The remedy is obvious. The remedy is equal justice under law, respect by all for law, and orderly procedure.

Refugees Making Good

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. CELLER. Mr. Speaker, strange as it may seem, Hitler has at last created a benefit for the United States.

Among those who have escaped Hitler's persecution and who have sought refuge on our shores are eight Nobel prize winners. Their genius and talents are now at our disposal.

In this connection, the newcomers generally have created many new industries. They have brought new trades to the United States and are making here articles which were heretofore imported, such as fine leather goods, perfumes, Viennese knit goods, Karlsbad wafers. Diamond cutters, so essential to war industries in the manufacture of precision instruments, have brought to us their skills from Belgium and Holland.

In this connection I herewith submit a letter which appeared in the New York Times, written by Dr. Jacob Billikopf, director of Labor Standards Association, Philadelphia, entitled "Refugees Making Good":

REFUGEES MAKING GOOD

I was deeply impressed with your editorial They Too Can Aid, in which a strong plea was made that among those who have succeeded in escaping to our shores there are 2,250 exiles who are a source of intellectual war power which we have not yet tapped and whose services should be utilized.

In 1937 and 1938 it was my privilege to serve as codirector of what is now known as the National Refugee Service. One of my tasks was to create throughout the country resettlement committees for the reception of refugees—confident that through such intelligent distribution they might more readily be absorbed in American life and civilization. The record of the 15,000 or more refugees who have been sent inland has been remarkable.

Only this morning I received a communication from a leading social-service executive on the Pacific coast, from which I quote the following:

"You asked how many refugees there are now in our city and how many are on relief. We have between 3,000 and 3,500 refugees. The refugee relief problem has become trifling. In fact, at the present time there are only 8 cases on relief and these, of course, are all of a residual character with no earning power in the families.

"We have, however, opened a utility shop, obtaining jobs of a simple character—addressing envelopes, labeling, folding material for mailing, etc.—and some of the so-called unemployable people will be able to earn part of their requirements.

"We are actually making a profit on relief disbursed at the present time. During the month of April, for example, we received refunds on account of relief previously granted to emigrees which were actually in excess of the amount of relief disbursed during the same month."

A refugee for whom a job was found in 1938 writes: "I employ now about eight persons. If it were not for shortage of goods we could employ many more. You will be pleased to know that my wife and I will shortly become citizens and that will be one of the happiest days of our lives."

The aliens who come here are never again what they were in the lands whence they came. We bruise them at times; we set up some of the old world barriers against them; we regard as inherited racial traits characteristics common to all people bursting from oppression and persecution; but for all that we change them and they become an integral part of our American civilization.

As Clarence E. Pickett, secretary of that great humanitarian institution, the Friends Service Committee, has observed:

"The majority of the refugees have made rich and significant contribution to our American life and are doing it with supreme joy and satisfaction."

JACOB BILLIKOPF,
Director, Labor Standards Association.
PHILADELPHIA, *June 10, 1943.*

The Outlook for the Canning Industry

EXTENSION OF REMARKS

OF

HON. FRED NORMAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. NORMAN. Mr. Speaker, in view of the very definite threatened reduction of the canners' pack of fruits and vegetables this season and the prediction by many that there may be no canned products on the market at all next year for civilian purchasers, I am inserting a very able article in the RECORD written by Mr. L. M. Jones, manager of the Washington Canners Cooperative, Vancouver, Wash.

Mr. Jones is a leader and expert in this field, and I recommend his article to Congress, the administration, and the country as a fair statement of the outlook for the future and the reasons therefor.

The article follows:

TODAY'S GUEST EDITORIAL

(By L. M. Jones)

WASHINGTON CANNERS COOPERATIVE

Instead of a busy season of packing fruit for future consumption, canners in our territory are either shut down or are operating in a very small way. Take strawberries, for example. Fresh market prices, on which there is no ceiling, are netting growers 20 to 24 cents a pound. Office of Price Administration has fixed a price limit of 12 cents, to be paid growers by the canners. What is actually happening is that Office of Price Ad-

ministration says we cannot can or freeze. Packers must give the berries that they normally got in past years to the civilian trade for fresh consumption. This may not be admitted by them in so many words, but this is actually how it works out.

We have no complaints with our growers for receiving these high prices on the fresh market, for they have had some poor years, and are entitled to good prices, now, to make up for them. We do, however, object most strenuously to permitting handlers of fresh strawberries an unlimited ceiling, thereby diverting berries from our cannery because of lower ceiling. All this is having a serious effect on our costs, as strawberries are one of our largest packs. We have lost heavily in volume, which means higher indirect cost, and we must maintain all our key men and women for future packs that we hope to put up.

We were informed by the War Food Administration that strawberries were wanted for the soldiers and sailors in the shape of strawberry preserves and jams. Now, under present circumstances, they will get very little, if any. We were also informed on several occasions that they would fix it so the Government would get its requirements of strawberries; either ceilings would be imposed on the fresh market or berries would be placed on the fresh market for a certain number of days, and for the balance of the season would be diverted to canners and processors for Government requirements. These promises have not been kept. What is true of strawberries will apply on all other berries, fruits, and vegetables much desired by the Government.

A few days ago we were told that ceilings would be placed on prunes and pears for fresh consumption. In view of past promises we question whether or not this will be done.

The total estimated pear pack in the Pacific Northwest is 50 percent of last year's. Present Government requirements are 50 percent of last year. This means that the entire pack will be needed by the Government to fill its quota, and still there will be a shortage. Here, again, the fresh market is capable of paying extremely high prices and taking most of the supply.

In normal times conditions like these do not exist. There would be open competition for the fruit, giving all interested processors and shippers an equal opportunity to obtain it. The matter resolves itself into a question of whether the Government wants fruit and berry canners to operate this season.

Another source of trouble is the wage scale set by the War Labor Board for canners. Canners in western Washington stated that the minimum that labor could be obtained for in the Puget Sound and Portland areas was 85 cents for men and 75 cents for women. Then we received official notice that wage rates would be 80½ cents for men and 66½ cents for women, the notice coming long after operations had started. Because of this situation, we have lost much of our old help, with wages so much higher in shipyards and other defense industries. We have been dependent during the summer months on high-school boys and girls to help in putting up the pack. Even this age group is not now obtainable, as even 16-year-olds have been readily absorbed in the shipyards at 90 to 95 cents an hour for both boys and girls.

What fruit will be canned this year under existing circumstances must be packed by patriotic, part-time citizens who are not concerned about what wages they receive but who believe, more than does the Government, that food can win the war.

After being told three times that wage increases certified by the War Labor Board would be added to canners' ceilings, Office of Price Administration scrapped its promises, and now has come out with the statement which practically means that if, at the end of the season, a packer goes into the red, it will give him some help on the added costs because of the increase in wages.

As far as the cooperative canner is concerned, this statement is meaningless. It has no profits or losses. Its grower membership is affected through the returns. If costs are high and ceilings are unfair, by not taking care of increased costs of processing they must take less for their fruit or vegetables. We, as cooperative canners, believe firmly that Office of Price Administration should make good its original promises and not offer a meaningless substitute.

Look Ahead—Look South

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. SIKES. Mr. Speaker, I request permission to extend in the Appendix of the CONGRESSIONAL RECORD a praiseworthy editorial written by Stanley Parkman, of the Gadsden County Times, at Quincy, Fla.:

"LOOK AHEAD—LOOK SOUTH"

Quite a bit has been said in recent months about post-war aims and plans—most of it has been from an international point of view.

It is not too early to give consideration to post-war plans of a local nature. The South, as a section, and Florida must begin now making plans for its future after the war is won.

The South will be greatly changed when the war is over. Many things will be different from the pre-war era. Most of the prospects are bright, for the South will have a chance to regain something that has been lost since the Civil War.

Industry has turned southward in recent years, partly because of Government encouragement and partly because industry found that the South is a fertile field for its development. Much of the industry that has come South is now Government owned and serves a strictly war purpose. The coming of peace must not mean that these facilities will be idle. Plans should be made well in advance for their conversion to peaceful production to serve a world that will be hungry for their output.

Billions of dollars will be in the hands of southern people and those who will seek to spend it in the South. Of course much of it will be in War bonds but that will assure an even flow of surplus income to avert boom conditions and at the same time prevent a tide of depression.

Much of the criticism of the Work Projects Administration and its kindred agencies was born in the South where it was clearly seen how the dole system brought about a slowdown of personal initiative. Possibly businessmen and leaders of private industry in the South are sicker of such practices than anywhere else in the Nation. They should take the lead in seeing that Government employment does not get a hold on people of the South again. Plans should be made now to avert another Work Projects Administration era.

The South must prepare itself to employ its own people when the war is won. Politicians of the South must plan now to see that Government gives private industry a chance to adjust itself. Jobs must be available for those who want to work and the Government must not cater to those who don't want to work.

Government projects and employment were necessary in the depression era because industry had failed to absorb the available supply of manpower, but careful planning can avert a recurrence of the same situation after the war.

The South has something to sell. We don't need to sit by and accept the crumbs that fall from the table of prosperity. This section of the Nation is wonderfully blessed with natural resources. Our farms have to supply the raw products of the Nation. Labor here is plentiful and the war has brought industry that can be put to profitable use.

Let us get away from this practice of offering all kinds of concessions to prospective industrial expansion here. There is no reason to bait industry with promises of no taxes, free land, and local capital. Some of the South's most enduring and prosperous industries have been developed by Southern people who started in a small way and built to bigger things.

Let us look ahead, to the South, for an era of prosperity after the war.

Shipbuilding Record of the Maritime Commission

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 5 (legislative day of Monday, May 24), 1943

Mr. WALSH. Mr. President, recently, at the suggestion of the Office of War Information, I sponsored a foreign broadcast on the shipbuilding record of the United States Maritime Commission.

I request that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The June figures, released by the United States Maritime Commission, brought the total merchant ship production for the first half of 1943 to 879 ships, aggregating 8,816,622 deadweight tons. In the entire year of 1942, American yards turned out 746 merchant vessels, aggregating 6,089,732 deadweight tons. American shipbuilding has taken tremendous strides in the past 6 months and there is every indication that the goals set for this vital war industry will be attained.

The first job of the merchant marine is to get great quantities of men and supplies to the right place, at the right time, to deliver crushing blows to the Axis—blows that will hasten the unconditional surrender of all enemies of liberty.

But, the merchant marine is a tool of peace as well as a weapon of war.

Admiral Land, Chairman of the United States Maritime Commission, has repeatedly emphasized the role of the merchant marine in peace. The vast fleet of merchant ships now built or being built have a well-defined task to perform in the rebuilding of the world after the defeat of the Axis. It is a possibility, Admiral Land points out, that ships now used for transporting planes and guns and tanks will be of service at a later

date to carry cargoes of food, medicines, clothing, and supplies necessary for relief and rehabilitation.

In addition to the large numbers of merchant vessels constructed for the United States merchant marine in American yards, scores of merchant ships have been built for our allies. It will require the employment of all we construct for ourselves, together with the use of the trained maritime personnel of the United Nations—operating their own ships as we operate ours—to bring order out of the Axis-created chaos.

The contribution of the workers in American shipyards and the men and ships of the United States merchant marine toward victory over the Axis and the establishment of better living conditions in the peace that follows victory will be an accomplishment never to be forgotten by the people whose liberties have been preserved and whose very lives have been saved by the tireless efforts of American builders and sailors.

How Prices Rise and How They Rise Too Far Unless All of Us Take Proper Safeguards

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PATMAN. Mr. Speaker, the reason for a price rise in wartime is simple. Anyone can understand it. The production of more materials for war means the production of less civilian goods. More people working for more money means more money available to spend. This increased volume of money competes for scarce goods if we let it, and when more money competes for scarce goods, it bids up prices.

But higher prices increase the cost of living, so that workers will seek higher wages to meet increased living expenses. Higher prices and higher wages will mean increased costs for businessmen, which they will try to cover by charging still higher prices.

Higher prices will mean increased costs to farmers, which they will try to meet by charging higher prices for farm products. But if farmers or businessmen charge higher prices for their products, this will raise the cost of food. Higher food prices will raise the cost of living and workers will want still higher wages, which, if granted, will increase business costs and bring a pressure for still higher prices, and these price increases finally will get back to the farmers, who then will want still higher prices.

Thus the circle goes, unless we carry out the control program. Each price increase breeds another price or wage increase; which in turn breeds another, and yet another, and the amount of goods remains the same.

It is to the self-interest of the individual to do everything possible to help hold down prices.

The situation which faces us today is simple to understand. We Americans have more income, more money to spend, than ever before in history. But there are less goods on which to spend our money. There are enough goods to meet most of the essential requirements of civilian life, but no more. If most of us make more money, which is what is happening, there still are no more goods, the amount of money does not help.

If we use our extra war-created income to buy this limited supply of goods, all that we will do is bid up prices.

There will not be any more goods. We have had to limit the production of civilian goods to meet the needs of our Axis-created war.

If we go out and buy to satisfy our whims and desires, rather than keeping our purchases to the things we really need, all we shall do is to pay more for the same amount of goods. We, therefore, will have less money available to buy new and improved goods later on.

If we help bid up prices, we will increase materially the cost of the war.

The many thousands of people with relatively fixed incomes—teachers, white collar workers, veterans, and veterans' families living on pensions, widows living on insurance payments, families of the men in our armed services—would suffer at once.

Those who received increases in wages or prices would live in a fool's paradise for which the final day of reckoning would be swift and certain. As prices continue to increase, they outstrip wages and civilian purchasing power is squeezed. When this stage is reached, any one of a number of events may start prices tumbling. Sharply falling prices produce a period of depression and business stagnation which hurts nearly everyone, producing bankruptcy and unemployment.

For wage earners they mean cuts in wages, reduced working hours, and unemployment, less money to pay off mortgages on houses bought at high prices, less money to meet insurance premiums on policies bought when wages were high; less money for day to day needs.

For farmers it would mean less money coming in to pay for farms and equipment bought during the period of high prices. It would mean failure and foreclosure of many.

For businessmen it would mean severe losses and financial receivership; often receivership and bankruptcy.

None of these things need happen if all of us do our part to keep rising prices under control.

Freight Rate Discrimination

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BRYSON. Mr. Speaker, I have addressed a letter to Chairman LEA, of the Interstate and Foreign Commerce Committee, copy of which is herewith enclosed as a part of my remarks along with an editorial from the Christian Science Monitor.

There are a number of bills before the Committee on Interstate and Foreign Commerce dealing with the question of freight rate discriminations and I sincerely trust that the committee will soon begin hearings and as promptly as possible report some measure dealing with this important situation.

The letter and editorial follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 5, 1943.

Hon. CLARENCE F. LEA,
Chairman, House Interstate and Foreign Commerce Committee.

MY DEAR MR. CHAIRMAN: Knowing that your committee has been heavily loaded with important measures dealing directly with the war program and hoping that upon our return from the short recess your calendar will be lighter, may I express the hope that the bill introduced by me designated as H. R. 2519 may soon be considered.

There can be no further justification, if ever there was, for the unjust sectional discriminations in freight rates. Let us now see to it that appropriate legislation is speedily passed dealing with this important issue.

Very respectfully,

JOSEPH R. BRYSON.

[From the Christian Science Monitor]

A CALL FOR EMANCIPATION

The South, that section of the United States which President Roosevelt denominated Economic Problem No. 1, now feeling the beneficial results of a great surge of emergeney industrialization, hopes that its wartime gains can be extended so that it can escape the stigma of being called the Nation's problem child.

At the same time, its economic and political leaders point out that the South's status is not its fault A northern industrial oligarchy, it is contended, was largely responsible for inflicting economic handicaps which have held Dixie in virtual bondage ever since the Civil War.

The magazine Fortune, in its July issue, takes cognizance of this condition. A subhead under the title of the article "The Deep South Looks Up," reads: "It sees an opportunity, with northern aid, to join the Union." The economic shackles on the South are listed by Fortune as the protective tariff, the uneven freight-rate structure, and the North's almost complete financial control of the South.

The tariff has always been a thorn in the side of the South—as, indeed, it has been to American agriculture in general. For generations, protection has increased the price of practically everything the farmer has had to buy, and its compensations have been small. Retaliatory tariffs, in particular, have prevented the South from marketing its surplus cotton abroad. The resultant reduced income kept the South poor.

The second handicap is the arbitrary division of the United States into freight-rate territories, which not only hampered the South in competing with northern producers in heavily populated regions, but actually discouraged the establishment of new or enlarge industries and the legitimate exploitation of natural resources below the Mason and Dixon's line. Fortune points out that it "costs 50 percent more to ship an auto storage battery from Jacksonville, Fla., to Washington, D. C., than from Chicago to Washington, 6 miles farther." This is a sample of rates affecting many competitive raw materials and manufactured articles.

The South is in an excellent position to become the center of post-war light-metal, chemical, and plastic industries because of the huge pool of cheap Tennessee Valley Authority power. The region has semi-skilled labor in quantity. The correction of the inequalities in rail and truck freight rates should be the first step toward emancipation of the South. Also, continued support for the Hull trade treaties in the future and a reexamination of the tariff laws at the first opportunity should be on the agenda of the post-war administration in Washington if equality of opportunity is to be something more than a mere phrase.

Crop Insurance

REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. LEMKE. Mr. Speaker, last week when the crop-insurance matter came up the chairman of the House conferees, the gentleman from Georgia [Mr. TARVER], promised to give me some time in the discussion, if he gave anyone any time, but then he moved the previous question and kept his promise. I find no fault with that.

But I find this matter is still in dispute, that the Senate has refused to concur in the House position, and that the House conferees have refused to meet with the Senate conferees. I feel that this is an arbitrary position on the part of the House conferees. I feel that they should submit to the rule of reason rather than to the rule of stubbornness. I think it is unjust and unfair and setting a dangerous precedent for the House conferees to refuse to meet and discuss any matter in disagreement between the House and Senate. In this particular case the Senate is right, and you Members of the House are selling the farmers down the river, especially when you refuse to carry out the 3-year contract your Government made with these farmers. You might at least discuss the issue and reach a compromise by carrying out the contract that has been made.

I here give you the wheat and cotton contracts in force in the different States that you are arbitrarily canceling. I will also give the yearly growth in popularity by years. This will show that all of the statements made on the floor were not correct:

Crop-insured farms

Wheat contracts by States:	
Nebraska	67,000
Kansas	42,000
Ohio	40,000
Michigan	32,000
Indiana	32,000
Missouri	30,000
Illinois	29,000
Oklahoma	22,000
Minnesota	20,000
North Dakota	13,000
Wheat contracts by States—Continued.	
South Dakota	9,000
Texas	9,000
Pennsylvania	7,000
Colorado	4,000
Oregon	4,000
Maryland	2,500
All others	124,000
Total	487,000
Cotton contracts by States:	
Texas	54,000
Georgia	25,000
South Carolina	20,000
Alabama	12,000
Louisiana	11,000
Oklahoma	9,000
North Carolina	9,000
Mississippi	9,000
Arkansas	8,000
Missouri	4,000
All others	16,000
Total	179,000

Steady growth in popularity of Federal crop insurance

Farms insured:	
1939	165,775
1940	379,710
1941	420,939
1942	503,266
1943	512,000

(All farms insured in 1943 under 3-year contracts. Some farms insured on both wheat and cotton.)

Mr. Speaker, it is apparent that a studied attempt has been made to misrepresent Federal crop insurance. An attempt has been made to show that it has been operated extravagantly. Senator NYE has shown that this attempt is not founded on fact. He gives the true picture of these operations, that it cost the Government about $23,000,000 to provide approximately $55,000,000 of benefits to the farmers who have suffered crop losses. Of this fifty-five million the farmers themselves contributed thirty-five million in premiums.

The Senator says:

Compared with the operation of private insurance companies, the Federal Crop Insurance Corporation has been administered very economically. * * * The expense ratio of the Corporation has been approximately 30 percent, as compared with a combined average of approximately 41 percent for stock and mutual fire insurance companies.

The cost of handling each wheat-insurance unit has been cut 56 percent since the first year beginning in 1939.

The excess of indemnities over premiums for wheat insurance has been reduced from 66 percent in 1940 to 49 percent in 1941, and to a low of 20 percent in 1942.

I am sorry, but if my colleagues persist in their blind opposition to agriculture, then there will be a day of judgment. In a democracy election day is judgment day. That is when the farmer will do his protesting. I repeat, I am afraid that unless this House changes its attitude toward the farmer and the laborer that then there will be strange faces to greet us here. Unless you change your attitude you will have made a fourth term possible if not inevitable. This is not a threat—just plain common horse sense.

Congress Aids Hitler With Inflation Moves

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith a letter that appeared in the Columbia (S. C.) Record of June 30, 1943. It is as follows:

CONGRESS AIDS HITLER WITH INFLATION MOVES

To the EDITOR OF THE RECORD:

Is it not full time our Congressmen were warned that lining up with Republicans who confess they'll cripple the President is aiding Hitler and Tojo to bomb us worse than we are bombing the Ruhr? Is it too late to warn them that opposing subsidies is heading toward inflation? I was in Germany when inflation struck there, and, believe me, inflation is hell. It can ruin any country.

Why blame the President for the impossibility of pleasing everybody? Why cry for ham and eggs and business as usual when our dear ones are dying at the front? Mistakes are unavoidable, but an unpardonable mistake is deliberately to cause inflation. God pity the middle and lower classes. Why are subsidies proper everywhere except where F. D. R. wishes to use them? In going beyond its prescribed lawmaking power and dictating the personnel and manner of execution of its laws, Congress robs the President of his constitutional executive powers. Why hamstring him by stirring up the hates which Hitler prophesied?

People's rights do not include the right to "git all you can while the gittin's good." Honor has no place for labor blocs and farm blocs and Republican and Democratic blocs groaning for votes and pie for dessert. What patriot expects not to suffer? Who should strive to profit but in the field of honor? What hero but greets the glory to suffer for freedom?

Election year is near and prophets of "grass'll grow in our streets" are again at their sounding boards, with crafty politicians knowing more than Pa and Ma and Uncle Joe and Aunt Mary. The result? Two-cent dollars!

This war is a long, long way from being won. Humanity's greatest tragedy is the treachery of man to himself. Greatness is reached only by cooperation. Whether a soldier on the front line or a soldier on the home line or a lawmaker or a law executor, you cannot escape that unforgettable warning: "Therefore, if the world goeth astray, in you is the cause."

Is it not full time, Mr. Editor, to sound the warning that inflation is hell?

Read what a wise man says of our President:

"When he first became President, the Nation's house was on fire. He put it out. Confidence was lost. He restored it and infused it into the hearts of the American people. The farmers were bankrupt. He made them solvent. Tens of thousands of shops and factories were closed. He opened them. Commerce was buried. He resurrected it. Business was dead. He brought it to life. Prosperity was banished. He restored it. Millions were homeless. He housed them. Millions were half naked. He clothed them. Millions were hungry. He fed them. Millions were idle. He employed them. The country was defenseless and seething with

unrest; revolution was just around the corner. Franklin Roosevelt has made the United States the arsenal of democracy, the fortress of liberty, the haven of happiness, and the home of content. In 10 centuries no other born of woman has ever rendered as much service to the hosts of toil, underprivileged, affliction, and distress as he has rendered them during the last 10 years."

Deliberately to create inflation by thwarting this man in the proper execution of his constitutional duty may needlessly cost the lives of millions of American boys such as yours and mine, may needlessly mean thousands of vacant chairs, and crepe on millions of American doors.

Is it not full time, Mr. Editor, that those who speak for us should speak constructive words and furnish cooperative aid? When a nation's existence is at stake it is certainly no time to play politics or flourish ignorance of economics. This is war! Not a home war of Americans against Americans, but a war of freedom against slavery!

THORNWELL HAYNES,
Columbia, S. C.

Why I Opposed Subsidies

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 5, 1943

Mr. POULSON. Mr. Speaker, my reason for opposing the President on this issue of subsidies was certainly not to be anti-administration, as some would attempt to label the opposition, but because I sincerely and firmly believe that subsidies are unsound and will lead to further inflation.

Now, let us discuss this subject in simple terms, confining ourselves to fundamental facts and truths, and by all means abandoning any form of demagoguery. I personally think it was unfair that the President labeled us, who opposed him, as people who wanted inflation. Such remarks do not add to unity when we feel that we have sound reasons for opposing subsidies. We were elected to legislate as we think best for the interest of the country, and that does not necessarily mean that we must be a "rubber stamp."

In the first place, my district represents a district of consumers, and therefore I am vitally interested in the food problem and the matter of cost of living. Consequently, I am opposed to inflation. What causes inflation? Every authority on economics has claimed that inflation results when our purchasing power exceeds the available commodities and articles to be purchased. In other words, there is more money in circulation than there are consumer goods in value, which causes the amount or selling price of the consumer goods to rise to meet the amount of circulating money offered in purchasing certain goods. Mr. Roosevelt took note of the fact that an increase in consumer spending power, which is already far in excess of the available supply of consumer goods, is a contributing factor to inflation. This being the case, it is obvious that any success which the administration has with its price roll-backs will simply add to the already excessive volume of consumer spending power. If prices should be reduced by 10 percent, for instance, the money which people thereby would not need to spend on food would be available for them to spend on something else. Unless this new surplus should be absorbed by taxes or savings, it would simply find its way into the inflationary stream.

Now, as the President has stated, it will take approximately $2,000,000,000 to finance a complete subsidy and roll-back plan, and this means an additional $2,000,000,000 placed in circulation. The only method by which this additional $2,000,000,000, plus the already existing surplus of cash, can be siphoned off to avoid inflation is by forced savings or taxes, plus the original price control by O. P. A. Mr. Morgenthau has stated that the tax rate on the higher incomes has about reached the limit, so the bulk must fall upon the middle-class and lower-income brackets, or even a sales tax, which I do not welcome. In other words, the amount not collected in taxes will be passed on to future generations. Let us assume we save $10 per year in the food costs, the cost of administration will be at least $2.50 and the interest will be $2.50, so the future taxpayers will be paying $15.

As I understand, the real purpose of subsidies is to assist those who are definitely unable to absorb the 8-percent increase in the cost of living from May 1942, which is the figure Mr. Roosevelt gave us in his veto message. I have suggested, as others have, that instead of subsidizing the processors and allowing the advantages to go to all, that it should only apply to those in serious need, such as the low-income earner, the pensioner, and the persons of fixed salaries in the lower brackets. This could be handled in the form of food stamps and determined upon the basis of their earnings to be adjusted from time to time according to the changes. This is not new legislation, and it has been recommended by both Republicans and Democrats.

I realize that O. P. A. has made mistakes, but nevertheless I have supported O. P. A. and voted against all cuts in their budget, because I realized they needed sufficient money to control and regulate prices.

Here is another danger arising from general subsidies such as has been recommended. This danger is based upon past experience. All we have to do is refer to the past inequities of the minor farm-subsidy plans. This information was brought out on the floor of the House during debate: Last year California produced over 7 percent of the food alone of the Nation, not counting cotton, wool, and so forth, and obtained $12,000,000 as subsidy, whereas Mississippi only produced 1.8 percent of the food and fiber of the Nation and received over $28,000,000 as subsidy. Of this $28,000,000, over $5,000,000 was paid to 63 large operators. This $5,000,000 amounted to more than all of the farmers of the following 21 States received:

Arizona, Connecticut, Delaware, Florida, Idaho, Maine, Maryland, Massachusetts, Nevada, New Hampshire, New Jersey, New Mexico, New York, Oregon, Pennsylvania, Rhode Island, Utah, Vermont, Virginia, West Virginia, and Wyoming.

There were 6,400 large checks to farmers in Texas which amounted to more than the farmers in 21 other States received. It should be noted that New York is one of the leading agricultural States in food production. That State alone produces more than half as much food and fiber as Texas, but her 153,000 farmers got less subsidy than 6,400 farmers in Texas.

We must also bear in mind that there is no pattern or yardstick by which they will apply this. Supposedly, they will attempt to subsidize the processor for the difference between costs and selling price. This is bound to lead to many discrepancies and inequities from a practical application of this policy. Too, we do not want a similar incident to occur such as was brought out on the floor recently regarding the pancake flour industry, which I will outline briefly.

The nationally advertised standard brands were sold in 20-ounce packages at 12 to 15 cents per package. Brands produced by independent producers and sold locally or through chain stores were sold at 5 to 7 cents per 20-ounce package. The spread is accounted for by the fact that the advertised brands pay for advertising, for greater distribution costs, and usually for better packaging. The independent producers were selling on such a small margin of profit that with the increase in materials and labor costs, they were unable to sell at that price. They petitioned for a 1-cent increase and were denied the increase. Incidentally, these manufacturers sell about 60 percent of the pancake flour sold. This denial resulted in 80 percent of the manufacturers of unadvertised brands going out of business. Two new companies with entirely new ownership purchased the machinery and equipment of the majority of these independent mills and have started manufacturing pancake flour.

O. P. A. has not held them to the low ceiling price but has allowed them to price their product at the maximum price. These prices range from 19 to 24 cents per 20-ounce package. As a result the consumer and the men who have pioneered this business are the losers. This is becoming the common practice.

So, summarizing my argument, the additional $2,000,000,000 is bound to create an inflationary condition, which will necessitate the retaking of this money from the public in the form of taxes or forced savings. Remember, the Treasury Department stated that of the 44,000,000 taxpayers, 40,000,000 were included in the first bracket, which means that these 40,000,000 taxpayers will carry the heaviest burden of this subsidy load. According to the President, there are

approximately 4,000,000 wage earners in need of the benefits of subsidy. Why not subsidize them direct instead of the general subsidy program for the benefit of the 130,000,000 in the United States? This will mean less taxes on the 130,000,000.

Now that the policy of the Government has been set up to use the subsidy plan, I pledge my sincere support and cooperation in assisting this program.

The Romance of Commerce

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malcolm W. Bingay, which appeared in The Detroiter of June 28, 1943:

THE ROMANCE OF COMMERCE

(By Malcolm W. Bingay, editorial director, Detroit Free Press)

"Events have mended the tear in the tapestry of our history."

In the days of a younger America, when we were closer to fundamentals than we have been lately, there was a bit of advice from the Book of Proverbs that was set forth for our youth: "Seest thou a man diligent in his business? He shall stand before kings."

A man diligent in his business these days, however, is making out questionnaires and governmental forms and he is standing—in line—before clerical representatives of myriads of alphabetical bureaus.

For more than a decade now the youth of America have been taught that there is something shameful about making a success out of life. American industry, commerce, business, were in the dog housse.

Then came the war.

The Nation and its Allies were desperate for the naval, military, and aerial implements to fight the well-entrenched enemy. The men who had created America, as wonderland of the world in industrial achievements, were called back from their exile in disgrace. That was a little more than 18 months ago.

Today the miracle has been achieved. The world is being saved from the despoilers of human liberty by the power and the glory of the American businessman who knows how to get things done. And Detroit stands peculiarly alone, unique in the municipalities of the earth in the creation of the greatest war machine history has ever known.

American industry and commerce has found itself again. It no longer stands apologetic before the wrath of a misled multitude. By its triumphs in war-winning production it has falsified the contentions of governmental Lilliputians that all that is needed to run the country is a new set of theories, a few textbooks and a flock of laws.

Detroit stands forth again, the industrial capital of the world, the dynamic center of salvation for all free peoples.

Looking back through the vista of the years it is fitting at this time that our Detroit Board of Commerce should be celebrating the fortieth year of its being.

For it was around this organization that the giants of our creation rallied: Men with driving genius, majestic courage, and unfaltering faith, to change the whole course of civilization—and, in the end, to save it.

Gone are the days when men must apologize for making a success out of life. At best it was a passing phase, a longish nightmare out of the hours of our despair. The tear in the tapestry of history has been mended by events. Once more we see the picture as a whole.

For thousands of years there has been no improvement in public morals, in philosophy, in religion or in politics, but the advance of business has been the greatest miracle the world has ever known.

Business is the salt of life. Business has to prosper before anybody can benefit. And the leaders of business have made it prosper and all mankind has shared in that prosperity. The politician can accomplish nothing without business because, out of the earnings of business, and its great byproduct of high wages, comes the money which permits the politician to function.

Never in the history of the world was there a great culture which did not come about through commerce. The glory that was Greece came from the money brought to Athens by its commerce; so it was with Rome, and so it was with the city-states of Italy, wherein was born the Renaissance of the world's wisdom. It was the awakening of commerce that aroused Europe out of its slumbers of the Dark Ages. It was commerce which gave Great Britain its culture and character and its traditions that made it possible for those heroic people to stand alone against the enemy after Dunkerque.

Commerce is the great civilizer. We exchange ideas when we exchange fabrics. The culture of the Greeks began when they discovered the letters of the Phoenician alphabet in the markings on letters from the traders of Tyre. Trade is the bloodstream of existence. Without it the world would return to primitive barbarism.

In America it has been commerce and industry and business which have made possible the greatest system of free education in all the history of the world. It has built our libraries, our museums, our parks, our recreational centers, our churches, our whole system of civilization.

For, as a byproduct of its achievements, it has created the moneys that have gone into the taxation by which all things of lasting value have been built.

A little more than a century ago, Michael Faraday, the father of our electrical age, the man who conceived the induction system which made possible mass production, the creator of the magneto, was giving a demonstration of his work before the British Royal Scientific Society in London. A rising young politician of the day, William Gladstone, was invited to attend the demonstration.

He evinced a polite interest at first and then became bored, asking:

"It is all very interesting, Mr. Faraday, but what on God's earth good is it?"

"Some day," answered Faraday, "you politicians will be able to tax it."

So it is that the businessman, the industrialist, the merchant, the investor, need not be ashamed of his calling, for without him there would be no comforts of life, no leisure, no culture.

Our times refute the theorists.

And around this old Detroit Board of Commerce of ours there has rallied through the years these very men who have made of Detroit a city apart. They labored for the creation of vast industries without losing sight of the civic needs of our community.

The very word "commerce" comes from a combination of two of the most used words in any language—"com" and "merci"—a getting together of that which is good.

For trade is more than mere sordid barter. It is a social act, a getting-together of all that is good. It is trade as much as prayer or laughter or any of the other higher attributes of man which places him above the animals. As Adam Smith quaintly put it in his Wealth of the Nation:

"Nobody ever saw a dog make fair and deliberate exchange of one bone for another with another dog. Nobody ever saw one animal by his gestures and natural cries signify to another: 'This is mine, that yours; I am willing to give you this for that.'"

The giants of Detroit, who 40 years ago founded our Board of Commerce, were men with the vision to see beyond mere dollars, mere trade, or they could not have achieved so mightily.

And those who are following in their steps must have that high vision and purpose as we come out of this war and revert our giant industries to the ways of peace. The one thing above all else it will require is courage. In that the City of the Straits has never been lacking. It is a part of our imperishable tradition from the days of our valiant founding almost two and a half centuries ago.

We have gone through wars and famines, revolutions and plagues. Our city has been swept away by fire. Our banks have crashed, through no fault of ours, but always there has been the will to survive and to triumph over our obstacles, in keeping with that heroic motto on the seal of our city:

"We hope for better days: it shall rise again from its ashes."

That challenge is here for us all now.

World events have come upon us to make it so.

And all who know the history and the tradition, the vision and purpose of the Detroit Board of Commerce, know that in that challenge this organization will play its mighty part.

The Source of Their Strength

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. SIKES. Mr. Speaker, we can draw strength and inspiration from a recent editorial appearing in the Christian Science Monitor, and I ask unanimous consent that it be inserted in the Appendix of the RECORD. It is entitled "The Source of Their Strength":

THE SOURCE OF THEIR STRENGTH

For hundreds of years the great military and naval leaders of the English-speaking race have been devout men, with a sublime faith in God and a firm belief in the ultimate triumph of right as the fulfillment of His will. It came as no great surprise, then, when Gen. K. A. N. Anderson ordered a special service of thanksgiving to be held Sunday, May 23, for his victorious British First Army in Tunisia, explaining:

"When success comes our way we are inclined to place too much emphasis on our own skill and power and not enough on the strength which comes from beyond human limits."

Those are words which might have been uttered by that fighting man of God, Gen. Sir Bernard Law Montgomery, of the British

Eighth Army, or by that other Covenanter, Gen. Thomas Jonathan Jackson, C. S. A., who lived according to the New Testament and fought according to the Old.

Nelson knelt on the deck of the *Victory* on the eve of Trafalgar, and Farragut committed his course to God as he sailed into Mobile Bay. Washington and Lee humbly asked for divine guidance on every occasion. Stonewall Jackson ordered thanksgiving services after victory and never failed to give God the credit for his successes. On one of his last days he recommended the Bible as a model for generals' official reports, and cited the narrative of Joshua's battle with the Amalekites: "It has clearness, brevity, fairness, modesty; and it traces the victory to its right source, the blessing of God."

That this remarkable quality of true humility is common to many great military men is emphasized by General Anderson's action.

Renegotiation Law Should Not Be Repealed

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PATMAN. Mr. Speaker, I hope that the Members of the House who are interested in preventing war profiteering, and especially the gentleman from Michigan [Mr. JONKMAN], who has introduced a bill (H. R. 2698) for the outright repeal of the anti-war-profiteering law, have been giving some attention to the hearings being held by the Naval Affairs Committee on the renegotiation law. These hearings have not been concluded; but the evidence already presented to the committee, which includes testimony of the Navy Department and of industrialists, large and small, conclusively proves that in no other way, except through renegotiation of war contracts, can we control the costs of the materials of war and effectively prevent war profiteering. The evidence presented to the Naval Affairs Committee is a complete answer to the gentleman from Michigan [Mr. JONKMAN], who has addressed the House on two occasions, May 12 and June 1, urging repeal of the law, without at any time proposing a substitute.

A WAR MEASURE

The renegotiation law is purely a war measure. It is, as Mr. Kenneth H. Rockey, Chairman of the Navy Price Adjustment Board, stated to the committee "the wartime substitute for the normal peacetime controls and stimulants of free competition." He said further:

> In the administration of the law we have sought, through practical application, to give recognition to the same factors and principles, with reward of reasonable profits in accordance with performance and capital risks, that would be in operation under competitive conditions in normal times.

That is a very significant statement, Mr. Speaker. It expresses in a sentence the basic theory and purposes of the renegotiation law. Contrary to what the gentleman from Michigan [Mr. JONKMAN] would apparently have us believe, the renegotiation law is not a punitive measure. It is not a revenue measure. It is designed not solely to recover "excessive profits" on war contracts nor solely to keep prices of war materials under control. Equally important, it is also designed to stimulate production, with reward of reasonable profits in accordance with performance and risks. This feature of the law the gentleman from Michigan [Mr. JONKMAN] completely overlooks or ignores.

RECENT INVESTIGATION

I wish to take this opportunity, Mr. Speaker, to examine the arguments of the gentleman from Michigan [Mr. JONKMAN] in the light of the evidence in the record of the Naval Affairs Committee in its investigation into the operation of the renegotiation law. The evidence is factual and not conjectural. It is detailed and not just generalities and assumptions. The committee has not only examined the Navy Price Adjustment Board but has made a detailed inquiry into several cases that have come before that Board.

The principal argument of the gentleman from Michigan [Mr. JONKMAN], as well as that of the disappointed would-be war millionaires, is that the existing excess-profits tax is in itself sufficient to prevent war profiteering, and since the 90-percent excess-profits tax was enacted subsequent to the renegotiation law, the renegotiation law can now be repealed.

At the outset one must understand that the 90-percent excess-profits tax is limited in application by the provision of the revenue code which places a maximum of 80 percent as an over-all tax. It should also be kept in mind that the excess-profits-tax provision of the revenue code provides for a 10-percent postwar credit. The gentleman from Michigan [Mr. JONKMAN] admits both these points, but they merit repetition lest someone erroneously conclude that the so-called 90-percent excess-profits tax is in fact 90 percent. The maximum eventual over-all tax is but about 72 percent.

When I was privileged to address the House on May 17 I presented several examples of the manner in which the excess-profits tax actually operates and in fact leaves large sums of money in the hands of war contractors. The gentleman from Michigan made no refutation. He attempted to answer merely by saying that percentages do not mean much, which, of course, is no answer at all.

Let me refer the gentleman to the Naval Affairs Committee hearings, where he will find actual cases involving war contracts and renegotiation. When the gentleman has opportunity to study these cases in detail I suspect he will be somewhat disturbed that he has introduced a bill for the repeal of the renegotiation law.

A CASE IN POINT

Take the case of the Northern Pump Co., owned entirely by a Mr. John B. Hawley, Jr., who appeared before the committee. I am reluctant to mention names but the data of specific companies was made public at the hearings. And I might add, according to the evidence, this company has done an excellent job of producing naval machinery at low costs.

In 1941 the private capital invested in the company amounted to around $2,500,000. The Navy, however, provided the company with over $16,800,000 in rent-free facilities. In other words, the Navy has invested in the company more than seven times the amount of the owner's investment.

In 1942 the company realized a profit of $22,720,000, which, after paying all taxes, left the company $5,205,000. This was a return of 160 percent on the owner's investment, in spite of wartime taxation. The growth of the company was in large measure due to the Navy's assistance.

For the benefit of the gentleman from Michigan I should perhaps repeat that after paying all taxes the owner of this company—one man—would have realized a profit on war contracts of $5,205,000.

ANOTHER CASE IN POINT

Let me call attention to another case developed before the Naval Affairs Committee: The Defoe Shipbuilding Co. This company is a partnership and as such it is not subject to the excess-profits tax, upon which the gentleman from Michigan places complete reliance.

The partners had $600,000 invested in the business. As a result of the war and the Navy's need for small craft the company was given $100,000,000 of Navy contracts. In 1942 the Defoe partnership realized a profit of $2,500,000. Surely the gentleman from Michigan would not contend that this company, which is a family partnership consisting of two brothers and three sons, should be permitted to retain $2,500,000 of the taxpayers' money as a profit on their investment of $600,000. The profit would be divided five ways in one family and, I must remind the gentleman from Michigan, the excess-profits tax does not apply in cases of partnerships.

When Mr. Defoe appeared before the Naval Affairs Committee he complained bitterly because the Navy Price Adjustment Board had requested a refund that would leave the partnership something like $700,000 as a profit. It is not without significance that one of the partners is a 23-year-old boy, brought into the partnership after the company started getting war contracts, and his share would be $110,000 for 1942.

RENEGOTIATION PRICE-FIXING MEASURE

Other specific cases, to be found in the hearings of the Naval Affairs Committee, could be presented to show the inadequacy of the excess-profits tax as a medium for the prevention of war profiteering. But, Mr. Speaker, the recapture of excessive profits from those who would become millionaires out of the war effort at the expense of the taxpayers, is only one phase of renegotiation.

Rengotiation is not a revenue measure. It was never intended to be. It is a price-fixing measure, designed to keep the costs

of war materials under control, when the Government is obliged to spend billions and billions to get the maximum possible production at the earliest possible date.

MORE THAN A BILLION DOLLARS RECOVERED

The Chairman of the Navy Price Adjustment Board testified that they had recovered in actual refunds to the Treasury $399,009,777. And it has been estimated that the total refunds on war contracts that have been renegotiated by all the departments—War, Navy, and Maritime Commission—in the first 12 months of operation amount to $1,062,000,000.

But, as I said before, Mr. Speaker, the actual refunds to the Treasury is only one phase of the savings obtained through renegotiation. The Chairman of the Navy Price Adjustment Board testified that through direct renegotiation the Navy Department had secured price reductions in the amount of $612,615,964. And he further pointed out that voluntary price reductions, at a very minimum, amounted to $300,000,000. While some of these so-called voluntary price reductions were doubtless made out of the patriotic desire of some companies and individuals not to want to realize enormous profits from the war, it is a fair assumption that many of them were made with the knowledge that their company was subject to renegotiation.

In other words, the price reductions obtained by virtue of the renegotiation law on articles not yet delivered to the Navy or on which payments have not been made has been well over $900,000,000. There is, of course, no way of estimating the amount of savings that will result in subsequent contracts for additional materials.

If $900,000,000 constitutes the price-reduction savings on war materials obtained by the Navy Department, which has only a small part of the contracts in comparison with the War Department, if this has been the savings in only one department in only 1 year of operation, it is a perfectly reasonable conclusion that the renegotiation law savings will amount to several billion dollars before the end of this war. I am not referring to actual refunds, which would in part be subject to taxation. I am referring simply to price reductions. It is this feature of renegotiation which the gentleman from Michigan does not recognize when he advocates the outright repeal of the law.

QUESTION ASKED AUTHOR OF BILL TO REPEAL RENEGOTIATION

Let me ask the distinguished gentleman from Michigan in what way would the excess profits tax, or any other system of taxation, realize these price reductions? On the contrary, it is axiomatic that heavy taxation aggravates the incentive of producers to increase costs, thereby reducing the profits on which the tax applies.

Heavy taxation tends to destroy the incentive to produce goods for the Government at the lowest possible costs. Tax rates do not differentiate between a man who is a high-cost producer and one who is a low-cost producer. No scheme of taxation has been devised to provide for the element of incentive for the efficient low-cost producer.

I do not believe it is necessary for me to point out to the House the ways by which costs may even be deliberately increased, with, of course, resulting decreases in profit and decreased taxation. Very often it is done in such a manner and by such a method that it can be discovered only by the closest scrutiny of the company's records. The most obvious method, one well known to all of us, is to increase the salaries of the executives and to hire several additional vice presidents and assistants to the vice presidents and assistants to the assistants.

It was brought out in the Naval Affairs Committee hearings that in the case of the Northern Pump Co., to which I previously referred, Mr. John B. Hawlay, Jr.'s salary was raised from $24,000 in 1939 to $49,000 in 1940 and to $442,000 in 1941. The company also paid a life insurance premium for him of $33,834.

I am reluctant to mention names of companies and individuals. I do so in this instance because these facts became a matter of public record during the Naval Affairs Committee hearing. A great many cases of exactly the same nature could be presented. I mention the Northern Pump Co. case merely to illustrate the point: Taxes are no substitute and merely tend to aggravate the cost of materials to the Government.

It has been said that the Bureau of Internal Revenue passes upon the allowances and deductions permitted by law for income-tax purposes. But that argument overlooks the fact that the Bureau of Internal Revenue does not have the time nor the staff to keep current, that it would probably be a matter of 2 years before the Bureau audited a company's income-tax return. The facts that a company could present 2 years from now, after the work may have been completed, as to the necessity of certain allowances as a part of costs will look considerably different than the facts as they would appear to the Renegotiation Board, able to examine the records of the company while the work is in progress. In other words, it is one thing to be able to justify the work of a vice president added to the staff as an item of cost to the taxpayers 2 years after the contract has been completed than to be able to justify it on the spot when the work is being performed.

If the suggestion of the gentleman from Michigan [Mr. JONKMAN] is followed, the renegotiation law is repealed and the excess-profits tax is relied upon, you may be certain that this war will cost the American people many billions more than it is now costing and you may be certain that the American system of free enterprise will suffer from an adverse public reaction when it is learned that another crop of millionaires grew out of this war, that some got rich while others gave their lives.

The gentleman from Michigan's second point in his argument for repeal of the renegotiation law is that there is no fixed formula for determining what constitutes excessive profits. I have asked him to suggest a formula. He has not been able to do so, nor can anyone advise a fixed formula which would work fairly and equitably in all cases of war contractors doing various kinds of work under most varied circumstances. Indeed, it is the absence of a fixed formula which gives value to the renegotiation law.

In some industries all the capital is supplied by the companies themselves; in other industries a large part of the capital is furnished by the Government or guaranteed by the Government. In some cases the manufacturer is furnished with rent free facilities, with an option to purchase. In other cases the plant is furnished by the company to be amortized over a 5-year period. In other cases the plant is furnished by the Government and merely operated by the company with no right to purchase at the end of the war.

Does the gentleman from Michigan contend that all these contractors should be allowed the same percentage of profit? Would he say that a contractor who furnished his own capital should receive no larger percentage of return than a contractor who was furnished capital by the Government? Would he say that the contractor who furnished half the capital should get the same percentage of return as one who furnishes all? What formula would the gentleman suggest as being fair and equitable in allowing reasonable profits in all these cases?

As the gentleman from Michigan well knows, some war contractors have been able to continue their peacetime operations with little change. Others have not. Some operations permit a very rapid turn-over of a contractor's investment. Others do not. Some contractors have entered into work with which they are entirely unfamiliar. Others have not. Some contractors have been engaged in work where the volume is small, where considerable time has been spent in perfecting a particular article. Others have not. Some contractors have engaged in construction work in foreign fields, where the risk has been great and there have been many unforeseen developments, even to actual loss of life among the contractor's technical personnel from enemy bombings. Other contractors have produced materials which can be readily produced by mass production. Other contractors have been producing war materials on which, during the process of the production, many technical changes or improvements have been made and will be made as the war needs dictate. In a war strategic plans and materials needed change overnight.

Let me ask the gentleman from Michigan again what fixed formula is there which, applied to these many and varied cases and circumstances, will, in every case or even in the majority of them, produce fair and equitable results? Obviously, a flat formula applied to all the cases, whatever the circumstances, would lead to unfortunate results. It would, in

effect, tend to penalize the venturesome and efficient and reward the inefficient. I remind the gentleman from Michigan that we have had some experience with flat formulas in determining reasonable profits on war contracts, and it was because of this experience that the renegotiation law does not provide for any fixed rule or formula.

The renegotiation law permits the fitting of profits to the facts. And it cannot be too strongly emphasized that the purpose of renegotiation is not alone to prevent excessive profits, not alone to bring about a reduction in costs and prices, but also, and most important, to stimulate production. As the hearings before the Naval Affairs Committee make clear, the Navy Price Adjustment Board makes allowances for contractors who show results in production, who show initiative, and who are efficient. If the Board did not have discretion and was obliged to apply a fixed formula, there would be little incentive for any contractor to be a low-cost producer, to experiment, to develop new products, or to take risks of any kind. Under a set formula he would receive no better treatment from the Government than a contractor who was inefficient or a high-cost producer.

The third point the gentleman from Michigan raises in his argument for repeal of the renegotiation law is that no allowance is made for post-war reconversion. The gentleman's argument is really directed to the tax law and not to renegotiation. If the gentleman is really disturbed over the question of industries being permitted to set up a reserve for post-war reconversion, he should introduce a bill to amend the tax law. Instead he introduces a bill to repeal the renegotiation law. It causes one to wonder if the distinguished gentleman is really interested in the question of reserves for post-war reconversion or whether he is more interested in finding arguments, however unsound they may be, which might be advanced against the renegotiation of war contracts.

Mr. Speaker, it is my personal opinion that if the Price Adjustment Boards had adopted the policy of allowing reserves for post-war reconversion as an item of cost, the very same people who are now complaining because the boards make no such allowances would be complaining that the boards exceed their statutory authority. Anything to get the renegotiation law repealed.

In the excess-profits tax provision of the internal revenue code Congress has set up a 10-percent post-war credit. Perhaps the post-war credit should be increased. Perhaps some other provision should be made in the tax law for the post-war period. Perhaps a complete post-war program should be worked out. That is for Congress to decide. But under existing law the Congress has said that 10 percent of the excess-profits tax will be the amount of credit to be allowed for the post-war period. It expresses the policy of Congress. Moreover, in the Internal Revenue Code Congress has stated what are allowable costs. If the Price Adjustment Boards were to make additional allowances they would, in my opinion, be entering upon a field in which their legal right to make such allowances would be highly questionable.

I have heard any number of speeches delivered on the floor of the House by my friends on the other side of the aisle in which they questioned the legal right of this agency or that to carry on a particular activity which they did not like. They have complained bitterly whenever they thought some agency was assuming to do something which the Congress did not by statutory enactment expressly say that they could do.

We now have the unique experience of the distinguished gentleman from Michigan complaining because the price adjustment boards have sought to carry out the intent of Congress to the letter and have not seen fit to take unto themselves a power which they do not clearly have. We now have the unique experience of having the gentleman from Michigan urging the repeal of a law because agencies of the Government have not broadly interpreted the law, whereas heretofore, on all other occasions, he has been one of those who has advocated the strictest possible interpretation of statutory enactments by the administrating agencies.

The gentleman from Michigan apparently does not recognize that if the price adjustment boards were to allow post-war reserves they would be confronted with the administrative problem of determining how long the war will last, what new commercial products will come out of the war effort, what the nature, extent and cost of reconversion will be for each industry, and estimate the amount of money that would be required for reconversion. Indeed, the necessity for reconversion in a great many industries may never arise. It would be a tremendous undertaking and a tremendous responsibility. But the gentleman from Michigan complains because the boards have not undertaken it without a clear declaration from Congress, he, therefore, asks that the entire law be repealed.

I do not believe that the gentleman from Michigan realizes that if, under existing law, the price adjustment boards were to allow a reserve for post-war reconversion they would have to allow at least $5 for every $1 to be set up as a reserve. It must be recognized that the reserve would be subject to taxation, because it would necessarily have to be an item of profit under existing law and not an item of cost. In other words, if a company were to be permitted to set up a reserve of $500,000 each year, the board would have to allow the company at least $2,500,000 to be able to set up the reserve. That $2,500,000 would enter into the price the Government would be obliged to pay for the article, and, obviously, would be highly inflationary. Such a policy would defeat the very purpose of the renegotiation law, to secure lower prices on war materials.

If the gentleman from Michigan were to take the time to inquire deeply into this subject, I think he will discover that the companies who are arguing the longest and the loudest for post-war reserves are companies who have always been the most liberal in the payment of dividends and have never followed a conservative financial policy. In any event, the question of post-war reserves is one pertaining to taxation and not one for renegotiation. But, to the best of my knowledge, the gentleman from Michigan has introduced no bill to amend the tax statute. He simply wants the renegotiation law repealed.

In his speech on the floor of the House on June 1 on the subject of renegotiation, the distinguished gentleman from Michigan devoted considerable time to a discussion of bureaucracy, long-haired professors and star-gazing theorists. I do not see where the remarks have any bearing on the merits of renegotiation, but I should like to comment briefly.

If the gentleman would consult with the members of the Naval Affairs Committee, who have had the Navy Price Adjustment Board before them, if he would consult with the members of the subcommittee on the War Department of the Committee on Appropriations, who had the War Price Adjustment Board officials before them during the recent weeks on the Army supply bill, I believe he will find unanimous expression from the members, both Republicans and Democrats, that the Navy and Army Price Adjustment Boards consist of outstanding businessmen. They are made up of men who have had many years' training and actual experience in the business and industrial world; men who are technical experts in finance, accounting, law, and engineering. If the distinguished gentleman from Michigan would just examine the statements of the witnesses who have appeared before the Naval Affairs Committee, he would note that practically every witness unhesitatingly stated, whether or not he agreed with the Board's conclusions in the renegotiation of his case, that the price adjustment boards were outstanding in their knowledge of the problems, in their understanding complicated questions, and to be absolutely fair and just in arriving at agreements. The reference of the gentleman from Michigan to long-haired professors and theorists in connection with the price adjustment boards is simply without foundation in fact. Of course I realize that the gentleman wished to popularize his appeal, and that he felt that the old cry of bureaucracy and star gazers would serve his purpose.

The postion of the gentleman from Michigan in urging repeal of the renegotiation law is rather unique in one other respect. He complains about the cost of Government and the great bureaucracy. He speaks of professors and theorists. But he introduces a bill to wipe out an agency of Government, which like the General Accounting Office in purpose, is designed to save the taxpayers money. He attacks an agency of Government whose personnel is probably the smallest of any agency, and whose personnel is made up entirely of

practical businessmen and experts in the business and industrial field.

Mr. Speaker, there are a number of other matters in connection with renegotiation to which I would like to refer. I shall not do so at this time. I earnestly recommend that you read the testimony before the House Naval Affairs Committee. You will find in that record a full and complete answer to the gentleman from Michigan, and you will be impressed with the importance of the renegotiation law to the war and our efforts to preserve democracy.

NAVY DEPARTMENT,
Washington, April 23, 1943.

Hon. WRIGHT PATMAN,
Chairman, the Committee on Small Business, House of Representatives, Washington, D. C.

DEAR MR. PATMAN: Pursuant to the request contained in your letter of March 25, 1943, to Lt. Comdr. Frank R. McGregor and your conversation of Wednesday morning with Mr. Slyvan Coleman, Lieutenant Commander McGregor, Lieutenant Commander Carroll, and the undersigned, the following facts with respect to the Northern Pump Co. are herewith submitted:

As of 1927, the Northern Pump Co. was a comparatively small manufacturer of rotary pumps, but by 1938 had developed electrical hydraulic drives for ordnance purposes, which required a highly specialized technique. The company has done an excellent production job.

For the period from 1936 to June 30, 1940, its annual sales ran from $1,000,000 up to approximately $2,000,000.

Result of proposed renegotiation for the year ended June 30, 1941: As of June 30, 1940, which is the date as of which the full impact of war business began to be felt, the Northern Pump Co. had a net worth of $1,007,000. Its sales for the year ended June 30, 1941, were $18,446,000, most of which were to the Government; its net profit before Federal taxes for the year ended June 30, 1941, was $5,226,000 (including $588,000 on nonrenegotiable business), or 500 percent on net worth, and after taxes estimated at $1,841,000, or almost 200 percent on net worth. Expressed in relation to sales, the over-all profit before taxes was approximately 30 percent of sales. As of the end of the year ending June 30, 1941, the working capital furnished by the Government constituted $8,000,000 and Government furnished facilities constituted approximately $6,500,000.

The Price Adjustment Board has requested a refund with respect to this period of $1,872,000, reducing the profit on renegotiable business, before taxes, from $4,712,000 to $2,839,000, leaving an estimated profit after taxes on all of the company's business of $1,205,000.

Result of proposed renegotiation for the year ended June 30, 1942: For the year ended June 30, 1942, its sales were $67,930,000, practically all of which were to the Government. Net profits before taxes for the year ended June 30, 1942, were $21,186,000 (including a small amount of nonrenegotiable business), or 2,100 percent of net worth as of June 30, 1940, to which no outside capital had since been added. Expressed in relation to sales, this is a profit of over 30 percent.

Net profits after taxes for the year ended June 30, 1942, were $5,206,000, or 500 percent on net worth as of June 30, 1940.

A refund of $15,155,540 was requested for the year ended June 30, 1942, reducing the profit on renegotiable business before taxes from $21,206,000 to $6,054,000, leaving an estimated profit after taxes on all of the company's business of $1,075,000.

Result without refunds: If no refunds are made, Northern Pump Co., beginning with a net worth as of June 30, 1937, of $362,000, which was built up to $1,007,000 as of June 30, 1940, would, as of June 30, 1942, have a net worth of $7,706,463 and will have acquired a new plant originally costing $2,393,000 at a net cost, after amortization and depreciation, of $360,000. This will have been accomplished largely on Government money, for, as of June 30, 1942, the Northern Pump Co. had advances from the Government of $7,500,000 in addition to Government facilities of approximately $16,800,000, with respect to which no rent was charged.

I trust that this is the information which you desire.

Very truly yours,
CLARENCE H. ROSS,
Counsel, Navy Price Adjustment Board.

Music for Workers

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. HAGEN. Mr. Speaker, on Wednesday, June 16, I received unanimous consent to extend a few remarks in the RECORD on the value of music in the war efforts. Since that time, I have received letters from Americans all over the United States, commenting on the value of music as a morale builder, and urging that I continue my efforts to make the country song conscious at this particular time.

One of those letters contained an article about what music means to England during the war.

It was written by Mr. Melville Clark, chairman of the advisory board, National Association of Music Merchants, Inc., Syracuse, N. Y., and published in the Mail Pouch of the New York Times of April 11, 1943.

The article entitled "Music and Government" follows:

I was much interested in the article "Government Support for Music," by Sir Robert Mayer, in the music pages of the Times, March 7, telling of the establishment and splendid work of Britain's Council for the Encouragement of Music and the Arts. The author pointed out clearly that this council was born of war and has forged right ahead even in Britain's most crucial war experiences to bring fine concerts of instrumental and choral music, dramas, and art exhibits to the widest possible audience, including factory towns and factories themselves.

He also brought out that, though the Council for the Encouragement of Music and Arts is now entirely a government subsidy, admission charges of 20 and 40 cents are made for all concerts, outside of those given in factories, where admission is free, and that people are buying the higher-priced seats in increasingly greater numbers, thereby showing their appreciation and desire to help make this activity self-supporting.

IDEA FOR UNITED STATES

Sir Robert likewise considered it highly significant that this council's formation was undertaken in 1940, coinciding "with the very moment when the country was in mortal danger of invasion. * * *"

For many months since I first learned of this council's existence and activities I have felt keenly that our Government, perhaps in conjunction at first with private financing, should create a similar council in this country to bring more music, entertainment, and cultural opportunities to our industrial workers and the rest of us on the home front.

Music's practical importance to the factories as a fatigue lifter and monotony breaker—a spiritual refreshment, you might say—and a vital recreational and cultural opportunity for both participants and listeners in those plants which maintain bands and choral groups for employees is more and more being recognized.

However, the number of individual industries providing music for their workers is vastly in the minority as yet. With the growing seriousness of accidents in plants and absenteeism, it seems imperative that our Government consider carefully the wisdom of establishing now some sort of music and arts committee to bring more music to our factories and thus help to reduce these problems. For it is well known that a happy man is the best worker.

I firmly believe that music in our factories—recorded music played over sound systems during working hours, when noise levels permit, the maintenance of factory bands and choral groups, and the giving of regular concerts in factories by orchestras and soloists of sound musicianship and reputation—would go far toward cutting down absenteeism and other problems.

Last year during my term as president of the National Association of Music Merchants we began a wide investigation of the practical benefits of music in war industries, sending out writer representative Miss Amy Lee to visit several plants already using music, to talk with workers and management officials. In every case appreciation for and belief in music's essentiality has been found to be practically 100 percent. This, our wartime work, we are continuing right along, despite the severe restrictions on all the musical instruments which are our normal livelihood, because we have absolute faith in music as a vital war winning force, and wish to see its practicality more universally recognized.

Therefore, I respectfully submit this idea of a Government-sponsored music and arts committee for our country, to function along the lines of Britain's C. E. M. A.

MELVILLE CLARK,
Advisory Board, National Association of Music Merchants, Inc.

Independence Day Thoughts

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered Sunday afternoon, July 4, at Manchester, Mass., on the occasion of the dedication of the honor roll, containing the names of the young men and women of that town that have

entered the armed services of our country:

The day and the occasion upon which we assemble must inevitably fill our hearts with patriotic emotion and enthusiasm. The Fourth of July, our national anniversary, represents the living realities, the suffering and the privation, the triumph and the results of our struggle for independence. The occasion today, a tribute of honor to those from Manchester serving in our armed forces, bespeaks our responsibility and duty to preserve in a world threatened by the flames of war, the great principles that have made our Government the freest on the face of the earth.

The days of 1776, as today, were grim days. The men who signed that Declaration of Independence know they were committing treason in the interest of the liberty of 3,000,000 in America. Failure meant hanging for the signers, who realized that their audacious undertaking was scorned upon by the rest of the world. But stirred by the great principles of justice, liberty, and peace, the founders paved the way for their crusade and America began to rear its majestic temple of liberty and freedom.

The Representatives on that famous day did not only declare that the Colonies would henceforth be free and independent States. They also proclaimed the first principles on which just civil government is founded, a system where the sovereignty of the people is supreme. They proclaimed political equality, established justice, and established the American way. Our founding fathers knew that there were certain rights beyond the power of any State to confer. They are rights which come from the Creator. Our founding fathers acknowledged these rights and what is more, they acknowledged the source of these rights.

HISTORICAL NOTES

One hundred and sixty-seven years have passed since this glorious day, when the Thirteen Colonies announced to the world that the new Nation had assumed its equal station among the powers of the globe, and that the lives, the fortunes, the honor of every free human being forming a part of it, were pledged to a new government by the people, such as the world had never beheld in practice, and in which the sovereignty of the people was to be the basis of that system.

Built upon the solid rocks of truth, justice, and liberty, the Nation has soared to tremendous heights, in the extension of Christian and philanthropic efforts, in scientific research, activity of thought, freedom of speech. More than any other nation, it has given so much that adds to the comfort and happiness of man. The shifts and expansions that have taken place during these 167 years are believable only because they actually happened. In this period, our population has risen from fewer than 4,000,000 to over 130,000,000. Our 13 States had a total area of a little under 900,000 square miles while our 48 States have more than 4 times that area now.

Today, we are writing another declaration of independence—not a declaration of words but a declaration of deeds. We are returning to the spirit of the men who met 167 years ago in Philadelphia, determined to preserve that great heritage which they left to us.

The Nation is today plunged into a great conflict because the form of democracy that was the basis of our Government as provided in the Declaration of Independence in 1776, has been challenged. The honor roll which we dedicate today proudly proclaims the names of those now actively engaged in answering that challenge. They are fighting not only for loved ones at home, but fighting to establish and preserve the conditions of freedom under which the people of the earth, including ourselves, can work out and put into effect, a world society in which the individual can live, work, play, and enjoy life at peace with his neighbors. This is to me the great broad issue of this fight to which Manchester has contributed so nobly with her youth. It is appropriate, indeed, that we should by our presence and actions today, pay official recognition to members of your families in the armed forces of our country.

WAR PICTURE

A year ago, the war picture was far from optimistic. Since the preceding December, we had seen defeat after defeat. We had lost an important part of our Pacific Fleet at Pearl Harbor. We had lost Wake and Guam and the Philippines. We had lost our rubber and oil and tin supplies in the East Indies. Japan dominated practically all of Asia. The map of the Russian line still showed the Nazi army still deep in the heart of Russia. The situation in the Middle East was bad. Our merchant ships were being sunk at a terrific rate.

Today, a mighty freedom-loving people moves steadily toward victory and peace, and the situation is changing daily. China, Britain, and America were not prepared for war. For 6 years, China has suffered as no nation has suffered. The Russian armies were punished terribly but they held and turned the tide. Once weak, Britain is now strong, after many trying ordeals. Our allies have given us what we needed so badly, namely time, and we have taken advantage of it. The Axis has been cleared out of north Africa. Our American flyers and Royal Air Force are doing a magnificent job in the air over Europe. Attu has fallen and the drive to rid the Japs from Kiska may soon be on. The battle of Coral Sea and Midway has shown the power of our fleet, Guadalcanal speaks for itself. Chinese forces have scored a major victory recently, and Russian power continues to demonstrate itself. The submarine menace is gradually diminishing. Our Army and Navy have become mighty machines of war. Our boys are in the air plunging through bullet-separated skies at ever-pressing foes, struggling and sweating in deserts, keeping vigil on seven seas, and giving their lives so that the fighting will be kept far from our shores and homes. We and our allies have now taken the initiative from the enemy. We are on the offensive and we will continue to maintain it. Such is the picture today.

OUR FIGHTING FORCES

Total victory is our objective. To obtain this goal we must have superiority in men and armaments over the Axis aggressors. We are raising and training a magnificent Army, and we are constructing and manning a superb Navy. We are planning to have raised by the end of this year 1943 an Army of 8,200,000 men, including an Air Force of about 2,500,000 and a Women's Army Corps of upward of 150,000. Our Navy now has well over a million and a half men in the service and on the way to 3,000,000. Compare this with the Navy of 3 years ago of 158,000 officers and men. Three years ago we were building less than 800 planes a month, half of which were training planes. Today we are building 8,000 a month, mostly of combat type. Three years ago we turned out machine guns at the rate of 25,000 a year. During the last 12 months we turned out 1,500,000. In this same period we turned out 44,830,000 bombs, including incendiary and block-busters. Since Pearl Harbor we have produced 37,000 tanks and plenty more are coming. Since that day we have produced 14,000,000,000 rounds of small-arms ammunition, and the progress picture is the same for artillery and all those other weapons and munitions of war that we need to carry the attack to the enemy.

During this year we will more than double the number of warships in our Navy. The combat tonnage of the fleet will increase this year two-thirds over what it was at the end of 1942. That accomplishment is without parallel in history. These are fighting ships—battleships, aircraft carriers, cruisers, destroyers, escort ships, and submarines. These do not include the several thousand landing craft which have been completed during the last 5 months. The Navy has developed a special convoy vessel, the destroyer escort. It has but one function—to hunt down the submarines. More of them will be built this year than there were destroyers in the fleet at the end of 1942. Within a year and a half we will have more of these vessels than any other single class of vessels in the fleet. The submarine menace has to date been one of our biggest problems. We are well on the way to a solution of this problem, and here in Manchester in one of your shipyards you are making a notable contribution to this end. The number of carriers, both large and auxiliary, completed in 1943 will multiply many times our total carrier force at the end of 1942.

The Navy started the war with the strongest—and I think I can add the best naval air force in the world. The number of naval combat planes was more than doubled between Pearl Harbor and the end of 1942. We have established new records in production, but we must make more and more. We have demonstrated that America can do the impossible. Labor and industry have already made valuable contributions through production to the war effort. The demands of war are insatiable and our efforts to produce must continue unabated with a driving force that will not stop until the enemy is defeated. Strikes and lock-outs in our defense industries must not be tolerated while our boys are giving their lives on the far-flung battlefields of the world. Government machinery is now available for the conciliation of any dispute that may arise and it should be used.

We must not be too confident in the job we have at hand. It would be foolhardy to suggest that the submarine menace is fully under control at this time. We have not yet invaded the continent of Europe. The Nazis may be planning another terrific drive in Russia. China is weak. The battle line with the Japs is 6,000 miles away, requiring a tremendous supply line to bring food and equipment to our men. There is a tremendous task ahead but despite this, we are informed by the War Department that the production in May was 3½ percent less than in April. A 2-percent increase had been expected rather than a loss. This let-down occurred at a time when we are so short of weapons that they are being taken from troops training in this country and sent abroad for combat, seriously impairing the training program and affecting the morale of the troops. Let us keep in mind that every day this war is prolonged means the lives of our sons and loved ones, destruction, waste, suffering, and heartbreak.

THE HOME FRONT

Our eagerness for news from the battle fronts of the world should be matched by our eagerness for doing our share in this great conflict. We must learn to make sacrifices and to learn to do without a lot of things. Total war requires so many materials that there is just not enough to go around. We need ammunition and we must do without the toy trains, the counters heaped with chromium-coated gadgets, limitless supplies of shoes, and so forth. Business as usual has come to an end for the duration.

In order to meet our task effectively, full and honest cooperation by both labor and management is imperative in this great emergency if we are to have unity, and unity, of course, is the keystone of our every plan and operation in this grim and desperate

conflict for the survival of democratic institutions.

This unity is not something to be dusted off and paraded upon state occasions. It is a basic principle which must exist in full vigor and as a weapon of offense. If unity once falters, we must also falter. But standing firm, we and our allies will march to inevitable victory. The plain truth is that, for the duration, none of us can quite be master of his fate. You and I and every one of us, have the good of all to consider first and foremost now, and in the days of trial which lie ahead, we must welcome rather than shun such discipline of thought and deed. We must see this new discipline as an invisible chain which binds us all to our proper duty, not for individual survival only, but for the good of all. Victory in war cannot be achieved cheaply. We must pay dearly for our victory not only with the lives of our men but also by unremitting and unrewarded toil on the home front.

CONCLUSION

We are all involved in the present situation. Today nearly every United States family is represented in some national defense service with millions of our loved ones in combat ranks, offering their lives to cur country under Old Glory.

In this moment of uncertainty, peril, and the tragic losses of loved ones, every true American feels the need of keeping faith and of preserving poise. A good many things seem to be crashing down and each of us is endeavoring to find a foundation on which we can stand firm and from which we can fight the good fight without flinching.

The founding fathers built a great institution. Democracy is right. Cooperation among races and nations is right. Our cause is right. Let us keep faith, work unceasingly, and assume all of our responsibilities. There is no one to save America but each one of us. Backed by spiritual strength and His guidance, our flame of liberty shall light the nations to yet nobler heights and lasting peace.

Address of Hon. Carl Hinshaw at Charles Town, W. Va.

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. CARL HINSHAW, of California, made at Charles Town, W. Va., on July 4, 1943, on the occasion of his dedicating the War Service Roll of Jefferson County, W. Va.:

DEDICATION OF WAR SERVICE ROLL, JEFFERSON COUNTY, W. VA.

About 10 days ago my colleague and good friend, your very distinguished Representative in the Congress of the United States, Hon. JENNINGS RANDOLPH, prevailed upon me to participate in your service today. I must admit that at first I did so just for him and because he is such a fine fellow. But then when I questioned him about Charles Town and he told me that this place and Jefferson County contains the finest people in the world, and that you maintain the traditions that have made our country great, and that I really ought to visit this beautiful old city, I gave in and assented.

I do not need to tell you that JENNINGS RANDOLPH of Randolph County, W. Va., is a man of great ability, because that is doubtless one of the good reasons why you keep on sending him to the Congress. But in Washington we have found that out, too. With great distinction, he handles one of the most difficult jobs we have. As chairman of the House Committee on the District of Columbia, he really is the uncrowned mayor of Washington.

But I did not come here to tell you, who know him so well, of JENNINGS RANDOLPH. He would be with you here himself were it not for the fact that at this same hour he is performing this same service in his home city of Elkins. He is today dedicating the War Service Roll of Randolph County. He asked me particularly to present to you his warmest greetings with his regrets.

And so it was that I accepted this invitation to address you today and to attempt in my poor way to substitute for him on this occasion.

I thought it might be well, before coming here, to learn something about Charles Town and Jefferson County, and launched upon a study of its history. I had not gone very far in my brief research before it dawned upon me that some of my own forebears had lived in the great Shenandoah Valley in early times, and my heart quickened to the task. Eagerness to learn more led me on. If I now tell you much that you already know forgive me, for to me it is new-found knowledge and of greatest interest.

JEFFERSON COUNTY, W. VA.

This county is indeed in an unique geographical position, an enviable one. Not many counties lies in the renowned Shenandoah Valley, and this one lies in the fertile lower valley where the Shenandoah joins the Potomac as that great stream breaks through the famous Blue Ridge Mountains on its course to Chesapeake Bay and the ocean. Who has not heard of the Blue Ridge Mountains of Virginia—and what student of American history has not heard of the Shenandoah Valley? Here is that place of song and story of rugged pioneers, of valiant men and splendid women who joined in building America.

Out of Spottsylvania County came Orange County in 1735.

Out of Orange County came Frederick County in 1738.

Thirty years later there came Col. Charles Washington, brother of George and Samuel, who acquired many acres of land in Frederick County, and in 1786 set apart 80 acres upon which he laid out Charles Town, this beautiful place.

Out of Frederick County came Berkeley County in 1772.

And from Berkeley County was born Jefferson County with its seat at Charles Town. in 1801, the year that Thomas Jefferson of Virginia took office as the third President of the United States. April 13 of this year marked the two hundredth anniversary of the birth of Thomas Jefferson.

Here it is that the ancient Indian trail from the west broke through the last gap, now known as Harpers Ferry Gap, en route to tidewater—that trail became known as the Conestoga wagon road as settlers driving ox teams moved from tidewater back into the wilderness. It is here that George Washington, as a young engineer, surveyed and plotted a new road to the Ohio River that ultimately became the road bed of a great railroad, the Baltimore and Ohio. It was the Shenandoah that felt most frequently the ebb and flow of the fortunes of that awful catatstrophe that descended upon us in the last century—the War between the States. It is said that Winchester, a few miles to the south of us changed hands from Blue to Grey and back and forth 76 times in those terrible years.

Farther up the Shenandoah to the south on Linville Creek lie the broad acres of John Lincoln, father of Capt. Robert Lincoln, great-grandfather of Abraham Lincoln, the Great Emancipator.

And, of course, Harpers Ferry, where I was met this morning, is a name burned deep in the heart of every school child.

And it was in 1859 here in the courthouse of Charles Town that John Brown was tried for treason to the State and a month later taken to be hanged by the neck at a place not far away. In the ranks of the militiamen who mounted guard at the execution stood John Wilkes Booth, who was to be the assassin of Abraham Lincoln, while Maj. Thomas J. Jackson, who became Gen. Stonewall Jackson, commanded a section of howitzers. "John Brown's body lies a-mouldering in his grave" (in New Elba, N. Y., whence taken by his wife).

In 1721 Spottsylvania County included most of northwestern Virginia, a place of indefinite and almost unknown boundary. In fact, the Colony and Dominion of Virginia in those days extended to the Mississippi River and to Lake Superior. It included what are now the States of Minnesota, Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky, and West Virginia—a vast domain that only a few venturesome and brave men had passed through.

I do not know the then limits of Spottsylvania County, but the county seat was Orange Court House in Virginia. Within its jurisdiction was the Sherundo or the Shenandoah Valley.

To the Sherundo came a few settlers from Pennsylvania, mostly German, Irish, Scotch-Irish, and English, beginning in about 1725 or 1726. In 1730 two men who must have traveled through this valley repaired to Richmond, and on October 28 of that year were granted application for 100,000 acres of land on the west side of the Opequon and in the valley of the Sherundo. They were Alexander Ross and Morgan Bryan. Their purpose was to obtain settlers for this land, and the lands were held for them under condition that they obtain 100 families to settle upon and develop them.

Five years later they had obtained at least 70 of the 100 families and had evidently placed them on the land, for in the State land office at Richmond in book 16, pages 315 to 415, may be found the records of 36 of the 70 patents known to have been issued—all on the same date—November 12, 1735. These patents all recite that the grantee is one of 70 families brought to the land by Alexander Ross and Morgan Bryan. Many other families were brought here by one Joist Hite, a German, and by Robert McKay, Sr., under similar arrangements, and like patents were granted them. Many of the families brought by Hite and by McKay have remained in the valley, while most of those brought by Ross and Bryan moved on south and westward between 1750 and 1800.

Curiously enough these Crown grants were made under the ancient English tenure of "in fee and common socage and not in capite or knight service" which later led to much difficulty with the family of Lord Fairfax who claimed these lands as lords proprietors of the northern neck of Virginia.

In 1735 when the land upon which we now stand may have been originally granted, it had a distant tie. It was stated in the patents that these lands were a part of the manor of East Greenwich in the county of Kent in England. That was 208 years ago. Among those who received such Crown grants were John Mills, George Hobson, John Beals, and William Hunt. Through their descendants I have a blood kinship to this valley, of which I am very proud. A few miles south of here near the South Fork of Bullskin Run may be found the remnants of their place of worship, Bullskin, later Berkeley Friends Meeting.

It is interesting to note here that Robert Worthington, of Quarry Banks, Cheshire,

England, received a grant of 3,000 acres on Evitts Marsh, which estate he promptly named "Quarry Banks New Stile," after his former home. It is possible that this grant embraced the site of Charles Town. It was his son, Robert Worthington, who erected St. George's Chapel, which was said to be the most costly chapel in Virginia at that time. Its now ancient ruins are but a short way from this place. Thomas Worthington, his son, removed to Ohio and settled in Rose County of that State and became the sixth Governor of Ohio.

Following the dread French and Indian wars which ravaged this valley—the outpost of Virginia—after the Shawnees, the Delawares, the Tuscaroras, and the Sioux had been pushed farther to the West, there came here to settle people of distinguished names from the Tidewater sections of Virginia.

Lawrence and Samuel Washington, brothers of George Washington, purchased portions of the Worthington estate, and Samuel built upon a part of the land his famous estate known then and now as Harewood. It was at Harewood that James Madison, fourth President of the United States, was married to Lucy Payne Todd, a widow whose sister was the wife of George Steptoe Washington, son of Samuel and nephew of George.

Some time prior to 1740 came Edward Lucas to live nearby on a plantation which he named "Cold Spring." I presume Lucas Creek is named for him. His grandson, Edward Lucas, became the eleventh Governor of Ohio. Other descendants were Edward and William Lucas, who represented this district in the Congress, and Daniel Bedinger Lucas, a distinguished United States Senator.

THE ROLL OF HONOR

In fact, my friends, were one to assemble a roster of our country's great and adventurous whose forebears settled upon this land when it was a wilderness, the list would be long and distinguished, even as is this roll of those who have gone now from this county to serve their country in its hour of peril. I see upon this roll many whose names have been a part of these broad lands for two centuries and many who have come here following in their footsteps. These are the great of today and tomorrow. These are your sons and daughters—your husbands and brothers and sisters.

May the great God of our fathers, Grand Architect of the universe, in whom is all wisdom and power and glory, bless their valiant undertaking to defend this noble land, our heritage, from its savage enemies, and preserve to us their lives while they defend our homeland.

May they return to us one day soon in glorious victory over those who would destroy us, bringing gladness to our hearts and happiness to our firesides once more.

And may we here have the will and the courage and the fortitude at home to do those things necessary; to make those small sacrifices in their honor to have awaiting them a land worthy of them, a land of freedom and happiness, a land of opportunity, a land of liberty under law, a worthy home for the brave.

And now let us in the words of Thomas Jefferson in the Declaration of Independence, reaffirm our belief:

"That all men are created equal, that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

And finally, as we here dedicate this roll of honor of those who serve our country in this war, reaffirm our determination to carry on to our last breath today's fight for freedom:

"We most solemnly, before God and the world, declare that, exerting the utmost energy of those powers which our beneficent Creator hath graciously bestowed upon us, the arms we have been compelled by our enemies to assume, we will, in defiance of every hazard, with unabating firmness and perseverance, employ for the preservation of our liberties; being with one mind resolve to die freemen rather than to live slaves."

NOTES TO THE ABOVE ADDRESS

Material for this address has been obtained from a number of sources. Much of the history of Jefferson County, W. Va., subsequent to the opening of the French and Indian wars is well written but most of the historical writers are apparently satisfied to treat its earlier history very lightly. True—the remnants of the basic material still in existence are not assembled and may be exceedingly difficult to find, but it is a task that should, and, it is to be hoped, may be undertaken by one who will not be overly dazzled by the stars in the geneological firmament of early Virginia.

Some leads to this material may be found in a volume entitled "Hopewell Friends History, 1734–1934," by John W. Wayland and others, published in 1936 by Shenandoah Publishing House, Inc., of Strasburg, Va.

From a facsimile on page 42 of that work the following is a poor reading:

At a council held at the Capitol the 20th day of October, 1730.

Present: The Governor, Robert Carter; James Blair; William Byrd; Cole Diggs; John Robinson; John Grymes; William Dandridge; William Randolph, Esq.

Alexander Ross and Morgan Bryan, of the province of Pennsylvania, having by petition to this board, set forth that they and divers other families of the said province, amounting to 100 are desirous to remove from thence and settle themselves in the Government praying that 100,000 acres of land lying on the west and north side of the river Opeckon and extending thence to a mountain called the North Mountain and along the river Cohongaruton [upper Potomac] and on any part of the river Sherundo [Shenandoah] not already granted to any other person may be granted to them in as many tracts or dividends as shall be necessary for the accommodation of the aforesaid number of families. The Governour, with the advice of the council, is pleased to order as it is hereby ordered that the said Alexander Ross and Morgan Bryan, the petitioners in behalf of themselves, and their partner have liberty to take up the said quantity of 100,000 acres of land within the limits above described and that upon the above number of families coming to dwell there within 2 years patents shall be granted them in such manner as they shall agree to divide the same and in the meantime it is ordered that the said lands be reserved free from the entry of any other person.

Pursuant to this order in council, and amendments and extensions no doubt, patents were issued first to 70 families substantially in the following form (p. 12, Hopewell Friends History), all of these patents bearing the same date, November 12, 1735:

"George the Second, by the Grace of God, of Great Britain, France and Ireland, King, Defender of the Faith, etc.,

"To All Whom these Presents may come: Greeting,

"Know Ye, that for divers good Causes and Considerations but more especially for the consideration mentioned in an Order of Our Lieut-Governor and Council of our Colony and Dominion of Virginia, bearing date the three and twentieth day of April One Thousand Seven Hundred and thirty-five, Granting leave to Alexander Ross and Morgan Bryan to survey in such manner as they should think fit, one thousand acres of land for each family of seventy families by them brought in to Our said Colony and settled upon the lands in the said Order mentioned and to sue out patents for the same; We have given Granted and confirmed and by the Presents do give Grant and confirm unto Isaac Perkins one certain tract or parcel of Land containing Seven Hundred and twenty-five acres and bounded as followeth, To wit: Beginning at a red oak on the West side of a Branch that runs into Opeckon next below the Branch which John Calvert lives on, and running thence with [*sic*] eighty West one hundred and three poles to a red oak, thence North twenty five degrees West one hundred and twenty poles to a white oak, thence North twenty eight degrees West one hundred and forty two poles to a red oak, thence north thirty eight degrees West sixty two poles to a red oak, thence north-west one hundred and twenty poles to a hickory, thence North forty degrees West eighty three poles to a hickory, thence North fifty degrees East eighty three poles crossing a small meadow to a red oak, thence south thirty six degrees East eighty poles, thence South sixty two degrees East one hundred poles to a hickory and red oak, thence South seventy five degrees East thirty seven poles, thence North fifteen degrees East one hundred poles, thence south seventy five degrees East forty four poles, thence South fifteen degrees East one hundred poles, thence South-east one hundred poles to a small hickory, thence South nine degrees East sixty seven poles to a Spanish oak, thence South twenty five degrees East thirty one poles to a hickory, thence South thirty degrees East seventy four poles to a white oak, thence South sixty six degrees East sixty six poles to a crooked red oak, thence North eleven degrees East one hundred and nine poles to a hickory, thence, South forty degrees East one hundred and twenty two poles to a red oak, thence South twenty degrees West sixty two poles to a red oak thense South fifty five degrees East sixty one poles to a red oak, thence south East fifty four poles to a white oak by a meadow, thence south west crossing the same forty poles to a hickory, thence north sixty eight degrees West one hundred and sixty poles to the Beginning; with all woods, underwood, swamps, marshes, low grounds, meadows, feedings, and his due share of all veins, mines and quarries, as well discovered as not discovered, within the bounds aforesaid and being part of the said quantity of seven hundred and twenty five acres of Land, and the rivers, waters, and water courses therein contained, together with the privilege of Hunting, Hawking, Fishing, Fowling, and all other profits, commodities and Hereditaments whatsoever to the same or any part thereof belonging or anywise appertaining. To Have and To Hold, possess and enjoy the said tract or parcel of Land and all other the before Granted premises and every part thereof, with their and every of their appurtenances, unto the said Isaac Perkins his heirs and assigns forever, to the only use and behoof of him, the said Isaac Perkins his heirs and assign forever. To be held for Us Our Heirs and Succcessors as of our Manor of East Greenwich in the County of Kent, in fee and Common Soccage, and not in Capite or by Knight Service; Yielding and paying unto Us, our Heirs and Successors, for every fifty acres of Land, the fee rent of one shilling yearly, to be paid upon the Feast of Saint Michael the Archangel, and also cultivating and improving three acres part of fifty of the tract above mentioned, within three years after the date of these presents. Provided always, that if three years of the said fee rent shall at any time be in arrears and unpaid, or if the said Isaac Perkins, his heirs or assigns do not within the speace of three years next coming, after the date of these presents Cultivate and improve three acres part of every fifty of the tract above mentioned, then the estate, cease and be utterly determined, and thereafter it shall, and

may be, lawful to and for Us, Our Heirs, and Successors, to Grant the same Lands and appurtenances unto such other person or persons, as We, Our Heirs and Successors, shall think fit. In Witness whereof, We have caused, these Our letters patent to be made. Witness Our trusty and well beloved William Gooch, Esq., Our Lieut. Governor & Commander in Chief of Our said Colony and Dominion at Williamsburg, under the Seals of said Colony, the twelfth day of Novr. one thousand seven hundred and thirty five, in the ninth year of Our Reign.

"WILLIAM GOOCH."

A volume entitled "Shenandoah Valley Pioneers and Their Descendants 1738–1908" by T. K. Cartmell, on page 250, states as follows:

"CHAPTER XLVII. GEORGE WASHINGTON, SURVEYOR, CITIZEN, SOLDIER, LEGISLATOR, AND PRESIDENT

"George Washington, the young surveyor for Lord Fairfax, and his two brothers, Samuel and Charles Washington, may be very properly classed with the early settlers of Frederick County. George acquired title to certain large tracts of land from Lord Fairfax. Some are designated the Bullskin surveys. One contained 550 acres, several other tracts were purchased from lessees of Fairfax. While Lawrence purchased several tracts in 1747, he was not a resident of the county. Samuel and Charles settled on this land, and continued as residents of the valley. Samuel lived on a tract near the site of Charlestown, Jefferson County. Charles owned the site, and laid out the town, and the village took his name. (See notes on towns.) Their homesteads were established prior to 1750, and maintain individuality to this day. Harewood, a large stone structure, still standing in good repair, was built in 1749–50 by Col. Samuel Washington. Large families were reared on these historic plantations. Many of the names became prominent both in the civil and military life of the Shenandoah Valley. The last male member of the family, Capt. Bushrod C. Washington, removed the remnant of his family to the State of Washington during the preparation of these notes. Colonel Samuel was a member of the old Justices' Court in 1771, and a vestry man of Norborne Parish.

"Augustine Washington owned large tracts in Frederick County in the vicinity of Old Hopewell Meeting House. Part of this land became the property of George Fayette Washington, born 1790, died 1867. His son, Maj. Burwell B. Washington (known as Bird), born 1830, died 1868, married Miss Buchannan. She and their only child, Miss Birdie B. Washington, are all that are left in the valley bearing the name. The old homestead, Waverly, is owned by them, though they reside in Washington, D. C. Augustine Washington executed a deed for several tracts. His signature was attested by George Washington and others. The family seal was used; the originals are in the old clerk's office at this writing, bearing date June 19, 1752."

It is believed that the author, T. K. Cartwell, has generalized too freely in stating "Samuel and Charles settled on this land" that had been acquired from Lord Fairfax and purchased from lessees of Fairfax, for it is known that some of these lands such as those purchased from heirs of Robert Worthington, Sr., were direct grants of the Crown through the Governor and Council and were "in fee and common socage and not in capite or knight service."

It seemed of some importance, historically, to learn something of the chain of title anteceding the ownership by Col. Charles Washington of the lands from which he set aside the 80 acres upon which he established the city of Charles Town in 1786. Hence some research was conducted by the Congressional Library on this point, among existing publications of students and societies, there being no direct evidence available in records that could be found readily.

A footnote commencing on page 392 of the Virginia Magazine of History and Biography for the year ending June 1908 (vol. 15) concerning "The Last Charter for the Northern Neck," which is therein reproduced, reads as follows:

"The Northern Neck of Virginia was probably at first supposed to include only the peninsula between the Potomac and Rappahannock up to the head of tidewater; but under the construction finally given the Culpepper-Fairfax grant, it included the present counties of Northumberland, Lancaster, Richmond, Westmoreland, Stafford, King George, Prince William, Fairfax, Loudoun, Fauquier, Culpepper, Madison, Page, Shenandoah, and Frederick in Virginia; and Jefferson, Berkeley, Hardy, Hampshire, and Morgan in West Virginia.

"This section of Virginia at an early date attracted the attention of persons desirous of obtaining a great amount of land in the Colony. In 1639, the Somers Islands Co., petitioned the King for a grant of the lands between the Rappahannock and Potomac, as a compensation for the small size of their own colony (Virginia Magazine, Historical and Biog., XII, 396). No response appears to have been made to this petition; but Charles II, while in exile, issued letters patent, dated at St. Germains on Ley, September 18, 1650, granting all the country between the Rappahannock and Potomac, and up to their heads, to Ralph, Lord Hopton, Henry, Lord Jermyn, afterward Earl of St. Albans; John Lord Culpeper; Sir John Berkeley, afterward Lord Berkeley, of Stratton; Sir William Morton, afterward one of the justices of the King's Bench; Sir Dudley Wyatt and Thomas Culpeper. No copy of this patent is known to the writer; but it is recited in later ones. Sir Dudley Wyatt came to Virginia to look after the interests of the patentees; but died in 1651, and as the Colony was soon after surrendered to the Parliament no further action was taken at this time. The patent is said to have been renewed by Charles II, in 1662; but probably there was no new grant. On pages 84, 85 of the Report of the Virginia Commissioners on the Maryland and Virginia boundary line (Richmond, 1873) is the abstract of a letter from the King, dated August 3, 1663, to the Governor of Virginia, describing the original grant, and stating that the original letters patent had miscarried (been lost), and that the patentees had assigned their rights for a term of years to Sir Humphry Hooke, and others. The Virginia government was to give these persons aid and assistance. There is a copy of this letter in the De Jarnette Papers (Virginia State library) No. 80.

"On May 8, 1669, as some of the original patentees were dead, and others had sold their interests, the King issued a new grant of the Northern Neck, to the Earl of St. Albans, Lord Berkeley, Sir William Morton, and John Tretheway. There is a copy of this patent in De Jarnette Papers, No. 94. Subsequently, Thomas, Lord Culpeper, son of Lord Culpeper, became the owner by purchase, of the rights of the other grantees, and on September 27, 1688, James II, issued to him the patent here printed. After being held for a time by Lord Culpeper's widow, and by his daughter and heiress, Katherine, who married Thomas, Lord Fairfax, the great property came, in 1722, to Thomas, Lord Fairfax, son of the last named, who was the last owner, and died at Greenway Court, Frederick County, Va., March 12, 1782.

"See William and Mary Quarterly, VI, 222–226, for a valuable account of the Northern Neck and its proprietors; Kercheval's History of the Valley (edition 1902), pp. 156–173, including report of C. J. Faulkner; the briefs of John Howard, Esq., in the case of *Morris and others* v. *the United States* (in U. S. Supreme Court); Calendar of Virginia State Papers, I, 223–231, 239–241.

"The Northern Neck was never a palatinate. Except in regard to escheated lands, this section was as fully under the civil and military control of the government at Jamestown and Williamsburg as any other part of the Colony."

From the foregoing it could be deduced that Lord Fairfax, having acquired rights as Lord Proprietor of the Northern Neck of Virginia by marriage, inheritance, and purchase from Lord Culpepper hired George Washington, in part to survey the Shenandoah Valley in order to learn what lands remained to him that had not been granted in patents by the Governor and Council at Richmond. It is quite possible that the lands of which the site of Charles Town is a part was among the unpatented parcels and that Lord Fairfax either sold or delivered this land to George Washington in payment for services, and that the latter then transferred a part or all of same to his brother Charles.

It is quite possible that the site of Charles Town was a part of the 3,000 acres on Evitts Marsh which was granted to Robert Worthington by Crown patent. Research to resolve this question would contribute much to the history of Jefferson County while adding to the existing knowledge of those times in the Shenandoah Valley. At all events it is well known that the confusion of rights between the Fairfax family and the grantees under Crown patents, and their heirs, induced many suits at law that occupied the attention of the courts of Virginia for years.

It is indeed unfortunate that so many of the old records were destroyed when Richmond was burned. Historians and historical societies have been struggling ever since to reassemble the information lost and to them, all credit for their faithful labors.

Resolution of the Lithuanian-American Council

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

WATERBURY LITHUANIAN-
AMERICAN COUNCIL,
Waterbury, Conn.

Congressman B. J. MONKIEWICZ,
House of Representatives,
Washington, D. C.

DEAR SIR: At a mass meeting held at Waterbury, Conn., on June 27, 1943, under the auspices of the Lithuanian-American Council, Inc., an organization newly created by the union of all Lithuanian groups anxious for a free and democratic Lithuania, with the purpose of lending all possible aid to the United States toward the successful prosecution of the war, and with the added aim of fostering a just and lastting peace among nations, the following resolution was passed by the unanimous vote of the 1,500 delegates and members there assembled:

"Whereas the Republic of Lithuania is the struggling victim of an unprovoked invasion and occupation at the hands of Nazi tyrants; and

"Whereas the people of Lithuania have persevered and remained loyal to the principles of freedom and democracy upon which their nation was built, and still resist every attempt made to subjugate them or to assimilate them into a foreign state; and

"Whereas the loyal hearts of our relatives and countrymen again appeal to the leadership of the United States and her allies for inspiration and deliverance from the heavy oppressor's yoke: Therefore be it

"Resolved, That we affirm our complete support of the cause of the United States and the policies of its leaders in their efforts to restore a world of free peoples; and

"Resolved, That we favor a peace wherein Lithuania, and the other peoples comprising the Baltic states, will be granted the territorial integrity and the freedoms promised them under the tenets of the Atlantic Charter; and

"Resolved, That we unite in our efforts to establish the Lithuanian State, restoring her to her place as a free, democratic, and independent nation safe from the hands of the Axis aggressors; be it finally

"Resolved, That copies of these resolutions be forwarded to the President of the United States, the Secretary of State, and to the Connecticut Members of both Houses of Congress."

CLARENCE V. BALANDA, *Chairman.*
MARCELLE ANDRIKIS, *Secretary.*

Food Subsidies—Farm Security Administration

EXTENSION OF REMARKS
OF
HON. PEHR G. HOLMES
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Massachusetts Farm Bureau Federation:

MASSACHUSETTS FARM
BUREAU FEDERATION, INC.,
Waltham, Mass., June 7, 1943.

To all Massachusetts Members of Congress:

There are two matters before Congress on which our board of directors wishes you to know their opinion representing 2,200 farm families in this commonwealth.

FOOD SUBSIDIES

They are absolutely opposed to the use of subsidies to hide the real cost of food at a time when the Massachusetts division of the necessaries of life reports average wages in the State the highest on record, and increased far beyond the percentage increase in the cost of living.

Paying food subsidies out of borrowed money appears to commonsense farmers a more inflationary practice than to have consumers pay the price food costs out of their current earnings.

But the worst aspect of subsidies on food is in another field. Our Government would make a fatal mistake to put the livelihood of 25,000,000 farm people, the backbone of democracy, at the beck and call of political appointees, with all the chance for loss of independence and for political maneuvering such a course would entail. I hope you will read the editorial from our Massachusetts Farm Bureau paper on this subject, which is attached.

FARM SECURITY ADMINISTRATION

The second matter is Farm Security Administration. There has been no serious criticism of the operations of Farm Security in this State, or in New England, where its operations have been on only a small scale. You are already informed of the abuses reported in some parts of the country. Our board believes, however, that Farm Security Administration costs far more than it is worth to farm people; and that its loaning functions could be better and more economically performed by the efficient and experienced Farm Credit Administration; and its agricultural and household advisory functions by the efficient and experienced Agricultural Extension Service.

Put in another way, the millions now appropriated for separate farm security would bring the country and farm people a very much greater return under the effective management of Farm Credit Administration and Extension Service. We believe that were the Farm Security Administration staff transferred to the Extension Service, which is heavily burdened, they would accomplish an immense amount more both for the small and insecure farmers for whom Farm Security Administration was set up and for all farmers, than they do at present.

Very truly yours,

HOWARD S. RUSSELL,
Secretary-Treasurer.

IS IT SAFE?

Is it safe to place 25,000,000 farm people in a position where the prices of their products and their cash income depend completely on the whims of Government officials?

Is it safe, we repeat? What will become of democracy and representative government if we add a quarter of our population at one stroke to the millions of Government employees and pensioners of all kinds now dependent on Federal largess; and that quarter composed of our rural people, the most independent sector of our citizenship?

This question seems never to have entered the thought of those who confidently seek subsidies to keep food prices low. They are concerned only about the effects of such a program in terms of money. They want to side-step inflation without resorting to the heavy taxation which alone appears capable of accomplishing this result. But what will be the effects of widespread subsidies in terms of freedom, of citizenship, and of our Nation's future? Our subsidy friends point to Great Britain and say that a subsidy program there has worked successfully. Great Britain is a small country geographically with a relatively low proportion of farm people. It imports most of its food. When it comes to agricultural policy, Great Britain is certainly far from a model. She has debased her agriculture for a century in order to boost her foreign trade, and now in the hour of her peril must resort to expedients.

The United States, on the contrary, was founded as a nation of farmers. Even though their relative proportions have decreased, this great body of rural people still furnishes a sharp contrast as to quality of government to the graft-ridden and inert population of the great cities. The farm people furnish the balance wheel that keeps us functioning as a democracy.

Just at the moment when we are paying reverence to that great statesman and rural leader, Thomas Jefferson, who foresaw just this, it is seriously proposed to place this great farm population at the mercy of politics, of hand-outs. Such a step would create a politician's paradise, where the honest independent man would have no place, no voice, and where all the favors would go to him who bows down and does as he is told.

American farmers fear subsidies, and they fear them with good reason. Such a carefully planned and well-founded program as Agricultural Adjustment Administration and soil conservation has already shown the possibilities for control and patronage that lie in payments by the Government. The mistakes of the well-intentioned but misguided Office of Price Administration officials, on the other hand, point out the dangers that face the farmers themselves in attempts to control prices.

We are fooling ourselves as to economics when we think that subsidies will prevent inflation. But far more important than that, let us pause long enough before we embark on such immense perils to the privileges of citizenship for which we are fighting. (Farm Bureau in Massachusetts, May 1943.)

Women's Army Corps

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the Women's Army Corps, delivered on July 4 by Rev. George W. Casey on the National Broadcasting Co. network Catholic Hour:

I come to you to report on the distaff side of the Army, the Women's Army Corps; its spiritual and moral health.

Let me state at the outset that the Army is on the side of religion. For religion and patriotism go together; they grow together; they support and strengthen each other. They are cousins, of a sort. They derive from the same grandparent, the cardinal virtue of justice, down through the special virtue of piety; that is the virtue that inclines man to recognize and reverence the source of good and benefit to himself—in this instance, God and country. Or, as someone has put it in another way—the mystic chords which bind the human heart to faith and fatherland lie close together; what strikes upon one reverberates along the other. The Army knows this and it knows the comfort and courage religion imparts—the discipline it imposes, the sacrifice it inspires in the embattled soldier. So it wants more religion. It reaches out for every chaplain it can get; gives him a chapel whenever possible—assistants, transportation, equipment, and supplies—to amplify himself, to enable him to meet the spiritual needs and desire of every soldier. The typical commanding officer wants the fullest religious program that the exigencies of a strenuous training schedule or combat conditions will allow.

Here at our own post—we have the same set-up in the Women's Army Corps as in the Army—with the active cooperation of our commanding officers, we have a full program of Protestant, Jewish, and Catholic services. And we modestly maintain that a devout person can live as full a religious life as in the average parish in America.

However, some of our members do get away from the habit of church-going. There are a variety of reasons—the break-up of their old routine, the loss of their familiar parish church, and, probably the most important cause, the absence of parental direction. Sometimes it is duty—though War Depart-

ment regulations permit excuse from all but the most essential duties—sometimes it is distance and sometimes it is plain distraction from long hours, loneliness, the press of studies, and training.

But more, I think come back to church than fall away. Many look at life seriously for the first time and reorganize themselves accordingly. Bad habits are broken in the Women's Army Corps as well as good ones. Loneliness makes some turn to the church to fill in the gap. Then again in the Army, the mountain goes to Mohammed. The church literally goes to the man out on bivouac and maneuvers, in trucks and into tents, wherever the men or, in our case, the women go, the mass goes, too. And even the lukewarm are captured by this. New friends are made, too; for church is thrust directly in front of those who have had no church experience before. And, a congregation, kneeling devout and rapt before an altar in the open field, preaches a better sermon than the preacher himself. We've all heard men who have never seen a mass before declare that they were strangely moved and attracted by it. Though we may say this about the chaplain, he can do more to bring his people to church in the Army than he could in civilian life, because he is closer to them. In the Army he shares their life, he is one of them. And, I must mention, too, as a most helpful factor in bringing members to church, those splendid girls whose type is so familiar to all clergymen of experience, who are always, but gently and unobtrusively, inviting their sisters back to church or bringing them in for the first time. Women incline to religion and so does the Women's Army Corps.

The Women's Army Corps is on the side of morality, too. It has many suggestions for the members' leisure time—which is temptation time—sports, shows, dances, concerts, books, but licentiousness, never. It is concerned with that which killeth the body, but not unconcerned with that which killeth the soul. The commanding officers, right down to the company officers, and especially the company officers, look upon themselves as guardians of the girls you parents have entrusted to them, watching and worrying over them, as you would yourselves. Whatever moral danger threatens them isn't due to the Women's Army Corps or its lack of vigilance; it isn't due entirely to the war—it's due to the same causes as in civilian life, namely, the current lack of consciousness of sin; and loss of the fear of God. Those who have been jeering at purity in song and show and book are the guilty ones. Until we put conscience back in control of the affairs of boys and girls, we will have trouble in and out of the service.

The Women's Army Corps is not a choir of angels: but a corps of women of flesh and blood; when they get tired and depressed some of them may strain a little after relaxation and diversion. There were, too, in the beginning, members whose moral and physical stamina was untested, who were woefully unaware of the impact of fatigue, homesickness and restriction of liberty on a frail spirit. And there were some who were just adventuring. A few of those were bound to fall from grace—since most of them were neither helpful nor happy, they have by now almost all gone home. The wonder isn't that there were moral failures, but that there were so few.

It is an understatement to say that on the whole the Women's Army Corps are a hard-working, high-minded, patriotic lot of girls, somewhat amazed at what has been said about them. From my own observation and experience, and not because of wishful thinking, I will say that their service has been for some a means of grace and the beginning of a new peace and diginity of soul. Others are lifting themselves up to permanently higher levels of living by their unstinting devotion, their willing sacrifice and their quiet endurance. They are finding new strength and new satisfactions, a new direction of life and a new nobility. And, I will further say that I have met here, some of the most devout and decent women I have ever known.

Women have engaged in war before without loss of gentleness and grace. Our own nuns went out onto the battlefield of the Civil War and came back without tarnish but with new distinction and honor. Corregidor was no place for women—but our nurses didn't shock the men with whom they shared hardship and danger, but thrilled and heartened them and the whole country. And won everlasting glory for their corps. If women can endure the sights and sounds of the battlefield and the dressing station without being coarsened and made unwomanly, then surely they can do the jobs the Women's Army Corps are undertaking without damage to their sweeter selves. Long ago a maid achieved sanctity by her soldiering. She clothed her slight form in shining armor and went off to the wars, indifferent to the surprise and scorn of men, listening only to the voice within. She revitalized her faltering king and his failing armies and led them on to victory. Our women soldiers in the spirit of St. Joan of Arc are not only marching on to victory over our visible foes, but over those implacable enemies of the soul, the world, the flesh, and the devil, and are keeping themselves clean and unspotted.

When one of our public men was visiting in Russian front lines—he asked his host how much of the front he was defending. The young general quickly retorted "Defending, sir? I'm attacking." I feel that way about this talk that I am not defending the Women's Army Corps so much as attacking the unchivalrous, ungrateful, and unjust criticism of their Corps. What they have a right to expect is the praise and thanks of all Americans.

When the War Department declared its urgent need of supplementing its manpower because of the enormous demands of total and global war, they were the first to answer the call. Eager and impatient to go all-out, on full time, for their country. They left their loved ones; they left their homes, where they had been shielded from danger, sheltered from hardship, and saved from labor. They left good jobs for which they had trained and waited long for tasks that were humble and hard. Resolute and unafraid, 100 percent volunteer, no laws or public opinion urging them on, they marched out to whatever awaited them, the long labors of the training centers or the foam of perilous seas and foreign lands, forlorn. They were not content with the old assignment of women in war "for men must work and women must weep." They insisted upon working with the patience, faithfulness, and devotion that is characteristic of women. As their director says "They are determined to make their new chapter of American history a serious contribution and not a feminine footnote." And the Chief of Staff of the United States Army testifies that "commanders have spoken in the highest terms of their efficiency and value." (Telegram from Women's Army Corps headquarters, June 19, 1943.)

The Declaration of Independence, the beginning of the life and greatness of our Republic was the work of a comparatively few men. It was rather the result of the prophetic and providential vision, the political genius, and the constant preaching of Samuel Adams, Thomas Paine, Patrick Henry, Thomas Jefferson, and a handful of others than the spontaneous rising of the people. It was implemented by the force of personality and military leadership of George Washington and Lafayette. And though the war was long and drawn out and it impoverished the country, there were not a great many of the citizens engaged at a time. But, unhappily, wars have grown since then in scope and involvement, so now it is not army against army, but people against people. The enemy is still mighty; he has concentrated all the national energy and attention upon war for years and unless we mobilize all our resources and all our powers and all our prayers, we will not prevail against him. The keeping of the Declaration of Independence and indeed the independence of the world from ruthless domination, from fanatical dictatorship, from the powers of darkness is not in the hands of a few, not in the hands of the Army and Navy alone, but in the hands of all of us. Nobody can lie back, nobody can sit it out—it is everybody's fight this time. That's the way the women of the Women's Army Corps feel and that's why they went to war.

Take Off These Handcuffs

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank C. Waldrop, from the Washington Times-Herald of today:

TAKE OFF THESE HANDCUFFS

(By Frank C. Waldrop)

New and further sensations are promised for next Friday when the Congressional Committee Investigating the Federal Communications Commission resumes hearings. If the revelations to come are more staggering than those made on the opening day of the hearings, last Friday, they will be stunners. On opening day, Eugene Garey, counsel for the investigating committee, disclosed that the Army and Navy distrust the Federal Communications Commission and have asked the President to take away from it control of a staff which conducts "radio intelligence" work, polite term for radio espionage and counterespionage.

Garey read into the record letters and documents concerning activities of the Federal Communications Commission, and to its chairman, James L. Fly, which he said "constitute a danger and menace to national security."

Garey said the Federal Communications Commission is also accused of being "entirely motivated by political partiality and favoritism in the performance of its duties" and "its powers are unlawfully exercised for the purpose of furthering its own political ideologies and philosophies."

One more. "The radio industry has been so purposefully terrorized by the Commission that it is enslaved and lives in an unremitting state of fear, as a result of which it acquiesces in every whim and caprice of the Commission."

That is tough talk. And the word is that the congressional committee expects to demonstrate proof of the charges by documented, detailed evidence.

As to that, we will see. Congress plans to adjourn shortly, and there are no other big investigations on just now unless the Jesse

Jones-Wallace controversy gets off to an unexpectedly quick start, so this Federal Communications Commission investigation is likely to get a lot of attention during these next few weeks.

But whatever happens in detail, the fact remains that the Federal Communications Commission is in a bad way, and needs a going over. Herewith, the background.

The Federal Communications was one of the first projects of the New Deal, and has been an excellent demonstration of its basic philosophy toward private industry, property, and free enterprise.

Radio transmission was at the beginning of the First World War just about where television was at the beginning of this war—proved in the laboratory and waiting only on the breaks to emerge into the common stream of affairs.

World War No. 1 gave it a tremendous push forward, knocked together small companies warring for trade position, and brought the broadcasting of news and entertainment into being as a gigantic industry.

The peculiarities of radio transmission, that one station may pirate into another's territory and crowd out its program if there is no firm division of fields, in time brought the need for aerial traffic cops.

The first United States radio law was passed in 1910. It was a mere requirement that users of ship wireless obtain licenses from the Secretary of Commerce and Labor. In 1912 it was revised, but still there was no power given by Congress to withhold a license from any applicant.

The 1912 law stayed on the books until 1927, by which time radio had long since outgrown the field of mere ship's wireless, and the anarchy of program piracy was in danger of wrecking the whole, battling new industry of broadcasting.

The 1927 act provided for a radio commission of five members to grant broadcasting licenses and really act as aerial traffic cop between the tooth-and-claw competitors.

But radio kept on outrunning the regulators, so that it was obvious by 1933 that the act needed broadening again. This gave the New Dealers their chance.

The Federal Communications Commission as we know it today came into existence with the act of 1934, which in effect swept all property rights out from under the holder of a radio license and made him a mere dependent upon the Government.

His license, as of today, is for 2 years only. The law and the regulations attached thereto, really do make the radio broadcaster entirely dependent upon the Federal Communications Commission as to whether he will stay in business. Of independence in radio there is none. The whole industry is at the finger's beck of Government.

That is the basic vice in the Federal Communications Commission Act of 1934—its destruction of property rights in radio and the immediately consequent wreck of free, independent behavior by radio operators.

The committee investigating the Federal Communications Commission has a chance to show up that vice, if it will, and to demonstrate what happens when men are made entirely dependent upon governmental bureaucracy for their daily bread.

Once that is shown, maybe Congress will start to roll back oppressions laid upon us all in the past 10 years, not only in radio but all across the field of business enterprise and daily living.

The New Deal laid those oppressions on us calling them reforms.

They are not reforms, they are handcuffs. The affairs of this country cannot really be moved ahead until they are unlocked.

Six-Point Program Outlined for Meat

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times:

SIX-POINT PROGRAM OUTLINED FOR MEAT—PLOESER, OF MISSOURI, SENDS HIS PLAN TO VINSON, BROWN, OF OFFICE OF PRICE ADMINISTRATION, AND MARVIN JONES—SET-UP CALLED WORKABLE—REPRESENTATIVE SAYS HE DREW IT WITH AID OF ALL SEGMENTS OF THE INDUSTRY

WASHINGTON, July 4.—A workable meat program drawn up after conferences with representatives of all factors in the meat industry today was presented to Federal food officials by Representative WALTER C. PLOESER, Republican, of Missouri.

Mr. PLOESER's program, which was submitted by letter to Fred M. Vinson, Director of the Office of Economic Stabilization; Prentiss Brown, Price Administrator; and Marvin Jones, Food Administrator; embodies these six major points:

SIX POINTS IN PROGRAM

1. Revision of the War Meat Board to include industrial elements not now represented.

2. Establishment of retail ceilings at the roll-back level on all grades of dressed beef, except Government graded AA, and ceilings on all grades of beef, lamb, veal, pork, and poultry.

3. Establishment of a wholesale ceiling allowing reasonable profit mark-up for retailer and insurance to nonslaughterers of meat allocation.

4. Establishment of a slaughterers' ceiling price based on the cost of live animals and poultry, plus operating costs and shrinkages with allowance for minimum profit.

5. Establishment of feeders' selling price ceiling on all cattle except those graded AAA when dressed, and a ceiling on stocker and feeder cattle and beef calves.

6. Protection for producers and feeders of cattle—including Government assistance where any deficiency exists in the proportionment of the over-all price range from producer to consumer.

EARLY ACTION ADVOCATED

"The alarming and chaotic situation in the meat industry calls for early action," Representative PLOESER wrote Messrs. Vinson, Brown, and Jones, "the establishment of an over-all program, which will be an incentive for production of meat and the proper movement of meat products through the market to various consumers.

"I have given many months of study to this problem as a part of my duties with the Small Business Committee of the House and am accordingly proposing what I believe to be a workable program in the light of Executive orders now in effect and in the hope that the 10-percent roll-back on meat prices can be held."

His plan, Mr. PLOESER commented, was drawn up after months of study and is a set-up "which embodies the sincere and unselfish collaboration of practically every group in the meat field from the grass roots to the retail store."

Its adoption, he believes, would provide an ample supply of meats for war needs, increase production, eliminate black markets, assure to the public an adequate supply at a fair price, and preserve the small business units of the meat and poultry industry.

The Gold Dust Twins of Louisiana

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Mr. MORRISON of Louisiana. Mr. Speaker, at this time it becomes necessary for me to unmask the hypocrisy of two individuals known in Louisiana as the Gold Dust Twins, namely, Little J. Y. Sanders and Gov. Sam Jones. These two hypocrites, burning with the envy of my ever-increasing political strength, have resorted to the most yellow and cowardly act of putting out an unsigned, anonymous circular in a silly and futile attempt to defame me.

The contents were so manifestly untrue that they even lacked sufficient manhood to sign their names to it, or to admit they wrote it. If these two Gold Dust Twins want to blast me, why do they not come out like real men and sign their names to a truthful circular?

When I want to expose them I always sign my name to any circular I write.

Now I will reveal to you why this untrue circular was written by this lowly pair. They have been getting what is known as political growing pains and cannot bear to see JIMMY MORRISON go too high in politics in Louisiana. First they tried to stop me by ignoring me. That failed. Then they tried a whispering compaign. That failed. Now they try to vilify me with a false, untrue, and anonymous circular. When this fails no one knows what they will try next in their sheer desperation. However, you can bet your last dollar that whatever they do will be something silly.

The old J. Y. Sanders crowd, of which Sam Jones is a product, made Huey Long a great political figure with these very same tactics, and it looks like they are going to do the same for me. They said Huey Long was a menace. Now they say JIMMY MORRISON is a menace. Why? Because they are quivering with fear that the people of the State of Louisiana will elect JIMMY MORRISON Governor. While Huey Long helped the people get paved roads, free schoolbooks, old-age pension, free bridges, and many other constructive programs, Sam Jones and J. Y. Sanders have not helped anyone except themselves and their special clique.

I have done everything within my power to help the people of my district and Louisiana here in Congress. Sam Jones and J. Y. Sanders do not want me for the same reason that they did not want Huey Long.

Now let us be fair about the whole thing. Let us give everyone what is due him. First let us take the record of the "Gold Dust Twins," Little J. Y. and Sam Jones, and then we will take my record. You can then judge all these records for yourself.

Everyone knows that J. Y. Sanders was a rubber stamp here in Congress. If you search the records, you cannot find where Little J. Y. introduced one single bill in the 6 years he was in Congress. I cannot find where Little J. Y. has ever done anything that would assist any particular group or any individual. He has no record for helping any class of people, such as the farmers or the laborers. As a matter of fact, he opposed many farm measures and he has always gone out of his way to vote and work against the laboring man's interest.

J. Y. has a nerve to call me "$12,000 JIMMY." Well, perhaps this is the only time he ever beat me in my life, because whereas he calls me "$12,000 JIMMY," nowhere will a record show that I received a $75,000 fee for my law firm as did J. Y. while in Congress receive for his law firm from the Plantation Pipe Line Co.

The truth of the whole matter is that these two boilers that I was erroneously referred to as having made $12,000 out of have never been paid for and they were even purchased before I ever came to Congress. Evidently it will take a lawsuit for Mr. E. A. Jumonville to get the O. P. A. price for these two boilers. I did not want, nor did I receive, a penny in this boiler transaction. I assisted a used machinery dealer, Mr. E. A. Jumonville, of Plaquemine, who, everybody knows, is a constituent of mine and a close friend of mine and who supported me in my campaign, in an effort to get him out from under all of the red tape that he became entangled in here in Washington. I tried to help him remove the red tape, which is the duty of every Congressman toward his constituent. In another transaction Mr. Jumonville had lost many thousands of dollars on some second-hand steel he had purchased, because the O. P. A. lowered the price after he purchased the steel and refused to let him sell the steel except at a big loss. Mr. Jumonville explained to me that it was a poor law that did not work both ways. On the one hand, the O. P. A. had forced him to sell at their price so that he lost several thousand dollars on some steel and, on the other hand, they would not let him get the O. P. A. price on two boilers when he had an opportunity to make several thousand dollars back that he lost on the other transaction under their ruling. So, as his Congressman, I went to bat for him.

It so happens that, unfortunately, some of the Sam Jones people attempted to judge me by my predecessor, Little J. Y., and when I got up and went to stomping on the toes of the big bureaucrats here in Washington in connection with this transaction, a lot of people wondered what kind of a Congressman is this that is actually fighting for his constituents and actually endeavoring to carry out his campaign pledges to represent his constituents, because Little J. Y. Sanders had never stepped on anybody's toes and had never helped anybody but his own law firm (incidentally his law firm that made the $75,000 fee from the Plantation Pipeline Co. is called Sanders, Miller & Herget).

If you will further check Little J. Y.'s record, you will see that he has never made any substantial amount of money in the practice of law. He uses his law firm, however, as a cover up for his political shake-downs, which amount to thousands and thousands of dollars.

If you investigate closely you will find where Little J. Y. owns a big cattle ranch just south of Baton Rouge. You will also find that Little J. Y. gave large sums of money to his father to establish one of the biggest cattle ranches in Tangipahoa Parish.

Now let us see how the other "Gold Dust Twin," Governor Sam Jones, has double-crossed the people of Louisiana.

I think that you people should know a little bit about the record of graft and corruption of Governor Jones' administration in Louisiana. As you recall, in his campaign, Sam Jones promised the people that he would reduce taxes, and instead he added 22 new taxes.

Sam Jones also promised the people before he was elected Governor that never would there be a sales tax and in a very dramatic manner he affirmed that with his right hand raised toward heaven and his eyes pointed toward the sky on every political stump in Louisiana. The previous administration left Jones a balance of $18,000,000. The governmental bureau here in Washington that keeps track of what every State's income is, as well as its expenditures, shows that thus far in the Jones administration Sam Jones has spent $1,000,000 more per month than the State is receiving in revenue.

Thus, in 3 years, Sam Jones has gone in debt $36,000,000 and it is estimated when his fourth year is up, by these same figures here in Washington, that the Jones administration will have cost $48,000,000 more than any other administration in Louisiana's history. Naturally this has shaken the faith of the people of Louisiana since Jones has received in increased and new taxes over $30,000,000 more than any previous administration. When you consider the increase in old taxes and the additional new taxes, plus the $18,000,000 that was left over from the old administration, together with the $10,000,000 that was issued in new bonds by the Jones administration, together with the $48,000,000 that has been spent over and above the revenue, one would believe that tremendous improvements would be evident in every nook and corner of the State.

Yet with all this money, millions and millions of dollars, Louisiana has had no new hospitals built, no new graveled roads, not over 50 miles of new paved roads, no new free bridges, no new college buildings, no public buildings, and few, if any, of other improvements. Yet it was Sam Jones who said that the previous administration was the most corrupt in the history of the United States.

Now it therefore boils itself down to this, with the Jones administration costing $96,000,000 more, with no improvements, either the Jones administration is the most crooked and corrupt on earth, or else it has proven itself the most extravagant and wasteful on earth. The money has gone somewhere and yet the people of the State of Louisiana, the taxpayers have not gotten the benefit of it. Theft is bad and waste is bad, but as far as the taxpayer is concerned, the results to the taxpayer is the same whether his tax money is stolen or wasted.

Here are just a few examples of the graft and corruption in the Jones administration.

First. Steve Alford, appointed by Governor Jones as superintendent of State police. Thirty-two thousand dollars shortage in connection with the State police at Camp Polk, La. Steve Alford at present is still under indictment for intimidation of voters. So many thousands of dollars were received by Alford in gambling shake-downs that Governor Jones was forced to remove him as superintendent of State police.

Second. Kansas City bridge deal scandal, where the State of Louisiana was defrauded out of $225,000, while Prescott Foster was chairman of the Louisiana Highway Commission. Just ask Mr. Foster how much he got out of this bridge deal.

Third. Eugene Stanley, Sam Jones' attorney general, indicted for conspiracy to defraud. Ask Mr. Stanley whether Jones is crooked or not.

Fourth. Jerome Hayes, superintendent of public accounts, appointed by Sam Jones, indicted for stealing. Indictment still pending.

Fifth. Prescott Foster, arrested for hiding the highway department books. Charge still pending. Mr. Foster was removed as chairman of the highway commission recently.

Sanctimonious Sam has proven on every occasion just exactly what kind of a fake and fraud he really is. First he started out trying to hold political meetings in the various churches in Louisiana. He would go from church to church and instead of sticking to religion he would mix in politics. This caused tremendous resentment and he finally had to give up the idea. Next, when he thought it would be a short war he began parading around the State in a soldier uniform, but when the war did not end quickly and he realized what a foolish spectacle he was making of himself unless he joined the Army, he abandoned that idea.

Do not let him tell you that as Governor he cannot go in the Army because if he had wanted to keep his word that he was "raring" to serve his country in the armed forces, he could have done just exactly like Governor Stassen of Minnesota, resigned and stepped immediately into the armed forces.

I predict that when his term as Governor is up that, even then with nothing to do, Sam Jones will not go in the armed forces.

Intimidation, indescribable pressure never dreamed of before in the State of Louisiana, are being brought to bear in an attempt to convince the people that the Sam Jones candidates should be elected, but never again will the people be misled into voting for anything that is sponsored by the "Gold Dust Twins."

This Jones crowd can distort, misinterpret, and twist any and all facts, but the people remain steadfast in their rock-bound belief that this reform Governor tried to reform everybody except themselves. From now on the people of Louisiana are going to be subjected to much more of this Jones-Sanders propaganda. Every undue effort is going to be made to influence you, to intimidate you, to persuade you to keep the Sam Jones administration in office. There are not many more months left during which the highfaluting Boston Club will rule the State of Louisiana. You people just sit tight. The political noose is drawing closer and closer around the necks of Sam Jones and his gang, who betrayed the people and their pledges to them.

In the New Orleans States, a paper which tries to defend Sam Jones, in an editorial, on June 5, 1941, said:

> We, the people, think we are voting for something that we want and desire, for something that is for the benefit of the Nation, the State, and the city, and then we find out we have done no such thing.

This lament is on the lips of 80 percent of the people who voted for Sam Houston Jones; the other 20 percent are on the State pay roll. It is the result of political fraud, deceit, treachery, and chincanery unparalleled in the history of any State, and Louisiana's hop-skip-and-jump Governor is never in one place long enough for an ordinary man to talk to him.

The following is typical of the Sanders-Jones administration:

Practical destruction of democracy in Louisiana by relegating the elected representatives of the people in the legislature to a standing no higher than an office boy. A senator or representative under Jones-Griffenhagen-Sanders government is like a fifth wheel on a wagon.

Destruction of the three basic branches of the government by open, flagrant, and arrogant attempts to coerce, intimidate, and browbeat the State judiciary.

Neglect of duty by practically vacating his office in running around the country to no purpose but his own amusement and advertisement.

Gross maladministration resulting in an enormous increase in governmental expense and decrease in governmental service to the people.

Padding State pay rolls with highbrows at big salaries.

Failure to keep promises made to the people, thus obtaining his election by fraud.

Increasing the State debt by millions.

Bringing Griffenhagen into the State government.

Destroying local self-government.

Interfering with the national defense by claiming political credit for bringing into the State the Army camps and other defense units made necessary by the national emergency.

Spending public funds right and left without results.

Keeping pay rolls and other public records secret.

It is well remembered by the people of Louisiana that this sanctimonious Sam promised the people that he would take the 7 cents per gallon gasoline tax off of the farmers, trappers, and the fishermen. Did he do that? He promised to give the trainmen a full-crew bill. Did he do that?

He promised to repeal the sales tax. What did he do about that? He promised to stop the deadheads. Did he do that? He promised to stop waste in government. Did he do that?

He promised that there would be no new taxes. How about that one? He promised to give every old man and woman $30 a month pension. Did he do that?

He promised the people of the city of New Orleans a free ferry service. Did he do that? He promised the school teachers of Louisiana to raise their salaries and to pay them for 12 full months. Did he do that? He promised to raise the pay of the school bus drivers. What about that one?

You, the good Christian people of Louisiana, know the answers to these questions. You know Jones stands indicted in the minds and hearts of all these people he has misled. Can it not now be said that he obtained that office under false pretenses by promising things he never really intended to do, and has not to this time done?

From my childhood days until the present time it never heretofore occurred to me that there was anything in the life and character of Judas Iscariot that I could ever defend, but there is one point in his conduct that differs from that of Governor Jones, and that is this, that, finally, when Judas came to realize what a terrible thing he had done in betraying his Master and his people, old Judas, after all, finally had enough manhood to go and hang himself.

All of you people know what Jones' record is in Louisiana. You know how he stands in Louisiana with the people. Let me now tell you how he stands here in Washington. There is not a department head, there is not a department secretary, there is not a department assistant secretary to an assistant secretary that will let Jones in the outer office. Authorities here in high places have long ago, as have the people of Louisiana, found him out. May we not now be reminded that we are told in the Bible, "Make sure your sins will find you out"? As you have found him out in Louisiana, they also have found him out here in Washington.

Now let us take the record of Jimmy Morrison. Sam Jones and J. Y. Sanders shook down every contractor in the State of Louisiana and almost drained the State treasury paying all the padded pay rolls and deadheads trying to defeat me. Two hundred and fifty thousand dollars was spent by the Jones forces for Little J. Y. and still he could not win. The main issue was rubber stamp or independent. J. Y. was a rubber stamp. I was not, and I won.

J. Y. stated that I voted 14 times against the President of the United States. That is a lie. On every bill for the interest of the armed forces and the war effort I have voted 100 percent down the line with the President's wishes.

Just contrast this vote with the article Sam Jones had in the Saturday Evening Post, where he belittled President Roosevelt and the war effort at the present time and urged the formation of a third party in order to destroy the Democratic Party.

My record here in Congress speaks for itself. You people know that I have done my best here in Congress and have made a real record in 6 months. Thousands of letters have poured into my office congratulating me. Since I took my seat in Congress I am glad to relate a few of my accomplishments, which I shall enumerate as follows:

1. Introduced a bill to give the late Billy Mitchell, one of America's greatest heroes, a posthumous Congressional Medal of Honor.

2. Introduced a bill to provide that all soldiers, sailors, marines, WAAC's, WAVES, and other members of the armed forces ride on all trains, including streamliners, for one-half cent per mile and one-third of the present Pullman sleeping-car rate. This one-half cent per mile also applies on all busses.

Today members of the armed forces ride at a reduced rate, but not at a rate of one-half cent per mile, and these rates apply only on slow trains.

As an example, under the Morrison bill, if a soldier lives in New Orleans and is stationed in Chicago with a week's furlough, he can go to New Orleans and back to duty in Chicago on the Panama Limited and sleep at night on a Pullman for approximately $15.70. Today the same trip costs that soldier over $60. Many a poor mother and daddy has had to dig down in their pockets to help pay transportation charges for their sons in the armed service in order that they can come home on a furlough. My bill will stop that.

3. Introduced a bill known as the shorten the war—win a bonus plan, which will give every member in the armed forces 3 years' pay if the war is ended in 1 year, or by April 16, 1944, or if ended in 2 years they will get 2 years' pay. All members of the armed forces who have been killed or who will be killed, are entitled to the bonus, which will be paid to the next legal kin. Thus this bill provides for an incentive to shorten the war.

According to experts here in Washington, if the war is ended in 1 year it will save the taxpayers of the United States, with the 3 years' bonus being

paid under the bill, the sum of $370,000,000,000. If the war is ended in 2 years, $280,000,000,000 will be saved by the taxpayers.

4. Introduced a bill providing for the creation of a Supreme War Council to consist of four members, patterned after the Supreme War Council of England. According to this bill, two members, a Republican and a Democrat, are to be nominated in the House, and two members, a Republican and a Democrat, are to be nominated in the Senate. In this way the Supreme War Council will be composed of Members of Congress who would be answerable to the people, and if they did not fulfill the people's desires, the people have an opportunity to vote against them when they come up for reelection.

5. Introduced a Federal pension bill for payment to all needy and old persons in the amount of $40 per month by the Federal Government.

6. Visited the Strawberry Belt and made speeches at Albany, Independence, Ponchatoula, and Gonzales. It was the first time any Congressman ever spoke to the strawberry growers when it was not election time.

7. Prevented strawberries from being declared nonessential.

8. Prevented a ceiling price of $2.50 per crate being put on strawberries this past season.

9. Secured for the high school at Pine, La., a permit to build a new schoolhouse when the War Production Board had previously refused such permit. That building at this time is in the process of construction and soon will be nearing completion.

10. Secured for the third ward of East Baton Rouge Parish 2,500 feet of 4-inch pipe in order that Istrouma and the defense plants located north of Baton Rouge would be adequately protected against fire with sufficient water. For 6 months local people in Baton Rouge had tried to get the necessary priority, and it was not until the matter was taken up with the W. P. B. that the pipe was secured.

11. Secured a new housing unit, which was badly needed, at Slidell through the F. H. A.

12. Secured for the city of Baton Rouge hundreds of new housing units that were badly needed.

13. Cooperated with other Congressmen to get additional housing in New Orleans, Lake Charles, Alexandria, Leesville, and Cotton Valley.

14. Aided and assisted the Higgins Industries, of New Orleans; argued on the floor of the House that a plywood factory located in Louisiana was necessary for the production of cargo planes. When certain materials became scarce and it was necessary to go before the W. P. B. to secure permission for these materials, I personally met with Mr. Andrew J. Higgins, Sr., here in Washington, offered my cooperation, my office, and did everything possible to work out the important details which meant so much to the people of the Sixth District, the State of Louisiana, and the war effort.

15. Secured for Louisiana State University, one of the greatest universities in the United States, several special units for specialized training of men in military service. There are at present almost 5,000 men in specialized training at L. S. U.

16. Met with President Hodges on numerous occasions in Washington and cooperated with him to the fullest extent in his problems and the problems of L. S. U.

17. Am using every effort to endeavor to get a training unit for Southeastern Louisiana College in my home town of Hammond.

18. Urged that the defective runways at the airport at Hammond be corrected. This airport is now completed and its facilities having been recently enlarged makes it one of the finest airports in the United States.

19. Went to bat to keep the Baton Rouge abattoir, or slaughterhouse, from being permanently closed down, due to underhanded work of Mayor LeBlanc and Roland Kyzar. Met with the delegation from Baton Rouge and took them personally to see Prentiss Brown, head of O. P. A. The abattoir is now open and has been open for sometime due to my efforts.

20. Secured from Mr. Clifford Townsend, Food Administrator, an order to prevent the minimum carload rates on potatoes from being raised from 30,000 pounds to 45,000 pounds.

21. Secured for farmers in Tangipahoa Parish an order allowing mixed cars of potatoes, peppers, and other vegetables to be shipped under maximum icing. The ruling was otherwise and this took a good deal of time with O. D. T.

22. Received from the Franklinton Chamber of Commerce and from leading citizens of Washington Parish telegrams thanking me for my efforts in keeping the Franklinton N. Y. A. school from being moved from that locality.

23. Aided many farmers and small manufacturers in securing farm equipment and necessary machinery.

24. Fought to get a better price for the dairymen who were not being treated fairly by the O. P. A.

25. Fought to get the price on Irish potatoes raised by O. P. A.

26. Personally went before the O. P. A. and objected to a ceiling price on logs.

27. Voted for and supported the Pace agricultural bill, which, together with the Bankhead bill, will give the farmers 25 cents a pound for all cotton they produce. Unfortunately President Roosevelt vetoed the Pace and Bankhead bill and same is now pending before committees in the Senate in an effort to override the President's veto in order to give the farmers 25 cents a pound for cotton. I feel that I have done everything by voting for both of these measures to aid the cotton farmers and that I have thereby kept faith with them. If it had been left up to other Members of Congress and myself, the farmers would get 25 cents per pound for their cotton.

28. Secured for many sheriffs and officials in many parishes equipment for their defense organizations.

29. Secured for the dairymen in many communities additional feed where it was so vitally necessary.

30. Fought for the sugar growers' interest, and especially the small cane grower's interest.

31. Tried to help every single person, group, or anyone who has called on me, and in many instances volunteered my cooperation.

32. Supported every act introduced in Congress which would aid or benefit the farmers directly or indirectly.

33. Secured boilers for tire recapping machines.

34. Answered the request of many small businessmen, asking me to secure equipment for them and priorities for them, asking me to untangle this and untangle that. I am glad to give them my time and effort to aid them.

35. Straightened out many allotment payments that were badly tangled in order that those who were left behind by the boys in the armed forces would receive their allotment checks promptly.

36. Answered every letter that was received by me without one single exception. Made every effort to do everything possible to accommodate anyone and everyone that made a request.

37. Voted for and supported all appropriations that were for the armed forces and the war effort. Voted for and supported every war measure sponsored and asked for by President Roosevelt.

38. Consistently voted against all appropriations that were a waste of the taxpayers' money and not essential to the war effort.

It is my firm conviction that 85 percent of this red tape, rationing, and bureaucracy is unnecessary. As a result of it the destruction of the little businessman is practically inevitable. It is impossible for a right-thinking man to go along with a lot of these theoretical, dreaming bureaucrats and for that reason I have opposed many of their stupid and blundering policies, which have proved such a terrific detriment to our people.

Part of my fight day and night is to save the little businessman. He was my friend in Louisiana and he is my friend in Washington. His fight is my fight and I am doing everything possible to aid him.

As far as my record for the first 6 months that I have been in Congress is concerned, I feel justly proud and I realize, and I am sure that you realize, that I have done as much, or maybe more, than the people expect of me. I am proud of that record. It not only serves to show what a man with determination, courage, and energy can do but it shows by contrast how J. Y. Sanders tried to fool the people of Louisiana. The time of the Sanders-Jones crowd is through. They will never win another election in the State of Louisiana.

These two "Gold Dust Twins", Sam Jones and Little J. Y., remind me of two little Negro boys running through the woods in a thunderstorm, scared to death, praying for less noise and more light.

Florida Barge Canal

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. HENDRICKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 2, 1943.

The PRESIDENT, FRANKLIN D. ROOSEVELT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: I am sending to you herewith copies of a letter and a memorandum regarding the Florida Barge Canal which I have written to the Petroleum Administrator for War, Hon. Harold L. Ickes.

Your approval of this project in 1935, and your expenditure of over $5,000,000 on the beginning of its construction, together with your subsequent recommendation to Congress that it be completed for commercial and military needs, constitute a consistent record of your far-sighted policy in this matter of our national transport. Unhappily, this policy was frustrated and defeated by Mr. Ickes.

It is an officially recorded fact that but for the action of this Cabinet officer, who is now also Petroleum Administrator for War, our Gulf and Atlantic intracoastal waterways would have been long since connected by this channel across northern Florida, and we should now have no petroleum problem in the eastern United States. The water route between the Mississippi Valley area and the Atlantic seaboard could not have been severed by the enemy, and there would have been no death roll of merchant crews and ships destroyed in attempting to do by sea what could have been safely done by barges via the intracoastal waterway through the Florida Canal.

Mr. Ickes' direct responsibility for this, coupled with his continued efforts to prevent relief by means of this project, and his general failure to arrest further deterioration of our petroleum situation, have raised the question as to the usefulness of his continued participation in the Government.

I commend to your attention the facts set forth in the attached letter and memorandum with a view to such action by you as you may deem best.

Respectfully,

JOE HENDRICKS.

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 2, 1943.

Hon. HAROLD L. ICKES,
Petroleum Administrator for War,
Washington, D. C.

MY DEAR MR. ICKES: Your letter of June 4 replying to mine of May 15 relative to the Florida barge canal was received during my absence. I note that your opposition to connecting the intracoastal canals of the Atlantic and Gulf seaboards by this 72-mile barge channel across the neck of the Florida Peninsula is unabated.

In a memorandum which I attach hereto as a part hereof, I have dealt in detail with the several points touched upon in your letter, and have pointed out the fallacious nature of the technical argument you present.

The real issues, Mr. Administrator, are far broader and go much deeper than the mere necessary technical assessment of cost and service, which, when correctly appraised, prove the Army engineers to be right in their support of the canal and in their stand in opposition to your efforts to destroy it.

The fundamental facts are these:

(1) Long before this war, as early as 1935, you were officially on record as opposed to a channel across northern Florida which would connect by water the Mississippi Valley and Gulf areas of this country with the Atlantic seaboard, and which would afford a major safeguard in time of war, and cheaper transportation to more than 37 States of the Union. You had an opportunity then, in the direct line of your duty as Administrator of Public Works, to have caused such a channel to be constructed. The official record of the Senate Committee on Commerce (hearings on S. Res. 210, 74th Cong., 2d sess., February 19, 1936), carries your own testimony to this effect. In spite of your own examining engineer's report and recommendation, made after exhaustive study, that "the design is in accord with sound engineering practice, and that the project is economically sound. It is recommended that the loan, with or without the grant, be made," you caused the project to be shelved. You had abundant justification in the recommendation of your technical advisers for finding the project to be self-liquidating and causing it to be built. But you reversed these findings and vetoed the enterprise, and by this act of disservice to the public welfare and security, our country is today without this vital element in the national defense and the civilian economy. You are thus personally and individually responsible for the absence of inland water transport between east and west in our hour of need, and for the consequent failure of petroleum and other supplies in the East and for rationing in the balance of the country.

In the face of this record, your pleading that there is not time to build the canal for service during the emergency is not only in direct opposition to the statement of the Chief of Army Engineers to the Senate Committee on Appropriations that it is a reasonable anticipation that the project could be in service by the winter of 1944–45, but it cannot relieve you of the responsibility for failure to provide this facility 8 years ago.

Again, in 1942 your representatives appeared before the House Committee on Rivers and Harbors and did their best to dissuade that committee from approving the Mansfield bill to authorize the project.

Again, in March of this year (1943) you caused your representatives to appear before both House and Senate Subcommittees on Appropriations to oppose this project, and did by these efforts defeat it. As to the misleading nature of that testimony, I have something further to say in the accompanying memorandum.

A dispassionate examination of the whole record makes it impossible to escape the conclusion that for more that 8 years you have left no stone unturned to prevent this project from coming into being and that you are responsible for the absence of through barge transportation and the petroleum situation we face today. And you are the Petroleum Administrator for War!

(2) We are without adequate transport and without adequate petroleum supplies for the civilian economy and security today. You have not only failed to remedy the situation, but the record shows that you went so far as to discourage by personal testimony before the Senate special committee the first efforts of the railroads to relieve the situation. Above and beyond this, you tell us that you cannot prevent a further decrease in eastern supplies.

(3) The opposition of the major oil companies to the cross-Florida Canal is a part of the official record. Yet your office is staffed by men from these companies, and you offer their opinions and their figures as disinterested evidence. I invite you to publish a list of the men from the major oil companies who are members of your staff and who are paid—or whose positions are kept open for them—by those oil companies, as well as by the Federal Treasury, and their respective salaries. As long as this situation exists, Congress and the public cannot be expected to receive with the confidence they have a right to place in a public agency your pronouncements and the testimony of these men.

(5) The Florida barge canal is not only an answer to our petroleum situation, but it is an answer to the even more important problem of our whole overburdened and deteriorating transportation system. Dry cargoes are as vital as is petroleum. I do not think you can be excused by mere reiteration of the statement that the position of the Petroleum Administration for War in this matter relates only to the relative efficiency of the barge and the pipe line for the transport of petroleum. You have apparently acquiesced in, if you have not actually recommended, the use of large amounts of steel, equipment, and manpower for the construction of tugs and barges for operation on the Mississippi and its tributaries, on the Gulf intracoastal waterway as far as the west coast of Florida, and on the Atlantic intracoastal waterway from the east coast of Florida to Trenton, N. J. Yet you take the position that these same barges and tugs and more of the same operating on these same intracoastal waterways and across the 72-mile trans-Florida channel is not advisable. This would be incredible if it were not a matter of record. Further, a mass of engineering opinion, including that of the Corps of Engineers of the Army, refutes the contention of the major oil company members of your staff—companies traditionally and selfishly opposed to the project—that barge transportation is not more economical in material and manpower than are pipe lines.

You are not only the Petroleum Administrator for War, you are the Secretary of the Interior, and as such you have a duty and a responsibility toward the devolpment, security, and welfare of this country. I am not impressed by your plea in your letter of May 13 that "the utility of this canal for the transportation of materials other than petroleum is a matter upon which this office cannot express a considered opinion." In your letter of June 4 you do not hesitate to go far afield from the duties of the Petroleum Administrator to invoke as a basis for your opposition the war program as a whole, nor have you refrained from discussing the questions of critical materials and manpower and transportation, all of which are responsibilities of other Government agencies, not of the Petroleum Administration for War. Further, you were Administrator of Public Works, and as such directed in 1935 an exhaustive study of the potential dry cargo movement through such a waterway, and you must be aware of the favorable recommendations made by your examining engineer. If not, you must admit that you vetoed the canal without acquainting yourself with those findings.

The above are the real issues in this matter, Mr. Administrator; not decimal points and finely balanced comparisons of steel and manpower. We have neither adequate transport nor adequate petroleum supplies. You have failed to solve the problem, and yet you oppose this connection of our waterways which, regardless of all other considerations, can be made to relieve the situation. I believe that it should be begun now, and that the Chief of Engineers is correct in saying that it is a reasonable expectation that it may be in service by winter after next; and I believe that Congress will take the matter in hand very soon.

Speaking for myself, and I believe that a substantial majority of the Congress and the

people feel as I do, I can no longer be satisfied with promises that "all essential needs will be met." This is an absolutely misleading phrase, which we have heard before and relied on to our sorrow. As a matter of fact, we do not have today, and we have not had for many months, enough gasoline and fuel oil to meet all essential needs, and you tell us that in all probability we shall have less in the future.

I think it is almost universally acknowledged, by friend and foe alike that failure to provide this connecting channel across north Florida was one of the most tragic omissions and errors in policy in the history of this Nation, and has resulted in detriment to the public welfare and security to a greater extent than the Pearl Harbor disaster. More men have died, more ships and cargoes have been lost, more suffering has been caused, and more detriment to our ultimate war effort has resulted from this failure to see to our vital transport than followed in the train of Pearl Harbor. I believe that the people of this country, regardless of party or section, are rapidly approaching a conclusion as to where the responsibility lies.

Respectfully,

JOE HENDRICKS.

MEMORANDUM

To Hon. Harold L. Ickes, Petroleum Administrator for War.

From Representative JOE HENDRICKS.

The following is comment on certain erroneous figures and statements set forth in your letter to me under date of June 4, 1943, and is supplementary to and a part of my reply thereto.

(1) The first point you raise is that of relative manpower required to effectuate plans for moving to the eastern seaboard 250,000 barrels of petroleum daily via (a) a 24-inch pipe line, and (b) the intracoastal waterways through the proposed connecting channel across northern Florida.

You state, in substance, that you do not favor the barge movement over the Florida Canal route because the equipment would involve a vastly greater draft on our manpower resources. This is so directly contrary to actual fact, and the figures you give so utterly ignore the elementary principles of economics and engineering, that I take this opportunity of dissecting them in some detail.

There are several assumptions and omissions underlying your figures which are untenable and unreasonable and which cannot be allowed to go unchallenged. These include:

(a) The totally erroneous basis which has been used by you in computing man-hours. It is an elementary fact that the manpower represented by any construction project is the total labor required to bring it into being, beginning with the natural raw materials. For this reason, the manpower represented by any project is very roughly proportionate to its total cost. For the total cost is, in the last analysis, substantially all labor. An intelligent approach to great precision in determining the man-hours can be made by dividing the total cost by an informed estimate of the average hourly wage involved (including all operations concerned from the natural raw materials up). If a completed project costs $10,000,000, and it is estimated that the average hourly wage (from the natural raw materials up) is $1, then with moderate precision it may be determined that the project represents a draft on manpower resources of approximately 10,000,000 man-hours. By the same token, if each of two projects costs $10,000,000, and the average hourly wage represented by one is 80 cents and by the other $1, then the first may be reasonably assumed to require 20 percent more man-hours than does the second. To take simply the direct labor on a project as the basis for computing the total draft on manpower resources is so violently opposed to the facts that it would not be tolerated by the most elementary engineering or economics. And yet this is what you have done. Even in so doing, the statements of the Petroleum Administration for War, including your own, are so improbable as to arrest attention. I give you some examples:

On page 156 of the hearings before the Subcommittee on Appropriations of the House, War Department civil functions, Seventy-eighth Congress, first session, the Petroleum Administrator for War has submitted for the record the statement that construction labor on the 24-inch pipe line is estimated to be $12,000,000, plus $21,000,000, or a total of $33,000,000. If it is true, as you state in your letter of June 4, that the total man-hour requirements of the 24-inch line are 9,000,000, this $33,000,000 estimate for construction labor shows that you contemplate paying an average wage of $3.66 per hour. This is astonishing, to say the least. Yet it is confirmed by the statement in the hearings referred to, where it is set forth, that the total man-days estimated for the project is 650,000 plus 420,000, or 1,095,000, which indicates an average daily wage rate of $30.12. Arithmetical analysis of the statement clearly shows that it is computed on the basis of one 8-hour shift per day. Thirty dollars and twelve cents for an 8-hour day, average for the 8,000 estimated as employed and for this class of work, is a startling scale even for these times. I am willing to believe that this is simply one more of the many erroneous statements presented to Congress by Petroleum Administration for War in this matter. If not, then this $30.12 per day wage scale might well be the subject of inquiry by appropriate authority.

Again, if your figure of 9,000,000 is for total man-hours, and the cost of the project is really only $95,000,000, as stated, then the average hourly wage would be $10.55, or $84.40 per man for 8-hour day. This further illustrates the confusion in your figures.

(b) You assume that the 24-inch pipe line will deliver to the eastern seaboard a daily, year-round average of 300,000 barrels of crude oil. I point out to you that you have never yet (even on the western portion of this line) been able to transport anything approximating this quantity. Further, the best engineering opinion is that you cannot expect to exceed 250,000 barrels daily on the year-round average. It is regarded as a tacit admission of the faults and difficulties of the 24-inch line that the second large line now under construction has been reduced to 20 inches. There appears no other possible justification for putting in a 20-inch line instead of a second 24-inch line, if the latter would function to give us a proportionate increase in deliveries to the east. By persisting in the assumption that the 24-inch line will carry 300,000 barrels daily as a year-round average, instead of 250,000 barrels daily, and by carrying this figure of 300,000 into your computations you have introduced from this cause alone a 20-percent error in favor of the pipe line in all your figures for manpower, horsepower, and materials required per barrel of petroleum delivered. This error is only one of many which must be corrected before rational comparisons between the pipe line and the barge can be made.

(c) You have assumed that the proposed connecting channel across northern Florida should be charged to the emergency movement of petroleum. This is an unreasonable assumption, and is not justifiable by any system of accounting. The proposed connection of the Gulf and Atlantic Intracoastal Waterways is a part of our permanent national general crago transport system, and is not, like the pipe line, a facility for the emergency only, nor only for petroleum; although it could be used to the greatest advantage during the emergency.

(d) You have omitted from your computations all manpower represented by the cost of feeder lines and distribution facilities along the Atlantic seaboard. On the other hand, the barge proposal includes distribution all along this coast from Florida to Trenton, N. J.

(e) The number, kinds, and capacity, and the cost of barges and tugs shown in your and other Petroleum Administration for War statements are so at variance with the facts and the estimates of the Chief of Army Engineers that they cannot be accepted. It can only be concluded that the Petroleum Administration for War has put forth these figures arbitrarily in an effort to reduce by computation the efficiency of barge movement.

A rational comparison of the draft on our manpower resources which would be required for a 24-inch pipe line on the one hand and for the proposed barge movement on the other, shows unquestionably that the barge movement is by far the most economical. To make such a comparison, it is first necessary to develop a rational estimate of the cost of each project.

The cost of the trunk of a 24-inch pipe line, without feeders or any distribution facilities along the Atlantic seaboard, is stated by Petroleum Administration for War to be $95,000,000. When the feeder lines and the cost of facilities for distribution along the Atlantic seaboard are added, the total cannot be taken as less than $114,000,000, all net Federal expense. This cannot be assumed to deliver more than 250,000 barrels daily on the year-round average.

The total cost of barge and tug equipment to deliver 250,000 barrels daily, year-round average, from and to the same termini, substantially, as assumed for the pipe line, and assuming that 150,000 barrels of this is to be residual fuel oils and 100,000 barrels is to be lighter products, would be as follows:

600 10,000-barrel wooden barges, at $48,000 each	$28,800,000
400 10,000-barrel steel barges, at $55,000 each	22,000,000
324 600-horsepower steel tugs, at $175,000 each	56,700,000
Total, if all had to be constructed	107,500,000

As a matter of fact, over 100 of these steel tugs and over 100 of these steel barges and numerous wooden barges are already on order for lease to private enterprise on a basis which will shortly return their cost to the Government. The total cost of these steel barges and steel tugs referred to as being on order, at the above scale, is $23,000,000, which should be deducted from the above $107,500,000, leaving the total cost of the fleet yet to be built as $84,500,000.

While it should be pointed out that the $84,500,000 for the barge and tug program is not and will not be a Federal expense item—because this equipment will be leased to private enterprise on a self-liquidating basis—this figure may be used to compute man-hour requirements as compared with the actual Federal expense item of $114,000,000 for a 24-inch pipe line shown above.

Summarizing, we have:

To deliver daily to, and distribute along the eastern seaboard, 250,000 barrels:

(a) By 24-inch pipe line (all direct Federal expense)	$114,000,000
(b) By barge movement over Florida canal self-liquidating Federal financing)	84,250,000

In the over-all picture of the draft on manpower resources, both of these figures represent man-hours of labor, and substantially nothing else. Since the construction of barges and tugs involves, on the whole—from the raw material up—a wage scale probably 20 percent higher than does a pipe-line project, the ratio of $114,000,000 for the pipe line to $84,250,000 for the barge movement (1.35 to 1) should be altered accordingly, that is, the actual ratio of the man-hours required by the 24-inch pipe line to those required for the barge-movement facilities is as 1.69 is to 1. In other words, facilities for a 24-inch pipe-line movement of 250,000 barrels per day requires 69 percent more man-hours than do facilities for barge movement of the same amount.

The above is a substantially true picture of how very much smaller would be the actual draft on our manpower resources by the construction of barge and tug facilities than would be the draft caused by the construction of a 24-inch pipe line.

One essential fact emerges plainly. By its insistance on pipe-line construction, and by its opposition to the connected Intracoastal Waterway, the Petroleum Administration for War has wasted 41 out of every 100 man-hours and 58 out of every 100 tons of steel it has employed in its 24-inch pipe line.

(2) You advance the point that the pipe-line construction involves no use of shipyard facilities now devoted to military and naval production, whereas you say that the building of barge and tug equipment to the extent required would cause either a serious curtailment of present shipyard programs or the construction of entirely new yards. Whoever furnished you with this information could have been only ignorant of the facts or careless of the truth. In the first place the figures given by you as to the number of tugs and barges required is more than twice the actual number determined by the Chief of Army Engineers. In the second place, the records of the committees of both House and Senate are replete with testimony to the effect that the small boat yards and barge-building concerns (suited to this class of construction) have not enough work to keep them operating at capacity, and that there are ample idle facilities for constructing all the tugs and barges needed for this movement, without interfering with the construction of a single vessel in the military and naval program.

While the construction of these barges and tugs would in no way occupy construction facilities needed for naval and military vessels, the construction of a 24-inch pipe line does require 237,560 more tons of steel than do the equivalent barges and tugs. This would certainly occupy rolling mill plate capacity which could otherwise be devoted to plates for more than 160 destroyers or more than 75 large cargo ships.

(3) You submit a table which purports to truly set forth the relative steel, horsepower, and manpower requirements of the barges and pipe lines. These are the same misleading and erroneous statements presented to Congress on several former occasions and are based upon utterly inaccurate assumptions. The totally erroneous nature of these figures and the really much greater efficiency of the barge over the pipe line (in steel, horsepower, and manpower) was so thoroughly demonstrated by competent testimony before the subcommittee of the Senate Committee on Appropriations (hearings on H. R. 2346, 78th Cong., 1st sess.) that I am entirely willing to rest on that record, and I am confident that Congress will arrive at an accurate judgment as to these matters. For your personal information, I give you herewith the correct comparison of the efficiency of facilities for barge movement and pipe-line movement. These show that the pipe line is a very poor and wasteful second.

	Barge, including distribution	Pipe line, excluding distribution [1]
Barrels delivered daily per ton of steel employed, all-steel fleet	0.98	0.76
Using wooden barges for residuals, and steel barges for products, with all-steel tugs	1.46	.76
Barrels delivered daily per prime horsepower installed	1.24	.99
Barrels delivered daily per utilized horsepower	2.40	.99
Relative consumption of manpower in construction of additional facilities	1.00	1.69

[1] Relative manpower figures include distribution facilities in each case.

(4) I am glad to note that you admit in your letter that "any opposition to the canal that is based on a prediction of the duration of the war would be * * * wholly unjustified." And yet, regardless of this statement by you, your representatives have, inferentially, taken a position before congressional committees that time is of the essence and that therefore the canal should be opposed. You yourself have done this in your letter to me of May 13, where you state that "our conclusion is based upon two major considerations," and proceed to name the time you say will be required for the construction of the canal as the first of these major considerations.

No one can object to honest enthusiasm for a given plan; and honest mistakes in empirical data may be forgiven (although such errors do not increase the confidence imposed in those habitually making them), but actual destructive attack upon other plans which could serve the same and other purposes, and a demonstrated willingness to let the public welfare suffer rather than fail in that attack is a phenomenon so astonishing that it challenges public attention. I have yet to witness the most ardent advocate of barge transportation, via the Florida canal or otherwise, attempt to block the construction of any pipe line which was reasonably designed to meet the emergency needs, regardless of its relative efficiency. We must have adequate transport for all commodities. We must have petroleum. The spectacle of a Cabinet officer waging war upon a project calculated to render vast service in this field, endorsed and vouched for by the highest technical authority of the Government, is grotesque, and it remains to be seen whether it will be further tolerated.

(5) You state in your letter that "no witness from this office has testified that an abandonment of rationing of fuel oil is in prospect." Here, again, Mr. Administrator, we have a typical example of those numerous statements and representations, made by you or your representatives, which are diametrically opposed to the facts and the record. A witness from your office did testify that an abandonment of fuel-oil rationing is in prospect. The record is in the hearings before the Subcommittee of the House Committee on Appropriations, War Department Civil Functions, Seventy-eighth Congress, first session. On page 147 of these hearings the record shows that Mr. Ralph K. Davies, of the Standard Oil Co. of California, and your Deputy Administrator, as testifying:

"We hope that we may be able this coming winter to supply the full civilian requirements of heating oils."

Again, on page 150, Mr. Davies stated:

"With the completion of these two lines, we should be able, I think, to supply the full demand domestically here except on gasoline * * *."

Again, on page 169, there is the following testimony:

"Mr. ENGEL. I believe you stated that the administration hoped to furnish the full requirements for heating oil under the plans now proposed by your Administration, is that right?

"Mr. DAVIES. That is our objective; yes, sir.

"Mr. ENGEL. Well, do you think you can supply it?

"Mr. DAVIES. We think we can, provided we have approval from the War Production Board for the materials to furnish this second pipe line, and provided the military estimates are not greatly increased."

Again, on page 199, there is the following testimony of Mr. George A. Wilson, also from your office:

"Mr. POWERS. Mr. Wilson, we are at liberty to state on the floor or publicly that with the completion of your two pipe lines from Texas to the east coast, plus existing tank-car facilities, that the present gasoline rationing system in the East will be definitely taken care of, and enough oil will be delivered to the east coast next winter without fuel-oil rationing.

"Mr. WILSON. In answer to that, Mr. Powers, I would say that upon the completion of the 2 new, large-diameter pipe lines, the 24- and the 20-inch, all the way from Texas through to the east coast, which would provide approximately 535,000 barrels delivery per day by those 2 lines, plus continued use of tank cars, existing pipe lines and existing or under construction inland waterways equipment, that we will be able to meet the full east-coast petroleum requirements on a basis of continuing gasoline rationing, and substantially as it now is, and supply normal requirements of fuel oil and other petroleum requirements for domestic and offshore use.

"Mr. POWERS. Without rationing of fuel oil?

"Mr. WILSON. That is what I mean by normal requirements."

These quotations from the official record show beyond question that statements which you say were not made were actually made by your representatives. Were the official record of the hearings lacking, your statement is directly refuted by the formal report o the House Committee on Appropriations, reporting to the House on H. R. 2346 (78th Cong., 1st sess.), page 7:

"The Committee is advised that pipe lines presently built and in course of provision, plus the use of tank cars and a relatively small amount of water transport, assuming proper priorities yet to be granted on pipe lines in course of provision, will take care of the eastern-seaboard area during the next winter in a normal way, including the heating of homes, except gasoline for pleasure driving, which is taboo anyway because of rubber shortage."

Not only did your representatives mislead the committee in the matter of fuel oil, Mr. Administrator, but the situation today as to gasoline is eloquent proof as to the misleading testimony regarding this commodity.

(6) I note that your staff includes, according to your statement, men who have had many years' experience in the construction and operation of all forms of petroleum transportation. Experience is desirable, but we should not ignore the allegiance to selfish interest which that experience may imply. Beyond doubt, such experience could be used either in or against public interest. When we remember that the men of whom you speak are drawn from the ranks of those private and competing interests who are traditional foes of the Florida canal, and when we couple this with the fact that you, yourself, by your former action prevented the

construction of this essential transport facility, the situation is worthy of scrutiny. If you care to submit to me a complete list of all men in your administration who have been drawn from the oil companies, together with the respective positions they occupied therein, and the salaries or other considerations still afforded them by these companies, together with the compensation being paid them at the same time by the Federal Treasury, I shall be glad to present it to the House of Representatives and request its publication in the RECORD.

If you feel that your Petroleum Administration for War will not be justly judged in this matter, I am inclined to believe that the House of Representatives would, upon due proposal, constitute a special committee of inquiry before which you and all other parties at interest, including the general public, might appear. My own view is that such an inquiry into the opposition to the Florida canal and the failure of our petroleum supplies is overdue.

JOE HENDRICKS.

Action, Not Words, Needed to Stop Inflation

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. HOPE. Mr. Speaker, all Members of Congress have on their desks the monthly digest of the Bureau of Labor Statistics of the Department of Labor. I hope that Members will read this digest in connection with the President's veto message on the Commodity Credit Corporation extension bill. I wish the President might have read it before he wrote his veto message.

This digest shows that from April 1942 to April 1943, hourly earnings in manufacturing industries increased 12.2 cents, or approximately 15 percent. It further shows that weekly earnings in April 1943 were $42.48 as compared with $35.10 in April 1942, or approximately 21 percent higher. It shows also that from May 1942 to May 1943 the cost of living advanced 7.8 percent. Inquiry of the Bureau of Labor Statistics gives me the information that the increase from April 1942 to April 1943 was exactly the same, 7.8 percent. In other words, weekly earnings in factory employment went up almost three times as much as the cost of living. Yet the President's message attempts to give the impression that wages have been stabilized and that it is only the cost of living which has been advancing. The President says we must roll prices back in order to avoid inflation. If we roll prices back and do not roll back wages and income, we are simply increasing the inflationary gap. We are increasing the amount of purchasing power at a time when the quantity of goods available for purchase is becoming smaller and smaller.

I am anxious to back the President in any real fight against inflation. I voted for the Gore amendment when the original price-control bill was under consideration. The administration opposed that amendment. It has continued to oppose every real effort to combat inflation. How can anyone take the President's talk about combating inflation seriously when the record shows that the administration has not up to date done one single thing to stop or even slow up inflation? On the contrary, it has sponsored and urged many highly inflationary proposals such as the 48-hour week with time and a half for all time over 8 hours and the present food-subsidy program. If the President means what he says about stopping inflation, let him prove it by rolling back income and wage payments as well as prices. This is a time for deeds rather than words.

The Shipbuilding Program in the San Francisco Bay Area

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio broadcast made by me over stations WSOO, Sault Ste. Marie, Mich., and WMAM, Marinette, Wis., on July 4, 1943:

Last Sunday I told you about the remarkable record that had been made by one of the famous Six Companies that had participated jointly in building Boulder Dam and other huge construction projects and who had been asked by Uncle Sam to turn their talents over to shipbuilding. Today I want to discuss another side of this shipbuilding program out here in the San Francisco Bay area which is not so rosy, and if I can I want to offer some reasons for the bogging down in this program.

In the course of our investigation we got up one morning at 5 o'clock in order to get aboard a new C-3 cargo vessel for its trial run. This ship, built in the Moore Drydock Co.'s yard in Oakland, had been launched June 4, 1942, over a year ago. It was to be a standard C-3, 19-knot dry-cargo vessel such as is standard in our pre-war long-range construction program. It is a beautiful ship, well built in every particular so far as I could see and I went over it with a fine-toothed comb. But when it was nearly complete the Maritime Commission decided it should be converted into a "reefer" ship, to have its cargo holds refrigerated to carry perishable meats, vegetables, etc., under lend-lease to Britain. Consequently, instead of completing this ship as originally designed—and we are still building many of this type—instead of pushing this almost completed ship through to completion, much of its interior had to be torn out and scrapped and then began a long wait for refrigeration machinery that was not received until late in April of this year, and so this ship that was launched over a year ago is just now going into service, and all those vital vessel-months of service have been sacrificed on the altar of indecision or of changed decisions.

A sister ship, launched shortly after this ship, was likewise ordered converted to a "reefer." Now, when that ship is about 85 percent completed, along comes the Navy and requisitions this ship ond orders it reconverted back to a one-fifth "reefer" and four-fifths dry cargo, unrefrigerated ship. So here is a case where we install dry cargo equipment, then rip it out and install refrigeration—then rip that out again and reinstall dry cargo equipment again. Do you wonder that the men who have put their heart and soul into their work and into the war effort, should not only become discouraged, but, in fact, actually rebellious? And I mean just that, because we had testimony freely given our committee that a committee of foremen in that yard had in their possession a petition which they intended to present to management stating they would henceforth refuse to buy any more War bonds if that ship was again reconverted, because they felt it was a waste of their own hard-earned money. And the unfortunate part of it was that they blamed the shipyard management for making these changes—whereas, they are only obeying orders from the Government departments. One certainly hesitates to question the judgment of either the Maritime Commission or the Navy in instances such as this, but at the same time, no one but a moron could fail to sympathize with the feeling of the men. And out here on the coast there is a shortage of manpower, and every honest hour's effort is demanded of every honest person engaged in every phase of the war effort. But, our committee could not fail to come to the conclusion that these constant changes in governmental designs, specifications, and so forth was doing untold harm to the over-all ship production schedule. It is almost driving both labor and management crazy. One manager showed me a cartoon that hangs near his desk in which it portrays a shipyard management and its whole office staff poised in a daily silent prayer, even before opening the morning's mail, that they be not hampered all that day by more changes in demands or specifications.

I might add in passing, that our committee, after witnessing the various tests to which these ships are subjected by the Maritime Commission before they accept the vessel from the builders, were taken off this ship by a Coast Guard patrol craft and taken direct to one of the newer shipyards which we inspected carefully and talked to a number of the employees. We were especially interested in checking into the food situation because of violent criticism which labor leaders had made to our committee that the men were not being fed hot lunches and given covered dining halls in which they could sit down during their half-hour lunch period and enjoy a hot meal. I shall not comment on that demand—I prefer to let you form your own comment. However, what we did find was that this yard had nine canteens scattered throughout the yard from which the workers could purchase cold sandwiches, milk, chocolate milk, coffee, all at 10 cents, and cigarettes, tobacco, etc. They could also purchase box lunches, put up by the yard in its own cafeteria, which contained two sandwiches, a salad, a dessert, an orange, and a drink for 35 cents. This reminds me that several days a week, back in Washington, I find it necessary to have one of the girls in my office get my lunch for me and I eat in my office. On such days I usually get two sandwiches and a bottle of milk and it costs me 37 cents. We went through a very excellent cafeteria, spotlessly clean, and in which a variety of hot and cold foods are served at prices which I considered somewhat below our prices in the Capitol Restaurant in Washington. True, this cafeteria is outside the

plant gates and far away from the shipways and their workers on shift, but it was designed for the office force as well as for the convenience of the several thousand employees that live nearby in the dormitories and apartments that the Government has built for the workers. In this yard at least, I cannot subscribe to the labor union representative's complaint.

At 5:45 that afternoon we witnessed a launching of a tanker at this yard after which we literally dashed back to our hotel to freshen up a bit and left almost immediately for a dash across San Francisco again and back to the Moore yard in Oakland across the bay to witness another launching over there of a vessel for the Navy. This particular launching was most interesting and a novel experience because I had a "worm's-eye view" of it. I was permitted to watch the operation of the huge and novel trigger arrangement by which this company launches its ships and in so doing stood directly under the hull while it slid down the ways over my head. It was quite a thrill. After speaking at the lunch which followed the launching, I was indeed glad to get back to the hotel at 10:30 and go to bed after a somewhat well-filled day.

We had some extremely sensational testimony before our committee with reference to the rather famous Kaiser yard, known as Richmond No. 3. An auditor of the Maritime Commission, Mr. Alonzo Bryan, voluntarily came before our committee and charged gross mismanagement, inefficiency, waste, and extravagance in the operation of the yard. Among other things, he charged that this yard had spent $106,000,000 out of an original appropriation of $185,000,000 and had not yet completed a single ship under that contract calling for some troop ships. He charged that the management kept no inventory whatsoever of the supplies and equipment and materials in the yard. If so, of course, that is absolutely inexcusable—and it is noted that in his prompt reply to these charges, Mr. Kaiser himself made no mention of that charge. As a matter of fact, he denied none of Bryan's charges but instead defended the yard by charging the fault to changes in designs and specifications by the Government. Mr. Bryan further charged that Kaiser had spent and was seeking repayment from the Government through the Maritime Commission of over $600,000 for the recruitment of workers in 11 Midwestern and Southern States. As I understood his testimony, he said this money was loaned the men in advance for transportation and living expenses and was to be repaid after the men earned it. But he charged that already, Kaiser management had admitted that at least $40,000 of this could never be recovered because at least 300 of these men had accepted the money and had never since shown up in the Frisco area—neither at Kaiser's plants, nor at any other Bay area shipyards. Mr. Bryan charged further that Richmond No. 3 had over 50,000 tons of steel on hand over and above its requirements and that much of this steel, prefabricated, was being transferred to its other yards. He charged that over $1,000,000 worth of linoleum and other floor coverings were on hand and being disposed of at less than cost because of changed designs. Now, of course, Mr. Bryan was not entirely aiming his charges against Kaiser but was simply pointing out facts and again we come back, as Mr. Kaiser himself pointed out in answering these charges, that the constant changes in designs and specifications and requirements of the Government are responsible for gross extravagance, waste, and inefficiency and contribute to a devastating slow-down in the production program for vitally needed ships.

However, following Mr. Bryan's testimony, we had still more startling testimony from a number of workmen in the yard. These men, likewise appearing voluntarily, were all keymen—they were foremen, leadermen, hull superintendents, yards inspectors, etc. With one exception, they claimed to be veteran shipbuilders of many years' practical experience. They charged a devastating lowering of morale among the trained men because of the fact that, first, Kaiser was trying to maintain his peacetime construction; second, that Kaiser was more interested in building facilities—that is, the shipyard itself—than he was in building ships; and, third, that their recruitment of manpower was a fabrication of falsehood, with resultant dissatisfaction, which caused a devastating turn-over of that manpower, with resultant drop in production.

Let us examine those charges more closely. These men, who proved they were veteran shipbuilders, charged that when Kaiser first started building ships for the Government he very wisely sought out trained shipbuilders and employed them as his inspectors, foremen, superintendents, etc. One of our biggest problems—and admittedly most disturbing problems—in this whole accelerated shipbuilding program has been the necessary dilution of our trained shipbuilding supervisory personnel. It has worried all of us who are concerned with the prosecution of the problem. However, these men charged that once they had been put in charge Kaiser immediately brought into the picture his own personnel who had been successful in his organization in building his large construction projects in peacetime; for example—Boulder Dam—in which he was one of the six companies (possibly the dominating voice). These men, excellent on such work, still know nothing about building ships. But these men bragged openly that once they had been trained in the shipbuilding techique by these trained shipbuilders they would be, and in many instances were, elevated in rank over their teachers—even when they were not half trained or half experienced in shipbuilding—and then the trained shipbuilders were either discharged outright or their salaries and other working conditions so altered that they were forced to quit in disgust or at least in discouragement. They could only say to themselves, "What's the use; I train them and then I get the ax one way or another."

Then, to make matters worse, when the Government comes along and changes designs or specifications, these half-trained dam builders do not know how to change their construction program accordingly. They are still not trained shipbuilders. If these charges be true—and they seem to be—the Kaiser miracle-man stuff is a complete hokum as far as I am concerned. He and his organization, having proven their inability to change as necessity demands, and as such can only qualify in my book as trained shipbuilders and good shipbuilders in exactly the same proportion as Machine Gun Jack Kelley can qualify as a tailor because I saw him deftly operating a mechanical cloth-cutting device in the Alcatraz Prison clothing factory recently. So this practice has ruined the morale of trained men who know how to lay out work on a ship, regardless of changes in design—such men must be trained shipbuilders of long experience. It was a mistake of the Maritime Commission to change designs at Richmond No. 3 if they knew Kaiser was building such an organization of pseudo shipbuilders out of admittedly experienced and excellent dam builders. Such men might be excellent at building shipyard facilities, but not ships. As for the misrepresentations in recruitment of manpower, these charges stem from the fact that perhaps some overzealous manpower salesmen in their zeal inform the recruits that they will have working conditions that do not exist, housing conditions that do not exist, feeding and transportation conditions that do not exist. That this has been done—no one can successfully deny to those who have experienced it. The labor turn-over speaks for itself. Also, the fact that Kaiser's recruitment agencies have even sent crazy people out here, whom the authorities returned to their homes under armed guards for whom they are now billing the Maritime Commission, cannot easily be excused. In fact, in this instance it cannot help but appear that Mr. Kaiser must have employed some old-timers who had had experience in the gentle art of Shanghaing seamen. Richmond No. 3 is not the rosy picture the press has built up about the miracle man.

Rotation of Troops

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BROOKS. Mr. Speaker, numerous reports of conditions in the tropics and in the Arctic have reached me. I have been informed, for instance, that conditions in tropical climes such as the Solomon Islands are such that white troops have a hard time maintaining their health and morale under the depressing influence of these climates. On the other hand, I have received many letters from soldiers stationed in the Arctic indicating that these men miss the diversions and the entertainment of the more salubrious climates of the temperate zone; and the need of a change in station is very apparent after they have served in the Arctic for many months.

I realize that during the course of a long war, the War Department cannot consult the wishes of the men in service as to the place they desire to be stationed. I realize the needs of the service require fighting men who cannot be mollycoddled and pampered. On the other hand, I realize that this war has been going on for over one year and a half; and without rotation in the use of men there is danger of lowering the morale of our troops and even impairing their health if they are continuously kept in the severe heat of the tropics or in the rigors of the cold of Arctic latitudes. With this in mind, I have written the War Department regarding the policy of rotating troops who are exposed to the two extremes—heat and cold—and have received a reply to my letter. I feel that the country is entitled to the benefit of this correspondence which is most informative, and I therefore ask unanimous consent that this exchange of letters may be printed in the RECORD below:

JUNE 11, 1943.

HON. HENRY L. STIMSON,

Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: It has come to my attention through many channels that some of our troops stationed in out-of-the-way

parts of the world are living under most trying circumstances. For instance, I have just received a letter from a soldier in Guadalcanal who tells of the terrible strain upon white troops stationed in tropical countries due to insects, bugs, rodents, etc., which one finds in the tropics. I also have an Associated Press dispatch from a war correspondent, Olen W. Clements, in which he refers to the terrible annoyance of the "flies, ants, lizards, scorpions, and mosquitoes."

I have similar reports from the Arctic regions in reference to the strain upon the troops due to continuous cold and lack of normal entertainment, etc.

It has occurred to me that the War Department must have some rotation policy as to troops stationed in out-of-the-way places where such unusual strains are placed upon the troops in addition to the normal battle conditions. If such is the case, I would like to have your attitude on such a policy. Such rotation may not include the return of the men to continental United States; but may contemplate relief by moving them to other nearby theaters of action where such conditions do not obtain. Proper rotation may result in increased morale as well as reduction in number of hospital cases.

I will appreciate your report on this matter which in my opinion is becoming increasingly important as the war lengthens from months into years.

Very sincerely yours,

OVERTON BROOKS,
Member of Congress.

JUNE 24, 1943.

HON. OVERTON BROOKS,
House of Representatives.

DEAR MR. BROOKS: I have your letter of June 11, 1943, addressed to the Secretary of War, concerning the health and morale conditions of troops stationed in tropical countries and in the Arctic, and the possible rotation of troops on duty in these areas.

The War Department fully appreciates your views on this subject and you may be assured that every effort is being exerted for the health, welfare, and contentment of our armed forces wherever they may be stationed. They are being constantly watched over by men long experienced in detecting any change in health and/or morale. When the situation is such that it appears favorable to make a change, the men in isolated outposts are removed to larger bases where more facilities are available. In some areas soldiers are being furloughed to the continental United States in such numbers and at such times as shipping facilities, the tactical situation, and the availability of trained replacements permit.

With reference to your inquiry concerning troops in regions which lack normal entertainment, every practicable measure is being taken to encourage self-entertainment among the soldiers. In this connection, theatrical advisers are assigned to each area headquarters whose duties are to assist soldiers in entertainment projects. A limited number of soldier kits are available and every effort is made to distribute them to the most isolated groups. These kits are of various types, some containing theatrical equipment, others radio transcriptions and turntables, music and musical instruments, games, books, or athletic equipment.

Health conditions are being closely watched and our soldiers are receiving the benefit of the best medical and scientific teaching of this country. I am enclosing copies of War Department press releases on health measures being taken overseas, which will attest this fact.

I appreciate your interest in this vital question and I am sure you understand that there is no disinclination or oversight on the part of the War Department to limit the rotation or furloughing of these isolated groups. Such limitations as do exist are imposed by the lack of shipping facilities and the strategical and tactical considerations.

Sincerely yours,

JOHN W. MARTYN,
Administrative Assistant.

United States Faces Defeat on Home Front

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John H. Cline, from the Washington Star of July 4, 1943:

UNITED STATES FACES DEFEAT ON HOME FRONT

(By John H. Cline)

Despite the efforts of some officials to minimize the deterioration of the home front by accusing the press of making mountains out of molehills, it is perfectly evident that the state of affairs prevailing in Washington today gives very real cause for concern. The simple fact is that we are faced with a crisis in our conduct of the war on the home front—a crisis which cannot remain static, but which inevitably will grow worse unless determined and intelligent measures are taken to eliminate the causes of the trouble.

Broadly speaking, the difficulties now harassing the Government have their origins in two areas. The first and the primary trouble area is in the executive branch of Government, where poor administration has produced an appalling compound of confusion and conflict. The second area encompasses the relations between Congress and the President. To some extent the troubles in this field may be traced to an ailing executive establishment.

The chaotic conditions prevailing in the executive branch are the direct result of a persistent refusal to gear the Government's administrative machinery to the demands of total war. And the responsibility for this failure rests with the President. After the start of the war in Europe, but before Pearl Harbor, Mr. Roosevelt told the country that our defense program could be carried through without impairment of social gains by superimposing the defense establishment on the framework of normal industry. We were going to have guns and butter, too, although that assurance then was hardly less realistic than it would be today.

In fairness to the President, he has long since ceased to talk in terms of social gains. There is no longer any suggestion that we can enjoy the good things of life and also produce the facilities that we must have to fight the war. But granting this, the fact remains that Mr. Roosevelt has not yet been willing to go all the way down the line in converting the administrative branch of the Government from a peacetime to a wartime establishment. He lacks the time or the temperament, or maybe both, to get down to the tiresome and detailed job of personally administering the executive branch. And he has not been willing to delegate this onerous task to capable subordinates endowed with adequate and clear-cut authority.

This weakness in administration first showed itself when the President set up the old Office of Production Management under the joint direction of William Knudsen and Sidney Hillman. Neither man was to have final authority, the President said, but were to work together as partners. Presumably they were never to disagree, but, of course, they did, and within a short time the Office of Production Management disappeared in the first of a bewildering series of reorganizations which has brought forth a long list of alphabetical combinations, a few good men and a patchwork of Executive orders that would drive a jigsaw puzzle fan to distraction. It is only natural that there should have been a scramble for power in this legalistic no-man's land on the part of officials who seldom knew where their authority began or ended. And it is not surprising that the term "bureaucrat" as employed by a bewildered citizenry, has taken on a connotation that is something less than complimentary.

Had he been willing to do so the President at any time could have slashed a clear path through this maze, or he could have commissioned someone to do it for him. But he has preferred to reorganize and improvise, shuffling agencies and faces but never getting down to the unpleasant business of throwing out the incompetents and turning the job of running the administrative branch of Government, and the necessary authority, over to the best available men, regardless of their predelictions for or against the New Deal. The result is a state of demoralization at the seat of government, which forces into the open such feuds as that between Vice President WALLACE and Secretary of Commerce Jones. What are the people to think when nothing is done about a complaint from the Vice President that a Cabinet officer is obstructing the war effort by operating an "utterly inexcusable" form of "bureaucracy at its worst"? The complaint is either true or not true. If it is true, Mr. Jones has no right to continue in office, and if it is untrue, the Vice President should be called to account. But there is not the slightest indication that anything will be done about the matter.

In addition to its adverse effect on the people, this state of affairs has helped to widen the breach between the President and Congress at a time when they should be working in closest harmony. Not all of the President's differences with the legislators are due to sincere conflicts of opinion. Some are inspired in part, at least, by narrow political considerations in the House and Senate, but in the main the so-called legislative "revolts" are genuine manifestations of concern at the turn from bad to worse which our domestic affairs have been taking. Congress is close to the people. Every 2 years all of the Members of the House and a third of the Senators have to stand before their constituents for reelection, and it is a reasonably safe assumption that the uneasiness and the discontent that are so evident in Congress today reflect a similar uneasiness and discontent throughout the country.

Unfortunately, however, the recourse of the Congress, when it is in disagreement with the President, is largely negative in its effect. It can prevent the President from doing many things, but there is little that it can compel him to do. Thus, if the judgment of Congress were infallible, which it certainly is not, there would be little that it could do on its own initiative to put our domestic affairs in order.

In this situation, two things are imperatively needed. First, the President must clean house in the executive establishment himself, or turn this task over to some one who will not hesitate to see it through. Second,

the President and Congress must find a meeting ground on which they can subordinate their differences and work together to pull the country out of its headlong slide toward total demoralization. Unless both of these needs are met, and met soon, the people of this country are going to suffer some very painful consequences.

Independence Day Address

EXTENSION OF REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the Independence Day exercises at Plainfield, N. J.:

My fellow Americans, we are met on the anniversary of the Declaration of Independence. It is the year we also celebrate the two-hundredth anniversary of the birth of Thomas Jefferson. We know that the substance and much of the form of the Declaration of Independence was the work of Thomas Jefferson. His knowledge of the efforts of humankind to obtain freedom and self-government, his intense desire to advance the principles to which he had devoted his life, established him as the individual to be the author of the declaration of principles upon which our Nation is founded. It was the most momentous document in the struggle for freedom that had been given to the world since the Magna Carta of 1215. Five hundred years had passed between these two events. One hundred and fifty years of it covered the period from the landing of the Pilgrims at Plymouth Rock to the surrender at Yorktown. The culminating incident of this era of human progress was the Revolutionary War, resulting in a new nation, conceived in liberty and dedicated to the proposition that all men are created equal and are endowed with the inalienable rights of life, liberty, and the pursuit of happiness.

Our whole existence since then has been one of continued progress and the development of institutions to preserve the freedom which had been won. The Declaration of Independence was the foundation upon which a new perspective of government was to be builded. The Constitution welded the Nation into an "indissoluble Union of indestructible States"; the Gettysburg Address gave new life and rededication to the principles established and recognized as essential to our continued existence as a free people.

Lord God of Hosts, whose mighty hand
Dominion holds on sea and land,
In peace and war Thy will we see
Shaping the larger liberty.

Our experiment in free government has been successful. For 150 years it has been our guaranty of the blessing of liberty. Our habit of life has attracted the attention of the civilized world. Peoples of all nations, races, and creeds have sought refuge on our shores, and we have carried the blessings we have enjoyed to enslaved peoples in all parts of the world. This has not been done without suffering and sacrifice. One generation after another has been faced with its problems, but as each difficulty presented itself we have met it with fortitude, in the cause of humanity, and in accord with the purposes wrapped in the folds of the American flag.

We meet today with the consciousness of the world cataclysm in which we are now involved—the most cruel and inhuman war that history records. We did not seek it. We sought in the name of humanity to avoid it. The barbarous forces of aggression and greed that brought it about must be and shall be destroyed. It is the obligation of every American to have an active part in that destruction. The men and women in the combat forces have a right to expect—and they demand—our utmost in production and self-denial. This war cannot be won by the men on the fighting fronts alone. The casualty lists bring home to us the seriousness and tragedy of the conflict. They emphasize what our fighting forces have to meet; 15,000 dead, 22,000 wounded, 34,000 missing and 20,000 are prisoners. These sacrifices are a challenge to the rest of us to do our share of the fighting by grim and courageous determination to keep the supply lines unbroken.

The Axis Powers ridiculed our entrance into the war. They had a mistaken notion that it was impossible for our men and women to develop into a fighting army, and that our industry was incapable of producing the necessary equipment. What we have accomplished is giving them an entirely different idea.

When the threat of war came we were under a severe handicap. We are a peace-loving nation. Our industry has always been geared to our peacetime habit of life. The Axis Powers are not so minded. The first objective of their industry has always been the preparation for war. So it came about that when we found ourselves the object of attack our enemies were well equipped, and we had virtually no war-production facilities. It was necessary to convert our entire industry to wartime needs—to build new factories, create new devices, and discover new formulas. How well we have succeeded is certified to by Maj. Gen. G. M. Barnes, Chief of the Army Ordnance Technical Division; he has said, "The achievements are beyond our greatest expectations"; and General Arnold, Chief of the Air Corps, recently said, "Not long ago our Air Force was so small that we knew each other by name." Our expansion started in June of 1940. In that month the military strength of the Army Air Forces was approximately 47,000. Today there are over 2,000,000 officers and men, or 42 times more than 3 years ago. The expansion in civilian personnel for the same period has been comparable—an increase from 8,000 to 330,000, or 41 times. Sixty thousand American flyers take the air every day all over the globe There are 1,600 planes being flown daily everywhere, mostly in foreign service. Every day more bombers are arriving in England. We have organized and equipped fighting forces on land and on sea. We have furnished our allies much of the equipment that has restored their confidence and given assurances of success.

All that has been accomplished demonstrates the capacity of the American people, their skill, and their patriotic zeal.

We are making progress. We are no longer on the defensive, we are carrying the battle to our enemies with marked success. We not only look forward to the success of our armed forces, but we realize that destruction of the enemy is only a part of the program ahead of us. Unless the peace is won the war will be lost. There is much discussion as to the form our participation in post-war rehabilitation should take. There is anxiety on the part of some that when the end of the conflict comes we will withdraw from participation in world affairs, and assume an attitude of so-called isolationism. That is impossible. It is impossible by the very nature of things. The world is still round, but it is much smaller than it was when Columbus made the discovery. Science has brought that about and, if we are to really understand our future position, we must evaluate such things as the part radio communication and airplane transportation will have in our commercial relations with other nations. But this much is certain—the American people anticipate participation in world affairs after the war sufficient to insure a lasting peace.

Our policy has been thought out and was given sanctity by the declarations of the Atlantic Charter as long ago as August 21, 1941: We seek no aggrandizement, territorial or otherwise. We desire no territorial changes that do not accord with the freely expressed wishes of the people concerned. We respect the right of all peoples to choose the form of government under which they will live, and wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them. We will endeavor with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and raw materials of the world which are needed for their economic prosperity We desire to bring about the fullest collaboration between all nations in the economic field to secure, for all, improved labor standards, economic advancement, and social security. We hope, after the final destruction of the Nazi tyranny, to see established a peace which will afford all nations the means of dwelling in safety within their own boundaries, which will afford assurance that all men in all the lands may live out their lives in freedom from fear and want. We believe that all of the nations of the world must come to the abandonment of the use of force, and that, pending the establishment of a wide and permanent system of general security, disarmament of all nations is essential.

These are our hopes and aspirations. How they are to be brought about will depend upon conditions when the time comes for us to superimpose the blessings of peace upon the ravages of war. Then will come forth another Declaration of Independence, guaranteeing to millions throughout the world the inalienable rights with which they are endowed but which they have never enjoyed. The principal obstacle will have been removed with the unconditional surrender of the Axis Nations, and with that surrender will come release—then will come the reign of truth and peace—

God of the nations, who has led
Thy children since the world began,
Through doubt and struggle, pain and tears,
Unfolding Thy eternal plan;
From countless hilltops as of old
The fire upon the altar flares;
Through countless rites, in countless tongues,
Men offer their imperfect prayers;
Hasten the time of our release,
Bring in Thy reign of truth and peace.

O Holy Spirit, who dost touch
The prophets with Thy sacred fire,
Eternal Wisdom to whose light
All seekers after truth aspire;
Behold the warring sons of men,
The helpless by the strong oppressed,
The truth with error still concealed,
The evil grudgingly confessed;
Hasten the time of our release,
Bring in Thy reign of truth and peace.

Prohibitionists on Wrecking Tour

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edi-

torial from the Sheboygan (Wis.) Press of June 23, 1943:

PROHIBITIONISTS ON WRECKING TOUR

The brewing industry of the country will be curtailed for the duration of the war if certain organizations and individuals bent upon prohibition have their way.

We remember only too well what occurred in the World War when our young men were away fighting, and we are about to have a reoccurrence of the same, the goal being prohibition.

When the Office of Price Administration placed a ceiling on corn which was out of line with the ceiling on pork products farmers refused to sell their corn, believing they could realize a greater profit by feeding it to livestock. The Government, hopeful of remedying a grave situation, called loans on 1941 and 1942 corn, hoping this would force corn into the market. Up to date it has not had this effect. Farmers have paid for their loans and only a small amount has come into the market.

Congressman FRANK B. KEEFE states that he has received numerous wires and letters from various interests including a large number from brewers who claim they are dependent upon corn products in their brewery processing, and from the tone of these letters the situation is critical. Unless they can get an adequate amount of corn products the brewers will face the problem of curtailing to an extent that will paralyze the industry. Fast gathering rumors are circulating throughout Washington that the Government is going to adopt methods to seize corn much the same as was done with scrap but that it is to be delivered to essential industry—and the brewing industry is considered nonessential. This would leave the brewers out in the cold, and many would be forced to close.

In the First World War the same arguments were advanced that food was necessary to win the war, and prohibition followed. It was an overnight campaign of malicious falsehoods which swayed the people, and a minority, not a majority, became the controlling factor in putting over prohibition.

Today there is enough corn in the country for all essential industries and a supply for the brewing industry, if it is brought into use. The farmers have this corn, and it can be utilized with profit. To keep this corn on the farm, mortgaging the future of the country to the extent that it might be a war hazard, is not the way to solve this question.

Farmers and the Office of Price Administration must get together and move the corn. Corn is a commodity of value and essential, more so now than ever before. It should not be necessary in this country to have a corn drive similar to a scrap drive. There should be a frank understanding between the Government and the farmers, and the sooner this is accomplished the better for all concerned.

We would say to the Office of Price Administration and to the farmers don't let the prohibition crowd get a stranglehold on this country again. In the House of Representatives and in the Senate of the United States are many individuals who would sacrifice the welfare of a community or of a nation to win on the prohibition front. That is their stock in trade, and then they go home to their constituents and preach what a great service they have rendered.

It is an easy matter to upset the markets of the world, but not so easy to remedy them. If the Government will set the corn moving it will find its way into every industry and a problem that now looks serious could be righted in 30 days. If the Office of Price Administration and the farmers continue to fight over what is a fair price for corn and withhold it from circulation then we can look for drastic action, and that is what the prohibitionists favor. They want an order that will prevent corn from going into anything but an essential industry. The brewing business is considered nonessential.

We would ask that the Government, instead of adopting strong-arm methods to seize corn work it out on a basis that will be fair to the country at large and which will give a steady flow of corn to every State in the Union. Let us promote a system of good feeling, protect the workingman's glass of beer and say to the boys on the fighting front that we are going to keep the faith while they are away, that never again will we allow fanatical prohibitionists to dictate the policies of Uncle Sam.

We want to thank Congressman KEEFE for certain facts brought to our attention which have been most helpful.

Happiness—A Right?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Channing Pollock:

HAPPINESS—A RIGHT?

(By Channing Pollock)

Every now and again I serve on a board that hears human-relations controversies and attempts mediation. A few weeks ago one of the appellants, a young woman who was urging that a man divorce his wife to marry her, supported her claim by telling me, "The Declaration of Independence gives everybody the right to be happy."

My answer was, "I don't think our founding fathers meant what you mean. Anyway, hasn't this wife the right to be happy, too?"

The lady hadn't thought of that. Her idea was the not uncommon one that what Thomas Jefferson and his collaborators intended was an assurance that henceforth we should "eat, drink, and be merry," each of us being guaranteed whatever he or she regards as essential to his or her unvarying satisfaction.

Few phrases are used as often as "the right to happiness," meaning, according to the person who utters it, the right to limitless self-indulgence, to animal gratifications, or to material possessions. The right to happiness is the right to a fat bank account, to be idle and thriftless, to a mink coat, or to the man or the woman we desire at the moment, no matter what the legal or other obstacles.

There is no such right to happiness, and nothing could be more absurd or fallacious than the notion that anything of the sort was among the truths held "to be self-evident." The desperate men who signed "the unanimous declaration of the Thirteen United States of America" could hardly have been in the mood to consider bank accounts or illicit love.

Most of them were sober citizens of extremely moderate means who toiled long hours under conditions that we should regard as unbearable. They were our leading citizens in the sense of mental and moral leadership; very few of them had, or cared about, even the modest luxuries of that day. At the moment they certainly were not interested in what so many of us call happiness. More probably, they were thinking of their embattled brothers at Lexington and Concord, of Ethan Allen and his ragged and badly armed Green Mountain boys at Fort Ticonderoga, of the farm lads out of ammunition on Breed's Hill and Bunker Hill, of their just cause and the likelihood that every mother's son of them might be hanged if it failed.

As a more or less casual bystander, it seems to me that there are many misapprehensions as to the Declaration, as to Independence, and as to happiness. The Declaration was purely a political document, that is, pertaining to public policy—and every sentence in it referes to political authority and jurisdiction. Whatever his personal opinion of parity of intellect and character, when Jefferson wrote that "all men are created equal," he meant only that they were equal before the law and had equal rights under it. Among these, he mentioned "life, liberty, and the pursuit of happiness." Plainly, he meant the right to earn a living, and to retain and use our earnings, to do that and other things freely, and the right to achieve happiness by our own efforts. The pursuit of happiness does not suggest that it shall pursue us.

No one has the right to do that which, if it were done by everyone, would be opposed to the common good. I might regard intoxication as blissful, but that doesn't give me the right to inflict it upon my family and the community. The conviction that riches are happiness doesn't give me the right to steal. Nor does desire for the happiness of an extra day or two of idling give me the right to jeopardize other men's lives, and our victory, by deserting my post at a desk or lathe. I have the legal right to spend my money as I choose, but even then the happiness I find in motoring does not give me the moral right to waste rubber and gasoline, nor does the happiness I may derive from luxury give me the moral right to buy champagne rather than War bonds.

In short, we have no rights that interfere with the rights of others. As my lawyer friend Arthur Garfield Hays has often remarked, "I have the right to swing my arm; that right ends at the point of your jaw."

Finally, it seems to me that many of us attach too much importance to happiness, and that what we call happiness may be shabbily mean and ignoble. To be happy because we live, because we are free, because we are well and neither naked nor hungry, because we have work to do and are doing it to the best of our abilities, because we have deserved and kept the love of those under our roof or protection—these are happinesses we may seek and enjoy with our own self-respect and that of the community.

That truth is self-evident. Since Jefferson declared that he wrote the document in an outburst of patriotism, it is, I feel sure, what he and his fellows had in mind when they risked death by signing a declaration that men are endowed by their Creator with the right to life, liberty, and the pursuit of happiness.

Life Magazine Calls House Concurrent Resolution 25 First Step in the Development of a Truly National Foreign Policy

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks, I include in

the RECORD the following editorial, which appeared in Life magazine June 28, 1943:

FULBRIGHT'S RESOLUTION—A YOUNG CONGRESSMAN OFFERS A FOREIGN POLICY PLANK THAT BOTH PARTIES CAN ACCEPT

Well, last week the home front made some progress. Not that it sprouted wings, exactly. John L. Lewis, wages, price control, rationing, subsidies, food shortage—all these administrative matters were in a terrible snarl. The new boss of the home front, James Byrnes, was in the middle of the snarl, which was so bad that he had called on Bernard Baruch, veteran wager of war, to help him cut his way out of it. But these two had not yet had enough time to prove what they could do. The progress that the home front made last week came from another and entirely unexpected quarter. It came from Congress.

A couple of months ago, J. WILLIAM FULBRIGHT, a freshman Congressman from Fayetteville, Ark., introduced a resolution to which few paid any attention. The resolution was as plain as an old hat. It said:

"Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein."

This forthright, simple declaration was referred to the Foreign Affairs Committee, of which Congressman FULBRIGHT is a member. It was allowed to soak in the committee for more than 2 months, and hardly anybody outside of Congress even knew of its existence. But last week Chairman SOL BLOOM gave it a hearing. The result was a spectacular unanimous vote. Friends of the resolution may well keep it off the floor until after the approaching congressional recess. For while the backing for it is now very large, some think it will grow even larger after Congressmen have had a chance to talk to the folks.

FIFTEEN YEARS

The Fulbright resolution is stated in exactly one sentence. When someone asked the Congressman how long it took him to write that sentence he smiled and said he guessed about 15 years. What he meant, of course, was that he had been studying the problem of United States foreign relations for at least that long. In fact, when the folks back in Arkansas' Third District chose him for Congress in 1942 they picked a man well equipped to represent them in a world crisis. For Congressman FULBRIGHT, relatively unknown up to now, has a broad background. He was a Rhodes scholar at Oxford University, England, 1925–28. He traveled in Europe. And he became president of the University of Arkansas at the early age of 34. Sitting last week amidst a deluge of fan mail and telephone calls, which were running 15 to 1 in favor of his resolution, he cracked, "Everybody assumes that just because a fellow comes from Arkansas he can't read or write. But that's where they're wrong."

Congressman FULBRIGHT is a Democrat, as are 13 other members of the Foreign Affairs Committee. But he was able to carry his resolution across party lines and get the unanimous support of the 11 Republican members, too. In fact, some of the Republicans were very active—for example, JAMES WADSWORTH of New York, leading Republican statesman in the House, JOHN VORYS and FRANCES BOLTON of Ohio, EDITH NOURSE ROGERS of Massachusetts. It is perhaps worth noting that the resolution is particularly popular with new Congressmen, whether on or off the Foreign Affairs Committee. Young Democrats like WILL ROGERS, Jr. of California and MIKE MANSFIELD of Montana, new and rising Republicans like RICHARD GALE or WALTER H. JUDD of Minnesota, CHRISTIAN HERTER of Massachusetts, or JAMES C. AUCHINCLOSS of New Jersey—to mention only a few—are burning with desire to have the United States develop a more dynamic foreign policy. They see in this resolution a chance to take a big step ahead—and for three chief reasons:

1. It would put our allies on notice that we intend to be counted in. Such a notice is urgent because, without it, United Nations statesmen cannot develop intelligent policies. For that matter, unless we give such a notice, policies may be developed which will not be to our advantage.

2. Although very general in form, the resolution has a set of teeth. Not only does it call for international machinery with adequate power but it also favors United States participation in such machinery.

3. It is a grass-roots resolution in which the administration has had no hand. It can therefore help to put United States foreign policy on a broad, popular base.

OBJECTIONS

Politics being what they are, a number of objections have been raised against the Fulbright resolution. One is that it is too general and vague. Yet an attempt at this time to frame a specific plan might lead to eventual disaster, as in the case of the League of Nations. It is better to begin with a simple expression of popular opinion. Another objection is that the resolution would not constitute a foreign policy, because it would not be irrevocably binding. It would, however, be morally binding, and the voters could make it stick by keeping the heat turned on their Senators and Congressmen.

It is also objected that the treaty-making power does not reside with the House but with the Senate, and, moreover, that it requires a two-thirds vote of the Senate to ratify a treaty. But this is surely a very narrow view of the matter. For one thing, the people have on occasion bypassed the Senate to carry out desired policies. Both Hawaii and the State of Texas, for example, were annexed by joint resolutions of the House and Senate, chiefly because administration leaders had despaired of Senate action. But as a matter of fact the Fulbright resolution leaves all the actual arrangements with the Senate and does not in any way infringe on that body's treaty-making power. The Fulbright resolution is a popular expression of a general principle, leaving to Senators the tough job of deciding on the kind of machinery needed. Indeed, it merely takes advantage of the courageous work already done by several Senators, notably Messrs. BALL, BURTON, HATCH, and HILL, who have been advocating for months a similar—though more complex—Senate resolution.

TWO-PARTY POLICY

The fact is that this resolution opens up a great political opportunity, it is a first step in the development of a truly national foreign policy. As this page has pointed out before, a foreign policy has to be basically bipartisan—that is, it must be advocated in principle by both parties. Naturally the Republicans are never going to agree with the Democrats concerning all the details of any policy, because the Republican view of what is good for America differs greatly from the Democratic view. But a foreign policy advocated by the party in power and flatly opposed by the opposition, can never work; for foreign statesmen can never tell when the opposition will gain power (perhaps on a domestic issue) and so cancel out every previous foreign commitment, expressed or implied. Foreign statesmen can only accept United States commitments if they know that the opposition agrees in essence with the party in power—as for instance, in the case of the long-accepted Monroe Doctrine. Thus if either party is to have a foreign policy at all, it must find agreement with the other party. For if such agreement is lacking, neither party can govern in foreign affairs.

This is the great principle toward which far-sighted Republicans, often misunderstood and reviled by their own party, have been working for the last several years. They have sought a common ground on which all Americans, Democrats and Republicans alike, can undertake to deal with the rest of the world. The House Foreign Affairs Committee may not have discovered all of the common ground that there is. There may be other, more advanced principles on which both Democrats and Republicans can agree. But by its unanimous vote the committee has shown that such a ground does exist and is possible to achieve. In this sense it has opened up a new horizon. And the time has now come for Americans of all parties to lift their eyes to this horizon—because it is their common horizon, it belongs to all of them.

Congress Revolts Against Irresponsibility

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. ELSTON of Ohio. Mr. Speaker, recently 17 meat-packing houses and scores of meat dealers in the Cincinnati, Ohio, area have suspended operations, and others are bound to follow unless immediate action is taken by responsible Government departments to assure processors of meats and dealers at least an opportunity to exist. As the situation which I have described prevails generally throughout the country we are facing a tragic meat famine. The sad part of it is, this is occurring at a time when the supply of livestock is estimated to be greater than at any other time in our history.

Bureaucratic bungling is destroying the meat-packing industry when it is needed the most, yet we appear to be no closer to a solution of the problem than we were more than a year ago when it was first pointed out that packers could not continue in business under existing policies. Congress has made every possible effort to have those responsible for food administration adopt a sound program and to adhere to the laws enacted by Congress, but it all appears to have been without avail.

As some of the circumstances which contributed to the present deplorable situation are well described in an able article by Owen L. Scott entitled "Congress Revolts Against Irresponsibility," appearing in the Washington Sunday Star of July 4. I am submitting it herewith for your consideration:

CONGRESS REVOLTS AGAINST "IRRESPONSIBILITY"

(By Owen L. Scott)

Out of today's revolt of Congress against the White House is likely to develop a more responsible type of administration of wartime powers. This revolt, in fact, stems from a strange situation in which persons with little or no public responsibility were exercising immense authority.

There had developed here what amounted to a "brain trust" that shaped domestic policies and, on occasion, enforced those policies.

This brain trust, which stemmed from Harry Hopkins, who lives in the White House, was and still is very small and compact. Its principal members are three.

Ben Cohen is the elder statesman of the group. Mr. Cohen is right-hand man to James Byrnes as war mobilizer and is the former junior partner in the Corcoran-Cohen team. The second of the group is Richard Gilbert. Mr. Gilbert is former economic adviser to Harry Hopkins and now is right-hand man to Prentiss Brown as Price Administrator. The third is Edward Prichard. Mr. Prichard is not long out of Harvard and is a former law clerk for Justice Felix Frankfurter. He is right-hand man to Judge Fred Vinson as economic stabilizer.

This little group decided on a price rollback for a few agricultural commodities and selected the commodities. The decision was made without prior consultation with the Government's officials who are responsible for wartime food policy. It was made on this basis in spite of the fact that the Price Control Act passed by Congress specifically directs that the Secretary of Agriculture, or in this case the Food Administrator, shall give prior approval before policies affecting farm prices can take effect.

One or two further examples illustrate part of the reason why Congress revolted.

The first concerns meat. The country is aware that the Nation's whole meat-producing and meat-marketing industry recently has been in turmoil. Congressmen discovered that an important part of this turmoil traced to a decision of youthful Mr. Prichard.

Mr. Prichard, without prior consultation with the responsible Food Administration officials, apparently had made up his mind that public announcement should be made that a meat roll-back would take place on a specific date. The announcement was made before regulations governing the roll-back were drawn. No cattle grower or cattle buyer or meat packer had the slightest idea of how he was expected to do business from that time until days later, the regulations appeared. The Nation's whole cattle-marketing system was thrown into turmoil from which it did not easily recover.

Then a second example concerns wages. This country has a War Labor Board made up of four outstanding labor leaders, four outstanding employer members, and four outstanding public members. These are men of long experience and reach their decisions against a background of wide knowledge of individual cases. Therefore, it has been something of a surprise to the Labor Board members to find that their decisions are subject to the veto of 27-year-old Mr. Prichard, whose entire worldly experience has been gained in recent Government service.

In one case, as an example, the War Labor Board decided that an equally important industry in that same area, competing for the same labor, likewise would have to have an increase in wages if it was to be able to obtain the labor needed to operate. In this case, without consulting the Board, Mr. Prichard decided that the increase should be vetoed, and so he vetoed it. The result was a serious situation in another industry.

The American people have the idea that there is a sort of a supreme court of elder statesmen, operating through an adequate machine and making decisions on the basis of exhaustive study, which now runs the planned wartime economy. They have confidence in Justice Byrnes, Judge Vinson, and Bernard Baruch, who advises them. But these men have next to no real staff. The problems that they must pass upon are many and complex. It is only natural that a handy brain trust takes over much of the job of making Nation-shaking decisions.

However, Congress is not satisfied that this method of operation is the best. It is unwilling to permit the very life of American industries to be entrusted to the tender mercies of youthful lawyers and economists, selected without Senate approval, and exercising vast authority with no public responsibility. The Nation has not been aware of the way decisions were being made, or by whom those decisions were being made.

To try to remedy a situation that was getting out of hand, Congress has given the War Labor Board specific statutory standing. This means that this Board is a creation of Congress. It may mean that Mr. Cohen and Mr. Prichard can be less high-handed in dealing with its decisions. At the same time, Congress is trying to bulwark the authority of the War Food Administration so that this administration can have some authority to go along with its great responsibility.

The revolt in Congress is directed at what Congressmen regard as irresponsibility in public administration. It is designed to prevent high-handed practices on the part of officials who operate in the background and who do not take responsibility for their acts.

Resolution of the Department of Oregon, Veterans of Foreign Wars of the United States

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. ANGELL. Mr. Speaker, on June 27, 1943, the Department of Oregon, Veterans of Foreign Wars of the United States, adopted a resolution urging that aliens who have not availed themselves of the opportunity to apply for citizenship and those who have filed their first application and who have been found to be giving aid and sympathy to our enemies be returned to the country from which they came within 6 months after the cessation of hostilities, and also expressing opposition to unrestricted immigration.

Pursuant to authority heretofore given, I include as a part of my remarks this resolution, which is as follows:

DEPARTMENT ENCAMPMENT,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
June 27, 1943.

Be it resolved, That all aliens who have had ample opportunity to make proper application for citizenship and who have not availed themselves of that opportunity and those who have made their first application and who have been found to be giving aid and sympathy to our enemies be returned to the land from whence they came within 6 months from the cessation of hostilities; and be it further

Resolved, That we are unalterably opposed to letting down the bars to unrestricted immigration from any foreign country whatsoever; and be it further

Resolved, That citizenship be not granted to any alien under any circumstances who has been admitted to this country by Presidential decree or by other method of avoiding the present laws governing entry to the United States; be it further

Resolved, That a copy of this resolution be given to the press, the Oregon delegation in Congress and to the Veterans of Foreign Wars National Encampment.

Adopted by the Department Encampment, Department of Oregon, Veterans of Foreign Wars of United States.

The Only Way To Save the Day

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

THE ONLY WAY TO SAVE THE DAY

We don't promote prosperity
When we discourage thrift—
We don't by weakening the strong
Give to the weak a lift.

We've never yet helped small men up
By tearing big men down—
It does not help the poor to break
The rich in any town.

We can't keep out of trouble if
We spend all our income—
We can't secure world brotherhood
By stirring strife at home.

We can't have sound security
On money that's a loan—
We can't in men build character,
If we've none of our own.

We can't give courage, yet destroy
Men's independence—nor
Can anything but hope for peace
Make sane men turn to war.

We can't help men by helping them
To feed from public shelves—
The only way to help men is
To help them help themselves.

—*Horace C. Carlisle.*

Inflation—The Economic Fifth Column

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. BULWINKLE. Mr. Speaker, recently the so-called Commodity Credit Corporation bill passed the House of Representatives and the Senate of the United States and was vetoed by the President. The President in vetoing this bill sent to Congress one of the strongest veto messages that I have heard.

To my mind, the danger of inflation is the most serious situation that confronts the American people from a domestic standpoint. I can remember, as I stated in the House on Saturday, coming home from the last war and having to pay enormous prices for the common necessities of life. Each person can remember what sugar, coffee, bacon, flour, and other supplies cost in that period of the World War and following it.

Fortunately, in this war there has been a control of prices—while mistakes may have been made, yet the American Government and the American people have been saved from these abnormal conditions due to the wise policy of the

administration. Much has been said in the papers about inflation. Much has been said on the radio about inflation. Many people in each community have been discussing this subject. Some are asking what it is—what it does—and whether we are already having a taste of inflation and can expect more of it.

I shall answer the last question first. We are now tasting inflation in the way that a small boy takes the first bite of a green apple. And, like the small boy, if we eat all of the unripe fruit and many more like it, we shall be a very sick country. It will take us a long time to recover.

Before I give you a definition of inflation I will tell you how it works. Its approach is often slow and insidious. The victims rarely know what is happening until the damage is done. But it works with increasing speed and terrible efficiency. Once set in motion, like a stampede of wild cattle, it is very hard to stop, and when at length it is halted, it leaves behind it the wreckage of human lives and fortunes that may take decades to repair.

As a part of my definition of inflation, therefore, I will tell you that it is a force, a force in motion, and that this movement is one marked by increasing velocity. That is, the effect is similar to an avalanche. A lump of snow or ice, at an elevation, and under certain conditions is dislodged and begins to roll down, gathering weight and momentum as it rolls until, perhaps, it overwhelms villages in its path until it stops at the bottom—at the end of its devastating journey.

There is this difference, however, between a picture of an avalanche and the effects of inflation. An avalanche is pulled downward by the force of gravity. The force of inflation is upward. It pushes everything up. Wages go up. The prices of farm products go up. Farm land values go up. And all prices, on which are based the cost of living, go up, too. Unfortunately, it is a peculiarity of inflation that cost-of-living prices go up much faster after a certain period than all these other factors. The cost of living by degrees overtakes and passes wage increases; it exceeds the rate of rise in farm land values and in prices received by farmers, so that neither higher wages nor higher farm prices nor any other temporary advantages that people may secure through selling their products or services at a better than normal figure are ever able to keep up with the cost of living during a period of inflation. It becomes a race in which every entry seems to be an also-ran. Certain classes of citizens suffer more acutely than others during inflation, but I will speak of them later.

To many of us inflation is just another name for high prices. There have been periods of generally high prices without inflation. During the gold-rush days in the Klondike, eggs at one time sold for a dollar apiece. There was a good deal of gold dust, and not many eggs. When more eggs got to Alaska, the price broke. A gold rush sets up a mild form of inflation, because there is more money to spend than goods to spend it on, but the effects are usually local and temporary. A wartime inflation, on a Nation-wide scale, is more than a gigantic gold rush; it becomes a national catastrophe. A small stream in a flash flood may do considerable local damage, but when some of our mighty Midwest rivers go on a rampage a vast area is affected and the economic consequences affect millions of people remote from the scene of the calamity. That is the way a national inflation works.

Inflation, as I have explained, has to do with the upward movement of the cost of living. But it is not a steady, gradual rise. It gathers force and speed until, toward the end, the effect may be one of almost explosive violence; that is, the prices of goods and services skyrocket, and, like a spent rocket, when the thing is all over, prices plunge downward abruptly, values collapse within a short space of time.

Let me give you an example. During the last war, as I have stated, we had an inflation that started about 1918. It did not come to a head, however, until 1920, when the war was all over. In May 1920 American farmers were receiving prices for farm products that on the average were 244 percent of the 1909–1914 average—almost 2½ times what they had got in peacetime. Then the bubble broke, and 1 year later their receipts were only slightly above the prices they got in the pre-war period. But mark this. The cost of living was still up. It had reached extravagant heights, and while the farmers' income was more than cut in half within 1 year, the prices they had to pay for living and for producing fell only 20 percent. The result was, that the real per capita income of America's farmers in 1921, what they could get for what they raised, was 19 percent below the 1913 level. With their 1921 income they could buy only a little more than four-fifths of what they could afford 8 years earlier.

Putting it another way, we can measure what happened to the American farmer during the last war in terms of the value of the average farm. At the height of that inflation, in 1920, our farms were worth, on paper, quite a lot of money. Farm land was considered very valuable because of the returns it yielded. The price of all grains, for example, was about two and one-third times the pre-war level. Cotton was almost two and one-half its normal price. Meat animals had more than doubled in price. The result was a great deal of speculative buying and selling of farms. While the wheat boom was on, hundreds of thousands of acres of grazing sod in the West were turned under and sowed to wheat. The notorious Dust Bowl came about from plowing up that prairie soil, which should have been kept as dry pasture.

Now, in 1920 the average value of farm land and buildings throughout the country was $10,284. That is a high average, but these values, you understand, were inflated values. They were not justified on the basis of long-time returns from farms. What was the average value of American farms in 1935, 15 years later? Just about $4,825, or less than half of their war-boom values.

Another thing happened during that inflation which was bad for the farmer. Under the temptation of high prices he went into debt. Mortgage loans, especially short-term notes, underwent a terrific expansion. Down payments were relatively small, and farmers, flushed with high incomes, piled up obligations without meeting them out of cash balances. When the boom collapsed, the farmer had to meet his obligations or see his farm foreclosed. He had to meet his debts with money that would not stretch as far as it did in 1920 because of his lowered income. In short, he met debts incurred in a period of "cheap" money with payments in a long period of "dear" money.

Twenty years after 1920 the American farmer was still paying the penalty for the inflation spree. In the single decade ending in 1939 more than 85,000 farm owners lost their farms under foreclosures. As for the farmer's race with the cost of living, it was not until 1942 that the average of farm prices reached parity with other prices.

Returning to the present inflationary trend, we must ask ourselves why we are in danger of experiencing a worse inflation than the last one unless, as the President warned us, we "hold the line" on every side of the domestic economic front. There are several circumstances that might lead to extreme inflation, but the main one is the increasing lack of balance between our national income and the quantity of goods and services that we can spend it on.

Briefly, in 1939 the gross individual incomes of all American citizens totaled about $71,000,000,000. After Pearl Harbor, as our war industries began to spurt, the national income went up by leaps and bounds. Last year it was approximately $116,000,000,000 and this year it is expected to pass $140,000,000,000, or about twice what it was 4 years ago. Let us see how we stand on consumer goods and services. In 1939 these amounted to around $72,500,000,000—plenty for the money we had to spend on them. Two years later their value had increased by about $10,000,000,000. There were still plenty of things to spend money on. In 1942, however, we began to discover that we couldn't carry on a war of this magnitude and enjoy peacetime luxuries, gadgets, and machines using essential war materials. We had to stop buying new automobiles, electric refrigerators, and vacuum cleaners and radios. By degrees we found hundreds of items to which we had been accustomed missing from store shelves. Nevertheless, our inventories of civilian goods were so large that there was still some $82,000,000,000 worth available. Today we are spending more than $7,000,000,000 a month for war—and although this money is going into people's pockets through wages and

profits it goes for things that civilians can use. We shall be lucky if we have $80,000,000,000 in civilian goods and services.

Under normal conditions this amount would be ample. These are not normal conditions. Millions of people who never had much money to spend now have a comfortable income. And they want to spend that money, along with everyone else. Unfortunately, there are not enough ways to use up our enormous buying power, not even with the considerable taxes we are now paying. In fact, it has been estimated that this year the people of the United States could pay all their taxes, spend $80,000,000,000 for available goods and services, and still have more than $40,000,000,000 left over.

That excess of disposable income over consumer goods and services is like a huge reservoir, into which floodwaters are pouring. These unused billions exert a tremendous pressure against the price structure. If we did nothing about it, excess consumer money bidding for scarce goods would force prices sky high; wages and farm values would follow suit. We would have a first-rate, large-scale inflation on our hands.

To meet this menacing situation, the Government has taken a number of measures. We have rationing, or dividing up scarce goods on a fair and equable basis. Along with that, we have a great number and variety of price controls. We have drained off some of the surplus through rather heavy taxes. But the Government alone—no government—could halt an inflation without the cooperation of all its citizens.

What can the citizen do to prevent the bursting of the inflation dam?

He can invest every cent he has to spare in War bonds. This not only drains off excess buying power, it provides a backlog for the post-war period. War bonds after the war will enable us to buy many things we cannot get now, and they will be better things in every way—more modern houses, automobiles, electric household machines, and the like.

The citizen can also pay off mortgages and other debts. In the case of farmers this is very important. Farm land values throughout the country during the past year have shown a disturbing tendency to increase abnormally. In 13 States values have increased from 20 to 24 percent. Fortunately, these average increases have not been accompanied, as in the last war, by a great increase in mortgage debt. On the contrary, American farmers during the past year paid off three times as much mortgage debt as they had, on the average, during the previous 3 years. This is a healthy sign. Debt-paying is a brake against inflation. Down payments on recent land purchases are also reported to be substantial, as a rule, and there is less speculative buying than during the last war.

The most important step for the citizen to take, however, is the hardest one. It is hard for the farmer, for the businessman, for the wage earner. That is, to forego special privileges that lead to increases in costs or prices.

It is easy to see why such a step is necessary. In spite of all efforts to keep down the cost of living, it has gone up, although not as rapidly as during the last war. At present the index of the cost of living is about 24 percent above that of 1939. In general, the farmer at present is in an advantageous position. Last year, for the first time in 20 years, the annual average of farm prices reached parity with other prices. Since the outbreak of the war in Europe, the average of farm prices has risen more than 90 percent, and farm income by about 80 percent, while the average of prices paid by farmers, including taxes and interest, has increased about 25 percent.

If, however, the farmer demands more for his products, and the laborer demands more for his work, and the businessman takes larger profits, the dizzy wheel of inflation is set in motion. It spins faster and faster, until all of us are caught in the mad whirl, and no power on earth can halt it.

There are whole classes of citizens to whom such a distortion of values means extreme hardship. These are the people with fixed incomes—teachers, employees of county, city, and State governments, those who have invested their savings in insurance or other stable investments. For the rain of inflation dollars will not increase the face value of your insurance policy by a single dollar.

We have taken a bite of the green apple, a 24-percent bite. But we are not small boys in an orchard. We are men and women engaged in a desperate struggle with ruthless enemies. Millions of our young men are risking and giving their lives to preserve the freedoms we have cherished since 1776. We must assure those millions of citizens in uniform that we at home have not permitted the home front to be wrecked by the most deadly and insidious of fifth columns—inflation. We must make sure that our citizen soldiers, sailors, and airmen return to a land that is economically sound and whole.

We can do this if we consider that the good of the Nation takes precedence over the temporary advantage of any one class of citizens. We must observe on our home front the same self-denial and discipline that are observed throughout the world by our fighting men.

It is the duty of each one, and especially those of us who are Members of Congress, to remember that while our soldiers are fighting on many fronts in the world that we must preserve the economic situation in our own country. We must not permit the farmers, the wage earners, the school teachers, the professional men, and others who live on wages and salaries to be ruined financially. It is our duty to prevent inflation even though each one of us makes a sacrifice for this purpose. The sacrifice that we make is small compared with what our men and women in the armed forces are making.

Vacation Reading

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an article in the Washington Times Herald, of date July 4, 1943, by Helen Essary, which article I think should be read by every Member of Congress:

I had a thrilling experience one evening last week. I heard America talked about in terms of America.

I heard America talked about—not in terms of Timbuctoo or Shangri-La but, I repeat, in terms of America. When I say "America" I mean, of course, "The United States."

It was not only a thrilling experience. It was an unaccustomed experience. I was not the only member of the little after-dinner conversation group who was aware of the novelty of such a theme in this globe-conscious Nation.

Each of us there was a citizen of the United States, yet each of us was startled to hear the present and future of his own native land selfishly put above the present and future of all far-away and nearby countries.

When we began to realize that, we were indeed startled at such unfamiliar doctrine. We were embarassed that we were startled. Suddenly we knew that unwittingly, like many Americans, we had been setting our minds on strange gods and strange goals.

Stupid business we had been engaged in, we thought with one accord, for here in America, in this great powerful country that is our own, are the gods and the goals, the promised land of most of civilized mankind.

The man who was selling us America was not a native American. He was a naturalized American. He was a Nordic born in one of the now occupied countries. He came to the United States many years ago as an immigrant boy of 14.

He had sailed away from an old land where life had little promise for the underdog. He had made his way up, doggedly, adventuringly, in this New World. He had fought through the hard days with no assets but strength of purpose and strength of body. He had come through the struggle tough and still fighting, with mind uncluttered with benevolent thoughts about helping the entire world.

His creed—he told us again and again—was America first, now, after the war, and always.

"Why should any American worry long over the comfort of any country but his own?" this forthright fellow demanded. "Who is interested in us except as a source of supply? Why do we fool ourselves with all this nonsense about love between nations?

"Why do we continue to give and give and give? Is it because we want other people to live our way? Will we ever stop meddling? Don't we know we can't afford to be missionaries forever?"

"I tell you there has got to be an end to this squandering," he added. "We've got the greatest of all countries but we can't hand out our children's resources the way we are doing. What we need to do and do at once is to be conscious first and last and all the time of America. And be conscious

of it without apology or explanation. What we need is passionate loyalty to America.

"Why are Stalin, Churchill and Hitler such leaders in their own countries?" asked the one-time immigrant now turned crusader. He had an answer before any of his listeners could find a sentence. It was because Stalin was a thousand percent Russian. Churchill was forever and completely a Briton. Hitler had his mind on Germany. Yet many of us in this country are in danger of forgetting the interests of America in our zeal to help the entire world.

"You can't keep this up," he declared. "You've got to put a limit somewhere or you will drain the country dry. Say you will stop at a debt of $500,000,000,000. And see that you do stop there. This country is so rich in resources, in energy and in the character of the people that $500,000,000,000 can be carried through without hardship to anybody, providing, of course, that you let it go no further."

"Providing also that industry will give jobs to the 12,000,000 fighting men and the 20,000,000 in war plants who will be stranded when peace comes," one of the group remarked.

Our 100-percent American had an answer for this, too. He was an industrialist himself, he explained. He was enlarging his plant to take in thousands of workers after the war. Everybody had to put a shoulder to the wheel of reconstruction, he said, and everybody would, if there was certainty that this Nation would grow up and stop loving the universe at the risk of its own salvation.

"What are we doing with the Old World still hanging around our necks?" demanded the former immigrant. "I am proud of the country in which I was born. But I am prouder of the country that gave me a chance to succeed and can still give every man a chance to succeed if he will work.

"After this war we've got to let those old countries, big and little ones, too, fight their way alone. We can't have them all pulling and nagging at us.

"Our responsibility is to our own people. The only talk we ought to have with any nation is the talk of trade. Not pretty, philanthropic trade, but the kind of trade by which, for example, I would sell an automobile to England at not only a profit on what it cost me but at a profit greater than the citizen of any other nation could make.

"If England, or any other country, can manage to sell us something at a profit to herself, all right, let her. But for heaven's sake, at the end of this war let's stop being mawkish. We've got to show we're made of the same stuff as the pioneers who built the grandest country on earth."

Talk to make you think, isn't it? I pass it on to you.

Bulkley Telegraph Trail Journal

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. DIMOND. Mr. Speaker, it gives me pleasure to present herewith a copy of the remarks made by Col. K. B. Bush, Chief of Staff, Northwest Service Command, in presenting the Bulkley Telegraph Trail Journal to the Alaska Territorial Museum at Juneau, Alaska, on June 18, 1943. Colonel Bush is not only an engineer of great ability, but is possessed of the vision and foresight so valuable for the development of a frontier.

Governor Gruening, Secretary Bartlett, Mr. Keithahn, my friends of Juneau: We of the Northwest Service Command have been favored with so many kindnesses by the people of Alaska in general and you of Juneau in particular that it is a pleasant duty for us to come here today on behalf of the Commanding General of the Northwest Service Command to present the Bulkley Telegraph Trail Journal to your Territorial Museum and to the chief executive of Alaska.

And in making this presentation I like to think that Colonel Bulkley and his heroic followers would consider it especially appropriate. Much of their adventurous exploration took place in the lofty and imposing mountains which guard this community. Their wilderness trek led them both up the Inside Passage by naval craft and through the Coastal Range on foot. And their charting of the far-flung fastnesses of Russian America, as Alaska then was called, resulted directly in 1867 in the purchase of this vast land from the Imperial Russian Government by Secretary of State William H. Stewart for $7,200,000. In fact, the map folded in the back of the journal that I bring today is a photostatic copy of Colonel Bulkley's map which lay on Secretary Seward's desk when he completed that historic and momentous transaction three-quarters of a century ago.

So it is highly fitting that a copy of the frontier colonel's journal and letters should come at last to the capital of the Territory which he was so influential in adding to the domain of the United States.

In recent months we have had the honor to present copies of this document to many distinguished persons. At Ottawa in February Brig. Gen. James A. O'Connor, Commanding General of the Northwest Service Command, presented one to the Canadian Government's archives through the Right Honorable W. L. Mackenzie King, Prime Minister of the Dominion. On that occasion—an occasion which will ever be remembered by those of us privileged to participate—General O'Connor declared:

"I have brought with me another token of Canadian-American friendship. Nearly eight decades ago far-sighted men in our two lands dreamed of a route northwestward across our continent toward Asia. This was the Telegraph Trail, an expedition which was to string telegraph wires through British Columbia, through Alaska, and into Siberia and Europe. This was one of the first expeditions ever to explore the immense and scenic mountain wilderness of northwestern America.

"President Lincoln authorized American participation in the undertaking. Queen Victoria granted a right-of-way through British Columbia. The Russians built a line 7,000 miles across Siberia to join our efforts.

"Recently we have found the original journal kept by Col. Charles S. Bulkley of the United States Army Engineers when he led that historic adventure. It has been photostated by our War Department, and I am pleased to have a copy with me today to present to the Prime Minister. I am sure it will claim a merited place in Canadian archives.

"The Bulkley Journal underscores only one phase of the historic friendship between the United States and Canada. This friendship has made possible in North America the longest unfortified boundary in the world. Some day our alliance in this war will also be a part of the history of our two lands. And I feel sure that the construction of the Alaskan Military Highway, a project of great importance in both war and peace, will be one of the brightest chapters."

I am certain all of you will be interested in the very descriptive and succinct letter with which the Prime Minister, in turn, sent the journal to the official Canadian Government Archives.

I shall read it in full:

OTTAWA, *February 20, 1943.*

Maj. GUSTAVE LANCTOT, K. C.,
Domain Archivist,
Public Archives,
Ottawa, Ontario.

DEAR MAJOR LANCTOT: I am sending herewith, for deposit in the public archives, the accompanying volume Journal and Letters of Colonel C. S. Bulkley, United States Army, Telegraph Trail 1865–1867.

This volume was presented to me this morning by Brig. Gen. James A. O'Connor, United States Army, under whose command the Canada-Alaska Highway was built. It contains a record of the Telegraph Trail expedition which was designed to join wire communications with Europe through Siberia and Russia.

President Lincoln authorized American participation in the undertaking; Queen Victoria granted right of way through British Columbia; and the Russians built a line 7,000 miles across Siberia as their contribution.

General O'Connor informs me that his aide, Lt. Richard L. Neuberger, was largely responsible for finding the original manuscripts and notes of Colonel Bulkley's expedition, which are here reproduced in photostatic form.

In view of the historic value of this book and its relation to early developments in British Columbia and the Yukon Territory, I stated to General O'Connor that I was pleased to accept the volume as a gift to the people of Canada and as a token of friendship sent on a notable occasion to Canada from the United States.

It is with this thought that I am now sending the Journal and Letters of Colonel Bulkley to the public archives.

Yours sincerely,

W. L. MACKENZIE KING.

In addition to this very timely international ceremony, General O'Connor has presented copies to HENRY A. WALLACE, Vice President of the United States, and to a man well known to all of you, ANTHONY J. DIMOND, Alaska's veteran Delegate in Congress. Next month, General O'Connor will present copies to the Alberta Provincial Library at Edmonton and to E. C. Manning, the Premier of Alberta, and in September to the Vancouver, British Columbia, Public Library, and John Hart, Premier of British Columbia, at an occasion being arranged by M. E. Nichols, managing director of the Vancouver Daily Province, and other prominent citizens of that city.

Thus will the record of Colonel Bulkley's valiant exploration be made available to the men and women who live in that section of the North American Continent which he and his fellow argonauts explored. Congressman HOMER D. ANGELL, of the State of Oregon, has referred to the Telegraph Trail Expedition as "a stupendous undertaking and a project of vision and foresight on the part of our pioneer ancestors to bring into closer relationship this continent and the Old World." He also has pointed out that the story of the trek is of "great interest now in view of the successful completion of the Alaskan Military Highway connecting continental United States and our Alaskan possessions."

This is the fact which makes Colonel Bulkley's pioneer exploit of such special significance to us of the Northwest Service Command. We are responsible for the construction, maintenance, and operation of the Alaska Military Highway. Colonel Bulkley and his fellow frontiersmen planned the first link of any sort by land between Alaska and the interior of the continent. In a very direct way, the record of the Telegraph Trail is the legacy of those American soldiers who in less than a year hewed through forests and mountains to enable the first men ever to travel overland from the United States to

Alaska to arrive in Fairbanks one cold morning last November.

The attempt made in 1865 to extend a telegraph line from the United States to Europe, via British Columbia, Alaska, and Siberia, presaged other events besides the present highway. It forecast, as Prime Minister King told us in February, the mighty alliance of America, the Soviet Union, and the British Commonwealth of Nations. Just as the Telegraph Trail was a joint undertaking of the United States, Russia, and Great Britain, so is the conflict in which we are now engaged a common task that those unconquerable peoples will conclude victoriously.

The Telegraph Trail was an effort to bind the Eastern and Western Hemispheres across the Arctic roof of the world. And only last week in Toronto, James A. MacKinnon, Canadian Minister of Trade, declared that the Alaska Military Highway will "eventually lead into Asiatic Russia and the Orient itself." Nearly eight decades later, we are following Colonel Bulkley's trail-blazing march through the Northland.

Part of Colonel Bulkley's Journal is the map he used. It is listed in the ledger as "Map of Russian America, or Alaska Territory, compiled from charts and surveys of Western Union Telegraph Expedition, Charles S. Bulkley, engineer in chief." On the map appear many places easily recognizable in Alaska today, even though the spelling has slightly changed: Fort Kadiak, Fort Sitka, Fort Wrangell, Fort Youkon, Behring Strait, Kodiak Island, Bristol Bay, Mount Fairweather.

The Lewes River, on which is located Whitehorse, one of the main bases on the Alaskan Military Highway, appears as the Lewis River on Colonel Bulkley's map. The Andreanof Islands appear as the Andreanoffski Islands. But most points are instantly familiar to Alaskans; for example, the St. Elias Mountains, Oumnak Island, Norton Sound, Cook's Inlet, and the Taku River.

The Telegraph Trail did not accomplish its misison, because an easier route for wires to Europe had been found. Yet it played a vital role in America's acquisition of Alaska, a step of immeasurable historic significance, particularly in the light of contemporary events.

"Whenever I think we have difficulties," says General O'Connor, "I can thumb through the journal kept by Colonel Bulkley and see the practically insurmountable obstacles which he and his men subdued."

The Alaska Territorial Museum, where this record will be held in safekeeping for all the people of Alaska, is an appropriate trustee for such a document. This museum was established by act of Congress in 1900. It contains samples of Eskimo stone work that are more than 7 centuries old. Here are kept the blankets, pelts, beaded skins, and totem poles which reveal the handicraft and culture of Alaska's original inhabitants, the Indians. Under Mr. Keithahn and his associates the museum has been enlarged and enriched as a repository of the symbols and skill of the people of Alaska. Colonel Bulkley's journal will find a welcome niche in this institution, I am sure. Its possession, too, by the Governor of Alaska will also be a token of the resolute place which the feat of the Telegraph Trail occupies in Alaskan history.

In presenting this document I again say that we of the American Army do so with profound gratitude for the cooperation and hospitality we have received from the fine people of the Territory of Alaska. Never could newcomers have been welcomed more wholeheartedly. On behalf of General O'Connor and the officers and men of the Northwest Service Command, I give to the Alaska Territorial Museum and to you, Governor Gruening, copies of the Journal which Colonel Bulkley and his followers kept in 1865 and 1867 when these granite mountains and inland waters were first explored by Americans.

Ernest Lindley Discusses American Foreign Policy After the War

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following article by Ernest Lindley. This column appeared in the Washington Post and other newspapers throughout the United States on June 20, 1943.

FOREIGN POLICY

(By Ernest Lindley)

WASHINGTON, June 20.—The Fulbright resolution approved unanimously by the House Foreign Affairs Committee goes directly to the heart of the question about American foreign policy after the war. It carries no excess baggage. It contains no clause which invites argument over ways and means and other details. It asks only that Congress express itself "as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein."

As a declaration of intention this is adequate. This Congress cannot bind its successors. It cannot commit itself to take any particular action in the future on concrete proposals. In a resolution of this sort it can only express its general sentiment.

The need for such a declaration was understood by the four senatorial authors of the Ball-Burton-Hatch-Hill resolution, and by the authors of sundry other resolutions now reposing in the Senate Committee on Foreign Relations. Many of our allies fear that we will retrace the trail toward isolation which we took after the First World War. None of them can be sure that we won't. Without our participation there can be no world-wide system of security. For the present, most of our allies are proceeding tentatively on the assumption that we will take our part in enforcing the peace. But, until our course is clear, they must keep the door open for alternative arrangements.

INFLUENCE WEAKENED

The effect of this situation is to weaken the influence of the United States. If the uncertainty is allowed to continue too long, we may find both that the opportunity to organize an enduring peace has been lost and that our more narrow national interests have suffered. If the world believes that we intend to pull our full weight, it will pay more attention to our views and interests now. It knows that the Senate was responsible for rejecting the League of Nations. It knows that the present Congress is running over with antagonism to the President. This opposition has been shown principally to home-front policies—although some of them are closely related to the efficiency with which the war is prosecuted. But many outside observers feel that this is only a sign of a swing of the political pendulum which will produce another Harding and a Congress to match.

If a great majority of the American people really are resolved to do their utmost to preserve the fruits of this victory, once it has been won, the sooner the rest of the world knows it, the better for us. An agreement on the essentials of national policy which would stand above party, as the Monroe Doctrine has come to stand above party, would be of immeasurable benefit. The prompt passage of a resolution by an overwhelming majority of both parties in both Houses of Congress would amount, if not to an agreement, at least to solid evidence that an agreement can and will be reached.

A resolution which touched off a prolonged and bitter debate or could not command the support of a substantial majority of both parties would, on the other hand, be worse than no resolution at all. A prolonged debate or a fairly close vote would only confirm the fears of our allies. It would weaken and possibly even disrupt the present alliance before the war has been won—which, in turn, might mean that the war could not be won.

TOO DETAILED

The trouble with the "B2 H2" resolution is that it is too detailed. It contains more than one point as to which even thoroughgoing supporters of international collaboration disagree. It proposes, among other things, the creation of an international police force. What is an international police force? The authors apparently had in mind a small international constabulary to which the victorious nations would assign forces. But in some minds this clause awakens the fear that most of our Navy, Army, and Air Force would be turned over to the command of an international body. The creation of any kind of international police force apart from the national forces of the victorious powers is not essential to the enforcement of peace. If the victors, especially the three great military powers, Russia, Britain, and the United States, are determined to enforce the peace, they can enforce it. If they disarm our present enemies and keep them disarmed no nation or combination of nations now visible could challenge the Big Three as long as they stuck together.

The central question is whether we are willing to commit ourselves to use of the armed power of the United States in collaboration with that of our allies to enforce the peace. That is the simple but vital question posed by the Fulbright resolution.

By implication, the Fulbright resolution has two other merits. As Representative FULBRIGHT himself said, it recognizes that the details of arrangements with other nations should be worked out by the Executive. He must come back to Congress for support of certain of these arrangements—although not necessarily all of them. In his conduct of foreign relations he will be guided to some extent by his appraisal of public opinion and the general views of Congress. And he must come back to Congress for approval, or support, of certain of the arrangements which he makes—although not necessarily all of them. The Fulbright resolution does not encroach upon the prerogatives of the Executive by venturing to tell him exactly how he shall proceed.

HOUSE HAS PART

Also it recognizes, by implication, that the lower House has a part to pay in the formation and ratification of foreign policy. The ratification of treaties is the constitutional duty of the Senate. But in the voting of appropriations and of various authorizations related to the size and disposition of our armed forces the House enjoys equal authority with the Senate. Moreover, agreements

and resolutions which practically are as effective as most treaties have been adopted in the past by a majority vote of both Houses. In all probability this method will be used more frequently in the future, since the treaty ratifying power has placed a troublesome disproportion of authority in the hands of a minority of the Senate.

However, to allay doubts about future American policy, the Fulbright resolution, or any like it, would have to pass by more than a two-thirds majority of each House, and preferably with the support of at least two-thirds of the Republicans in each House. It should not be brought to a vote until thorough canvass has revealed whether approval to this degree is assured. The unanimous action of the House Foreign Affairs Committee, however, holds the promise that such an agreement, reached first behind the scenes and then underwritten by a formal vote, is within the bounds of possibility.

Post-war Agreements Can and Should Be Made in a Form Requiring Only the Approval of a Majority in Both Houses of Congress

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Walter Lippmann, appearing in his column Today and Tomorrow in the Washington Post of June 5, 1943.

The power of a minority in one house of the Congress to veto treaties is, as Mr. Lippmann says, as formidable as ever. For many years in the past this power has been frequently and, on some occasions, disastrously exercised. As we look today upon the shadows of coming events, the thought must come to all of us that one of the greatest dangers now threatening the world's dream of a just and lasting peace lies in the insistence of a minority in one body of Congress upon this right to nullify treaties.

That our established procedure for the ratification of treaties is violative of the democratic principle of majority rule is not subject to argument. That we can return to the principle of majority rule by adopting a different method of procedure is the suggestion offered by Mr. Lippmann in the following article:

WHAT DID THE TEST PROVE?

Since the action of Congress in extending the Trade Agreements Act has been regarded as a test of post-war policy, what did the test show?

Primarily, it seems to me, the test has shown that the procedure requiring a two-thirds vote of the Senate to ratify treaties is still, as it has been throughout American history, almost unworkable. But the test has also shown that the more democratic procedure of ratifying agreements by majority vote of both Houses is workable.

It is true that the final vote in the Senate was 59 to 23, or better than two-thirds. But the Danaher, O'Mahoney, Maloney, and Reed amendments were rejected by majorities of less than two-thirds. So the test is a clear demonstration that the power of a minority of one House to veto treaties is as formidable as ever, and that the remedy is to place our reliance on the principle of majority rule by Congress as a whole.

No constitutional amendment is needed. For the resort to majority rule in international affairs is founded on ancient and ample precedent. In fact, it would have been impossible to carry on the business of the United States if international engagements had always been placed at the mercy of one-third of the Senate.

Under the agreements made with Canada in 1816 and 1817 there has been disarmament on the Great Lakes for more than a century. These agreements were made originally not by a treaty ratified by two-thirds of the Senate, but by the President under authorization of an ordinary act of Congress. This agreement has been one of the most beneficial and lasting in our history.

The treaty by which Texas was annexed to the Union was signed in April 1844 by Calhoun, the Secretary of State, and by the Texan representatives, Van Zandt and Henderson. In June the Senate rejected the treaty by a vote of 16 ayes and 35 noes. The administration then decided to act by means of a joint resolution of both Houses. "This mode of effecting it," said Calhoun, "will have the advantage of requiring only a majority of the two Houses, instead of two-thirds of the Senate." In December the joint resolution was adopted in the House, 132 to 76, and in the Senate, 27 to 25. Thus, we see that Texas could not have been admitted to the Union if the question had been left to a treaty submitted to the Senate.

Nor could the United States have acquired the Hawaiian Islands. President McKinley submitted two treaties of annexation to the Senate. The Senate would not act on either of them. Finally the President got a joint resolution of both Houses on July 7, 1898. We were then at war with Spain in the Pacific as well as in the Atlantic. Yet in the Senate the vote was only 42 to 21—a comfortable majority, but even under these exceptional conditions only exactly a two-thirds majority.

The Samoan Islands, now of such critical importance to us in the war with Japan, were acquired by the presidential action of the first Roosevelt in 1902 and 1904. Twenty-five years later Congress gave its approval by joint resolution.

It is well worth noting, too, that naval stations in Cuba were acquired by executive agreements in 1905. The authority to do this came from an appropriations act of 1901.

As a matter of fact our greatest foreign policies have not been founded on treaties submitted to the Senate or shaped by them. The Monroe Doctrine was announced to Congress. Our Chinese policy of the Open Door, and our various arrangements with Japan, such as the Root-Takahira and the Lansing-Ishii agreements, have had greater effect than formal treaties. But they were not treaties, and were not placed at the mercy of a filibuster by one-third of one house of Congress.

Experience has shown, therefore, how right was Washington when he said 1 month after the Constitution was adopted that the evil, when "one of the three is to have a negative control over the other two * * * will infallibly work its own cure." The cure has been the Executive agreement, ratified usually by majorities of both Houses.

Otherwise, we should always be, as we have much too often been, the victims of the conditions which Alexander Hamilton described when he said of the two-thirds rule that "its real operation is to embarrass the administration, to destroy the energy of the Government, and to substitute the pleasure, caprice, or artifices of an insignificant, turbulent, or corrupt junto, to the regular deliberations and decisions of a respectable majority."

The conclusion to be drawn from the test to which Congress has just been put is that the post-war agreements should be developed in the form not of treaties, but of measures which depend upon a respectable majority in both Houses of Congress. An obstructionist Senator who wants to complain about that will have a hard time persuading his colleagues, even more the people as a whole, that he has a good case.

Our Country Comes First

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. MORRISON of Louisiana. Mr. Speaker, I have received letters asking me to explain my vote for the Smith-Connally antistrike bill, which was recently passed over the President's veto. I am not defending my position, as my action needs no defense. My vote was not against labor at all, but rather it was for labor and for America, and against John L. Lewis.

Due to the patriotism of thousands of workers and their excellent leadership in Louisiana, there has not been a single strike, and what is more, it is a safe bet to predict that there will be no strikes for the duration of the war in that State.

If all labor followed the example of those in Louisiana, there would be no necessity for an antistrike law and there would be no such law today.

The American people have but one all-important job, and that is the winning of this war as quickly as possible. Labor, as a whole, has contributed a magnificent job toward the winning and ending of this war. Labor's record of 99.95 percent work without strikes in accord with the no-strike agreement for the duration is remarkable. No other nation can show such a great record.

But this record was apparently doomed when John L. Lewis called the coal strike, which would not only hinder the war effort but, if continued for any length of time, would completely cripple the war effort. The result could have been a major disaster.

The miners walked out, obeying John L. Lewis. The coal miners want their union and they need their union. They also want America and they need America. To have a successful union the miners must obey their union leader. This they did. I do not blame the miners. I blame John L. Lewis. Whatever the good that John L. Lewis did for labor, his uncalled-for strike took it all back and hurt the labor cause to no end, inflicting serious damage.

John L. Lewis did more to hurt the labor cause in calling this strike than any major act by any individual or group

of individuals in America in the last 10 years.

Here was the situation. The miners were out. Lewis refused to order them back. Congress had to act and act fast. Soldiers, sailors, and marines were panicky. Mothers and fathers became shocked and filled with bitter emotion. This was not an isolated strike. It was a strike so general and so paralyzing that it could cause our beloved Nation to go down in defeat and slavery. It was the beginning of what Hitler was hoping for—his ace in the hole.

Letters came pouring from all battle-fronts. A typical letter from a typical American soldier in Africa, which reads like thousands, related:

It was dark and the boys gathered around to hear the news over the radio here in Africa. We knew how we were doing, but hoped to find out how the war was going as a whole. All went well until the end. The miners are going out on strike. That sentence hurt. The boys squirmed in their foxholes. Remember us. We left home February 10, 1941. We went to camp at 21 bucks a month. We left our sweethearts, wives, classrooms, and jobs. Our country asked, we gave. We were the first American expeditionary force. We have been overseas 15 months. Many men have children they have never seen. A few days ago we buried five of our boys in one grave. We couldn't identify them. We have not had the simple pleasures such as baths, clean clothes, fresh food, or entertainment. We sleep with sand fleas, lice, mosquitoes, snakes, and anything that crawls, too numerous to mention. It gets tiresome after a few months. Then the ever-present thought, will I make it home or is my number on the list? I could write for hours on things that the boys have given up or gone without. Do we want sympathy? Hell, no. We want cooperation. This news of strikes, it hurts. What if soldiers on the front lines should strike? We need coal. The lack of it holds up industry. We need planes, tanks, and guns. Without them we die. Is that what we fight for? Don't let these traitors spoil our America.

A Congress that had for 10 years befriended labor acted, and acted quick, and passed this Antistrike Act. Congress actually befriended labor in passing this act because, just 1 hour after its passage in Congress, Lewis, seeing the handwriting on the wall, ordered the miners back to work. If Congress had not passed this act, would Lewis have ordered his miners back? You know the answer as well as I—Lewis most assuredly would not have done so.

The miners again struck at Lewis' command and the President vetoed the strike bill. Congress, acting in accordance with the Constitution, overrode his veto. The President made a mistake but the miners went back to work. Even the President's leaders in the House voted to override his veto. America was now assured that the war effort would continue.

I am firmly convinced that every rank and file member of labor, or 95 percent of them, would have voted as I voted, if they had been sitting in my place here in Congress. Labor wants their unions preserved—they need their unions, but labor also needs America in order to have their unions. America was about to be lost, and with it labor as a cause would have been lost. This strike would have ended both America and everything that America has.

Every soldier, sailor, or marine is proud of the action of Congress. Every patriotic mother and father, as well as every other citizen in the United States, is also proud that Congress acted and that the strike was thus settled. With the ending of this coal strike, soldiers overseas, in the camps, have their morale stimulated as never before. No longer can our enemies raise their vanishing morale by pointing to this coal strike. No longer will these enemies be aided and comforted by John L. Lewis.

Everyone in my district knows that I am a liberal and that I am for labor and labor organizations 100 percent. I ran for office and a plank in my platform was to support labor. I am still a liberal and still for labor 100 percent. I have voted for and supported all labor legislation. I have voted against and fought all legislation that was detrimental to the cause of labor.

In this antistrike, or anti-Lewis bill, it was to take a choice; to vote for the American flag, for the men in the armed forces fighting and dying, or to vote for John L. Lewis and help Hitler. I voted for the American flag and the soldier boys. I would do it again, and I believe 99 percent of the entire membership of organized labor in Louisiana would have done likewise, had they been in my place.

In this life-and-death struggle we must all sacrifice. As I said before, I am in sympathy with the miners. They deserve more pay. But if they cannot get it without striking, they must sacrifice that pay raise until after the war. With them it is a question of their country or a little more money. Their country comes first.

And my country comes first with me. One of John L. Lewis' labor leaders told me I was through politically if I voted for the antistrike bill, that he would see I was defeated. He stated that a great deal of literature and propaganda would be sent to my district. My answer was that if I had a choice to make between my country and my political office, my country comes first. I know you and a few others could not defeat me, but even if you could, I would still vote for my country and my flag and against John L. Lewis, because, after all, my political ambitions are so small and infinitesimal as compared to those American boys who at the very moment are fighting, bleeding, and dying, that it is hardly worthy of mention.

Naturally none of us likes to see any adverse labor legislation. Any legislation at all is often used as an opening wedge. However, this Anti-Strike Act will not affect one single member of organized labor in Louisiana. The act automatically dies when the war is over. Lewis has hurt the cause of organized labor in America. It will take many years for this damage to be repaired.

As for my part it shall never be said that, by my vote, I had aided and abetted John L. Lewis in impeding or destroying the just gains that labor has gained in the past decade, or that I had or would by my vote aid or help Lewis lose the war on the home front.

As a result of this growing hatred against John L. Lewis, he, and some of his unscrupulous leaders, are trying to shift the angry public sentiment of labor, of the farmers, and the people in general, from himself to the Members of Congress. Do not fall for this slick scheme of John L. Lewis. Just remember that Members of Congress did their duty and if America comes first in your heart, you would have done the same had you been a Member of Congress.

France did not come first in the hearts and minds of her Parliament, and France fell.

I was a friend of labor before my election. I am their friend now, and I shall continue to be their friend in the future.

Mr. Farley's Faith

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading Times:

MR. FARLEY'S FAITH

When more than 600 people sit through a noon luncheon with the temperature above the 90° mark to hear a speaker, then we can say, in the Berks vernacular, "Ain't that sump'in'."

That is exactly what a Rotary Club audience did yesterday when the Honorable James A. Farley, former Postmaster General in the Roosevelt Cabinet and former national chairman of the Democratic Party, was the weekly noonday luncheon speaker.

Mr. Farley, we believe, drew a packed house, a suffocating house on a sweltering hot day, for three reasons:

There has been a rejuvenation of interest in national affairs with the people hungry for some intimation whither we are bound.

Some of the guests of the meeting anticipated that Mr. Farley might let go of some political dynamite.

That many of the people wanted to see one of the biggest and most colorful figures in national politics.

We prefer to believe that the first and the last of the reasons we have given predominated.

Those who came expecting to hear a political blast were disappointed. They, however, left with a better picture of Farley the man, Farley the patriot, and, above all, Farley an intense American.

Mr. Farley was far too wise to indulge in politics. It was too hot to talk about politics, he said. And when he said "too hot," the connotation that was implied was more than just mere atmospheric heat, we believe.

The man who left the Roosevelt Cabinet voluntarily, the man who could probably go back to that Cabinet without having too many minor obstructions to hurdle, in his talk to the Rotarians and their guests put unbounded faith in America.

He frowned upon formulas for security. He expressed the thought that the Nation's salvation lay in hard work, in honesty, in self-reliance.

If Mr. Farley, one of the greatest political leaders of the Nation, had in mind any criticism of the administration with which he

broke he skillfully concealed it in his language and demeanor.

Much could be read between the lines. Such a statement as he made about the pioneers who made America what it is, as "these were not men who made compromises with forces that threatened them. They were men who destroyed those threats by their own indomitable strength and courage," might have been a barb aimed at this or that policy today or yesterday in Washington and then again it might not have been.

He spoke of the wise policy of the founding fathers of creating, as they (the pioneers) grew, "political institutions that preserve political freedom while they offer the broadest protection from selfish influences."

Mr. Farley saw in our national greatness something that comes back fundamentally to the American as an individual.

"Only sound men can make a sound nation," he said. Despite evidences here and there that wealth and security have made the American people careless and pleasure-loving, Mr. Farley pointed out that the pessimists are wrong in coming to the conclusion "that the fiber of America has become soft and that the inner integrity of our people has been destroyed."

Such weaknesses, Mr. Farley termed superficial and passing, calling attention to American prowess on the field of battle and on the home front's efficiency in production which he said "is not created by the mere proclamation of an intention. * * * Efficiency rises from the strength of free people."

America, he said in summing up, was "not built upon formulas; it was built upon the individual. * * * It is for us to preserve for our posterity what our forefathers created for us, a Nation of free people, ever helpful to others, but always selfish for the continuance, within our own domain, of the American way of life."

We gather from what was said at the close of the meeting that many of his audience gained a new conception of Mr. Farley, a conception of something more than a mere opportunist politician, a picture of a man who continues to loom large in our national life and about whom more undoubtedly will be heard.

That Mr. Farley drew such a great audience is heartening. It indicates a resurgence of interest in national politics and in the men who formulate the policies and control the destinies of this great Nation.

Farm Labor

EXTENSION OF REMARKS

OF

HON. CHARLES E. McKENZIE

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. McKENZIE. Mr. Speaker, I would like to call your attention to a letter that I received this morning from the Honorable Guy M. Boyd, a prominent merchant of Morehouse Parish, La.:

COLLINSTON, LA.,
June 24, 1943.

Hon. CHARLES E. McKENZIE, M. C.,
Washington, D. C.

DEAR CHARLIE: Can't the Government do something about the farm labor situation? Why does farm labor have to produce food at $2 or $2.50 per day when the Government is paying $1 to $2 per hour? I know that labor that was getting $2 per day producing food and feed, went to defense plants and got 75 cents to $1.50 per hour. If something is not done about this condition, things are going to be in bad shape.

If we are going to run our Government on an equitable basis to all, this condition must be changed and the farmer and farm labor given a chance, too.

Please give this some thought.

Yours very truly,

GUY M. BOYD.

Mr. Speaker, I agree with Mr. Boyd—something must be done for the farmer and farm labor. Will this Congress do it?

Statement of Hon. Vicente Geigel-Polanco, Senator at Large of Puerto Rico, on the Need for Puerto Rican Independence

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 3, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks I include herewith a statement by Hon. Vicente Geigel-Polanco, senator at large of the island of Puerto Rico, which gives authoritatively and completely a picture of the real issues facing the people of Puerto Rico—which issues are of utmost importance not only to the people of Puerto Rico, but equally important to the United States in this period of crucial war, when our whole colonial policy toward Puerto Rico, endangers our good-neighbor policy, and weakens our ability effectively to defend the Western Hemisphere from Axis attack. I urge the membership of this House to give careful study to the statement of Senator Geigel-Polanco in connection with my bill for Puerto Rican independence, H. R. 2989:

The Legislature of Puerto Rico, in its ordinary session of 1943, adopted by a unanimous vote the following concurrent resolution:

"Concurrent resolution to lay before the President and the Congress of the United States of America the right of the people of Puerto Rico that the colonial system of government be ended and to decide democratically the permanent political status of Puerto Rico as expeditely as possible, immediately if feasible

"Whereas in all political parties and civic and economic sectors of Puerto Rico, the unanimous opinion prevails that the colonial system of government should be totally and definitely abolished;

"Whereas the form of definite political status which, on the basis of this unanimous anticolonial conviction, the people of Puerto Rico are to have, should be democratically decided by the free vote of the people of Puerto Rico;

"Whereas it is the unanimous desire of the people of Puerto Rico that, in accordance with their will set forth in the program of the political parties, the permanent political status be decided as expeditely as possible, immediately if feasible, or at the latest when the war ends and peace is established, whichever shall be most compatible with the best conduct of the war against the totalitarian powers: Therefore be it

"Resolved by the Senate of Puerto Rico (the House of Representatives concurring)—

"SECTION 1. That the Legislature of Puerto Rico, in the name and in representation of the people of Puerto Rico, by this concurrent resolution, lays before the President and the Congress of the United States of America the right of the people of Puerto Rico that the colonial system of government be ended and to decide, in special free and democratic elections, by the free will of the people of Puerto Rico themselves, their permanent political status, as expeditely as possible, immediately if feasible.

"SEC. 2. That if the President and the Congress of the United States of America consider that in order to make effective this right and to act favorably regarding this petition, we should wait for the moment when victory is won and peace is being organized, the people of Puerto Rico will wait with patriotic resignation until that decisive moment for their natural aspirations.

"SEC. 3. That a copy of this concurrent resolution be transmitted to the President of the United States of America, the President of the Senate and the Speaker of the House of Representatives of the United States of America, the Secretary of the Interior, the Resident Commissioner of Puerto Rico in Washington, the Governor of Puerto Rico, and to the press."

Authorized as it is to study upon the ground the political, economic, and social conditions of Puerto Rico, I think it would be highly desirable and appropriate for the Bell committee to recommend to Congress the legislation necessary for the immediate termination of the colonial system of government, existing here and the establishment, by the will of the people of Puerto Rico themselves, of a free, democratic, and responsible government.

According to our rights as a people, to the American principles of government and to the democratic institutions, the political problem of Puerto Rico has no other solution—just, adequate, and historically feasible—than the independence of the island and the foundation here of a free and democratic republic within the community of American nations.

HISTORICAL BACKGROUND

The Island of Puerto Rico, one of the Greater Antilles, was discovered by Columbus in the year 1493. The first Puerto Rican settlement was founded in 1508, 100 years before the establishment of Jamestown, Va. Spain settled and colonized the Island, transplanting and adapting to the Antillean environment the best institutions of Spanish culture. The formative process of the people of Puerto Rico took place during the sixteenth, seventeenth, eighteenth, and nineteenth centuries. The first 300 years covered the necessary stages for the development of the population, the administrative organization of the different towns, and the initial promotion of the material resources. At the beginning of the nineteenth century the people of Puerto Rico had already attained its own peculiar characteristics, a sufficiently defined personality and a clear concept of social justice. All through that century Puerto Rico kept on laying firmer foundations for its personality and developing a culture of strong vitalities.

As a province of the Spanish Crown, we enjoyed a wide representation in the National Parliament on the same basis of equality as the Spanish provinces of the peninsula. On November 25, 1897, the Spanish Government granted Puerto Rico the Autonomy Chart acknowledging the sovereignty of our people to such a substantial degree that it could enter into trade agreements with other nations. The Autonomy Chart established a

government of the parliamentary type. The legislative branch was composed of a chamber of representatives and a council of administration empowered to legislate on all local matters including administrative organization, public credit, banking and monetary system, and with full authority to dictate its own tariffs. The executive power was vested in a governor general, assisted by a cabinet composed of five secretaries—Grace, Justice, and Interior, Finance, Public Education, Public Works, and Posts and Telegraphs, and Agriculture, Industry and Commerce—all of them Puerto Ricans and endowed with such powers that no executive order of the Governor could be carried out unless it was previously countersigned by the corresponding secretary.

In 1898 Puerto Rico had a homogeneous population of approximately a million inhabitants, a well-defined historical personality, a common language—Spanish—and a solid culture related to the purest Greco-Latin traditions. The country was enjoying an autonomous and responsible government.

AMERICAN OCCUPATION

It was then that the Spanish-American War took place. Puerto Rico was not responsible for that armed conflict, and neither did it have any interference in it, nor was it a conditioning factor thereof. Nevertheless, on July 25, 1898, United States military forces occupied the island. It is a proclamation addressed to the people of Puerto Rico on that occasion, Gen. Nelson A. Miles, commander of the forces of occupation, said as follows:

"In the prosecution of the war against the Kingdom of Spain by the people of the United States in the cause of liberty, justice, and humanity, its military forces have come to occupy the island of Puerto Rico. They come bearing the banner of freedom. They bring you the fostering arm of a nation of free people, whose greatest power is in justice and humanity to all those living within its fold. We have not come to make war upon the people of a country that for centuries has been oppressed, but, on the contrary, to bring you protection, not only to yourselves but to your property, to promote your prosperity, and to bestow upon you the immunities and blessings of the liberal institutions of our Government."

In the peace conferences which followed the war operations the Government of the United States demanded the cession of the island of Puerto Rico. By the treaty of peace signed at Paris December 10, 1898, the island was ceded accordingly. Article IX of the treaty provides that "the civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by Congress." As an explanation to this article the American Commissioners, in their memorandum of December 9, 1898, made the following statement: "As regards the political status and civil rights of the native inhabitants, these were reserved to Congress, which would enact laws for the government of territories ceded to the United States, this being but a confirmation of the right of the sovereign power to leave to the new government the establishment of these important relations. The Congress of a nation which never enacted a law oppressive or detrimental to the rights of residents within its dominions and whose laws guarantee the greatest liberty compatible with the conservation of property, surely can be trusted not to depart from its well-established practice in dealing with the inhabitants of these islands."

PRESENT STATUS OF PUERTO RICO

In spite of these promising words, the United States has not yet done justice to Puerto Rico nor has established here a free, democratic, and responsible government. After a period of military rule, the United States Congress passed the Foraker Act on April 12, 1900, establishing a so-called civil government in Puerto Rico. This law declared the inhabitants of the island "citizens of Puerto Rico," and as such entitled to the protection of the United States.

On March 2, 1917, Congress passed the Jones Act which, slightly amended, is still in force. The new law created a legislative assembly composed of a house of representatives and a senate, both elected by popular vote and empowered to legislate on some local matters, but subject in its action to the veto power of the Governor of Puerto Rico, the President of the United States, and Congress. The President appoints the Governor, the attorney general, the commissioner of education, the auditor, and the judges of the Supreme Court of Puerto Rico. This act declared the citizens of Puerto Rico citizens of the United States.

The political status of Puerto Rico has always been ambiguous. Certain Supreme Court decisions have characterized the Island as an "unincorporated" Territory in contrast to Hawaii and Alaska that are "incorporated." The extent to which the Constitution of the United States applies to Puerto Rico has never been specifically delimited. Under the present status, the United States Congress exercises full powers to pass upon all matters, both internal and external, affecting Puerto Rico. Our people entirely lack authority to face and solve their fundamental problems. We live under a regime of a purely colonial type.

In the economic sphere we were deprived of the autonomy that in tariff matters, we enjoyed in 1898. The free exchange of goods was introduced in our trade relations with the United States. All American tariffs were made extensive to cover our trade with other countries, and we were included in the United States coastwise shipping system, which forces us to depend on the more expensive services of the American merchant marine.

SOME OF THE EFFECTS OF THE PRESENT STATUS ON THE ECONOMY OF PUERTO RICO

The present political status has affected the Puerto Rican economy in the most disadvantageous and harmful way. The whole system, including the implications of the tariff, has gradually built up a type of commercial agriculture exclusively suitable for exportation which, by seriously curtailing the subsistence farming activities indispensable to feed our people, compels us to import almost every article of consumption. Import duties imposed on commodities generally consumed by most people are so high that they create an unsurmountable barrier for our commercial exchange with other nations. Instead of simply regulating commerce, the American tariffs when applied to this island shut out all foreign products that could be obtained elsewhere to our economic advantage. We are thus forcibly obliged to make practically all our purchases in the American market. From 90 to 95 percent of our outside commerce is carried on with the United States.

One of the most noticeable effects of the tariff in Puerto Rico is an exceedingly high cost of living. Rice, wheat, codfish, beans, olive oil, cotton fabrics, and a hundred more items that we must import fall under the prevailing rates of tariff protection. That means that we have no choice but to buy those commodities in the United States, although other countries may have them at more convenient prices for us. Let us see just one example of how the American tariffs work on this island. In the case of rice, subject to an import duty of 2½ cents per pound, we pay every year nearly $2,000,000 in excess of the amount that we would have to pay in any other market. This figure does not include the overcharge of the transportation in American vessels. About 17 commodities comprising 65 percent of all food consumed in the island cost us from 8 to 14 percent higher than they cost in the city of New York. Not a single commodity of general consumption in Puerto Rico appears on the free list.

However, should the effects of the tariff end with the increase in prices and the cost of living as their only consequence, our problem would not acquire such a threatening aspect. But besides, it is a fact that due to our peculiar conditions the tariff does not protect the industrial development of the island. We encounter a state of things which rather frustrates the initiatives of an industrious people such as ours and renders practically void any attempt of industrialization with Puerto Rican capital due to the absence of adequate tariff protection for our own producer who cannot stand the competition of the American manufacturers. Consequently we are unable to create new sources of employment to meet our serious unemployment problem. It is undeniable that a tariff devised to give generous protection to a country of such powerful agricultural and industrial activities as the United States cannot be wisely applied to a small and almost exclusively agricultural country mostly made up of consumers, suffering an economy of the colonial type, subject to outside capital, as Puerto Rico, without incurring not simply in a mere absurdity of economics, but also in the annihilation of the local sources of production and in a precarious impoverishment of the country.

Furthermore, the tariff is greatly responsible for the large-scale land tenure and the absentee ownership that persist in the island.

This asurd economic regime—a direct outgrowth of the system of government in force—has retarded the development of the Puerto Rican industry; it has delayed the promotion of the authentic wealth of the country; it has obstructed our commerce with unnecessary restrictions and limitations; it has lessened our opportunities of employment to a most perilous minimum; it has contributed to increase our taxation in a way injurious to the insular economy; it has taken away from us the sources of income which could be derived from our own customs directed by local laws and local convenience, and therefore creates for our Treasury a state of perpetual neediness and scantiness impelling it to almost exhaust its borrowing capacity in a fruitless effort to take care of the public services to a more or less fair degree; it has established such an economic structure that all sorts of hardships, burdens, and disadvantages weigh on the Puerto Rican consumers. Amid these circumstances it is natural that our economy should have suffered a gradual process of decline and impoverishment, and today it is on the verge of collapse. The agricultural adjustment program imposed substantial sacrifices from Puerto Rico, although we do not share its benefits on the same basis as the continental areas, neither have the reconstruction projects been extended to the island in the same sense of generosity and justice that moves them in the States. Under the quota system for the production of sugar—the most important and basic local industry—Puerto Rico has suffered a greater reduction than any of the domestic areas. Besides injuring the growers and other producers, this curtailment has considerably diminished the already meager chances of employment. As a climax to all arbitrary acts the Sugar Act of 1937 places Puerto Rico in the category of foreign zones as regards to the importation of refined sugar.

In all those aspects in which the tariff really protects some of our products we find that favorable effects are being virtually annulled by the agricultural adjustment policy and specially by the trade agreements which displace us from the American market through the advantages accorded to countries sending to the United States the same commodities that we produce.

We face, indeed, a very critical situation. On one side we are forced to buy in the American market all we consume, and on the other we are not allowed to produce as much as our resources would permit under normal conditions. And then, after being reduced to a single market and to a very limited production, still we find the above-mentioned obstalces in our way when marketing our products. It is a situation that necessarily ruins our economy and plunges our people into despair.

AN END TO THE COLONIAL SYSTEM

We are dispossesed of any power to protect ourselves from said circumstances, to work for a proper solution, or to chart our economic life in accordance to the potentialities, means, and wealth of the Island. Hence, our productive possibilities tend to vanish, our resources are coming to naught, and our people are getting poorer and poorer.

An unavoidable state of profound collective restlessness and discontent arises from those conditions. It is that our people cannot willingly accept it own destruction. We firmly believe that we also have a right to the enjoyment of life, liberty, justice, and happiness. Puerto Rico longs for the power to promote its production, raise the standards of living and the working conditions of the laboring classes, introduce policies of true social justice, insure the well-being of all its citizens, and organize itself under a democratic form of government.

But as long as this anomalous situation resulting from our undefined political status prevails it will be absolutely impossible to draw up a program for the economic reconstruction according to the peculiar needs of the Island, because we lack the indispensable authority to trace that program and because we have not been given the opportunity to decide and direct our destiny through a democratic procedure.

No step has been taken by any of the Federal administrations to place the island in condition to clarify its permanent political status. Up to now, and during 45 years of American rule, the people of Puerto Rico have been living aimlessly, without a chance to determine the course of their aspirations. The undefined status has prevented the island from the proper orientation of its economic structure, its school system, and its normal life as a civilized community. The absurdity of the situation has maintained in us a feeling of anxiety as to where to direct our future; it has provoked the present social crisis, the economic chaos, and the inability of the island to utilize its resources to the benefit of its needy classes; it has obliged us to waste our efforts, our energies, and our millions of dollars in keeping an educational system which lacks a definite purpose; and it has dragged the people to the present degree of uneasiness and uncertainty so damaging to its progressive evolution and so detrimental to the development of a good citizenship.

It is therefore most urgent and undeferable that this colonial system be replaced by a system of government responsible to the people of Puerto Rico. To attain this change it is indispensable that Congress should authorize Puerto Ricans to decide the permanent political status of the island in accordance with the principle of self-determination.

The right of our people to decide its own political status rests on the natural right of every civilized community to rule its own life. From the Puerto Rican point of view the urgency to decide the final political status is based on the fact that the present system fails to provide the means and the permanent guaranties that must be had for the progressive development of the economy, culture, and welfare of the people.

OUR DEMAND FROM THE AMERICAN POINT OF VIEW

Besides the arguments that could be avanced by Puerto Rico asking for authorization to decide its political status, there are from the American point of view itself additional and very powerful reasons strengthening our petition, to wit:

That the system of government which prevails in the island does not derive its powers from the consent of the governed and therefore runs contrary to the Constitution and the democratic institutions of the United States.

That the United States is responsible for the economic chaos existing in Puerto Rico as a consequence of the present governmental system, and that it behooves Congress and the Federal administration to free the island from the system producing that chaos not only for the good of the national prestige but also as a protective measure for American taxpayers who are suffering, in part, the effects of the economic chaos of Puerto Rico.

That the continuation of such a colonial type of government, or of any other system not deriving its powers from the people of Puerto Rico, does not satisfy the moral pledges and legal commitments incurred before the world by the United States at the time of the occupation of the island.

That the continuation of such a colonial type of government imposed by the United States on a civilized country of the Western Hemisphere—a sister country of the Spanish-American group of nations and united to them by the bonds of race, tradition, history, language, and culture—is in opposition to the basic postulates of pan Americanism, impairs the moral principles of the good-neighbor policy, and hampers the international position of the United States as a democratic power.

That an early definition of the Puerto Rican political status will effectively contribute to encourage better economic relations and to bring a closer spiritual understanding between the United States and Puerto Rico.

That in the light of American history, precedents, and free institutions of the United States it is evident that the only democratic way to solve the problem of Puerto Rico is by an authorization from Congress allowing the people of the Island to decide its political status in accordance with the principle of self-determination.

INDEPENDENCE, THE SOLUTION

At the arrival of the American forces to our shores in 1898, the Puerto Rican people constituted already a Christian community with a well-rounded history of achievements. Customs and traditions had been established in the course of four centuries of civilized life. Repeated proofs had been offered to the world about our capacity for the fulfillment of the duties implied by social life, for the performance of Government responsibilities, and for achievements in various fields of human knowledge.

Our historical reality in 1898 was not, therefore, that of a territory open to colonization. Neither was it a country in need of the civilizing effort of the United States. We were a people fully matured, conscious of our destiny, with our own way of life, with a type of culture of Greco-Latin origin, enjoying a Governmental system of actual sovereignty. Our historical reality today—45 years after the change of government—is as follows: that the Puerto Rican nationality subsists in the integrity of its formative elements, with the advantage that now we have a population of 2,000,000 inhabitants, that public education is more outspread, that we have achieved an evident material progress, that the sources of our economy have multiplied themselves, that our capacity for self-government has been enriched with new experiences, that the people are wide awake in regards to their rights and with the attitude to protect their justice, and that the clash of interests and culture brought about by the interference from the United States has produced a strengthening of the moral consciousness of our people, underlining differences and sharpening the native force of resistance against foreign pressure.

The solution to the problem of our sovereignty was already implicit in that historical reality that we had reached and that we were in 1898. The existence of the Puerto Rican nationality, as a community in full activity of social intercourse under a type of differentiated culture, involved the right to constitute an independent political organism. In the historical reality that we are today—after 45 additional years of deep experiences in the field of culture, economics, and government; enrichened our nationality in the values of social intercourse, in its administrative capacities, in its social understandings, in its desires of human betterment, in its aptitudes for responsible life—in that reality our right to our own sovereignty strengthens and affirms itself, a right which finds in independence a concrete political expression. Independence is the solution that history furnishes to our problem of sovereignty. That is the logic and unavoidable result of the historical law that has governed our life as a people. The historical reality is the force that determines for us a course that necessarily leads to that solution.

The solution to the constitutional problem of Puerto Rico does not depend, therefore, on fate nor on whim, nor on any fleeting convenience, but on those secret forces which throughout history have modeled the destiny of our people up to the point of maturing its capacities and training it for the responsible functions of a free life. And this is so, not only because of a predetermination of history, that is to say, a culmination of a process of growth in the realms of human intercourse, culture, economics, administration, and morals. It is so, additionally, because the constitution of a people in a sovereign entity does not mean anything else but an act of equipping it with the power to continue the process of growth under better auspices, to continue living its typical way of life, to continue developing its potential values. The political constitution cannot be a sudden social derailment, contrary to the historical reality of what a people actually is.

On the other hand, it is a fulfillment, in the realms of conscience and responsibility, of that very same reality. Since that historical reality is the fountain which provides everything that the nationality signifies as a value of life, of culture, of spirit, of human tradition, it is not possible to do without it at the hour of collective integration, precisely when the physical and spiritual forces which form the historical reality of a people reach the fuller maturity, the greater foresight, and the most vigorous vitality.

When a people face the problem of its sovereignty it is not with the purpose of becoming something else, but to continue being what it is in its most high and fruitful values. Puerto Rico desires to solve the problem of its sovereignty, not to be something different to its own reality, not to be an appendix to another people, not to destroy its personality, not to ruin its historical destiny, not to annul its creative aptitudes, but simply to be Puerto Rico in itself, according to its own spirit, according to its own way of life; to be a Puerto Rico in the enjoyment of liberty, in the progress of culture and in the strength-

ening of justice. And to be that Puerto Rico, to continue being Puerto Rico, history does not offer to our people any other way out but that of its independence.

STATEHOOD, A FALSE TRACK

The solution of the problem of the sovereignty of Puerto Rico is desired so that our people may develop its personality under more favorable auspices. Would that be possible under statehood, which implies the entrance of our country into a community of nations having a language, race, and culture of British cognation, grounded in the traditions of the common law, with philosophy, ideals, customs, beliefs, and standards of living distinct from our own? Would it be possible even to conserve our personality as a people, not to mention the continuance of our historical development, once we have been merged into the American Federation, impelled as the latter is by a sweeping process of historic integration, of forcible nationalization, which must erase the distinctive characteristics of the States so as to give the country a typical and united appearance?

In that process of nationalization which the Government and the people of the United States promote with unusual vigor and huge resources, our personality as a people must necessarily be wrecked since, its history, its spirit, and its destiny being different, it would not find in the American Federation a hold for its traditions, acceptance of its customs, encouragement for its culture, understanding for its language, sympathy for its ideals, atmosphere for its creative ability, or a reason for its manner of living. Americanization would be compulsory. And Americanization would necessarily, fatally, and inevitably mean a depuertorricanization. Joining the federation would compel us, both by command of law and policy of Government, as well as by loyalty to American nationality, to renounce being what we are, to renounce being what history has made us; to renounce our language, our culture, our personality, everything that we are and represent in the world or moral and spiritual values, in order to try to be something else foreign to our existence, foreign to our history. And because such a transformation cannot be effected, considering that the soul and the life and the history and the basic facts of a people are not the consequence of chance or caprice, or convenience, the said spectacle of a slow disintegration would await us; we would be sentencing ourselves to a barren adaptation which would yield only hybrid fruit; the strength of our creative energy would be broken; our culture would be corrupted; the soul would be confused; the vital impulses would be smothered; the collective soul would never attain to maturity of expression; we would experience a sensation of emptiness, and we would continue to blunder along, adrift in the most hazardous adventure in heedlessness, without insuring our existence, without a hold in history, without connection with reality, without a bond with our own destiny.

The sponsors of statehood sidestep this fundamental aspect of the problem. They also sidestep all consideration of the economic aspect, because it is absolutely against them. And when it is mentioned, if the one who mentions it is a responsible person, he admits that statehood would be highly prejudicial for our country from the economic point of view. In fact, after the island is admitted as a State we would be obliged, in addition to the tax burden already weighing on our people, to pay the Federal Treasury several million dollars for internal revenues, income taxes, inheritance taxes, taxes on alcohol, drugs, cigars, cigarettes, etc., etc. We would lose the customs revenues which are now returned to us by the Federal Treasury. The Federal wage-and-hour law would be in full force in the island and the amendment which authorizes the establishment of differential rates for the benefit of our small industries would be without effect. The Federal Insurance Contributions Act, the Federal Unemployment Tax Act, and the Federal Victory Tax Act would increase our tax burden in several million dollars. Under statehood we would continue to be subject to the customs tariff which compels us to import practically everything from the American market at an overprice which in normal times economists estimate at more than $20,000,000 a year. Under statehood we could not even protect our coffee by an import duty—a thing we are now allowed to do as a special concession under the present regime. Under statehood practically all discriminations, prejudices, and disadvantages of an economic order which we have been suffering because of the present commercial reciprocity agreements, and of those hereafter entered into, would subsist, inasmuch as the situation would continue to be the same due to the essential differences which exist between our economic structure of a tropical country and that of the United States.

Generally, the adherents to the idea of statehood limit their pleadings to three points: (1) That certain United Staes officials, legislators, and leaders have made declarations in favor of granting statehood to Puerto Rico; (2) that the action of constituting Puerto Rico into an organized Territory leads to statehood; and (3) that the collective citizenship granted to the Puerto Ricans through the Jones Act is an unmistakable sign of the purpose of making the Island into a State of the Union.

But none of these points stands analysis. As to the opinion from United States officials, legislators, and leaders who favor statehood, it is easy to produce the opinion from those who are against the idea, rather backing independence. Henry L. Stimson, who happened to be Secretary of War when the War Department had jurisdiction over Puerto Rican affairs, expressed himself as follows during a hearing before a committee of the United States Senate: "I am one of those who feel very strongly that the ultimate statehood of Puerto Rico would not be of benefit to either Puerto Rico or the United States. * * * The racial difference is a very great difference. The difference of climate, habit, tradition, and distance, but perhaps more than anything else the fact that it would be for the first time going beyond the territorial limits of the United States, thus making a precedent for going beyond those territorial limits in other cases." (Hearing before the Committee on Pacific Islands and Puerto Rico, United States Senate, May 7, 1912, pp. 5 and 7.)

The same idea had been expressed by Marcy, Seward, Fish—outstanding Secretaries of State—all coinciding in this fundamental thought: "Even if we could own any territory overseas as a possession of the United States, the Federal Union should keep itself strictly limited to the territory contiguous to the North American continent."

President Wilson expressed himself in the State, page 357, that with the acquisition of Puerto Rico and the Philippines as a result of the War with Spain, the United States acquired noncontiguous territories already inhabited by peoples different from them in language, customs, and institutions; that contrary to what happened with the other territories acquired (except Alaska and Hawaii), the insular possessions are not fitted for the progressive development running from territory to statehood, and that they are dependencies and must remain as such until they reach the necessary development to become independent or autonomous.

Elihu Root, the noteworthy jurist, inspirer of the United States policy during many years, and also Secretary of State, declared addressing our people: "Do not you ever expect to be a State of the Union; we have put an end to the last two contiguous territories turning them into States. Puerto Rico cannot escape the logic of things, and should also be a republic. * * *" The words of the great American jurist contain a statement which we the Puerto Ricans must repeat daily, and prescribe it as a curative formula to those who suffer from the crazy mania of pretending to deviate us through the false track of statehood: "Puerto Rico cannot escape the logic of things." The logic of things in this case is the logic of our beings, the logic of our spirit, the logic of our personality, the logic of our history, the logic that we are Puerto Rico. It is from that logic that the advocates of statehood for our people pretend to deviate us.

A recent restatement of the policy regarding noncontiguous territories was voiced by the Joint Committee on Hawaii in its official report to Congress, as follows: "That the admission of Hawaii as a State presents a departure as it would be the first noncontiguous area to be admitted." (Senate Doc. No. 151, 75th Cong., 3d sess., February 15, 1938). The committee recommended that the question of statehood for Hawaii be deferred.

If the action of constituting a noncontiguous territory as Hawaii in an incorporated territory does not involve an actual promise of statehood, much the less involved is said promise in the action of constituting a noncontiguous territory in an organized territory, as is Puerto Rico defined in the law in force.

The argument adduced as a greater show of persuasive strength in favor of statehood, is that of citizenship. Nevertheless, among the arguments to that end, none of them so misleading, none lacking so much weight as this argument about citizenship. Collective citizenship was not extended to Puerto Rico until 1917. Historical facts throw the following light: (1) The so-called granting of citizenship was by no means an act of just acknowledgment of our personality, but an imposition from the Government of the United States; (2) citizenship extended to this island falls into a second- or third-class category, and (3) the extension of American citizenship does not carry a promise of statehood.

In a speech before Congress, when Congress was considering the Jones bill which forced Federal Citizenship upon the Puerto Ricans, Luis Munoz Rivera, then our Resident Commissioner in Washington, made the following statement about the Puerto Rican citizenship acknowledged by the Foraker Act: "We are satisfied with this citizenship (Puerto Rican citizenship) and desire to prolong and maintain it—our natural citizenship, founded not on the conventionalism of law but on the fact that we were born on an island and love that island above all else, and would not exchange our country for any other country, though it were one as great and as free as the United States. * * * It is true that my countrymen have asked many times, unanimously, for American citizenship. They asked for it when through the promise of General Miles on his disembarkation in Ponce and through the promises of the Democratic Party when it adopted the Kansas City platform—they believed it not only possible but probable, not only probable but certain, that American citizenship was the door by which to enter, not after a period of 100 years nor of 10, but immediately into the fellowship of the American people as a State of the Union. Today they no longer believe it. From this floor the most eminent statesmen have made it clear to

them that they must not believe it. And my countrymen, who, precisely the same as yours, have their dignity and self-respect to maintain, refuse to accept a citizenship of an inferior order, a citizenship of the second class, which does not permit them to dispose of their own resources nor to live their own lives nor to send to this Capitol their proportional representation. * * * As the representative of Puerto Rico, I propose that you convoke the people of the Island to express themselves in full plebiscite on the question of citizenship and that you permit the people of Puerto Rico to decide by their votes whether they wish the citizenship of the United States or whether they prefer their own natural citizenship. It would be strange if, having refused it so long as the majority of people asked for it, you should decide to impose it by force now that the majority of the people decline it." (CONGRESSIONAL RECORD, vol. 53, part 8, 64th Cong., 1st sess., May 5, 1916, p. 7472.)

Congress did not listen to the voice from Puerto Rico. Congress preferred to dictate its imperial writ imposing upon us, by force, a citizenship of a colonial type.

Actually, the citizenship thus extended to the Island belongs to a second or third category. Senator Clarke, from Arkansas, had the foresight that it would be like that. In 1912 he pointed out that what was proposed for Puerto Rico was a qualified citizenship, devoid of the rights that citizenship implies for the continental citizens. (See hearing before the Committee on Pacific Islands and Puerto Rico, U. S. Senate, May 7, 1912, pp. 13-14). The citizenship imposed upon the Puerto Ricans is a citizenship without sovereignty, a citizenship without nationality, a citizenship without constitution. To the inhabitants of the continent, their citizenship guarantees them sovereignty rights within the State and within the federation. To Puerto Rico it does not guarantee any right of sovereignty at all. To us it is a citizenship without nationality—we belong to, but we are not a part of the American Nation, according to the decision of the Supreme Court of the United States in the case of *Downes* v. *Bidwell* (182 U. S. 244). To us it is a citizenship without constitution. In the case of *The People* v. *Tapia y Muratti* (245 U. S. 639), the Supreme Court of the United States declared that the granting of citizenship does not imply the extension of the Constitution to the Island.

The granting of citizenship does not involve a promise of statehood. It was made clear by Secretary Stimson in the year 1912 when he stated: "I see myself no inconsistency in the grant of American citizenship to Puerto Rico; no inconsistency between that and the ultimate ideal that Puerto Rico shall have practically an independent local self-government. * * * I only allude to it to rebut the argument that I have heard advanced, namely, that to grant American citizenship to Puerto Rico necessarily involves ultimate statehood." (Hearing quoted above, pp. 5 and 6.) President Taft ratified this point of view by saying: "Neither in the mind of the American people, nor in the mind of the Puerto Rican people, the grant of citizenship should be associated to any thought of statehood." When the Jones bill was passed Judge Horace Mann Towner, then a member of the Committee on Insular Affairs in the House of Representatives (later he became chairman of the committee and afterward served as Governor of Puerto Rico), stated that: "If we grant you citizenship today, said citizenship would not prevent a revolution that you may choose to stir later on. Your condition will continue exactly the same. You could rebel just the same as if we had not granted citizenship. Should the United States desire to confer independence upon you the United States can do it, whether or not you are citizens of the United States. One thing has nothing to do with the other." And Congressman Jones himself, the author of the law which besowed citizenship upon us, emphatically stated: "I believe that in the United States there is no opinion in favor of statehood for Puerto Rico."

The previously mentioned three points generally adduced to support the idea of statehood come out to be, therefore, mere interpretations of opinions and facts which have no bearing to our historical reality. They are points of support of a purely dialetical nature, which a better informed dialectics instantly eliminate, leaving the vanishing idea of statehood in the air and without any real support.

Nations are deeply interested in two things: culture and economics. All questions related to spiritual values are implicitly contained in the former, just as all questions related to material values are implicitly contained in the latter. Those are the cornerstones of every nationality. Sovereignty is nothing else but the power to keep developing, under more propitious auspices, the historial personality in the realms of culture and in the fields of economics.

As a solution to our problem of sovereignty, statehood would be contrary to the historical and natural development of our people. Within the fold of the American Federation we would find ourselves pressed by forces antagonistic to our own forces—antagonistic to them in essence and in substance—since the people of the United States react to a different psychology, to a different social course, to a different way of life, to a different sense of things, to a different spiritual projection. Necessarily, our historical destiny would be distorted, and the creative impulse of our nationality would be void, coming to an untimely end in the dangerous adventure both culture and economics—the two great values for which the people struggle everywhere.

That is why statehood is not the right solution to our problem of sovereignty. To us statehood would not go beyond being a political fiction, or juridical arbitrariness, or at most, an imposition by force; but it could never be a natural culmination of our historical destiny; it could never be a result of the vital forces which act within us. It is just the logic of things—about which Mr. Elihu Root spoke—which discards statehood as a possible solution. The logic of things, the voice of destiny, the sentiment interwoven in the race, the guiding light of the spirit, the mighty force of history: they all proclaim independence as the only possible solution to our problem of sovereignty.

VICENTE GEIGEL-POLANCO.

SAN JUAN, PUERTO RICO, *June 17, 1943.*

The Role of Subsidies

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I submit herewith an editorial appearing in the New York Times:

THE ROLE OF SUBSIDIES

The President's veto message on Friday raised two grave problems: First, what policy Congress and the administration should now adopt with regard to subsidies; and second, what the relationship of the President and Congress will be in dealing with the whole domestic economic problem.

Neither in its arguments nor in its tone was the President's veto message reassuring. Whatever the defects may have been in the bill the President vetoed—and it was altogether proper that he should have drawn attention to these and asked for their correction—it is clear that Congress has been more nearly right on the whole subsidy issue than the President. In the present crisis, it is true, Congress should not attempt to forbid subsidies altogether. Even if there were no such thing as a good subsidy, there would still be such a thing as a subsidy that is the lesser of two evils in a specific situation. Whether a subsidy is more desirable than its alternative is a question that can be answered only for a specific commodity under specific circumstances.

It would not be difficult to show that the specific subsidies that have been most in dispute—the roll-back subsidies on meat, butter, and coffee, and even some subsidies that Congress has quietly accepted, such as that on petroleum—have been either wrong in principle inconsistent with other policies of the the Government, or calculated to do more harm than good in the method of their administration. It was for these reasons among others that Chester C. Davis felt obliged to resign as Food Administrator. His letter to the President did not contain any blanket condemnation of subsidies, but pointed out that the "broad general subsidies" announced by the President would be ineffective "in controlling inflation unless they are accompanied here, as they are in England, by current tax and savings programs that drain off excess buying power, and by tight control and management of the food supply."

Certain general principles should be clear. Subsidies cannot be considered a primary weapon against inflation. They do not in the least deal with its basic causes. The best they can do is temporarily to mitigate certain of its symptoms—always at the risk, which must never be lost to sight, of building up far worse evils in the future. They are at best, therefore, a secondary and minor weapon in the battle against inflation. They play something like the role of dynamite in building a road; and, like dynamite, should be handled only by experts. In no case should they be used as a substitute for genuinely basic measures, but only as a supplement to them. The harm of using subsidies too cautiously would be minute compared with the harm of using them too recklessly.

Yet the President talked in his veto message not only as if he considered subsidies a major weapon in the battle against inflation, but almost as if it were the most important single weapon against it. Of Congress's action against subsidies he declared: "This is an inflation bill, a high-cost-of-living bill, a food-shortage bill. * * * It will have a devastating effect upon our economy and our war effort. * * * This measure will make it virtually impossible to institute any additional measures to reduce the cost of living or even to hold the line."

One reason that Congress has been profoundly suspicious of the whole subsidy program is that it has no confidence that the administration will administer it with care and skill and within strictly defined limits. The President's veto message is hardly reassuring in this regard. It is true that the President declared at one point that subsidies "should be applied only in strictly limited and clearly defined circumstances." But he went on to say that Congress must leave with the executive branch "the means of seeing to it that further increases in producers' prices do not increase the cost of living." When one considers that the roll-back of meat and butter prices, according to the calculation of the Office of Price Administration itself, will reduce the cost of living only 1 percent, though this subsidy alone will cost hundreds of millions of dollars a year, one can only imagine the dimensions of a subsidy designed

to prevent any further increases in living costs—especially with the administration policy of continuing to boost industrial wages, which have already raced far ahead of increases in living costs.

It was gratifying to find the President suggesting, at the end of his message, that "in this task of saving our free economy, Congress and the Executive must work together as a team." But, with the exception of one or two such lines, the implication of the whole message was that the chief duty of the congressional member of the team was to nod approval, and that if Congress failed to approve the President's subsidy program in its entirety he would place upon it the full blame for any failure in the whole anti-inflation program. Surely a more conciliatory spirit and a more extensive use of consultation and compromise are essential to the conception of working together as a team.

Posters Work for Victory

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by myself entitled "Posters Work For Victory":

This is the time of year when all of us are thinking of patriotism, and particularly thinking of it in symbols. The Fourth of July itself is a symbolic reminder of our stirring national heritage and our independence. Our flag is a symbol, the Dome of our Capitol is a symbol, and the very firecrackers that some little boy sets off are a symbol, too, whether he knows it or not. Our great patriotic paintings and war posters, familiar as they are, and equally symbolic, deserve our special attention.

Probably there is not a single American, whether he be a citizen of this land by birth or by adoption, whether he hold degrees from a dozen colleges or be barely acquainted with the three R's, who has not at some time seen, and thrilled to the significance of, that famous historical painting, The Spirit of '76. This is probably the best-known picture produced by an American artist. In one form or another, it has been reproduced literally millions of times, and in every possible way. Color reproductions of it hang in millions of homes. It is constantly used in advertisements, calendars, posters, school histories, and even as a trade-mark. It appears over and over again in patriotic tableaux, and a Fourth of July parade would hardly be complete without the three familiar figures of the stern old drummer, the valiant and determined fifer, and the eager drummer boy. Archibald M. Willard painted this picture in 1876, just 100 years after the event which it commemorates. A large popular demand for colored reproductions immediately placed the picture within the reach of everyone.

In a very real sense The Spirit of '76 was our first war poster. It was made, not during a war, but shortly after a long and bloody one, the struggle between the States, and it has remained for almost 70 years the best war poster which we have ever had.

Henry Kelsey Devereux, who posed for the drummer boy of the painting, says: "The painting created little or no stir among the art critics and connoisseurs. It was not painted for such. The painting was a patriotic human document that reached the hearts of millions and will for centuries to come be an inspiration to further millions yet unborn."

Mr. J. F. Ryder, art dealer and patron of Archibald M. Willard when he was a struggling young artist, gives us the best contemporary account, and, incidentally, the best possible definition of a war poster: "The idea of the artist in painting the picture was to concentrate all the determination and enthusiasm in a few figures * * * Pictures have been painted by artists of great skill, possessing qualities of technique of method, valuable beyond the works of other artists; pictures which give pleasure to experts and connoisseurs. In the midst of such works, The Spirit of '76 stands. The eye wanders from these works of great technique, and is awed by the grandeur of the old man, by the force of the fervid and devoted group, by the spirit which invades the whole. Mr. Willard with his powerful but, perhaps, less-finished touch did more than please the eye of experts; he stirred the heart of a Nation."

During the last war many of our finest artists turned to the production of posters as their contribution to national morale and the war effort. I am sure everyone remembers the Howard Chandler Christy drawing of the tall man in the top hat, with his finger outstretched: "Uncle Sam Wants You " Mr. Christy continues to make inspiring posters during the conflict of today. Particularly memorable is his picture of the Red Cross nurse. His magnificent painting, on an heroic scale, of the Signing of the Constitution now hangs in the main hall of the House of Representatives.

Probably, too, everyone is familiar with the "Four Freedoms," painted by Norman Rockwell and reproduced in recent issues of the Saturday Evening Post. These four stirring pictures of what we are fighting for have had wide distribution and equally wide acclaim. Another extremely familiar poster is one of the fine series put out by the War Production Board: "Men Working Together," which depicts a soldier, a sailor, and a welder, all shoulder to shoulder and looking sturdily forward. War Department, the Office of War Information, and Treasury posters are everywhere—and they represent the best and most vigorous in American art.

This is not the art of the salon, of the critic and the connoisseur. It requires no mood, no studio atmosphere, no correct lighting, no proper background, no hushed voices, and no beautifully printed catalog of explanatory notes. This art must succeed, if it succeeds at all, by immediate impact. It must be effective in any light and against any background—schoolroom, barber shop, streetcar, restaurant. It must be strong enough to enlarge for a billboard or the side of the proverbial barn; it must be sharp enough to make a cut for a letterhead. It must be clear enough to stand reproduction on all kinds of paper, from the finest bond to the cheapest unbleached wood pulp. It must carry its caption boldly, if there be caption at all, so that the passenger on a swift overland train or the casual pedestrian who glances once at a handbill before discarding it instantly seizes and understands the message. It must constitute the graphic representation of the soul and sinews of a people at war. It is not studied, not posed. It is quick and vivid with colors forged in the furnaces of our effort.

The general and generous cooperation of the advertising industry in using the best of American art for patriotic purposes looms large in these difficult days. Few of us will ever forget The Kid in Upper Four. Almost all of our Nation-wide companies have been using outstanding pictures, and outstanding text. I know of one concrete example which, if it did not make history, certainly managed to collide with it. As part of their contribution to the war effort, a New York advertising firm engaged a full page of both the New York Times and the New York Herald Tribune on the day the second front in North Africa opened, to reproduce a poem called Prayer to Jehanne of France by Joseph Auslander. The poem was illustrated by a drawing of Jean d'Arc, made by an American artist, Adolph Treidler, for this occasion. The fact that the page appeared on the very day of the second front was a happy stroke that called double attention to the poem. The advertising firm, the author, and the artist received literally thousands of letters about the page. The whole page was eventually set up as a poster reprint and has been widely distributed.

The national war agencies tell me that: "Posters are divided into five categories: (1) recruiting; (2) selling War bonds and stamps; (3) production, which now includes related subjects, particularly those designed to reduce absenteeism; (4) morale building, general patriotic themes; and (5) security or 'don't talk' posters." I am inclined to believe that the last two categories are the most important. Recruiting will come, as inevitably as the draft; it is virtually a matter of getting a man into the niche best suited for him. War bonds and stamps will be bought and bought in increasing numbers. Production, if only from a selfish motive of the individual who must be sure of his daily bread and butter, must and will go on. In all these fields posters help, but especially in the matter of building morale and of keeping us from rumor-mongering. Every one of us has a moment of despair or depression now and then, when we, almost in spite of ourselves, begin wondering what is the use of it all. Every one of us sooner or later, comes into possession of some isolated scrap of information, which, if overheard by alien ears and pieced together with other seemingly unrelated scraps, can send a ship to the bottom or a squadron of brave men to their graves.

In these fields the national war agencies have gone magnificent work. One particularly notable poster bears the caption, "Strong in the strength of the Lord, we who fight in the people's cause will never stop until that cause is won," from one of Vice President WALLACE's recent speeches. The picture is that of three resolute arms, one holding a monkey wrench, one a rifle, and one an S wrench. Two of the "don't talk" posters remain fixed in my memory. One is a simple brown background, like the sands of the African desert, with a wooden cross and the pitiful heritage of a helmet and a cartridge belt hung over the arms. The title is "A Careless Word, Another Cross." The second depicts a drowned sailor washed up on the beach, his clothing and his fair hair still awash with the sea water. The caption: "A Careless Word, a Needless Loss." The third shows a woman who has just received that fateful message "Missing in Action . . . somebody talked."

We learned to "Join the Navy and see the world" through a poster which has served well in peace and war. Now we learn to buy War bonds through the huge billboard on the lawn of the Treasury Building—one of the best strokes of outdoor advertising which has come to my attention.

Let us remember to give our war posters more than a casual glance. They are really worth while. And some of them may be tomorrow's famous paintings. The more simple and direct and vital they are, the more our heart's blood is set pounding. I want to take this opportunity to congratulate the national war agencies, the advertising industry, and the artists themselves for the help contributed toward winning the war by this useful and helpful medium—the Poster.

Generation of Power at Boulder Dam

EXTENSION OF REMARKS

OF

HON. MAURICE J. SULLIVAN

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include an article from the Reno Evening Gazette of June 21, 1943, on power generated at Boulder Dam:

BOULDER POWER AT RECORD PEAK—NEW GENERATOR TO BE INSTALLED

Boulder Dam has become the first single power plant in history to operate at more than 1,000,000 kilowatt capacity.

The record output, sufficient to meet the prewar needs of a city the size of Chicago, first was reached June 11, Interior Secretary Harold Ickes told the Associated Press at Washington today.

The rated capacity of the Boulder power plant is about 950,000 kilowatts, but by operating the 12 big generators at a 10-percent overload it was possible to obtain more than 50,000 additional kilowatts.

The Bureau of Reclamation has ordered another large generator of more than 80,000-kilowatt capacity and that when all installations are made the capacity will reach 1,332,300 kilowatts. The 1943 output is estimated at 6,000,000,000 kilowatt-hours, more than the 1921 production of all Pacific coast plants.

A large proportion of the power from Boulder Dam goes directly or indirectly to airplane factories, shipyards, munitions plants, air fields, army posts, naval stations, mineral developments, and other industries in southern California and Nevada.

The Office of Dependency Benefits

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 5, 1943

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks I include here an article written for the Saturday Evening Post by Mr. J. C. Furnas, in which he explains the problems and methods of procedure of the Office of Dependency Benefits.

The article follows:

THEY GET 'EM PAID

(By J. C. Furnas)

On her way back from the Rural Delivery box, the old lady noticed that a Plymouth Rock chick had fallen into the brook and was swimming no better than you would expect. She dropped the mail in a fence corner and went to the rescue. When she returned, the old cow was standing near by, her jaws swinging thoughtfully, but whether in eating or cud chewing was not clear. The weekly paper was still there, but the skinny stampless envelop with the highly official air was gone.

Inside that envelope and now inside the cow was a check on the United States Treasury for $37—the old lady's indispensable monthly allowance from her soldier son in cahoots with Uncle Sam. So she went back to the house, got out the rusty pen and dime bottle of ink and the lined tablet, and wrote the Office of Dependency Benefits about it—the whole story, down to the possibility, for she was fair-minded, that the wind had blown the envelop away and the cow was guiltless after all.

What is Office of Dependency Benefits? For one thing, a set of initials already bulking larger than anything since Works Progress Administration as an American household word. Formally, it is the Office of Dependency Benefits, a unit of the Army's Services of Supply. Physically, it fills a brand-new 18-story office building in Newark, N. J., commandeered from a great life-insurance company. Functionally, it is a key war-production plant. This north end of Jersey is full of high-powered industries making ships, motors, planes, bandages, and explosives. But, for importance, Office of Dependency Benefits need take no backtalk from any of them. Its job is the mass production of morale for both civilian and military needs.

That is no mere metaphor. The Office of Dependency Benefits plant uses both production-line methods and diabolically ingenious machine tools to speed monthly production of more than 2,500,000 individually made-out checks, totalling more than $110,000,000 a month, paid out mostly to soldiers' families and dependents. Its daily mailing floods the gasping Newark post office in a quantity usually expected of a city of 150,000 people. If that isn't mass production, Henry Ford is a hotel doorman. And the vast majority of checks so mailed mean continued reassurance to fighting men that the folks they left behind are not resourceless.

That is where the morale comes in—plenty. Too many soldiers brooding over those at home would be just as dangerous sand in the cogs of the war effort as too many families at home angry, hungry, and frightened because their breadwinners have been hauled off to camp.

Congress created Office of Dependence Benefits last June in a burst of enterprise due to suddenly realizing that something had to be done about the dependents of the family men who were soon to be drafted wholesale. The Navy has a smaller similar set-up. Who gets what and why is simple in principle. Of accounts handled, some 950,000 are class E allotments—money regularly deducted at soldiers' request from their pay and remitted to dependents or savings bank or life-insurance company. The Army has run that system since Spanish War times. Anybody in uniform, from General Marshall down, can get in on it voluntarily. The only limitation is that enlisted men can't peel down below the $10 a month considered a soldier's necessary minimum by his solicitous superiors.

That is a colossal job in itself. Office of Dependency Benefits also handles Public Law 490 accounts—emergency payments to needy dependents of soldiers captured or missing or otherwise out of touch. That job will get tragically busier and bigger as American expeditionary forces tangle more with the enemy in the other hemisphere. But family allowances, aimed directly at the draft-and-dependents problem, are the biggest job of all—to date more than 2,000,000 separate and individual accounts, each full of personal emotions.

Family allowance is a special privilege of enlisted men up through the rank of sergeant. Because their pay is supposed to be enough to enable them to look after their folks unassisted, fancier non-coms and officers need not apply. A married private, for instance, can chip in $22 of his monthly pay of $50, whereupon Uncle Sam chips in $28 and sends his wife $50. A first child rates $12 monthly, subsequent children $10 each. The total of the Government's contribution rises with each additional child, but the soldier's contribution rises only if he has class B dependents as well as class A relatives. He chips in an additional $5 for class B's. A dependent parent gets $37, a dependent sister $27, if no other dependents are in the picture, and so on in a nicely graduated scale through several hundred varying cases, all figured out in advance, with Uncle Sam making up the deficit wherever necessary.

Being sensitive on the subject of drafting husbands, Congress even fixed it so wives and children are looked after regardless of either need or the soldier's wishes. Parents, sisters, and so forth, are only class B dependents, getting an allowance only if the soldier asks for it and after "disinterested parties" have made affidavits that the dependency is real. But wives and kids are class A. Even if Private John Doe doesn't apply, even if he doesn't want to in the least, even if his wife Jane has a job that supports her or an independent income, she has only to prove to Office of Dependency Benefits that she is married to him and start collecting $50 a month, rain or shine.

On finding $22 missing from his pay for the benefit of a lady who doesn't need it or whom he hasn't seen for 5 years and doesn't want to see for another 500, John may get unmistakably burned up about it. Since common-law marriages, still obtaining in many States, are also recognized by the allowances law, John may actually find himself helping support a lady to whom he didnt even know he had become formally attached. But he has no recourse. The law says one legal wife—or one divorced wife entitled to alimony—equals one full allowance, any time she applies. Those in Office of Dependency Benefits who should know, however, say this arrangement does a great deal more good in protecting wives with regardless husbands than harm in giving unscrupulous wives a chance to bleed men in the service.

That is only one of a thousand ways in which the personal equation crops up in Office of Dependency Benefits. Newark is spang in the middle of the Nation's heaviest concentration of population—a good 10,000,000 Americans within 25 miles—and every day three or four hundred Office of Dependency Benefits beneficiaries come shyly or belligerently in from New Brunswick and Brooklyn, Paterson and New Rochelle, to check up on what happened to that money the boy said he would send. Fifteen full-time interviewers barely manage to keep sympathetically abreast of their confusions and problems. Ten more are needed to handle the day's usual bag of 300 phone calls, often over long distance. On occasions Office of Dependency Benefit's staff must cope with more than a dozen different languages. But Armenian, French, or Cantonese, it all translates into the one sore point of "Where's my dough?"

Distress cases—where the caller is having a baby or is stony broke and can't wait for allowance payments to go through—are turned over swiftly to the Red Cross or the Army Emergency Relief for quick rescue. The Army Emergency Red Cross maintains a small and harried staff right on the premises, also handling any and all distress letters arriving in the mail room downstairs. Special readers look for signs of tragic trouble and shoot such mail to Army Emergency Red Cross at once. Army Emergency Red Cross then wires its local office, wherever indicated, and help is on the way.

Some of the callers in person take versatile tact in handling. There was the lady last winter indignantly asking how come she couldn't draw Class A allowance from all three of her husbands. Told she couldn't legally be married to three men at once, she retorted crushingly that she had been careful to marry each in a different State. The Office of Dependency Benefits still said no. But it neglected to pursue the matter of whatever bigamy might be involved. Its job, it feels, is to

pay money where Congress says it is due, not censor the customers' private lives.

To make up for her, however, there was the lady appearing later, showing indubitable proof that, just to be on the safe side, she had married her man three separate times.

Enter an excited Italian unable to understand that the money his boy wrote about can't be paid till after the first of the month. His idea of speeding things up is to stand and shriek fluent Sicilian in the interviewing room until guards work him out into the street. Enter a soldier's pregnant wife, parking defiantly in a chair and announcing she will stay right there, 24 hours a day, until either check or baby appears—preferably both at once on the spot. Enter an embarrassed old Irishman, explaining that his baby grandson fell foul of the check and tore it up.

Producing the pieces from his hat, he wants to know can he get another check right away; the electric bill is way over-due. As it happense, he can; whereas the old lady with the ruminative cow is probably in for a long wait. The United States Treasury is very slow about issuing duplicate checks without better proof of loss than the cow could furnish when put on oath.

Requests for documentary evidence of children's legal status are often baffling. Such six-bit words may move a mother of eight to bring the whole brood to Newark in person, deploying them in platoon front before the interviewer. Whatever documentary evidence may or may not mean, here are Angelo, Maria, Giuseppe, Giovanni, Beatrice, Lucia, Francesco, and little Pietro yowling in her arms, to prove they unquestionably exist and could certainly use $10 a month apiece. Under such circumstances class A allowances can add up amazingly. A recently drafted husband and father from a Pennsylvania industrial town had been on Work Projects Administration at $87.50 a month. To the surprise and delight of all concerned, he found that allowances would better than double the family income the moment he was inducted—1 wife and 11 children equaled $162 a month, not to mention that papa was also getting free lodging, clothes, and food, and $28 a month cash besides.

But for every customer who comes in person, thousands take pen in hand. It takes 22,000 square feet of desks and more than 750 letter-writing clerks to answer the daily mail. Everything gets answered—not only correspondence straightening out formalities, but all the letters of protest, appeal, and slander that keep flooding in from Geyserville, Calif.; Sebeka, Minn.; Jacobsburg, Ohio; Bloomfield, Conn., and practically all points in between. Only two in five are standard enough for form letters in reply, and the flood is steadily mounting. The officer in charge of the correspondence branch is, consequently, always at his wits' end for an adequate supply of letter writers, and says, with a grim kind of satisfaction, that this one end of Office of Dependency Benefits will outlast all the rest of the outfit—long after peace has washed up the determinations or information branch, the girls will still be writing letters to folks in Dogtrot, Ark., who want to know, with reason, what happened to the money Uncle Henry wrote he was sending 47 years ago.

Three or four hundred letters a day come from Representatives or Senators in there pitching for constituents who want help in building a fire under Office of Dependency Benefits. A few enterprising legislators, in fact, appear to have circularized their districts with form letters saying you may be eligible for an allowance if you have relatives in the service, and, if so, just let me know and I'll gladly fix it.

There is no fixing. Office of Dependency Benefits handles inquires or applications by precisely the same method as if no franked envelope was concerned. Now and again somebody writes the President direct. One recently turned up addressed: "Mr. President Theodore Roosevelt." There was probably a much higher I. Q. behind the soldier who, after studying the regulations, concluded that he was unquestionably dependent on himself and applied for a class A allowance in his own favor.

Nobody yet knows what lay behind the case of the soldier and wife who couldn't get together on what their children's names were. The 6-year-old daughter on papa's application was named Angela Mae, for instance, whereas his wife stated firmly in papers she submitted that the child was named Ann Beulah. A dubious detail like that usually produces on-the-spot investigation. Among millions of beneficiaries chiselers and fakers are sure to show up, and some 12 regional field investigation offices from coast to coast are constantly working at ferreting out the fraudulent claims.

On the whole, however, Office of Dependency Benefits has been startled by its customers' honesty. When allowance payments were just starting hardship cases were often sent regular allotment checks while family allowance applications were pending, the allotment being a charge against the family allowance payments later. In practically all such cases mere notice that refund was expected produced quick and complete repayment—so far $250,000 has been refunded without any kind of pressure being applied.

The patriotic honesty of wives and old folks who write in refusing payments is even more warming. A migrant west coast laborer, by definition no plutocrat, said no with great effect:

"I think we can get along the way we are without any Government family allowance. Who knows? What you would allow me might be the straw to break the Jap's back. If George wants to send us a little to help along, O. K., but we don't want your allowance dear old U. S." When a soldier is headed overseas, Office of Dependency Benefits reminds him that allowances and allotments had better be arranged to avoid long-range delays later. Even after arrangements have been completed on the soldier's initiative, the beneficiaries may refuse articulately.

"Hope I never need assistance, so every cent we have can go to help win the war quicker," wrote one father under those circumstances. "This boy did not know I could keep agoing, but I can." It made lumps in the throats of several correspondence clerks when a scrawly letter came in from an old Mexican couple in Arizona, saying they were doing all right without an allowance:

"I am glad because he is going to defend our country, and I am sorry because we are very old to wait until he comes back. And we want the Army officers to do us the favor to take a good care of our boy, Juan S. Hernandez. He doesn't know how to talk a very good 'inglesh."

Better staff work at the customers' end would often help speed payments up. Many slow-ups occur because wives don't know their men's Army serial numbers—the quickest point of reference for that particular guy in Office of Dependency Benefits files. Names can be run down eventually in most cases. But when the files already contain 6,000 Smiths, of whom more than 500 are named John, the difficulties are evident. Out of sheer instinct for sabotage, some women lacking serial-number information blithely dreamed up likely sounding strings of numerals and wrote them in the proper spaces, thereby tangling up any possible chance that Office of Dependency Benefits trouble shooters could straighten out their difficulties.

Many customers don't know what a birth certificate or an affidavit is. Or, as a baffled wife reported, "I can't find no notary republic in this here neighborhood." Others report that some small-town bankers or lawyers, asked to help in making out affidavits testifying to dependency, just glare suspiciously at this newfangled document and refuse to have anything to do with it. A country bank distinguished itself last winter by returning an allowance check to the depositor; it was punched all full of funny-looking holes, the cashier pointed out, and had obviously been canceled. Probably the only case on record since the panic of 1837 when a check on the Treasury of the United States bounced.

The error is not quite so flagrant as it sounds, since these checks are not only full of holes, as alleged, but are also made of thick cardboard instead of paper and have one corner cut off—the effect is very like what the State Department does to a passport in canceling it. All that is required to suit the needs of the automatic sorting, calculating, recording, and mailing machinery, without which it would probably be impossible to get the job done, unless half the United States were hired as clerical help.

Setting up Office of Dependency Benefits has been a field day for makers and designers of such half-human gadgets. Once an account gets into the works, the entire process of monthly check writing and addressing is literally untouched by human hands. No layman can begin to describe the involved sensitivity and accuracy arrived at. The net of it is that the soldier, the dependent, and the amount are all reduced to code numbers on a stencil card with oblong holes punched at significant places. When the card goes through the works, cunningly alined steel fingers feeling for the holes actuate machinery that writes the check. It is signed by machinery and even inspected by machinery. Another clacking gadget runs both checks and stencil cards through itself and throws out, in disgust, any check that doesn't agree absolutely with the information on the card that sired it.

Machinery also does the enveloping and sealing. Since the enveloping machine occasionally puts two checks in one envelope or sends another through empty, the Office of Dependency Benefits has a gadget that tests filled envelopes for too much or too little thickness. When it finds a suspicious specimen it flashes a signal and hands the offending envelope to the operator. The temptation to give it a bit of dog biscuit for reward is practically irresistible.

Many of the officers who supervise these Tom Swift robots were recruited from among the crack personnel of business-machine manufacturers. Half their time is put in making sure that the drama of human life gets properly recorded on the file cards as it happens. Private Doe's wife has another baby—$10 must be added to her allowance. Sergeant Box's mother dies and her allowance is discontinued. Captain Cox's daughter marries a marine lieutenant, and father reduces his allotment to her. Every such item of emotion-charged behavior—birth, divorce, marriage, death—translates into numbers like 467892093876 73694 6 500 on a new card with mystic punch holes to match, and next month the machine recognizes all the facts as a mechanical matter of course.

Get 'Em Paid! is the official slogan, printed huge on poster strips on every wall in the building. It has been tough going right up to now, and present plans in Washington to go in even more heavily for drafting married men won't simplify matters. Under the original law and starting last June with two colonels and a secretary, the mission was to get the first allowance checks mailed by November 1, a date that looked barely possible as of then. Early in summer, however, the demand for allowances piled up so that the law was

amended, shifting the starting date forward to September 1.

The Office of Dependency Benefits could only moan, send a figurative roustabout to sit on the safety valve and pile in the wood till the sparks flew out of the stack as big as pigeons. With steam leaking at every gasket and the untried disbursing set-up threatening to tie itself into pretzel bends any minute, she managed to meet September 1 on the nail. The customers apparently appreciated it. Several of them actually sent Christmas cards to the Office of Dependency Benefits with grateful messages written in.

Booming in number of employees and accounts handled, the outfit was just hitting its stride in Washington last fall when the second blow fell. In one of the decentralization moves now popular, it was decided to shift Office of Dependency Benefits from the overcrowded Capital to some area offering more employee housing and better help-recruiting facilities. Such a shift always means terrific pay-roll mortality. The average employee of an agency booked to move immediately rushes out and gets a job in an agency due to stay in Washington, so he won't have to uproot himself. Office of Dependency Benefits lost 60 percent of its newly trained and organized personnel at one swoop. Even so, in both personnel and bulk of files and equipment, it was the biggest such trek yet made when, in November, 3,400 Office of Dependency Benefits employees invaded Newark so slickly that total interruption for any department amounted to only a couple of days.

The director, Col. Harold N. Gilbert, United States Army, a native of Pennsylvania, on whose broad shoulders rests the tremendous responsibility for this vital activity, is an organizer and administrator of long and wide service. He raised the whole show from a pup to its present strength of 150 officers and about 9,500 civilian employees. Previously, by his foresight and planning, the largest peacetime Army and Air Force in our history was recruited; it gave us a head start when war finally broke upon us. Among the bright colors on the left breast of his uniform are the ribbons of the Distinguished Service Cross, the Distinguished Service Medal, and the Purple Heart, attesting to his outstanding services to our country.

A good many of these Office of Dependency Benefits officers, completely lacking enlisted men under them and in command principally of shoals of young women, carry the Victory medal ribbon that means service in the last war, often with the tiny gold star that means the wearer survived action.

When taking over this present job, which involved creating a new organization to administer the allowances, greatly increasing the already existing machinery for allotments and synchronizing the two, the colonel laid down the principle, "No moss or barnacles brought along," from outside and stuck to it. His correspondence branch has many innovations that save time and work; his production lines for routing case records and correspondence are unlike anything else ever seen under heaven, but they keep the job moving fast; flexibility and "Why not do it this way?" alone got him through those first few months of fantastic development, which has enabled the Office of Dependency Benefits to receive and handle more than 2,000,000 family-allowance claims, nearly 1,000,000 allotment accounts and more than 15,000,000 pieces of mail, exclusive of checks, up to the time this was written. Now he is hammering at a new principle. He is going all-out to get and keep it in the heads of his whole crew, from department supervisors to messengers, that the checks they stuff into mailbags are aimed at real flesh-and-blood human beings like themselves to whom lack of the money involved can mean deprivation and heartbreak.

Independence Day Address by Senator Wiley at Abbotsford, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an Independence Day address delivered by me at Abbotsford, Wis., on July 3, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the Fourth of July, 1776, a resolute group of farmers, lawyers, and businessmen wrote their names to the document called the Declaration of Independence. They were daring men who signed that instrument. They were courageous and liberty-loving.

The Nation at that time consisted of 13 colonies along the Atlantic seacoast with a total population of about 3,000,000 people—about the same population as now living in Wisconsin.

Those were the horse-and-buggy days. There were no airplanes, no radios, no railroads, no cement highways, no steamboats, autos, or gasoline engines, no telephones or telegraphs. But there were thinkers in those days—folks who thought strongly, who loved liberty, and justice, and who dedicated their lives, their fortunes, and their sacred honor, to carrying out that Declaration of Independence.

Since that eventful Fourth of July in 1776, the world has changed much. America has changed. We have become the foremost Nation on earth, and the British whom we fought in those days are now our allies in a world struggle.

Most everyone who hears my voice has a personal interest in this war. Each of us knows that if we should lose, it would mean economic and political slavery for us. Many of us have a son, brother, sweetheart, husband, relative, or friend in the Army, Navy, Air Force, or in a war production plant. Each one of us on the home front is seeing to it that the home front is held intact. We know that if the home front is not kept intact—that is, if the morale breaks—production will break, and if production breaks, the boys on the front line won't have the wherewithal with which to fight and we will lose the war. We know that the food and the weapons which our boys get are what equip them for victory.

But, you ask, when will victory come? That I cannot answer. When war came upon us on December 7, 1941, we were not prepared for it. It came like a thief in the night. But now, thank God, we are prepared.

Some of us in Washington were anti-interventionists. We knew that America was not prepared psychologically or otherwise for war. Every Gallup poll showed some 60 to 90 percent were against intervention. If this country had intervened in war, there would not have been the unity there is today, but we were attacked by a treacherous foe—this foe intervened in our affairs—and now a united nation dedicates its all to victory.

We have a tough job in front of us, and, in my opinion, a longer job than some folks seem to think. I would make sure that none of us become overconfident, and I would make sure that none of us indulge in the spirit of defeatism.

There is reason for the faith that is in us—the faith that we will win. Why? Because we are fighting a just war and the god of battles is with us.

Our recent victories in Tunisia, in the south seas, and in Attu, are all indicative of the fact that we are hitting our stride. But this must not breed overconfidence. Once Hitler was victorious and many of the folks in this country believed he was invincible, but now the situation has changed.

In the days of Hitler's victories, Britain was unarmed. Only a few intrepid flyers in Britain and the British Navy stood between her and slavery. Today her armed forces have increased a thousandfold. Today she has joined with us in sending tanks and planes to Russia. Today her Royal Air Force and ours control the air over Britain and the Channel and Europe. But we must remember that we haven't a soldier on Europe's soil—Hitler's fortress. The battle has just begun.

Today Russia—magnificent Russia—who has given 10,000,000 of her lives, still stands valiantly baring her breast against Hitler's hordes.

Today we have almost a three-ocean Navy and three and one-half million men in the armed forces, with millions more on the way. We have seen many set-backs since Pearl Harbor—the loss of Bataan, Corregidor, and the Philippines, 3,000 dead at Pearl Harbor, over 65,000 casualties—killed, wounded, and prisoners.

But we have also seen magnificent victories—the story of Midway with the Japanese threat turned back, the Battle of the Coral Sea, 3,000,000 tons of Japanese shipping at the bottom of the sea, and, above all, we know that these so-called weakling sons of ours—those sons who the Japs said could not fight and would not fight—are, man for man, better warriors than either the supermen of the East or of the West. They have demonstrated this in the air, on the sea, under the sea, and in every battle in which they have engaged.

On the home front, while we may differ about partisan politics, we are united in the effort which will bring victory. Labor and management are doing a tremendous job. Our production has been the marvel of all time. Our bombers are flying across to Britain in droves. We are way ahead of production schedules.

Our armed forces are made up of Colin Kellys, General Doolittles, John Buckeleys, Commander Gilmores, Elsie Otts, Lieutenant O'Haras Admiral Callahans—men and women of extraordinary heroism and devotion to duty.

These boys of ours are flying over the continents and seas of the earth, plunging through bomb-infested skies. They are struggling and sweating and dying in the deserts and the jungles. They are sailing underneath the surface of the seven seas, destroying the commerce of the enemy—they are doing all of this for you and me, that the enemy may be kept from our beloved and their beloved homeland.

It is up to us to carry on as their bravery demands. This is no time for any of us to so love gain—that we neglect our job on the home front—the job of production and the maintenance of morale. It is no time for the racketeer and the profiteer. It is no time for the breeding of hate and dissension.

When Thomas Jefferson died on the Fourth of July, 1826, his last words were, "Tell the committee to be on the alert." That is the lesson which Pearl Harbor should teach us also. This Nation must be constantly on the alert—alert so that dangers from without and dangers from within cannot destroy the great values of which we are trustees.

These great freedoms of ours—freedom of press, speech, worship, petition, trial by jury, freedom to work and to own and accumulate

property—these did not come into being by accident. They were the result of hundreds of years of sacrifice. They can only be preserved by this people remaining on the alert. We are told eternal vigilance is the price of liberty. It is also the price of retaining liberty.

For 167 years we have kept the light of freedom—like a beacon light—burning so that all mankind could see it. Hitler and the Japanese would snuff out that light and make us slaves as they have made the Czechs, the French, the Dutch, the Norwegians, the Danes and the Belgians.

We have accepted the challenge made by our enemies to our liberties and our freedoms, and we have dedicated all that we are and all that we hope to be to the preservation of those freedoms.

It is to the preservation of those freedoms that I desire to speak very seriously. Some day this war will be over. Some day our boys who are astonishing the world with their valor will be back to take their part in the maintenance of law and order and the preservation of the American way of life. They will become with us the American phalanx that will preserve the Nation against all impacts, internal and external.

As we are seeing now, little Hitlers will arise; there will be opportunity for such to come into being because in the future there will be many problems, economic, social, and political. Then we will see these fake mastermen come forward like the old medicine man in my boyhood days. They will come forward with all the fake remedies and panaceas.

I can see that medicine man now standing on the corner mesmerizing the people. First he would describe all the symptoms, all the aches and pains. Then he would build himself up to where the people might accept him as the great remedial agent—then he would pull out the bottle and sell it for a dollar or more that didn't cost him over 5 cents.

So today we have the medicine men of this generation. They are no different from the racketeers in labor and in management. They dwell on the ills. They make out a great case and of course their purpose is to "sell a bill of goods" and the "bill" they sell is not the fake medicine contained in a bottle but the fake philosophies contained in their heads.

They have another technique. They are in fact little Hitlers. He used the idea "divide and conquer" and almost conquered the world with it. But these fake politicos we now have, even have the nerve in these days to try to divide management and labor. They have made contact with individuals who find it to their advantage to preach dissension and discord, hate, etc. One would think, as one listens to the impassioned plea of these modern medicinemen, that management only contains bad men. You and I know that a bad man, no matter where he is, makes a bad condition. A bad man, be he clergyman, lawyer, farmer, businessman, or laborer, will affect detrimentally the place in which he lives and operates.

No one in America, except the racketeer type, wants to interfere with the rights of labor. I said "except the racketeer type." We have a small percentage of folks in and out of labor of that type as we all know.

As we proceed along on our course toward victory and approach the era when this Nation is among the victors in fact, it is the obligation of each of us to see that there are no supergovernment groups in America. By that I mean there must be no group in America that is bigger than the Government.

I am talking to the farmers today. The farmer has never really organized. Of course, there are various farm organizations, but by and large, the farmer is an individualist. I thank God for that. He is not driven like sheep. He thinks things through.

For a while he may be led by a demagog—someone who plays up his fears and emotions—but ere long he awakens and he lands on both feet. The reason for this is because he lives close to mother nature. He sees in nature a certain standardization. The frills and the folderol of superficial living do not belong to him. Politically, he is occasionally taken for a ride by some politico or sham messiah, but he lands back on his feet.

In my opinion, he is the hope of the Nation. He will not stand for any group taking over this Government for any length of time. He knows the value of American citizenship. He wants his children, when he passes on, to enjoy those values and privileges.

Right now the farmer is becoming fed up particularly with what the theorists in government tell him he must do. Essentially the farmer is a practical man. He has learned that industry and thrift and honesty and hard work bring results. He has dedicated all that he has to the preservation of what he considers as the American way of life, and he will not be led astray by any of these fake medicine men who come around and preach class hatred, fake political ideas, and would build their own political fortunes on division.

With God's help, fellow Americans, we will remain constantly on the alert against any internal Pearl Harbors or any external Pearl Harbors, and with His help we will carry through to victory, making sure that our children and the children of America for all time to come will possess and enjoy liberty and freedom.

What Happened Flag Day

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, I hold in my hand an editorial entitled "What Happened Flag Day," published in the New York Journal-American. The editorial is a most patriotic one, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT HAPPENED FLAG DAY?

By what accident did two branches of the Federal Government, the executive and the judicial, select Flag Day to deprecate or to disparage the American flag?

Was it purely an isolated circumstance that the Executive, by a proclamation of the President and by an exhortation through the Office of War Information, proposed that all of the flags of the so-called United Nations be impartially displayed on the one day set aside by Federal law solely for Old Glory and that in the medley of alien colors the four-barred ensign of the hypothetical "four freedoms" be prominently flown?

Was it by mere chance that this day of all days should have become the occasion for the Supreme Court to reverse its numerous previous decisions—including at least one decision handed down by present members of the Court—and to hold for the first time in more than 150 years that neither the Congress nor the legislatures of the several States may enact laws to be obeyed by all making a salute to the flag a part of the ceremonial in public schools or, presumably, in any other assemblage?

And was it wholly fortuitous that these highly significant actions occurred at a time when propagandists, some of them from foreign lands, are trying to needle the American people into a League of Nations condition of mind, for the post-war construction of a supereminent "world government" in which the American people shall submerge their historic freedom and to which the American Nation shall abandon its priceless sovereignty?

It is obvious that if a supergovernment is to be erected, in which America is to be entrapped, the American people must be converted away from that jealous regard for their own form of government which has never, until now, been successfully assailed.

It is equally obvious that the people cannot be seduced from their old and ingrained loyalties, for which their forefathers shed heroic blood on these shores and for which their devoted sons are dying even now in wide regions of the earth, unless the people can be induced to disrespect the symbol of their nationality and to reject the instrument of their democratic governance.

That symbol is the flag.

That instrument is the Constitution.

The two of them are inseparable in the hearts and thoughts of patriots.

So long as our flag flies unchallenged over our offices and domiciles, so long as the Constitution prevails unimpaired over our civil processes, America will remain the free home of a free people.

When the flag is allowed to be belittled, when the Constitution is permitted to be distorted, our loyalty diminishes and our liberties are in danger.

And both the flag and the Constitution are being ominously challenged today.

We are being told that the United States now belongs to a group of governments comprising the United Nations.

Insofar as the phrase implies only that we have temporary military allies in a world war, it is a plain and honest phrase.

But we know—as witness the "world government" propaganda—that the phrase "United Nations" is also used designingly to denote a scheme of future international entanglement from which America, if once enmeshed therein, could probably never deliver herself.

Similarly, in being asked virtually to adopt the flag of the "four freedoms" we are told tacitly that the blood of our fighting men flows abroad to cement these freedoms into the creaky foundations of world government.

However, the way to slay such chimeras is utterly simple.

Let us merely look at the truth—the truth that our 10,000,000 men in arms are not fighting for myths and vagaries.

They are fighting for America—for the American flag and the American Constitution.

And so we arrive at the other aspect of this confused subject—the aspect that concerns us alone, as a nationality.

We arrive, in other words, at the Supreme Court decision on Flag Day declaring that the flag need not be honored by Americans in America.

This decision, nullifying four previous Supreme Court decisions, took for its basis the first amendment of the Constitution, part of our Bill of Rights.

And this decision was preceded by voluminous and continuous propaganda in left-wing publications calling upon the Supreme Court

for a reconsideration and reversal of its previous judgments.

Until this Flag Day the Bill of Rights has never been interpreted in such a way as to protect unpatriotic or subversive deeds or words.

If the new decision remains as the supreme law of the land, it may spawn all kinds of troubles and may be invoked to shield all kinds of villainies perpetrated in the name of constitutional freedom.

Now, the query remains—why did the Supreme Court choose this particular day to hand down this amazing decision in reversal of itself?

Why, indeed, did not the Court avoid this designated day?

The decision could have been issued any day.

So why was this decision, holding it to be no crime to despise the flag, made public on Flag Day—the one day in all the year that is dedicated to the flag; and the only Flag Day—strange coincidence—since the occasion was instituted in 1916 on which the executive branch of the Government has paid public honor to other flags than our own and has asked the people to do the same?

Had there been a set purpose to displace our flag from its primacy in the minds of the people and to subject its lustrous folds to contempt, the deed could not have been more skillfully contrived.

Recess of Congress

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. RANKIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. RANKIN. Mr. Speaker, I understand a resolution is going to be brought in here to recess this House for 2 or 2½ months. I want to say in all seriousness that I shall oppose any such recess. I think it would be a terrible mistake—with the country in the condition it is, with the war at its height, with race riots all over the country, with internal disturbances disturbing the administration, with much unfinished legislation pending before us—it would be a serious mistake to adjourn this Congress and go home for that length of time.

We might be justified in taking a recess for 3 weeks, with the understanding that at the end of that time we would take 3-day recesses; but I am not willing, under the conditions that now exist, to vote to adjourn for a period of two or two and a half months.

I believe I have been as consistent as any Member of the House in trying to stay here and attend to the business of the Congress.

I am told that I was the first Member who ever served in this House who answered every roll call for 10 consecutive years. On yesterday our colleague the gentleman from Georgia [Mr. BROWN] finished out his 10 years without missing a roll call. I am glad to welcome him to the 10-year club.

Of course, it is nerve-racking at times to stay here, and sometimes I feel like Alcibiades who is said to have stopped his ears and fled from the presence of Socrates for fear he would grow old listening to his eloquence.

But we were elected to serve here, and I, for one, feel that we should remain at our posts of duty—especially during these trying times.

Bureaucracy's Threat to Liberty

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 6, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, one of the causes of the American Revolution was the number of Government employees sent by the Tory Government of England to govern the actions of the Colonists. Accusing the King personally of this form of oppression, the Declaration of Independence stated that—

He has erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out their substance.

The right of home rule, the right to govern themselves through officers of their own choosing, the right to change those officers whenever they should not serve the common interest—these were some of the reasons for the revolt against the Government of those days.

During the last few years those same reasons have returned again to menace our freedom. Again home rule is threatened in every community and State; again our right to have our actions governed by officers of our own choosing is being outrageously infringed; again our right to rid ourselves of unwanted officials and unneeded offices has been made impossible to exercise. And again there are signs of a spirit of revolt against a situation fast becoming intolerable.

When Thomas Jefferson was President, there was but 1 Federal employee for every 5,308 Americans. Today there is 1 Federal employee for every 45 persons, without counting the men in uniform. Figuring the average American family at 4½ persons, this means that 1 in every 10 families is supported by the Federal Government, and help to rule the other 9.

These Federal employees are not all in Washington. Most of them are scattered throughout the States Less than half are concerned with the war. There are 44,000 Federal employees in the State of Michigan alone, as compared with 93,000 Michigan State and local government employees—excluding the 50,000 engaged in education. The total number of Federal employees in the United States on April 1, 1943—the latest official figures available—not counting the military, is 2,991,327. The total number of State and local government employees, including school teachers, is 3,237,000. More than 48 percent of our combined Federal, State and local government employees are at work administering the laws of the Central Government at Washington. This in a country which fought for its freedom from a government that denied the principle that local affairs should be governed by local governments consisting of local officials.

There was a time in the memory of living Americans when the only contact most persons had with Federal officials was when they bought a postage stamp, saw a United States marshal ride horseback into town, or caught a glimpse of a Federal circuit judge alighting at the station platform for a short term of court.

Today, however, Federal officials and Federal officeholders are permanent residents of every city and county, almost of every block and township. There is now hardly a man or woman but who must frequently accommodate his actions to the regulation of some local representative of the strong, centralized power in Washington which we have allowed to encroach upon the rights of States and communities to govern themselves in matters affecting only local interests.

Businessmen are harassed and handicapped in attempting to serve their customers and clients by multitudes of Federal regulations, often based upon little or no legislative authority, and too often administered by small-fry Federal employees from whose whimsical, but annoying and dangerous interpretations, appeals are costly and time wasting.

O. P. A.'s regulations controlling business transactions fill 5 thick volumes with 11,000,000 words. Even housewives are not immune from the effects of the extension of Federal power through the O. P. A. The regulations proposed to govern housewives who seek to can and preserve food for their family tables fill 6 newspaper columns with technical wordage. It took 500 O. P. A. lawyers in Washington to prepare this agency's maze of regulations. More than 2,200 more lawyers have been hired to see that they are enforced in every State, city, and village, on every farm and in every home.

It is the same story in many other Federal agencies and bureaus. The entire country has been infiltrated with Federal employees who draw their power and authority, not from the States and communities affected by their actions, but from the Federal Government in Washington. Their first allegiance is not to those with whom they deal and among whom they live, but to a hierarchy of officialdom which may be thousands of miles away.

Herein lies a grave danger to our continued freedom: That thousands of those who govern us are not subject to the people's control. They are not elected by the people. They are appointed by entrenched bureaucracies in Washington. Neither are these bureaucracies

subject to anything more than the most tenuous supervision or control by the people or the people's representatives in Congress. The King's officers in the American Colonies and the absentee landlords of Ireland never created a situation more inimical to the liberties of a people than does the presence of Federal employees extending their power even into the most remote villages in America.

The tremendous cost of this continent-wide government by bureaucracy is secondary to the threat it has created to the American system of representative democracy. True it is that the salaries of Federal employees, even though they are numerically 10 percent under the total of State and local government employees, including teachers, exceeds the salaries of the latter by almost 14 percent; but the millions spent from taxes to support the horde of Federal employees would be cheap if it guaranteed the preservation of individual freedom. On the contrary, however, the millions being spent are destroying, not preserving, the American way of life.

We are engaged in a foreign war which broke upon us suddenly one Sunday morning in Hawaii. But there is another war which began 167 years ago when we proclaimed ourselves to be a free and independent Nation, and which has continued uninterrupted to this day. It is the day in and day out struggle to keep free of domestic tyranny, and it must continue to be fought in every corner of America. There are forces—some ignorant, some malicious—constantly at work to swerve us from the clear paths blazed by our forefathers. They have had to be resisted in every city and town and State, at every ballot box, in every public forum, in every legislative body, in every court in the land. But one threat to our liberties has been allowed to intrude itself slowly and subtly into every office, factory and home: The threat borne by a locust swarm of Federal employees so remotely responsible to the people that such responsibility can hardly be said to exist. It is this threat which we must fight even as we fight our foreign foes. It is this threat we must crush now, lest tomorrow it crush us.

Taking Profiteering Out of War

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the program of the American Forum of the Air entitled "Taking Profiteering Out of War." The program was conducted on June 20. I have received from the Government Printing Office an estimate regarding printing of the program. It is estimated that it will make four and one-fifth pages of the RECORD, at a cost of $189.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

Announcer JAY CALDWELL. The American Forum of the Air. Good evening, ladies and gentlemen. From the Shoreham Hotel in Washington, D. C., stations WOL and WOR take pride in presenting to the Nation-wide audience of Mutual one of radio's pioneer features, the American Forum of the Air.

Since 1928 Theodore Granik, attorney and editor, has arranged these weekly programs, in which the news personalities of the day discuss the issues of the day freely and frankly in the American tradition of free speech. Again this week the Shoreham is crowded with hundreds who have come to hear this important discussion, many of whom are from official life.

And now, Director Theodore Granik.

Director GRANIK. Thank you, Jay Caldwell.

America this year is spending over $100,000,000,000 to prosecute the war.

Many of those billions consist of contracts from the Army, Navy, and other procurement agencies—billions for everything from planes and ships to pins and shoes.

With so much being spent on war contracts it was only natural for the people to be wary of war profiteers. So Congress enacted an excess-profits tax which takes up to 80 percent of war-boom profits.

But Congress felt that was not enough. So, as an extra precaution, in April 1942 it enacted the renegotiation law, providing that the Army, Navy, Maritime Commission, and the others could renegotiate all major contracts to arrive at a fair price based on actual operations and costs.

And so, in the first year of renegotiation, the price boards report adjustments totaling $2,800,000,000, consisting of cash refunds on completed contracts and credits and lower prices on future deliveries. And these adjustments have all been voluntary, the boards tell us.

But renegotiation is not as simple as that, It involves considerable paper work and conferences. It takes production executives away from their plants. And it leaves a war contractor uncertain as to how he may fare on any job.

So the House Naval Affairs Committee a few days ago began studying this problem to determine whether renegotiation should be retained, amended, or repealed outright.

This evening the American Forum of the Air considers the over-all problem, taking profiteering out of war.

Our speakers are Mr. Maurice Karker, the Chairman of the War Department Price Adjustment Board; Representative ROBERT A. GRANT, of Indiana, member of the House Naval Affairs Committee; Senator STYLES BRIDGES, of New Hampshire, who has questioned 5,000 war contractors as to their feelings about renegotiation; and 2 of the thousands of manufacturers affected by the law—Mr. S. C. Allyn, president of the National Cash Register Co., of Dayton, Ohio; and Mr. Scott Russell, president of the Bibb Manufacturing Co., of Macon, Ga.

Each has a brief statement. Then all five will join in a round-table discussion of taking profiteering out of war.

First, then, Mr. Maurice Karker.

ADDRESS BY MAURICE KARKER

The renegotiation statute has been called dangerous and un-American. Maybe it is both, but I know that we are engaged in a dangerous and un-American war in which we are fighting for our liberties and our lives. Extraordinary measures are justified in the protection of both.

Renegotiation is neither a punitive measure nor a taxing statute. It is a part of the procurement process—the adaptation to war of a common commercial practice in time of peace. It is the wartime substitute for peacetime competition, and the law was passed (and is being administered) in the interest of the people who pay for what is bought and of private industry which produces that material. It is the best answer yet devised to that problem which has plagued every wartime President of the United States since George Washington. It is the best safeguard yet developed to see to it that the people's money is spent with intelligence and rigid economy and that they get a dollar's worth of value for every dollar spent.

Whether or not profits are excessive in the case of any individual company depends upon the facts. It does not and cannot depend upon a formula. In the first year of administration of this act, the War Department alone recovered nearly $700,000,000 and secured price reductions of over $1,000,000,000 in addition—all this from about one-sixth of the war contractors in 1942. The reductions made average about 10 percent on the total prices of the contracts reviewed.

This job is being done with a small force at a minimum of expense and in a way to leave industry strong and fit to resume postwar reemployment, recapture of domestic and foreign markets, restore the American standard of living and maintain a higher degree of prosperity for all the people than the country has ever before known. It provides incentive and reward for the superb job of production which has been done by American industry, but it provides them from the very minimum of debt and taxes to be laid upon the backs of all the people.

Director GRANIK. Thank you, Mr. Karker. And now, Representative ROBERT A. GRANT of Indiana, a member of the House Naval Affairs Committee, which is holding hearings on this problem. Congressman GRANT.

ADDRESS BY REPRESENTATIVE ROBERT A. GRANT

I am grateful for the opportunity to take part in the discussion of this vital subject of war profits.

All of us are agreed that no man should make inordinate profits out of this war. At the same time, we must be equally determined that our system of private enterprise shall survive in the difficult period of readjustment that will follow. Therein lies the most glaring deficiency in the Renegotiation Act.

The price adjustment boards do not make any allowances whatever for a reserve for reconversion and rehabilitation of American industry. The Government did allow conversion into war business as an item of cost, but that same Government refused that same concern any reserves out of its own earnings out of the converted plant with which to reconvert and rehabilitate itself back into peacetime business.

During the current hearings before the House Naval Affairs Committee, the Chairman of the Navy Price Adjustment Board admitted in response to my question:

"Looking at it as a practical matter, I think business will have to have the assistance of the Government to reestablish itself after the war."

After the Government becomes a big stockholder, and a preferred one, in any business, the next step would be to send out a man to sit on the board of directors and the Government would soon be dominating every business in this country. It would be operated with the same inefficiency that we associate with the receiver of a bankrupt concern. Such domination, to me, is state socialism.

What is the difference between that and the Nazi system?

This is total war. The Renegotiation Act, however, applies only to prime or subcontractors making war products for the War, Navy, or Treasury Departments, the Maritime Commission, or the War Shipping Administration. Any other business concern that operates outside this list, either because of its inability to get into war business or because it chooses not to do so, is entirely outside the jurisdiction of the price-adjustment boards.

If present tax rates are not effective to really recapture excessive profits, then why shouldn't they be revised so that they will more effectively do the job. It is a terrific and an awful power to vest in three individuals the right to sit down at the table of American industry and, without any fixed formula, to tell American industry how much money must be paid over to the Government over and above the obligations to the tax collector.

Please don't misunderstand me. The chairman of the Navy Price Adjustment Board is doing his very best in a herculean task of dictating profits over thirty-five billions of American business. I know that the same thing can be said for you, Mr. Karker, and your job is even bigger than the Navy's. My complaint is not with the men who man these boards but rather with the present application of the law itself.

Director GRANIK. Thank you, Congressman GRANT. Now, Senator STYLES BRIDGES, of New Hampshire, who has questioned 5,000 war contractors about renegotiation. Senator BRIDGES.

ADDRESS BY SENATOR STYLES BRIDGES

Months ago I became interested in the program of price renegotiation of war contracts. Spurred by a desire to ascertain just how the plan was affecting American industry, and to learn first-hand what industry felt should be done to remedy shortcomings under present administration of the law, I started a personal survey.

With the cooperation of the committee of Americans, I sent out detailed questionnaires to some 5,000 industrial establishments. Frankly, I received a fine response. This information has given me and my colleagues in Congress the most complete data on the subject yet assembled or made available.

Two large volumes, comprising the first half of the survey, have been turned over to the Truman committee, the House Naval Affairs and Ways and Means Committees, the Senate Finance Committee, and other committees directly interested. With continued interest from every section of the country, it will be necessary to prepare a third volume.

Since this evidence deals with actual experience it is possible Congress will move to remedy certain phases of the law and its administration.

I believe the American people and American industry favor some effective and efficient form of war-profit control. Business does not want to come out of this war an inflated free enterprise. It does desire to emerge with sufficient strength to face the huge task of peacetime conversion.

Under existing circumstances business faces critical days ahead because of the popular zeal to take virtually all profits out of wartime production.

Everyone must make a contribution in this war. Most people are willing to. This is true of industry, which has already done a grand job in production. But, industry must have some assurance financial reserves will be available to meet the multitude of complex problems certain to face America and American industry in the post-war era.

One of two things should be done; either the present tax law should be amended, or new legislation enacted to permit industries to retain—while yet they can—sufficient cash reserves to meet problems of the future.

I offered a plan to meet this contingency—a plan permitting industry to purchase Government bonds with all profits above a certain level.

The cash reserves accrued in these bonds would be earmarked for purposes; to be expended at fixed intervals over a period to meet the emergencies of reconversion and deflation.

Thus, the Government would get money now for war needs and industry would have assurance of cash reserves for peacetime enterprises.

Mr. Granik, let me say I think we have one definite problem in mind beside winning this war, and that is to preserve free enterprise so that when the boys return home they will return to more than an empty shell of democracy, and in that objective, I think this problem of renegotiation of contracts is vastly imporant to the future of this Nation.

Director GRANIK. Thank you, Senator BRIDGES. We hear now from one of the thousands of war contractors affected by renegotiation, Mr. S. C. Allyn, president of the National Cash Register Co., of Dayton, Ohio. Mr. Allyn.

ADDRESS BY S. C. ALLYN

I think we can assume that manufacturers are not interested in making anything more than a reasonable profit from war contracts. Any other attitude would be no less than a betrayal of the 8,000,000 men in the armed forces who not only are making no profit but do not even have a guaranty that they will return alive.

Granting that there is no desire for excessive profits, the question then is, "How can profits be kept reasonable?" In answering that question, we must consider the abnormal conditions under which contracts are placed and executed in time of war.

The great majority of manufacturers are making items with which they were not the least bit familiar before the war. It has often been impossible to accurately determine ultimate costs at the time a contract was placed. "Good Faith" is the saving factor and the unwritten element in every contract which protects both manufacturer and Government. Renegotiation is nothing more than a means of exercising that good faith. To my mind it is the best method of adjusting profits to actual costs that has yet been developed.

I believe there should be a better understanding of renegotiation. In the beginning at least, there was some feeling that this procedure was a reflection upon a company's integrity. That is certainly not the case. It is rather a certification that the adjusted profits are satisfactory to the Government. As the manager of a business, responsible to the public, to stockholders, to employees and to 3,000 of our former employees in the armed forces. I welcome this official stamp of approval. It means a great deal now. It may mean even more at some future date.

When we started renegotiation, we did not know exactly what to expect, but we soon realized that this was something to be desired rather than opposed. The attitude taken by administrators was fair and businesslike. The voluntary price reductions which we had made were given full consideration, as was every other factor.

I do not presume in this discussion to be speaking for anyone or any organization except myself and our own company. However, I know that what I have said parallels the opinions and the experiences of others.

Renegotiation is an emergency measure, a fair and practical method of performing a necessary wartime function. It should be intelligently administered and by the same token it should be accepted by manufacturers in good grace and good faith.

The act is not perfect. Some amendments can and should be made. But to ask for repeal would be taking too great a risk because no satisfactory substitute has been proposed. I sincerely believe that private enterprise owes it to its own future to cooperate in making renegotiation work.

Director GRANIK. Thank you, Mr. Allyn. And now, a big textile manufacturer likewise affected by renegotiation, Mr. Scott Russell, president of the Bibb Manufacturing Co., of Macon, Ga. Mr. Russell.

ADDRESS BY SCOTT RUSSELL

In common with the vast majority of American businessmen, I am utterly opposed to profiteering, in war or in peace. I am willing to do whatever is reasonably necessary to prevent it.

I do not believe the bureaucratic monstrosity set up by the Renegotiation Act is either reasonable or necessary.

Its proponents defend it by citing certain horrible examples. No one questions that such situations should be prevented, but they leave me cold when they are used as an excuse for applying renegotiation to the great bulk of Government contracts.

The demand for the renegotiation law grew out of the mass production of items that never before had been mass-produced. No one knew what they would cost. In such situations it has a real place and should be preserved, but it should be confined to them.

It should have no place in the Government's dealings with manufacturers of standard goods, the costs of which are readily ascertainable.

In the first place, taxes have already taken 80 percent of this profit, so renegotiation is dealing with only 20 percent of it.

The Office of Price Administration has fixed all these prices and in many instances the procurement agencies have set their own ceilings below the Office of Price Administration.

But, worst of all, the patriotic manufacturer who has given up his customers and turned all his production to his Government, has to go through the inquisition of renegotiation, while one who has sold identically the same goods at the same or higher prices to his civilian customers, and probably to customers of the other producer has no worries over renegotiation. That the Government gets the goods under such circumstances is a tribute to the patriotism of American industry.

A simple amendment by Congress confining it to the purpose for which it was originally intended would make it both fair and possible of administration. Now, it is neither.

Director GRANIK. Thank you, Mr. Russell. The American Forum of the Air continues with its informal, round-table discussion.

Mr. Karker, to start the discussion, will you tell us precisely, why it is that the excess-profits tax doesn't do the whole job; why renegotiation is necessary to eliminate excess profits?

Mr. KARKER. An excess-profits tax, briefly, operates too late after the damage has been done, and it cannot by any formula or proposal seen or heard yet do a job equitably, as between companies whose sources of capital and performance factors vary as widely as they do in American industry. When you rely upon the excess-profits tax to reduce the amount of profit in even a given situation to that which is regarded as fair, you have already paid a higher price than should have been required to be paid for whatever it be that you buy, whether it be a tank or textiles; you have to borrow the money, you have had to add it to the public debt. You are adding to it this cost of service of the public debt, and eventually you are adding it to the tax burden to be laid upon the backs of the peo-

ple, and you have had the whole inflationary effect of that artificiality. Whereas——

Congressman GRANT (interposing). Mr. Karker, let me——

Mr. KARKER (interposing). Excuse me just 1 minute, please. Whereas, if it is prevented in the first place, you go through none of that process, and you are a deflationary influence instead of being an inflationary contribution.

Mr. RUSSELL. Mr. Karker, you don't think it is important—you don't think it possible for your negotiators to get around any quicker than the tax collector will get around, do you?

Mr. KARKER. We have done it for 17 percent of the companies for 1942 already.

Congressman GRANT. How long is it going to take you to do it to the rest of them?

Mr. KARKER. It will depend on the cooperation of American industry in two directions: First, in providing intelligent, experienced and able personnel with which to do the job; and, second, stepping forward and finding out what the facts are in their individual cases. Otherwise 1942 cannot be done before the end of this year.

Mr. RUSSELL. You admittedly have no formula which you can use as a reply to any given business before going into this, have you?

Mr. KARKER. That is perfectly correct. There is no formula and none is possible.

Congressman GRANT. For the benefit of the radio audience, I would like to have you tell us and tell them, what factors you do take into consideration when you arrive at the profit that you decide you shall allow a given business.

Mr. KARKER. Mr. Grant, there are probably a thousand and one of them. The principal ones, of course, are the volume of business that they have done, the degree of speed with which they have met their delivery schedules, the care with which they have used labor and conserved material, the cost at which they have produced, the inventive and management contributions which they have provided not only for their production but which they have provided to help other people; the source of capital which is used in making this production, and on and on into all of the factors, relationships, and ratios which businessmen themselves take into account in measuring their own efficiency.

Congressman GRANT. Their own efficiency. Mr. Karker, what factor would you say was given the greatest weight of all?

Mr. KARKER. There isn't any one factor given the greatest weight of all; all factors are taken into account.

Congressman GRANT. How much weight do you give to the factor of cost?

Mr. KARKER. It is one of the primary considerations because the basic philosophy of administering this statute, as laid down in the joint issue by all of the departments concerned, is that there shall be provided incentive and reward for the production of more, and for that production at lower and lower cost.

Congressman GRANT. But the very point I wanted to get at, Mr. Karker, is: You say that cost is one of the biggest factors in arriving at an allowable profit to a concern; and isn't it true, then, that to that extent you are allowing a fee based on cost, and we are reverting back to the old cost plus a percentage of profits contract that plagued us during the first World War?

Mr. KARKER. Not at all. It isn't a fixed percentage and, of course, we are not, because we don't allow a fixed percentage; the Case amendment as it was proposed in the House a year ago or thereabouts, made a fixed limitation of 6 percent, and that is definitely cost-plus or selling-price plus.

Congressman GRANT. I would like to ask Senator BRIDGES, if I may, on this matter of post-war reconversion—and that is the thing that worries me most of all, Mr. Granik, and I am afraid we are going to have private industry prostrate at the end of the war—I would like to ask, Senator, what you learned from your questionnaire over the country about the interest of American industry about the vital part of that problem.

Senator BRIDGES. More than any other single thing, Bob, I found out that in the mind of the average businessman was the problem of facing the post-war era and the problem of conversion to a peacetime basis, the problem of rehabilitation, the problem of deferred maintenance, the problem of adjustment over a period of time with the possible deflation period in progress.

Mr. ALLYN. Isn't the question of a reserve for reconversion a question of amendment to the existing law?

Mr. GRANT. You agree with us, then, that there should be that amendment made?

Mr. ALLYN. Yes.

Mr. RUSSELL. Mr. Allyn, do you think——

Mr. ALLYN (interposing). Certainly, I think it would have to be amended in the income-tax law at the same time.

Mr. RUSSELL. I would like to ask two questions.

Mr. KARKER. I haven't answered the first three yet.

Mr. RUSSELL. First, where are you going to get enough men to weigh with discretion all these factors that you say have to enter into every individual consideration? You have not got a yardstick for them.

Mr. KARKER. That isn't true, Mr. RUSSELL. There is a yardstick; there isn't a formula.

Mr. RUSSELL. It hasn't got 36 inches to it.

Mr. KARKER. Oh, yes; it has probably 39.

Mr. RUSSELL. One other question.

Mr. KARKER. Have you read the joint issue from the departments?

Mr. RUSSELL. Yes; I have read it.

Mr. KARKER. And you haven't found any basis, any policy, any outline of principles to be followed? You haven't found any philosophy to be followed?

Mr. RUSSELL. I have a philosophy, but I don't know where you are going to find the thousands of men necessary to administer the philosophy.

Mr. KARKER. Where do you estimate that there are going to be thousands?

Mr. RUSSELL. The Truman committee said that there were 85,000 of them that you had to negotiate, and you have only got 200.

Mr. KARKER. The Truman committee made a minor mistake; they listed as renegotiable all the manufacturing concerns listed by the Department of Commerce of the United States. Our best estimate in the War Department—and it is purely a guess—is that we may have to renegotiate 15,000 manufacturing companies. For all the departments it won't exceed twenty to twenty-five thousand.

Mr. RUSSELL. How many have you renegotiated?

Mr. KARKER. Something over 2,000.

Mr. RUSSELL. In a year and a half?

Mr. KARKER. Oh, no; not in a year and a half. In the first place, it isn't a year and a half since April 28, 1942; it isn't quite 14 months, if my arithmetic is correct. But in the first part of last year our time was taken up trying to define principles, to develop policies, to get an organization together. Really, there had been no production on the matter of renegotiation until the 1st of January 1943, and since that time the War Department has reached agreements with something over 2,000 companies.

Mr. RUSSELL. Let me ask you one more question. Isn't the real basis for your renegotiation, isn't the driving reason for renegotiation, the manufacture of goods that have never before been manufactured? Is there any reason why standard goods sold both to civilians and to the Government at the same price should be under the renegotiation statute when the revenue act takes 80 percent of any profits and 90 percent in some cases?

Mr. KARKER. Never 90 percent; but go ahead.

Mr. RUSSELL. Ninety of the top part that you have always said comes from the increased production; that is what induced the 90 percent. Now, why apply it to standard goods that you can go uptown to a store and buy just as well as you can buy it from the manufacturers?

Mr. KARKER. Because, Mr. RUSSELL, strictly under those situations, excessive profits result from increases in volume, which, in turn, result in lower costs. I have in mind one situation, with which you are probably familiar, in which the volume in 1942 was 3 times that in the base years; the profit per dollar of sales was 3.4 times that of the base years; the dollar profit before taxes was 10 times that of the base years. Does it seem logical that excessive profits might be involved in that situation?

Mr. RUSSELL. Isn't it true that 80 to 90 percent of that goes back to the Government anyhow without your boards?

Mr. KARKER. Eighty-one percent of the top dollars in any business can be taken out, but over all the maximum possible is 72.8 percent.

Congressman GRANT. Didn't I get from your opening remarks that the War Department recaptured some $2,800,000,000? Was that your statement?

Mr. KARKER. No.

Congressman GRANT. That was somebody's statement and figure or a part of whatever figure they used.

Senator BRIDGES. It was Senator MCKELLAR'S figure in the Senate yesterday in which he was not fully informed.

Congressman GRANT. Thanks, Senator, but Mr. Karker, a part of your money goes back to the Treasury on contracts that have been completed and payment made, but the rest of those funds go back to the procuring agencies where those contracts were let. Now, of course, it is the responsibility of Congress to provide for the Army and the Navy, and if the Navy comes up to our committee and asks authority for an airplane program of a billion dollars, and they are finally able to renegotiate the contract for $1,000,000 less before final payment, then they have got the program and they have also got the $1,000,000. What do they do with the $1,000,000, what becomes of the responsibility of Congress to look into those matters and make provision for the Army and the Navy?

Mr. KARKER. May I answer the first part of your question first, Mr. Congressman. The amount referred to (and we don't like the word "recapture" which the Congress used) which was recovered up to the end of May was $698,000,000. That wasn't recovered from contracts completed; that was recovered from contracts which had deliveries and for which the deliveries had been paid up to the end of the last fiscal year. Those contracts may still be in effect; the $1,000,000,000 approximately, the amount which has been saved through price reductions for deliveries remaining, is simply money not expended under the appropriation and is handled exactly as it would be had you appropriated $170,000 for a particular airplane, and the Department had been able originally to negotiate with the manufacturers to buy it for $160,000. The $10,000 are not spent for each plane, but the money is available, and within 10 percent, available for transfer for other purposes under the authorization of Congress.

Congressman GRANT. But did the War Department ever report that they had so many hundred millions of dollars accumulated in a reserve that they had saved, and what should they do with it?

Mr. KARKER. Why, Congressman, the report which has just been made to the appropriations subcommittee shows that $12,000,000,000 is unexpended on appropriations already made.

Senator BRIDGES. Mr. Karker, I feel rather strongly on this particular thing because I think the general public have been rather confused by the statements, not that you have given out, but that have been given out, whereby they are supposed to have saved about $3,000,000,000 when part of it, as you have explained here, is an actual saving, money that has gone back into the Treasury, but the substantial part of it is an imaginary saving which has come about actually by price reductions, and I think that to the American public we should all have a very clear distinction between money saved, which is money returned to the Treasury, and this sort of imaginary saving which goes on as a result of reduction of prices.

Mr. RUSSELL. Senator, wouldn't 80 percent of that money have come back into the Treasury or some percentage, approximately 80 percent, come back into the Treasury regardless of the renegotiation boards?

Senator BRIDGES. That would be my understanding, generally.

Mr. RUSSELL. The figures that were given, as I understand it, were before taxes were deducted.

Mr. ALLYN. In the first place, I don't think you can confuse renegotiation with excess-profits taxes because renegotiation is not a revenue measure. The purpose of renegotiation is to recover excessive profits and when renegotiation works it exerts a stronger moral effect to hold prices down. On the other hand, I think excess-profits taxes have a strong effect to hold prices up. When you have got 20 percent that you are going to get of whatever is left, the tendency is to keep your prices up and keep your profits up, and 20 percent of a million dollars is $200,000, and 20 percent of $500,000 is $100,000, and I don't see how the excess-profits tax can be used as a means of controlling excess profits.

Mr. RUSSELL. How is the renegotiation statute going to be so used if you can't get around to the contractors within 2 years after they are through with this year's business? You don't know what your business earned last year until you have been renegotiated.

Mr. ALLYN. You can find out awfully darned quick.

Mr. KARKER. As a matter of fact, it isn't going to take 2 years.

Mr. RUSSELL. Mr. Karker, it has taken us 8 months to get up the information your men have asked for, and we have never seen the men yet.

Mr. KARKER. I didn't realize that even Macon moved that slowly, Mr. Russell, because there is no reason why it should.

Mr. RUSSELL. They asked for a lot of information.

Congressman GRANT. Mr. Granik, I wonder when we think of the cost of renegotiation to the taxpayers, if the renegotiation boards have ever considered that effect and cost represented by the hours and the days and the weeks and months that are spent by the auditors and accountants of a business in supplying the necessary information to the Price Adjustment Boards, and also the loss to the Government in production of vitally needed products for the war. We had a man, Mr. Karker, before our committee who said the effect of his shutting down to supply figures to the Price Adjustment Board cost 100 gun mounts. What would that have meant in the ships on which they were to be manned?

Mr. KARKER. It means that he is a liar. I don't want to get into a discussion of that situation here, but I know the particular case, and the decline in the manufacture of gun mounts was due to a change in design, and none of the men in that organization is interested at all in renegotiation. As a matter of fact, he has delayed renegotiation for a matter of 12 months, but we are coming to grips with him.

Congressman GRANT. But the problem you have raised in the waste——

Mr. KARKER (interposing). The problem has been considered and it is a very serious one, and we have made it as simple as it possibly can be, but perhaps it can be made simpler. The number of special audits that have been made have never been more than two or three in the War Department. We accept the figures of the regular auditor; we accept certificates of the officers of the corporation; we accept the segregation of sales which is the most difficult and expensive part of renegotiation on the basis of spot check from the officers of the company. We have done every reasonable thing that we can to make it simple, direct, and smooth.

Senator BRIDGES. I just wanted to point out in answer to Mr. Russell's question something that I ascertained in talking with your Board, Mr. Karker; that one of the advantages that some form of renegotiation has, in addition to what would be accomplished by excess profits, is the fact that it allows them to get into a firm, for instance, that has bloated or inflated its expenditures. In some instances I know of, they paid their stenographers an unhead-of salary, and had all the family at big salaries on the pay roll, and in that case it very definitely can do something that excess profits won't accomplish.

Mr. RUSSELL. I said to start with that in that situation I was favorable to keeping it. It ought to be kept in the situations where they are making new goods and mass-producing goods that they have never produced before. My objection to it is in dealing with perfectly standard goods that are sold every day over the counter to the civilian or the Government at the same price.

Senator BRIDGES. I think you have got a point there, Mr. Russell.

Congressman GRANT. I want to hark back to this matter of reserve for rehabilitation, and I want to ask Mr. Karker (and he is in this where policy is being determined) what his thought is on the matter. Do you agree with the statement that was made by the chairman of the Navy Price Adjustment Board to our committee that industry is going to have to come to the Government for help to survive when the war ends?

Mr. KARKER. Not generally, no.

Congressman GRANT. Do you believe that a good bit of it will have to come to the Government for help?

Mr. KARKER. Oh, yes, I think that some of it will, and I think that it is more largely from that group which doesn't have war business that your casualties are going to come. I don't like you to assume that I am not sympathetic to the provision now of adequate reserves in the case of every individual company to tide them over that period of readjustment, to provide for the reconversion of their facilities to the extent that that reconversion is a necessity at the time; to provide for the separation pay for those men that they have and the reemployment of other men who become available. You load an enormous responsibility on the Renegotiation Board, the Price Adjustment Board, by criticizing us for not allowing it when Congress itself has not allowed it.

Senator BRIDGES. Mr. Karker, do you think that in order to bring that about the act should be amended?

Mr. KARKER. Senator, I am not a policy-making officer of the War Department, and I think that question could and should be answered by the Under Secretary of War. As an individual, I think that the tax statute, the Revenue Act, can very properly be amended. I think there are a great many considerations which the Congress will have to keep in mind, and take into consideration when you do it.

Congressman GRANT. Do I understand, Mr. Karker, that you would personally like to have an amendment to make allowance for reserves?

Mr. KARKER. I would.

Congressman GRANT. I am glad to hear you say that.

Mr. ALLYN. Mr. RUSSELL, do you advance the argument that products such as you have mentioned should not be renegotiated because there are no excessive profits?

Mr. RUSSELL. I say that there is no difference between those products in wartime and those products in peacetime. The argument has been made that because the production has expanded that profits have become excessive. But it is the expanded production that has put the companies in a 90-percent tax bracket, and you're only arguing over 10 percent, and certainly the Government expects the people who stretch themselves out to get that last modicum of production, to get the 10 percent out of it.

Mr. KARKER. The amount is 80 percent.

Mr. RUSSELL. Let me explain Mr. Allyn's statement. The over-all top is 80 percent, but it is this last expanded production that Mr. Karker is talking about that puts you in the 90-percent bracket that has a stopper of 80 percent. But you wouldn't be in it except for that possibility.

Mr. ALLYN. Then you have a post-war credit of 10 percent and you get back to 81 percent.

Mr. RUSSELL. That is right, but you don't know what your inventory is going to be worth, and Mr. Karker's men, as I understand it, are not giving any credit for inventory.

Congressman GRANT. Mr. Granik, I want to make one point on the matter of post-war credit provided in the excess-profits tax. It provided for these bonds that are negotiable. They are not negotiable now, but they are to be negotiable after the cessation of hostilities as proclaimed by the President and by the Senate in a concurrent resolution, and may I point out to you that in the last World War it was ended by a concurrent resolution on the 2d day of July 1921, almost 3 years after the armistice, and business would be broke in the meantime if it has got to wait that long on the credits that come from the post-war bonds.

Mr. KARKER. We have a better Congress than we had in those days. [Laughter.]

Congressman GRANT. Mr. Karker, I hope you are right. I want to say that I am interested in the future of renegotiation. I want to be understood as saying that I believe it was fully justified and very, very well intended, and, possibly, the only way to meet the situation in that experimental period when we were making new commodities for the war and increased volumes that we have never known before, but with the experience we have had, aren't we pretty well able to negotiate contracts closer to the line, and shouldn't we be able to see this thing taper off pretty fast with a better negotiation process by the procurement agencies themselves, by taking a break-down from a contractor and going over it with a fine-tooth comb before they ever sign a contract in the first place?

Mr. KARKER. Mr. GRANT, there isn't the slightest question that the amount of recovery will be reduced substantially and materially from now on. It will be very much less, but the minute you take this statute off the books the pressure to keep costs down and to price in relationship to cost will be taken off.

Congressman GRANT. I would just like to say, lest I don't have another opportunity, that I don't advocate outright repeal without adequate safeguards being thrown around it. We have got to make some provisions for post-war reserves. I think, too, that we ought to be able to write some sort of a formula for an irreducible minimum below which we shouldn't go, so that a man should have something of his earnings which should be his own.

Mr. KARKER. Every man who has been renegotiated has something plus something

more, plus something more for good measure.

Congressman GRANT. But thousands of them are still on the outside wondering.

Mr. KARKER. There is nothing holding them back except their desire to put off the day; the money nerve is right over the heart, and it is for that reason that they are on the outside; they hate to be touched.

Congressman GRANT. I think that is an unfair indictment of industry generally.

Mr. KARKER. Oh, no; I am not trying to indict industry; I am indicting human nature, if anything.

Congressman GRANT. After all, business is conducted by human beings.

Mr. RUSSELL. Mr. Karker, you have got a terrific administrative task in this thing as it is now set up, haven't you?

Mr. KARKER. There is no question about that.

Mr. RUSSELL. If it were confined to nonstandard goods—goods that were never made before, couldn't you administer it much more efficiently, much more satisfactorily, and wouldn't you catch practically all of these horrible examples such as Senator BRIDGES was talking about, where they were paying their secretary $100,000 a year, and not have to deal with the great mass of American business and have thousands of people uncertain as to whether they would come out, and where they would come out?

Mr. KARKER. Of course, the number would be greatly reduced, but the inequities would be perfectly enormous. Mr. Russell, you yourself complained during the course of this discussion of the fact that business with the departments is negotiable and business with civilians is not, and you would not add another favored class.

Director GRANIK. I am sorry, gentlemen, our time is up. You have been listening to the American Forum of the Air discussion of Taking Profiteering Out of War.

We invite your letters and comments. And now, your announcer, Jay Caldwell.

Announcer CALDWELL. Thank you, Mr. Granik. Your comments and suggestions will be welcomed by Director Theodore Granik, attorney and editor, who founded the American Forum of the Air 15 years ago. Next Sunday at this same time the American Forum will present another discussion of current interest. This has been presented by Stations WOR and WOL as a public service feature in the American tradition of free speech. Jay Caldwell speaking. This is Mutual.

The Post-War Outlook

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 6 (legislative day of Monday, May 24), 1943

Mr. REYNOLDS. Mr. President, in connection with the subject of inflation and the subject of business generally with which the Senate has been concerning itself for the past several days, I ask unanimous consent to have printed in the Appendix of the RECORD one of the syndicated articles by Mr. Lewis Haney. The article was published in the July 4 issue of the Washington Times-Herald, and is on the subject of the post-war outlook.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HANEY DISCUSSES FURTHER POST-WAR OUTLOOK

(By Lewis Haney, professor of economics, New York University)

At a recent meeting of businessmen for the purpose of discussing the post-war outlook, I was asked certain questions. You may be interested in them and in my answers.

First, I was asked "If everybody goes in for post-war planning, isn't it likely that there would be chaos—wouldn't it be better to have one master plan for the Nation?"
